Can it be that slovenly newspaper practice is responsible for the careless language of some educators? Too many editors and news commentators forget that "Russia" went out of existence in 1917, when a new body politic, eventually to be known as the Union of Soviet Socialist Republics, was established. The name which the original totalitarians selected brings out clearly the international character of the Marxist police state. "Russia," with its necessary connotations with the Russian people, simply does not have the connotations that are present in "the Soviet Union." Why do journalists, who like to pride themselves upon their accuracy, continue to use an outmoded, unhistorical vocabulary?

To be sure, some newspaper folk as well as a few of the professors try to justify themselves by pointing out that they are merely following common usage. This seems to be a weak apology. In point of fact, the more alert foreign correspondents usually lead off their pieces in this field by mentioning "the Soviet Union" and then occasionally employ "Russia" as a variant.

On the other hand, Messrs. Henry A. Wallace, CLAUDE A. PEPPER, and their supporters almost invariably introduce talk about "Russia" and "the Russians." Naturally, these words, with their aura of courage and glory, elicit immense sympathy and admiration for the valiant Russian people.

Does any thoughtful reader imagine that this choice of language is not deliberate, although incorrect? With such radiant diction, Marxist apologists in the United States plead the cause of the clique which runs the Soviet Union. The interests of the Russian people and those of the Soviet Politburo, it may be noted, do not often coincide.

Why not be realistic as well as exact in this sphere of semantics? The distinction between tyrants and their slaves can and should be recorded each time that we mention "the Soviet Union" and "the Russian people."

Is it not significant that the statesman identified as X, who wrote the widely quoted piece on the surviving totalitarians, spoke clearly and consistently and correctly about "the Soviet Union"?

Truth depends upon accuracy of expression. Furthermore, fairness to all concerned demands that there be no name calling. This is a case where the rulers of the Soviet Union have themselves chosen their own titles and descriptions. They are the self-proclaimed leaders of a federation which not only has fifth columns everywhere but also, avowedly, aims to embrace the world with its peoples. That is in the nature of world revolution. The Constitution of the U. S. S. R. was drawn up with explicit provisions for the incorporation of all other political entities.

It is a practical measure of self-defense to employ the nomenclature selected, not by non-Marxist adversaries, but by the Soviets themselves. At any rate, some citizens of this country will protest every time a mistaken terminology is employed.

[Column of Mrs. Anne O'Hare McCormick on April 2, 1949, in the New York Times]

ABROAD—THE NEW EMPHASIS ON THE PEOPLE OF RUSSIA

(By Anne O'Hare McCormick)

In Boston Winston Churchill referred to his Fulton speech of 3 years ago but he did not mention the "iron curtain," the phrase he originated at that time. One reason may be that the curtain is not quite so opaque as it was. This is not to say that the outside world knows any more than it ever did about what goes on inside the Kremlin. The wild and contradictory guesses on the current changes in the high command are the best proof that there are no peepholes in the thick walls of that fortress.

But we do know more about life and conditions under Soviet rule. In the last 3 years news and people have trickled through and out of the border states in a widening stream. Nearly everywhere in Europe today you meet a sprinkling of Russians among the fugitive Czechs, Poles, Hungarians, and Rumanians who have evaded the frontier guards along the "Great Divide." It is not so easy to keep secrets in the Soviet sphere as it was in the Soviet Union; the farther the curtain extends the harder it is to nail it down.

From these fresh witnesses and a variety of other leaks the reporter hears much that confirms Mr. Churchill's theory that the admittedly able men in the Soviet Union have acted to unite the free world against them because "they fear the friendship of the West more than its hostility" and for the sake of their own self-preservation "cannot afford to allow free and friendly intercourse to grow up between the vast areas they control and the civilizations of the West."

HOMESICK FOR FREEDOM

Certainly anyone who has ever been in Soviet Russia or who encounters outside the latest Russian exiles, most of them products of the Soviet system and therefore bewildered and curious strangers in the outer world—a little like men from Mars—knows how friendly and open-minded the Russian people are by nature. Years ago, before suspicion and hatred of the United States became a policy, the writer recalls the warmth and excitement of the peasants in a collective village who followed her around all day to hear about "dear America." The experience was almost duplicated this year in a border country, when a runaway young Red Army man suggested they had not changed much by relating how wistfully the people in his home village talked of Americans they had once met. They were homesick for freedom, he said.

It is significant that there is more emphasis now than ever before on the distinction between the Russian people and the Soviet Government. No passage in Mr. Churchill's speech received more applause than the statement that "we have no hostility to the Russian people." The striking fact is that nobody has; no nation in history was ever so completely absolved of blame for the acts and aims of its rulers. Even the Communist Party and the Komsomols, that army of husky youth nearly 9,000,000 strong, are not held responsible for the policies of the little group on top which speaks and thinks for them all.

Ernst Reuter, mayor of Berlin, made the same point as Mr. Churchill in speaking at a luncheon given in his honor in New York on Friday by the American Association for a Democratic Germany. Dr. Reuter spent much time in Russia in his early years; he speaks Russian and today has exceptional opportunities to see and hear of what is happening behind the curtain. Berlin is by all odds the best observation and listening post on the Soviet Union. It is the big sieve

through which news of the West goes East and news of the East goes West.

On the basis of his knowledge of the Russians and his experience on the barricades, Dr. Reuter begged his audience not to make the mistake of confusing the "innocent" people with their Government. If the Russian people could have participated in the great resistance rally of the people of Berlin before the Reichstag last September, "I am sure they would have been on our side against their masters," he said.

A NEW WORLD POLICY

The signatories of the Atlantic Pact are assembling in Washington this week end. In this bevy of Foreign Ministers, the largest the Capital has ever seen, western Europe comes to the United States to solemnize a historic innovation not only in American but in world policy. No such peacetime coalition has ever been formed before. It represents the failure of Soviet policy, as the angry casuistry of Moscow's protest reveals.

The Atlantic Pact, like the Marshall plan, of which it is the supplement, is one way of strengthening free nations to resist the threat of aggression. But neither pact nor plan is the only way of dealing with Russia. Stepping up the effort to break through reflects a growing conviction among policymakers that there is a growing restlessness on the other side. This conviction stems from more information of what is going on. It does not mean that there are signs anywhere of an organized underground, such as existed in Poland under Nazi occupation, or the slightest chance of rebellion. Risings against totalitarian dictatorships are practically impossible. But the urge for liberation from tyranny is a force that any event could unleash—an open break in the Kremlin leadership, for instance, or a series of splits in the satellite regimes. Strength and freedom in the West, are other factors that could upset the balance of the Soviet empire. At any rate, fostering and keeping alive the spirit of the people on the other side of the iron curtain are as important for a well-rounded policy as organizing resistance on this side.

Biloxi, Miss., Celebrates Its Two Hundred and Fiftieth Anniversary

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. COLMER. Mr. Speaker, I doubt, in all sincerity, if there is a more attractive place in all of these United States than the little city of Biloxi, which adorns the Gulf coast line of the State of Mississippi. Not only is it an attractive city, but there are few spots richer in history and legend than this beautiful little Gulf-kissed coast town. In its history it has the distinction of having in its 250 years of existence, 8 flags to fly over it. It was once the capital of a territory which embraced possibly one-fourth of the area now occupied by these United States.

This month marks its two hundred and fiftieth anniversary, and an appropriate program, which promises to be one of the most colorful celebrations of its kind ever held in this country, is scheduled for this month.

Its natural beauty is unexcelled. Its giant centuries-old live oak trees growing in profuse abundance down to the white sands of the Gulf of Mexico, its beautiful, natural scenery, with its historical significance, all combine to make it one of the most attractive places in the world. Moreover, its commercial activities, added to its tourist trade, make it a most exceptional place in which to live.

Biloxi, Miss., is the home, in this modern day, of Keesler Field, one of the largest air mechanical training schools in this country.

It ships a large portion of the shrimp and other fish which go from the Gulf of Mexico to all parts of the country. Moreover, it is and has been for more than a half century the largest canner of oysters in the world.

I know that my colleagues will join with me in saluting this beautiful, historic spot and the fine, hospitable people who dwell within its limits on this, its two hundred and fiftieth birthday.

Mr. Speaker, in this connection, I submit herewith a statement prepared by one of its outstanding citizens, Mr. Anthony Ragusin. The statement follows:

BILOXI WILL HOLD TWO HUNDRED AND FIFTIETH BIRTHDAY PARTY IN APRIL

Biloxi, the Plymouth Rock of the Deep South—a city that once was capital of a region that reached from what now is Yellowstone National Park to the site of present-day Pittsburgh, is this year celebrating its two hundred and fiftieth anniversary.

Mississippi's most famous coastal city, which today depends on tourists, fishing, and boat building for its livelihood, was established as the first permanent white settlement in the Mississippi Valley in April 1699.

The occasion is being observed in the same month this year with a program which begins March 27 and continues through April 9, with a pageant depicting the colorful history of this city over which eight flags have flown.

Early in 1699 an expedition sent out of France by King Louis XIV arrived at Ship Island under the leadership of Pierre le-Moyne d'Iberville and assisted by his brother, the gallant Jean Baptiste leMoyne Sieur de Bienville. Its goal was the establishment of a colony in Louisiana.

After a preliminary exploration of the coast, d'Iberville decided upon the quiet Bay of Biloxi as the ideal site for his settlement. He soon made friends with the amiable Biloxi Indians, after which the colony was named.

Construction of the settlement, just north of the present city of Ocean Springs, was begun on April 8. The fort established to defend it was known as Maurepas.

A second colony was established in the southeast area of the Bay of Biloxi but was short-lived. The third establishment of the city was on the Gulf on a narrow, finger-like peninsula where the city today stands.

Thus Biloxi, by virtue of its discovery and settlement, became the first permanent establishment in the Mississippi Valley and the first capital of the Louisiana Purchase Territory.

When colonial Biloxi ruled land as far north as Canada there were nine judicial and military districts, including the Illinois, Wabash, Missouri, and Natchez.

Oldsters today say that one reason so many lawyers came to Biloxi was because land titles along parts of the coast involved 22 different tenures.

Biloxi remained the capital until 1722 when the seat of government was moved to newly established New Orleans.

Mississippi's 75-mile coastal area has long been a happy fishing ground. Its nearness to fertile spawning grounds for both crustacean and fish life, its shallow, island-protected sound and network of bayous and rivers attract tons of crabs, shrimp, oysters, small fish and the larger game fish which come to feed.

Biloxi has become the capital of this huge fishing industry.

Today the city has approximately 30 seafood shipping establishments. During the shrimp and oyster seasons more than 900 boats work out of Biloxi and more than 5,000 boatmen are engaged in catching seafood for the factories which process them for the markets of the world.

More than half of all the oysters canned in the United States during the past 30 years were packed at Biloxi.

Growing directly out of the fishing and seafood industry is the trade of shipbuilding. The Biloxi lugger, a power-propelled boat of from 30 to 46 feet in length, represents the experience of generations of building boats suitable for coastal waters. Nearly all the shrimp and oyster boats operating out of Biloxi, as well as many used in Louisiana, Texas, and other coastal points are Biloxi-built.

Biloxi, as a resort city, makes playing its business. Many of the plantation-type homes in the city today were built by planters who came to the coast to escape the heat and fever of their inland homes.

It is known that as early as 1840 Biloxi was favored as a summer resort although the only means of transportation along the coast at that time was by boat. During this period many New Orleans families had summer homes along the coast, a custom which still prevails.

However, it was not until the 1890's that the first winter tourists discovered this part of the Deep South.

Jefferson Davis, the South's wartime President, acquired a beautiful plantation-type home at Biloxi, facing the sunlit, blue waters of the Gulf. It was here that he wrote The Rise and Fall of the Confederacy, in the declining years of his life.

Today Beauvoir is a shrine and museum through which thousands of visitors pass each year.

The War Between the States left Biloxi comparatively unharmed. About the only reminder left today is Fort Massachusetts on Ship Island. This massive, semicircular fortress built at the west end of Ship Island, a sandy strip 12 miles from the mainland, was taken, lost, and retaken by Union forces, and the mainland was harassed by patrol boats from the fort, but no major engagements were fought near the town. Biloxians ran the blockade for food and supplies, giving basis for the anecdotes that preserve much of the war history of the town.

Probably the most notable Biloxi landmark, however, is the 100-year-old Biloxi Lighthouse, built in 1848, and situated at the water's edge on the Old Spanish Trail, which today is followed by a modern, paved highway, known as U S 90.

When Biloxi was seized by Union forces in the War Between the States, Confederate sympathizers buried the lighthouse lamps until after the war.

Today, however, they serve to guide not only the ships at sea, but the traveling public which motors along Mississippi's famed playground.

Legislative Difficulties in Oregon Under Republican Rule

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. MITCHELL. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following editorial from the Newport (Oreg.) News of March 20, 1949, containing excerpts from a recent speech by State Senator Richard L. Neuberger, of Portland, Oreg. Mr. Neuberger analyzes the shortcomings of the Oregon Legislature which he attributes in large part to nearly a century of Republican domination. Because the State legislature is a vital element of democracy working through representative government, I believe the Members will be interested in this statement.

MR. NEUBERGER'S TALK

Senator Richard L. Neuberger of Portland is one of the most controversial figures in the present session of the Oregon Legislature. On several points, both Republicans and Democrats are agreed about Mr. Neuberger. His mind is one of the most brilliant in Oregon. And he is destined to be very important in future Oregon politics. From there on opinions are divergent. The Democrats see him as a great hope for their party. The Republicans look upon him as the most dangerous threat in many years to their placid and secure position in the government of the State.

Last week Senator Neuberger made an important speech before the Exchange Club of Salem. His title was "What's Wrong with Oregon Legislature?" From the address we take some excerpts which are extremely thought-provoking:

"Sessions are too short. It is impossible to give serious and thoughtful consideration to nearly 1,000 bills and resolutions in 70 or 80 days. Many legislatures, of States smaller in area and population than Oregon, now meet for 180 days.

"A legislative reference bureau is sorely needed. Members are to reliant on lobbyists for information. There is no time for a member on his own to engage in research at the State library. Nor has the library ever been given an adequate appropriation to do extensive research for the legislature.

"The pay is incredibly low—near the bottom for the United States. For this session it barely will average $5 a day. This means the members must dip into personal savings to live at Salem. It also puts heavy pressure on the legislature to adjourn early and go home. This sounds fine—but what about bills of importance which never get out of committee? Miserable salaries force half the legislators to put their wives on the pay roll.

"The abysmal pay discourages many young men of promise from becoming candidates. How will they support their families? Thus our legislature loses its historic role as a training ground for future leaders in Government. It becomes a haven for mediocrity. The legislatures of other States produced such national figures as Roosevelt, of New York; Connally, of Texas; Aiken, of Vermont; Norris, of Nebraska; etc. However, consider the fact that comparatively few Oregon statesmen have ascended out of the legislature. McNary, Martin, Morse, Sprague—none ever served as legislators.

"The atmosphere is more that of a private club than of a public body. Attachment to the electorate seems remote and distant. This is why the legislature so often disregards the decision of the voters on such issues as old-age pensions, sales tax, conservation of resources, and educational policy.

"An example of this aloofness from the people is the fact that the house of representatives, traditionally regarded as the body closest to the voters, is far less public-spirited than the senate. Debate is shut off too soon in the house on vital questions. The senate, customarily considered the State's "house of lords," gives a bold idea better shift than does the other house.

"The legislature is so cushioned by unreality that it has deliberately violated the State constitution for almost 40 years to preserve its membership status quo. Although the basic charter of Oregon provides that each district must be of equal population, the legislature refuses to follow this mandate from the State's founders. This gives a curious sophistry to all subsequent legislative acts.

"There is a timidity about partisanship which stems from the fact that one political party has dominated the legislature for nearly a century. Out of 90 present members, 69 are Republicans and 21 are Democrats—and this is an exceptionally large number of Democrats for Oregon. Thus all rivalry is steered into personal channels. Individual ambitions flourish like weeds. This is more insidious than political partisanship. Furthermore, it submerges issues and exaggerates personalities.

"Because the legislature and the executive branch of government so long have represented the same political party, no check is exercised by the legislature, which actually is in default of its responsibilities. Only one committee out of 55, the ways and means, can swear in a witness. All other committees are dependent on hearsay evidence. The legislature has no real comprehension of how millions of dollars of taxpayers' funds are spent by the countless boards and commissions of the State government."

The Four Freedoms, an Original Poem by Distinguished Retired Chaplain of the United States Navy, James M. Hester, of Long Beach, Calif.

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. DOYLE. Mr. Speaker, one of the most distinguished citizens of my home city of Long Beach, Los Angeles County, Calif., is James M. Hester, retired chaplain of the United States Navy. He has written a poem, entitled "The Four Freedoms," and I wish to share the inspiring content with you, my colleagues, and with the other readers of the CONGRESSIONAL RECORD. Likewise, I felt it very appropriate that it be inserted in the records of the Congress of the Nation for which this distinguished Chaplain has already and does still continue to render devoted and untiring service:

THE FOUR FREEDOMS

Man shall be free to speak the truth
In every tongue and clime
And spread his views by word and press,
A right from God, sublime.

Man shall be free to worship God,
The still small Voice as guide;
Light of our fathers to the world,
A torch that shall abide.

Man shall be free from painful want,
Abundant life shall share;
And making straight the path to peace,
Good will to all declare.

Man shall be free from monstrous fear,
Belief in God his stay;
Abiding by the Golden Rule,
Right over might holds sway.
—*James M. Hester.*

May be sung to the tune Materna, as is used for "O Beautiful for Spacious Skies" (America the Beautiful).

Servicemen's Readjustment Allowances

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1949

Mr. TEAGUE. Mr. Speaker, it is likely the Congress will be considering legislation at some future date to extend the period during which servicemen's readjustment allowances may be paid. In order to present information regarding this matter to the Members of the House of Representatives, I am inserting in the RECORD an exchange of letters between Gov. G. Mennen Williams, of Michigan, and Gov. Beauford H. Jester, of Texas.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the letters referred to dated March 3, 1949, and March 26, 1949:

STATE OF MICHIGAN,
OFFICE OF THE GOVERNOR,
Lansing, March 3, 1949.

Hon. BEAUFORD H. JESTER,
Governor of Texas, Austin, Tex.

DEAR GOVERNOR JESTER: We in the State of Michigan are very much concerned about the possible failure of Congress to extend the period during which servicemen's readjustment allowances may be paid.

Almost one-third of our unemployed are veterans receiving such allowances. Our experience indicates that the veterans have not yet become completely assimilated into the labor market. He lacks seniority, and is, consequently, the first laid off and the last to return to work. Most of our veterans have not yet acquired such employment experience as to qualify fully for normal unemployment compensation benefits. As a consequence, unless servicemen's readjustment allowances are continued, these veterans and the State of Michigan will suffer considerably. Perhaps the situation in your State is somewhat similar. If so, you may be interested to know what we have done to meet the situation, and we would be interested to learn what you are doing.

After getting together all the statistical data that the unemployment compensation commission had, some of which is enclosed, a meeting was called in the Governor's office with representatives of all veterans' organizations, the unemployment compensation commission, the Michigan Veterans' Trust Fund, and the CIO veterans' department. This group, after discussing the situation, unanimously agreed that every veteran organization would contact its counterpart in every State of the Union, either directly or through the national office, suggesting they

contact their Congressman to secure the extension of these allowances. It was further agreed that I should contact the Governors of all the States to advise them of what we are doing and to ask their cooperation. Finally, we are attempting to have our legislature, by a joint resolution, memorialize Congress on this matter.

In my opinion, you will find that the extension of these allowances is a matter of great importance to the veterans in your State and to the general welfare of your people. I certainly hope that we can cooperate in this matter for our mutual interests.

Cordially yours,

G. MENNEN WILLIAMS,
Governor.

EXECUTIVE DEPARTMENT,
Austin, Tex., March 26, 1946.

Hon. G. MENNEN WILLIAMS,
Governor of Michigan, Lansing, Mich.

DEAR GOVERNOR: Recently you wrote to me concerning the possibility that Congress will fail to extend the period during which servicemen's readjustment allowances may be paid. I referred copies of your letter to our unemployment compensation and veterans agencies.

I now have comments from Mr. Harry B. Crozier, chairman of the Texas Employment Commission, and Mr. James C. Jones, Executive Director of the Veterans' Affairs Commission. I wish to pass on to you some portions of their comments.

Mr. Crozier writes, in part, as follows:

"You have invited me to give you my reactions to Governor Williams' letter and his argument for extending the period during which readjustment allowances may be paid to veterans. There is merit to what Governor Williams says, and Representative HUBER of Ohio, I understand, is the author of H. R. 1374 which proposes to extend the period to July 25, 1954, and to embrace discharges that occur during the 2-year period following.

"In addition to Governor Williams' points there is perhaps sound reason for extending the program to take care of youths who have entered the service out of high school during the time we have been stressing a defense program. These youngsters * * * have had no training in the business of making a living, and our experience with the readjustment allowance program leads us to believe that it is eminently fair that they, too, should have some relief while they are adjusting themselves.

"As regards the continuation of the program for veterans of the war period, our study of the program as it has been operated leads us to believe that such a course is much sounder than the giving of bonuses to our former servicemen. The money that has been paid out in readjustment allowances has done material good to its recipients.

"Because of the fact that the Veterans' Administration was able to utilize the unemployment compensation agencies that had already been set up in all of the States, the readjustment-allowance program has cost much less than any similar program ever costs. There are still those who believe that the readjustment-allowance program was abused and that a great proportion of our former servicemen enjoyed membership in the 52-20 Club, but cold figures dispute that charge. Our records reveal that less than 50 percent of the veterans of Texas have filed a single claim for readjustment allowances. Slightly less than 7 percent of all eligible veterans in Texas have drawn their full 52 weeks' entitlement as of February 28, 1949.

"You will recall that many of our economists were predicting dire things for the months following the close of the war and all of us had some fears of high unemployment. It is interesting now to look back and see that in Texas the maximum number of unemployed veterans filing claims in any 1-month period after demobilization was 99,153 in March 1946. In the corollary program of paying allowances to self-employed veterans the maximum of 29,647 was reached in June 1946. Month by month these veterans were returning to gainful employment, and by October 1948 the number of unemployed veterans filing claims dropped to 9,221, which is the minimum up to now, and in November 1948 the self-employed veterans filing claims dropped to 1,790, which is a minimum for them.

"It is a somewhat illuminating commentary on the present economic situation that during February of this year the number of unemployed veterans' claims jumped to 26,105, and the number of self-employed veterans' claims was up to 3,732. Of course, a part of this increase was due to seasonal conditions and the usual midwinter increase of unemployment. That fact helps to point up Governor Williams' contention that the veteran needs longer time to become fully assimilated into the labor market.

"My own personal opinion is that probably the best reason for extending the readjustment-allowance program is to tide over the youngsters who have been enlisted into the service. Their education has been interrupted and they will return to civilian life without any wage credits for unemployment compensation and without work training, to face a pretty dismal outlook. I should think it would be a contribution to our economy of tomorrow to provide some educational and rehabilitation programs for these youngsters."

Mr. Jones also quotes some interesting figures concerning veterans' employment in Texas, and then adds:

"The above figures show that the majority of the Texas veterans do not want a dole and will not take advantage of this entitlement except in extreme emergencies. However, these figures do indicate that unemployment in Texas is definitely increasing and although Texas is not an industrial State as compared to some of the Northern and Eastern States and our unemployment is not as great at this time as theirs must be, we may very easily be faced with a definite and serious unemployment problem in the near future.

"We have always believed that the termination of the readjustment allowance section of the GI bill of rights would be detrimental to the future welfare of those veterans who, through their own initiative or good fortune, received jobs whereby they were able to provide for themselves and their families without resorting to their entitlement under this particular provision.

"We believe further that this particular section of the GI bill of rights should become permanent, thus forming an annuity to all veterans of World War II so as to provide a permanent protection to those men who will never take advantage of its opportunity unless forced to do so by extreme necessity. * * *"

I concur in the findings of these experts in the field of veterans' readjustment and will see to it that the Texas delegation in Congress has an opportunity to study their comments.

Hoping that I can be of further assistance, and thanking you for your own interest in this program, I am

Very sincerely yours,

BEAUFORD H. JESTER.

When You Pay the Piper

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. CANNON. Mr. Speaker, under leave to extend my remarks, I include further excerpts from letters received by the Committee on Appropriations on Federal expenditures:

KINZERS, PA.

It is good business, for an individual or the Government, to balance the budget and try to remain solvent. The Government debt is too large and should be reduced instead of more deficit financing.

Reducing appropriation for the different divisions of the Federal Government is one fine way to start. A reduction of the amount of money in circulation which would come from a reduction in Federal spending and better management of Government funds is the thing that is best for the country in my opinion.

Taxes are high enough considering the conditions in this country today and it is sound economics to have a balanced budget. Income of the Government has sufficient places to be spent without overappropriations to the separate branches of the Government.

JOHN J. HESS.

HARTLAND, WIS.

Hon. CLARENCE CANNON,
House Office Building,
Washington, D. C.

DEAR SIR: We would like to take this opportunity to congratulate you for taking up the issue of Government expenditures which are allocated for the fiscal year of 1950, beginning July 1, for socialistic and experimental projects.

If our Government is to continue pouring out money, there is no doubt that this Nation will suffer extensively and perhaps to the point of economical chaos.

We believe that our only salvation is in reducing appropriations for the Federal Government.

We do not want increased taxation or the inevitable bread lines to follow.

HARTLAND PLASTICS, INC.

DES MOINES, IOWA.

With a very apparent recession in business, the budgeting of Government expenses should be on the basis of where the money is coming from to meet the budget. If the earning power of individuals and corporations falls below the last 2 or 3 years, then obviously the revenue which our Government will receive from taxation will be less.

I am enclosing a clipping taken from a recent issue of our local newspaper in which you will notice that Canada is considering cutting taxes 32 percent. This merely indicates that other countries realize the importance of reducing governmental expenditures.

Yours very truly,

C. E. ERICKSON CO., INC.

JAMESTOWN, N. Y.

There is not enough assessed property in United States to cover its bed. A deuce of a situation for the greatest country that God ever let the sun shine on. Many in Washington, and Albany, and other State capitals have been running the country on the theory that there would always be a magician that could pull a white rabbit out of

a plug hat. There are no more white rabbits or plug hats.

WARREN ROSS LUMBER CO.

AURORA, ILL.

We have simply got to have a reduction in spending by the various bureaus in Washington.

Even after making the cut of over $80,000,000 for the Department of the Interior, the reduced total is still $126,000,000 more than was actually spent during the past fiscal year. That brings up the point of why can't this appropriation be cut an additional $126,000,000,000. It would seem as if we were facing a time when there should be a decrease in expenditure and in personnel in not only this Department but others as well.

OATMAN BROS., INC.

MILAN, MICH.

We are confident that we speak the language of all industrial concerns in condemning the extravagant spending that has been so consistently on the increase the past few years. Our Nation-wide economy is in serious jeopardy and it will require convictions and thinking to force the issue and effect the reduction in appropriations that threaten the national economy.

THE AMERICAN BOILER & FOUNDRY CO.

SIOUX CITY, IOWA.

It has been a long time since anyone at Washington has thought of Government spending realistically.

THOS. KEMIS.

MIDDLESBORO, KY.

We are disturbed over the continued deficit spending of our Government. The newspapers print in very small type on the inside page the deficit of approximately one billion dollars at present which may be cut to a half-billion by the first of July. We all know that the period of high profits and high income tax returns has passed; and if the Government does not curtail sharply its spending then next year it will be a much more serious deficit which means higher taxes. History has repeatedly confirmed the failure of any government to survive deficit spending and high taxes.

This leads to one of two things: a cancellation of all Government debt or a cancellation of all private liberties. We hope neither of these happen, but we do believe that unless the leaders in Government, business, and labor do some sound thinking and prompt action, it may be too late.

REAMS LUMBER CO.

BURBANK, CALIF.

The Federal Government has been spending far too much unnecessarily what with the present recession or minor depression, whatever it may be termed, that business is now in the midst of.

I trust that all unnecessary expenditures can be eliminated.

GENERAL WATER HEATER CORP.

INDIANOLA, MISS.

By the time I pay my living expenses and taxes I do not have anything left for expansion or making improvements in my own business. If we can reduce Federal expenditures and start reducing our national debt and then gradually reduce taxes I think we will see more prosperity in our country. All these schemes of giving somebody something for nothing are not in keeping with the way this country was developed.

I know that it is a tough job when people all over the country want something for their particular territory or their friends.

W. W. GRESHAM.

OXFORD, MICH.

We are business men the same as you Mr. CANNON and realize that this Government of ours occupies the same position as a sound business which cannot operate at deficits and still exist. The faith of the people which has held up and permitted such a staggering debt that we now owe is beginning to waiver and falter. This faith must be restored.

THE SMITH SILO CO.

TYLER, TEX.

I want to commend the business approach upon the subject of our national budget.

Our cities, counties, and States are burdened with debt, but in the face of crisis their new budgets call for many millions. Truly the fate of our economy rests with your committee.

EAST TEXAS AUTO SUPPLY CO.

ROCHESTER, N. Y.

I would urge that all items for socialistic and experimental purposes be eliminated from the Budget and that all of the necessary expenditures be cut as much as possible. You will find most of us Americans right back of such an effort.

L. A. RATHBUN.

NEW YORK, N. Y.

It seems that many are intent upon making us all very rich, with everybody getting more than a billion dollars a week, and with bread selling at $100,000,000 a loaf.

Many have felt, as indeed I did for some time, that our income tax would make an all-out inflation impossible. My humble opinion is now that this confidence is not warranted. Likewise, price controls in peacetime would only accelerate the inflation.

AMERICAN ENVELOPE MANUFACTURING CO.

LOS ANGELES, CALIF.

I am heartily in favor of drastic cuts in appropriations, as are all the people of this country, with the exception of the special groups who are so blind that they are willing to sacrifice the future of our country for their immediate gain.

If more of our legislators took this viewpoint the future would look much rosier to the public in general.

NORMAN S. SMITH.

MEXICO, MO.

I feel that the spiralling cost of Government is as serious a threat to our country's future as is the rapid depletion of our natural resources.

A. P. GREEN FIRE BRICK CO.

KIRKWOOD, MO.

In 1932 the cost of Government was around $5,000,000,000 per year. In 1949 it will be around $42,000,000,000.

There are 72,000,000 insurance-policy holders who have seen their insurance dollar drop from 100 cents in 1933 to 38 cents in 1948. These people are thrifty, hard-working, and the backbone of the Nation. They are not happy.

E. E. SCHOLER.

KANSAS CITY, MO.

It is a fact that a family which cannot live within its income in normal times is headed for trouble. If during lush times when the family income is above normal this family steps its scale of living up to where it absorbs the entire income, the family is in trouble when that income declines. It finds itself unable to adjust its scale of living downward and begins to get deeper and deeper into debt. The wise thing for this family to do when the family income is inflated is to save that part which is above normal or else apply it to the reduction of outstanding debts, if any.

The above facts are true of a city, state, or nation, as well as a family. Communities of people appear to be just large families and behave in about the same way.

We, the people of the United States, in our national affairs have followed the usual pattern. During the war we necessarily had to raise huge sums of money and spend them to achieve victory. Since the end of hostilities we have found ourselves with the same huge income and have looked around for other places to spend the money. Many of the things for which we are spending the money may be desirable, but they certainly are not essential. We cannot afford them while we are nearly $300,000,000,000 in debt. It appears to be time for us as a Nation to get back to governmental essentials and apply any surplus income we have to reduce our national debt.

The way to keep governmental departments from spending money on unnecessary activities is to refuse to appropriate the money.

J. C. SKAGGS.

ST. LOUIS, MO.

It seems that today the good, old-fashioned American idea of thrift—of living within your income—has been discarded. Such a course can only lead us to a bankrupt socialism.

OAKLEIGH R. FRENCH AND ASSOCIATES.

KANSAS CITY, MO.

I feel that we should immediately curtail our huge Government spending, get the budget balanced and make every effort to maintain our present prosperity.

GEORGE H. SWAIM.

ST. LOUIS, MO.

The amount of money that is being expended by the Government is staggering. The Federal Government has over 1,800 departments, agencies, and bureaus. We all know that many of these departments and agencies are not operated as efficiently as they could be. If it were a business corporation there would be a constant check for leaks and losses because the corporation has to make up for its inefficient operations, but the Federal Government meets its inefficient operations by increasing the tax schedule.

LEE-ROWAN CO.

KANSAS CITY, MO.

One of the easiest ways for communistic ideas to seep into our Government is to have our Government bankrupt as so many of the European countries are and I can see Stalin and his friends like "wolves waiting for the kill."

It is up to our Congress to keep this from happening.

H. A. ROES.

FREDERICKTOWN, MO.

If drastic cuts are made in Federal Government expenditures along with a streamlining of Government as suggested by the Hoover Commission a renewed confidence will eventuate on the part of this country in its Government to say nothing of the large amount of unnecessary spending which will be saved resulting in some relief to the taxpayers or a reduction in our national debt.

After all our Federal Government conducts the biggest business in the United States. If private business was handled in the same unbusiness-like way as a great deal of Government business has and is being conducted, they would soon go broke. Surely the fundamental, sound principle of conducting any business should be used by the biggest business in the country.

FREDERICKTOWN LEAD CO.

ST. LOUIS, MO.

It is my opinion that continued spending by the Government beyond that which is absolutely necessary sooner or later will not only bankrupt the country but will bring on unbearable conditions. This thing of Congress appropriating money just because certain pressure groups demand it, regardless of its detrimental effect upon the country, should be stopped.

CROWN MANUFACTURING CO.

KANSAS CITY, MO.

Drastically reducing the expenditures of our Federal Government will go a long way toward getting this country back on its feet and eliminate the possibility of a socialistic state which apparently we are gradually heading for and sooner than most people seem to realize.

NOURSE OIL CO.

KANSAS CITY, KANS.

A great majority of the people in our country today are honestly, way down in their hearts, worried and do agree that we can't spend more than $40,000,000,000 a year and survive as a free country.

As I see it the material curtailing of our Government spending is the first and most important thing to get done for the well-being of the whole people.

ROBERT D. KISSICK.

KANSAS CITY, MO.

It is "up to us to do something about" the terrific and largely unnecessary expenditures for Federal Government. Goodness knows there are enough absolutely necessary expenses, and at best the costs must be high, but it is evident to every taxpayer that we have about reached the limit and must start in the other direction.

WALTER F. PAGE & CO.

JOPLIN, MO.

As one who has witnessed the increase in our Federal budget from $1,000,000,000 to something over $41,000,000,000 per year your statement really makes sense. I realize that economy may not be a popular subject in Washington these days, but I can tell you for sure that it is very popular with the many, many taxpayers.

GATEWAY CREAMERY CO.

RICHMOND, VA.

The one paramount thing that we need for a healthy state of our Nation, is for the Government to decrease its "take" from the taxpayers, and to get this overgrown bureaucracy off our backs, so that we can make some progress in getting ahead.

Recently—just to show you the way the wind is blowing—one of these bureaucratic boys from Washington came down here and made a speech, in which he referred to our national debt as being "only a quarter of a trillion dollars." You see, they have left the billions behind now, as old-time stuff, and are going after the trillions.

Let's all of us unite to stop them by removing their feed bag.

BINSWANGER & CO.

CAMDEN, N. J.

We want economy in Government. It is absurd the way the administration has been wasting money that could go into regular channels of business.

ELMER G. VAN NAME,
Attorney and Counselor at Law.

OTTUMWA, IOWA.

It would seem to me that the time has come to call a halt to the thoughtless spending and extravagance that is now being done by our Government agencies.

I heartily approve of the Hoover Commission and their report in most every detail and while I believe that the report is not going to be given the consideration that it should, it is such men as you that can do the most good in helping to have recommendations of that character upheld.

J. W. EDGERLY & CO., INC.

WHITE PLAINS, N. Y.

Unless the appropriations are drastically reduced no improvement can result. The various bureaus will not be reorganized and smaller appropriations asked by them and for them. The reform can be brought about only if you and your committee reduce the appropriations so that the bureaus will be forced to reduce their spending and reorganize for more efficient operation.

NORMAN ARMSTRONG, INC.,
Arborists.

ATLANTA, GA.

Economy is the watchword of every business today. There is probably not a single enterprise that isn't taking positive strides toward greater efficiency and economy.

But as we work toward this goal, the greatest business in the world, our Government, is marching backward, with greater inefficiencies, greater programs and projects, greater appropriations and expenditures.

DOWLING TEXTILE CO.

SIOUX FALLS, S. DAK.

It seems that as long as the bureaucratic heads can obtain money by heavier taxes that they will keep on adding to their pay roll and attempt to raise taxes more and more instead of attempting to reduce taxes and take a load off the American people.

NELSON LABORATORIES.

WAPAKONETA, OHIO.

I am sure I am not alone when I express a feeling of deep concern regarding the apparent trend in the Congress to pass new laws which will require additional large expenditures of tax money.

CLARENCE HENRY GOEKE.

MANITOWOC, WIS.

It is without question the ripe and high time to begin reducing our Federal expenditures if we do not wish to continue on our road to Federal bankruptcy. People must commence to realize that the Federal Government is not a profit-producing organization but rather a spending body. It is impossible to receive anything from any level of our Government whether it be local, State, or National without someone paying it to the respective body.

This can be clearly experienced if one does but so much as to contact businesses throughout the country. The surpluses which they should have been permitted to set up as reserves for times when extra investments for inventories, construction, and development is required was paid in excessive taxes, with the result that they now find themselves obliged to negotiate loans with their bank connections or to operate on the verge of bankruptcy.

SMALLEY MFG. CO.

SUPERIOR, WIS.

It is a well-known fact that many of the projects which are financed by Government appropriations are pet projects of those pressure groups which are able to make themselves heard by the "right" people. Of course we all know that the ultimate source of the money which is used to carry out these projects is the taxpayer's pocket. I am definitely interested in seeing a reduction of the appropriations which have been, and are being made, to further the development of non-tax-paying enterprises. To eliminate this drain on public tax funds would do away with one of the projects from which no return is received.

SUPERIOR TENT & AWNING CO.

SHEBOYGAN, WIS.

Throughout this entire United States there are hundreds of thousands of us men and women who are working, and working very, very hard, to raise the tax money which is pouring into the Government coffers today. We, the people, are entrusting you men in Washington with the guardianship of these funds.

We are working hard to provide money to make democracy work for us as we have known it during these past decades. We do not want to have this money wasted in such a manner that some day socialism rather than democracy will rule this wonderful land of ours. It certainly would do a man's heart good to see some of you fellows in Congress get in there and really fight and let some of these boneheads who insist upon throwing our money away know what is fundamental and right insofar as frivolous spending is concerned.

EBENREITER LUMBER CO.

Veterans' Hospitals

EXTENSION OF REMARKS
OF
HON. ROBERT L. RAMSAY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. RAMSAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Charleston Gazette, dated March 22, 1949. This editorial discussed the construction program by the Government of veterans' hospitals.

VETERANS' HOSPITALS

The goofy way the Government does some things convinces every citizen that reorganization is not only highly desirable but absolutely necessary.

Recently it was discovered that 24 veterans' hospitals with a total of 16,000-bed capacity were due to be constructed while there was absolutely no need for them. President Truman and Administrator Carl Gray, of the Veterans' Administration, announced that the construction program would be canceled.

While this program was going ahead, there were a number of Army hospitals over the country for which there was absolutely no need and they were declared surplus and offered for sale to local governments, some of them, it was reported, for only $1. Also there were others in partial operation only because it was impossible to get doctors, nurses, and other attendants to operate them at full capacity.

The sad part of this story is the fact that all over the country there is an acute scarcity of civilian hospital facilities. In most places, notably Charleston, existing hospitals are crowded far above rated capacity. Veterans were getting hospitals they did not need or want while civilians were dying for lack of hospital accommodations. The millions of dollars wasted in building unnecessary hospitals for the veterans could have done inestimable good if spent through State, county, and municipal governments for civilian hospital extension.

Who was responsible for this foolish condition? No one and everyone, it seems. The principal fault lay in the fact that the United States Government's right hand does not always know what its left hand is doing. What private business would ever tolerate such a system?

Congress never has adopted any clear policy about free hospital service for veterans. It seems to have been a matter that was

loaded with trouble, and no Senator or Representative wants to get the veterans down on him.

No civilian begrudges the veterans hospitalization, but there are worthy and unworthy cases. Free hospitalization ought to be for veterans who are financially unable to get the care otherwise. But those who can pay ought to be compelled to do so. It is nice to get something for nothing from the Government, but no right-minded veteran wants to chisel off the Government, especially when he stops to think that he is one of the taxpayers who have to foot the cost.

One would think that there would be no objection anywhere to dropping the 24 veterans' hospitals construction when it was explained that they were absolutely unnecessary. But there were objections—loud and mighty howls. They came from businessmen in whose sections the hospitals were projected. These businessmen and some misguided veterans put the pressure on Congress to get the stop order rescinded and the Congressmen put up a howl, of course only to satisfy their constituents.

Anyone who has ever had any connection with the United States Government has seen waste going on all about him. The policy of politicians to get Government jobs for their constituents has so overloaded the pay rolls that workers often are standing on one another's toes. Because often there is not enough work to go around, duplication of effort has become commonplace. And often millions of dollars are thrown away on projects for which there is no need whatever, simply because some Congressman wants to show the folks back home that he is doing something for them.

Congress is getting a particularly intelligent blueprint for the reorganization of the Government business and the cutting out of waste. But it can be seen that its application would take some of the political power from the politicians. That is why we despair that the report will ever get beyond the "received and filed" stage.

Endorsement of Rankin's Record on Un-American Activities Committee

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mr. RANKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication from the American Legion, Department of Wisconsin:

THE AMERICAN LEGION,
DEPARTMENT OF WISCONSIN.

To JOHN E. RANKIN, *Mississippi, Member, Committee on Un-American Activities:*

By resolution adopted by the American Legion, Department of Wisconsin, in convention assembled at Milwaukee, Wis., this citation is authorized in recognition of your courageous leadership as a member of the House of Representatives Committee on Un-American Activities.

Your militant and fearless leadership in conducting investigations into un-American activities has disclosed startling subversion injurious to our form of government.

These disclosures have alerted many Americans to the danger of subversive groups and have awakened in the hearts of many a realization of the dangers confronting America.

Your contribution as a member of this committee has been of inestimable value to the United States of America for which the American Legion, Department of Wisconsin, commends you highly.

Dated this 1st day of March 1949.

JOHN F. O'MELIA,
Department Commander, the American Legion, Department of Wisconsin.

I Am an American Day

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, several days ago I had the pleasure of meeting a remarkable lady, Mrs. Paul d'Otrenge Seghers, of Sunnyhill Farm, Huntington, Long Island. Mrs. Seghers, a foreign-born American, organized the now famous I Am an American Day, and established the Helios Foundation.

Having spent her early life under oppressive regimes in Europe, she came to America with a great appreciation of the liberties and freedom which so many Americans unfortunately take for granted. She has made a magnificent contribution to our great country by the establishment of I Am an American Day, which is now observed in every community in the land.

In connection with my remarks, I am enclosing herewith an article from the famous publication, Editor and Publisher, which appeared sometime ago:

SHOP TALK AT THIRTY

(By Robert U. Brown)

Back in 1939, William Randolph Hearst launched through his many newspapers the "I Am an American Day" celebrations which have since grown into Nation-wide observaces through a 1940 act of Congress. In recording the efforts of the Hearst newspapers to popularize this event, Editor and Publisher reported July 1, 1944:

"In 1939, in the city of Wauwatosa, and county of Manitowoc, Wis., a 'citizenship day' was held in April at which 350 young folk born in 1918, took an oath of citizenship before the Chief Justice of the State in token of their twenty-first birthdays qualifying them to vote.

"Not content with supporting the local ceremonial in his Milwaukee newspapers and reporting it elsewhere, Mr. Hearst editorially advocated on June 4 that it be emulated by all American cities, and the publisher instructed his numerous papers to put their organizations and columns behind the idea.

"Accordingly, 'citizenship day' exercises took place June 25, 1939, in Hearst newspaper cities."

No one can detract from the credit due Mr. Hearst and his papers for putting the idea across.

However, it develops that others had similar ideas even before 1939.

In March 1938, Mrs. Paul d'Otrenge Seghers, of Sunnyhill Farm, Huntington, Long Island, organized the Helios Foundation. She is a native of Poland who had spent her childhood in oppression there and in Russia until the revolution. Aims of the foundation are to propagate and inculcate knowledge, understanding and love of America among Americans, in particular among those of foreign birth.

At the first foundation meeting it was decided to set 1 day a year apart for all Americans to rededicate themselves to the ideals of America and as far as we can determine the first "I Am an American Day" was held at Sunnyhill Farm, May 31, 1938.

At the tenth anniversary celebration last year, a stone memorial was erected on the spot of the first observation.

Senator Arthur Capper is now honorary chairman of the Helios Foundation. He succeeded Maurice Maeterlinck when he returned to Europe after the war.

Mrs. Seghers is proud of the idea she had 11 years ago but she pays tribute to Mr. Hearst and his newspapers "for their magnificent piece of work in popularizing the event."

"I think it would be most unfortunate to minimize the credit Mr. Hearst deserves," she told us.

We think so, too. We report it merely to give credit for a grand idea to a lady in Long Island, to the Wisconsin community for having a similar idea (perhaps others had the idea, also) and to the Hearst papers for popularizing an event which without their attention might still be local observances.

Dr. John J. Sippy: a Pioneer in Public Health

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mr. JOHNSON. Mr. Speaker, on March 1, 1949, John J. Sippy, director of the San Joaquin local health district, passed to the Great Beyond.

Dr. Sippy was an unique character. In the early twenties, he came to Stockton, Calif., as the director of the San Joaquin local health district. This district had been organized pursuant to a California statute. The health district covered the entire county and took care of all public health activities within the county. From a purely administrative viewpoint, it was a remarkable type of organization. It eliminated the duplication of public health services by the cities and the county. It carried out one administrative public health policy for the entire county including each of the municipal corporations. It eliminated epidemics and made the people conscious of and informed on health problems.

The health district, however, was successful primarily because of the administrative genius of its director, John J. Sippy. He was the ideal administrator for such a project. He was a physician and surgeon. He knew how to administer the law and be firm without being arbitrary or oppressive. He knew how to clean up the tubercular herds among the dairy operators in the county without getting into interminable conflict. He knew how to make restaurants sanitary in the interest of public health without causing a revolution. He was a real administrator who had the knack of selecting good inspectors, nurses, and so forth, and training them to properly handle the public whose activities they were required to supervise and to do it in

such a way that they felt by making necessary changes in the interest of public health they were making a public contribution. He knew how to insure the people of his district against epidemics.

His work received national recognition. Scarcely a month passed during his incumbency in the office but what someone from various parts of the country and even from foreign countries came to inspect the district and learn from him how it was successfully operated. Some very complimentary things were said about his work. He could separate the flattery from the truth, but with it all, he never became afflicted with the phobia of greatness. He was modest. He was kindly. He was cooperative and he was devoted to his job. He was offered jobs with larger pay and perhaps greater responsibilities. However, he had become endeared to the community in which he pioneered in the field of public health, and I think he took great satisfaction in remaining there and seeing his plans and efforts flower into success and his usefulness and effectiveness increase from year to year.

Dr. Sippy was elected president of the League of California Cities, an honor seldom accorded one in administrative health work, but usually accorded to mayors, city managers, and so forth. This was a tribute to his genius as an administrator.

Under leave to extend my remarks, I include a news story regarding Dr. Sippy and also an editorial, both from the Stockton Record of Stockton, Calif.:

[From the Stockton (Calif.) Record of March 16, 1949]

DR. JOHN SIPPY SUCCUMBS TO LONG ILLNESS

Dr. John J. Sippy, 69, director of the San Joaquin local health district for 26 years and who retired from that post March 1, died in St. Joseph's Hospital last night at 11:10 o'clock.

Dr. Sippy had been ill for several months and at the time of his request for retirement was confined to his home at 19 East Pine.

Death was due to a heart condition brought on last year by an attack of virus pneumonia.

For the past 2 weeks Dr. Sippy has been in an oxygen tent.

PUBLIC HEALTH EXPERT

Generally recognized as an authority on executive and administrative matters connected with public health, Dr. Sippy was appointed director of the local health district in February 1923.

At that time, the health district idea was a new conception in health protection and he pioneered in this field.

Dr. Sippy came from a family of doctors. His father before him was a country doctor and Dr. Sippy was reared in Garden Plain, Kans. He graduated from St. Louis College of Physicians and Surgeons.

After his graduation he practiced medicine in Kansas several years.

Prior to his coming here Dr. Sippy was employed by the Montana Public Health Service.

VETERAN CAMPAIGNER

His tenure of office as director was marked by battles for better living conditions. He ran campaigns to raise funds so that operations could be performed on crippled children; he fought for a fresh air camp at Silver Lake and which is now the Stockton Municipal Camp, and he helped put over the Bret Harte Sanitarium for tuberculosis prevention at Murphy.

With these fights, the District's fame spread and doctors from all over the world have come here to study Dr. Sippy's methods.

Dr. Sippy is survived by his widow, Mrs. Grace Sippy, and two sisters—Mrs. Edna Brown, Topeka, Kans., and Mrs. Grove Bellinger, Wellington, Kans.

At Dr. Sippy's request, flowers are asked to be omitted. In memory of Dr. Sippy the San Joaquin local health district office at 130 S. American will be closed all day tomorrow as will branch offices in Lodi, Tracy, and Manteca, according to Dr. E. M. Bingham, who succeeded Dr. Sippy as director of the health district.

[From the Stockton (Calif.) Record of March 17, 1949]

JOHN J. SIPPY—PIONEER IN PUBLIC HEALTH

Dr. John J. Sippy needs no biographer or editorial writer to ennoble after death the life which was so nobly lived. Not only did he live the Hippocratic oath of his profession, but also he exemplified the best qualities of public service expected of public officials.

World-wide personal fame came to the little physician who began and carried to success the experiment in public health which is the San Joaquin local health district. Yet Dr. Sippy never used acclaim for personal advantage. From his standpoint, the glory belonged as much to his associates in the health office and to the citizens who supported and benefited from the unique organizational set-up as to himself.

Thrice over was Dr. Sippy a pioneer in a field which still offers great opportunities in medical service, if not in remuneration. Back in a rough-and-ready, developing Kansas he was the foe of superstition, entrenched selfishness, and satisfaction with things as they were. Later, in Montana, he was on the front line of the dangerous fight against Rocky Mountain spotted fever—a fight in which several associates forfeited their lives; and in California he was the untiring instrument of enlightened legislation and epidemiological methods, many of which he originated or inspired.

Throughout his professional successes and despite the fame which knocked at the door of his office, Dr. Sippy remained the country doctor, humble and approachable, a man who wore easily a bedside sympathy and gentleness, whether at a desk or investigating a malodorous septic tank.

Never was Dr. Sippy adequately recompensed for his services on the basis of potential income from private practice or from public office elsewhere. Indeed, he refused on at least one occasion an offer of additional pay.

Yet in death as well as in life, Dr. Sippy might well be envied by many another man vastly more successful in terms of this world's goods, for Dr. Sippy's reward is reckoned in terms of deep and undying admiration, appreciation, and affection from the community which he served so well.

Resolutions of Wisconsin REA Convention

EXTENSION OF REMARKS

OF

HON. MERLIN HULL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. HULL. Mr. Speaker, on March 24, 1949, the Wisconsin Electric Cooperative held its annual meeting at Madison, Wis., and adopted several significant resolutions relating to the organization's position with regard to Federal policy. The Wisconsin Electric Cooperative is a Statewide association of REA cooperatives representing 65,000 members of rural electric cooperatives in the State of Wisconsin. The adopted resolutions are as follows:

RESOLUTION 1—LOAN FUNDS FOR REA

Almost one-third of the Nation's farmers are still without central station electric service, and there remains thousands of Wisconsin farmers without electricity in addition to more thousands of other rural residences and establishments.

Of those farmers and other members of rural electric cooperatives now receiving service, the great majority will require expanded facilities for generation, transmission, and distribution of electric energy to adequately serve their rapidly increasing needs.

The orderly and economical development of rural electric cooperative systems requires long-range planning in order to save the waste of "too little" or "too late" in the way of preparing to meet coming needs.

Delivery of materials is still slow, requiring that orders be placed well in advance of anticipated use. Rural electric cooperatives must be able to back up their orders with loan authorizations from REA at the time of placement of the order, even though the actual expenditure of the purchase price will not be made until delivery later: Therefore be it

Resolved, That we urge the Congress to authorize loan funds for the rural-electrification program sufficient to meet these needs adequately and fully, in the amount of not less than $450,000,000 for the fiscal year 1950.

RESOLUTION 2—ACQUISITION OF EXISTING FACILITIES

In many instances complete electric-service coverage for an area in which a rural electric cooperative is operating cannot be accomplished economically because of division of the territory with other power systems which are unwilling or unable to extend service on a complete area-coverage basis. Acquisition of these existing facilities by the cooperative would frequently permit it to complete coverage of the entire area, and in many instances would result in improved and lower-cost service to all consumers in the area: Therefore be it

Resolved, That the Congress be urged to amend the Rural Electrification Act to broaden the powers of the Administrator to make loans for the acquisition of existing facilities so that he would also be authorized to make loans in any case in which the following circumstances are found to exist:

(1) That the security of existing loans made by the Administrator would not be impaired;

(2) That the borrower will be benefited, either financially or by improved operating conditions;

(3) That the service to the acquired system will not be impaired;

(4) That the existing facilities are so located as to permit effective integration of the system to be acquired;

(5) That the sale is voluntary on the part of the seller.

RESOLUTION 3—EXTENDED REA LOAN AMORTIZATION PERIOD

Be it resolved, That in order to permit the extension of the rural electrification program to the more thinly populated areas of the country and in order to permit REA-financed systems to generate and transmit more power where it is found to be advisable, we urge the Congress to authorize the extension of the amortization period of REA loans from 35 to 50 years, and in the case of loans for hydroelectric facilities, to a longer period cor-

responding to the reasonable productive life of the property.

RESOLUTION 4—RIVER AND VALLEY DEVELOPMENT

A Nation-wide power-development program is necessary at once to meet present shortages and increasing demand: Therefore be it

Resolved, That we support early, unified development of all of America's river basins for the fullest possible production of economical hydroelectric power consistent with other programs.

RESOLUTION 5—ST. LAWRENCE AND MISSOURI RIVER PROJECTS

The St. Lawrence seaway and power project is of vital necessity to the Nation from the standpoint of power needs, transportation, national defense, and economic development of the Great Lakes Basin. Its specific value to our members relates particularly to the increased income advantages that it would provide by making ocean-going transportation available at Wisconsin ports for our products.

The proposed Missouri Valley Authority project will particularly benefit rural electric cooperatives and residents in the area immediately to our west, but by reducing the electric power deficiency in the whole region will directly benefit our cooperative systems. Moreover, the completion of this project and the St. Lawrence power project will provide an opportunity for interconnections between power systems to establish an East-West power grid extending over a distance which would afford substantial advantages to people in areas outside of the immediate areas affected. East-West interconnections of such magnitude would permit substantial advantages to the participating systems by allowing power transfers from East to West and West to East to meet peak loads, the occurrence of which tends to follow the course of the sun. These peak loads at the easternmost extreme of this possible interconnected power grid occur 3 to 4 hours earlier in actual time than they do at the western end and at the eastern end have terminated well before they begin further west: Therefore be it

Resolved, That we particularly urge upon our Representatives and Senators in Congress that they vigorously support in every possible way the St. Lawrence seaway and power project, and the Missouri Valley Authority project, and that these projects be quickly approved by Congress and promptly gotten underway.

RESOLUTION 6—RURAL TELEPHONE SERVICE

Only about one-half of Wisconsin's farmers have telephone service of any kind at the present time. Many of the half who have telephones do not have adequate telephone service. There are few people whose need, from the standpoints of safety to property and health, and of convenience to business operations and home life, is greater than that of rural people. In some areas of the State, particularly in the North, there is practically no rural telephone service at all: Therefore be it

Resolved, That we urge Congress to speedily enact legislation to enable REA to lend funds to finance the extension and improvement of rural telephone service, and appropriate sufficient funds for this purpose to permit all those who wish to avail themselves of this opportunity to do so providing it can be done with reasonable assurance of self-liquidation of any loans made for this purpose; be it further

Resolved, That we support the development by cooperatives of rural telephone service to the fullest practical extent, whether by existing rural electric cooperatives or by new or existing cooperatives operating primarily or exclusively in the field of telephone service, in order to assure rural people of the advantage of democratic direction and control and nonprofit service; be it further

Resolved, That we direct the board of directors of Wisconsin Electric Cooperative to investigate the possibilities of assisting rural telephone cooperatives by extending to them the service facilities of WEC on a nonprofit, service-at-cost basis, and of developing any new services that would be of practical value to such rural telephone cooperatives, and of extending to such rural telephone cooperatives the opportunity to become members of Wisconsin Electric Cooperative; be it further

Resolved, That if practical means can be found to extend our services to such rural telephone cooperatives, and to admit them to full membership in Wisconsin Electric Cooperative, the board of directors of Wisconsin Electric Cooperative is hereby instructed to take all practical steps necessary to acomplish those purposes.

RESOLUTION 7—FPC SURVEY OF POTENTIAL HYDRO POWER

Be it resolved, That we urge the Federal Power Commission to undertake and complete without unnecessary delay a survey of undeveloped hydroelectric power potentialities in the region which includes Wisconsin.

RESOLUTION 8—FARM ELECTRIFICATION RESEARCH

Electricity furnishes a new type of energy to agriculture, the full potentialities of which are not as yet scarcely realized, much less developed. It is known that there are many potential productive farm applications of electricity as a source of light, heat and power. Additional research is urgently needed to determine the possibilities of using electricity to reduce labor, improve productive efficiencies, minimize plant and animal losses due to insect pests and disease, improve facilities for processing, handling, and marketing of farm products, and to meet the electrical needs of the farm household. Moreover, there is a great need for the establishment of a research program for the study and investigation of the technical problems of rural power system design, construction, and operation; the evaluation of consumer and power system equipment performance; the development and study of new and improved power system, farm and home equipment; the study of power system loads; and related research activities, in order to insure that rural power consumers will be provided with reliable and economical electric service and be able to utilize it fully and efficiently: Therefore be it

Resolved, That we request Congress to make available to the Farm Electrification Division of the Agricultural Research Administration and to the Rural Electrification Administration the sum of not less than $500,000 per year for research and study on the applications of electricity to broad agricultural usage, and on the technical problems of rural power systems; be it further

Resolved, That we request that the University of Wisconsin expand and intensify its research activities into the fields of practical farm and home applications of electric power and evaluation of equipment performance, and that this be done strictly on a tax-supported basis without special grants from persons or groups who may have interests opposing or conflicting with those of consumers of electricity.

RESOLUTION 15—FULL PARITY OF FARM INCOME

Throughout history, agriculture has been the first section of the economy to suffer from disastrous deflationary declines in economic activity and price levels. Following the First World War, farmers suffered a depression lasting throughout most of the twenties and up to the initiation and establishment of a comprehensive Federal farm program. At the present time, farm-purchasing power is again declining at a substantially faster rate than farm costs. A continued decline in the relative income levels of farmers would be disastrous in terms of the human welfare of rural people, and would be equally disastrous to the economic stability, or even the survival, of our rural electric cooperatives as business operations: Therefore be it

Resolved, That we earnestly support measures to establish a Federal farm program which will insure full parity of income to family-type farmers in relation to other groups in society.

RESOLUTION 18—GENERATION AND TRANSMISSION LOANS

According to studies of the Federal Power Commission, all regions of the United States are short of generating capacity to meet the needs of expanding demands for electric power. In Wisconsin almost every single rural electric cooperative has felt the pinch of inadequate power supply, and during the past year we have witnessed brown-outs and threatened curtailment of electric service due to inadequate generating capacity throughout the State. The amount of reserve power-production capacity in the United States has decreased from 52 percent in 1925 to less than 5 percent in 1948. It is generally recognized in the electric-power industry that 15 percent is the minimum reserve for safe operation. Although commercial utility companies are now taking some steps to increase their power capacity, past experience has demonstrated that the statements of the leaders of these companies on the question of power production capacity have all too frequently failed to be in accord with the actual needs of the public for power production. The present dangerous shortage of power was frequently and categorically denied by these same leaders of commercial power companies, who ridiculed those who reported the inadequacy of power-generation capacity and predicted impairment of service to consumers. If rural electric consumers are to be safeguarded with respect to their future supply of electric power, it is imperative that they look more and more to their own facilities for furnishing that power. Up to the present time Rural Electrification Administration has followed a policy of making loans for generation and transmission facilities in only limited cases, with the result that only about 6 percent of all loans made by the Administration have been to finance generation and transmission facilities. If REA cooperatives are to be assured of an adequate supply of power for the future, the percentage of REA loans allocated for generator and transmission facilities will have to be substantially increased.

RESOLUTION 19—ELIMINATION OF 30-DAY NOTICE REQUIREMENT IN GENERATION LOANS

Be it resolved, That we urge Congress to amend the Rural Electrification Act by deleting therefrom the existing requirement that the Administrator notify the Senate Banking Committee at least 30 days prior to the granting of any loan to finance the construction of generation facilities. This requirement was not in the original Rural Electrification Act of 1936, but was added at the urging of opponents of the rural electrification program as a means of hampering and delaying the granting of generation loans. The act without this requirement gives adequate protection to the public, and the only purpose served by this requirement is the unnecessary delay in the granting of generation loans. In this time of critical shortage of power, unnecessary delays are expensive and tend to jeopardize the timely construction of sorely needed facilities. This 30-day notice requirement is inconsistent with the underlying purposes of the act and should be deleted.

Veteran Patients in California State Mental Hospitals

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mr. SCUDDER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include a letter dated March 25, 1949, from the director of the Department of Mental Hygiene of the State of California.

I was connected for many years with the State of California as an assemblyman and as real-estate commissioner and had an opportunity to know the overcrowded condition of the State mental institutions. Over 2,000 veterans are now in these institutions when they should be in Federal hospitals, receiving the treatment to which they are entitled.

The letter follows:

STATE OF CALIFORNIA,
DEPARTMENT OF MENTAL HYGIENE,
Sacramento, March 25, 1949.

Hon. HUBERT B. SCUDDER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: As I told you in my wire of a few days ago, the number of veteran patients in California State mental hospitals is becoming an ever-increasing problem, and these veterans account for the major portion of the present overcrowded condition of these institutions.

You are, from past experience, close study, and visits to our hospitals, aware of the overcrowded situation, and I should like to show you how the veterans affect this situation. We have presently in our institutions in excess of 2,000 veterans of all classes. Additionally, we are receiving veterans into our hospitals at a rate in excess of 100 a month, and if past experience is any criterion this influx will increase rather than decrease. Of the 2,000 veterans there are perhaps, though at the moment exact statistics are not available, approximately 500 veterans who, for one reason or another, are not eligible for treatment in a Veterans' Administration facility. The remaining 1,500 are, however, veterans with service-connected disabilities, or non-service-connected disabilities. These veterans, as you know, under the provisions of Executive order, veterans' regulation No. 6 (a), have the right to hospitalization in a veterans' facility if there is room for them. Our file is replete with statements from the Veterans' Administration that there is no room for them.

Now, I should like to show you what relationship these 1,500 veterans have to our situation of overcrowding. As of February 28, 1949, we had in our hospitals an excess of population over capacity of 4,056 patients; of these 1,693 are male patients and 2,363 are female patients. The 1,500 veterans, barring perhaps two or three, are male patients, and from that we may therefore conclude that 88.6 percent of our overcrowded condition, with respect to male condition, is due to the present of these veterans in our State hospitals, and of our total overcrowded conditions these veterans constitute 36.9 percent of the entire picture.

I sincerely trust that this information will be helpful in obtaining not only a continuance of the Veterans' Administration building program in California, but a step-up of that program that will enable the Veterans' Administration to acquire, as temporary facilities pending the construction of permanent quarters, the military hospitals declared surplus and now being disposed of by the War Assets Administration.

With kindest personal regards, I remain,

Very truly yours,
DORA SHAW HEFFNER,
Director.
By CARL E. APPLEGATE,
Deputy Director.

Russia Winning Cold War

EXTENSION OF REMARKS
OF
HON. E. E. COX
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Jim Carroll, from the Washington Daily News of April 5, 1949:

RUSSIA WINNING COLD WAR
(By Jim Carroll)

Here are the reasons why William L. Clayton, former Under Secretary of State for Economic Affairs, is supporting the movement to form a federal union of the world's democracies.

First of all, he contends Russia is winning the cold war.

Mr. Clayton believes the Atlantic Pact is an important step in the right direction but that it does not go far enough.

Ex-Supreme Court Justice Owen J. Roberts, former War Secretary Robert Patterson, Mr. Clayton, and others recently announced formation of the Committee for Atlantic Union.

Mr. Clayton was chief of the United States delegation which negotiated the British loan. He also took a prominent part in the initial stages of organization of the Marshall plan, particularly in Europe, and was chief of the United States delegation which negotiated the Habana charter for an international trade organization.

Mr. Clayton issued this statement:

"Soviet Russia has split the world into two parts—the Communist world and the free world. Sooner or later every country will find itself in one or the other camp.

"The Communists are organized as one.

"The free world is divided into separate sovereignties, but in certain limited respects it must also organize as one if it would remain free.

"There is only one effective way of doing this and that is by federal union, just as the Thirteen American Colonies formed a Federal Union in 1787.

"As a minimum, the union should have the power to maintain armed forces, conduct foreign relations, regulate currency and regulate commerce between its members and with nonmember nations. Its powers would be as great or as small as its citizens decided. I would expect that the delegation of powers to the union would be explicit and limited.

"Only those who stick their heads in the sand fail to see that Soviet Russia is out to communize the world.

"Soviet Russia intends to destroy the Christian religion because it is the foundation of the home, of freedom, of democracy, of representative government, of the dignity of the individual and of private property.

"The Kremlin despises such things.

"Wherever communism enters, freedom, hope, the dignity and security of the individual, the joy of living—all depart.

"Most men who have lived in a free society would rather die than surrender these precious God-given rights.

"But in spite of general knowledge that communism enslaves the individual, it still is catching on in the world. It bores from within; it promises all; it feeds on hunger and cold; it thrives on frustration and hopelessness, born of economic misery. And there is too much misery in the world today. A way must be found to open up a better life to hundreds of millions of people, or communism may sweep the world.

"To help in only one small sector of the world, the United States continues to pour billions into Europe.

"Meantime, the cost of readying our armed services for world war III mounts steadily and ominously. Soon we shall be lend-leasing war materials to member governments of the Atlantic Pact.

"This total burden will get too heavy even for our strong back.

"But if we lay it down, economic conditions in Europe will deteriorate to the point where the seeds of communism will commence to sprout again.

"Russia is winning the cold war.

"Who, knowing the objectives of the cold war, can doubt this?

"Soviet Russia has two principal objectives in the cold war. One is to frighten democratic governments into excessive expenditures for defense; the other is to frighten private capital and initiative so that it will not operate freely.

"If both objectives can be achieved, economic disintegration will eventually ensue.

"Economic disintegration is usually followed by political disintegration.

"In a very real sense, therefore, the democracies are playing the Russian game.

"If we go on fighting this cold war in the way we are now fighting it, one of two things must happen: Either we will get into a shooting war, which we would win but which might end civilization for centuries to come, or we will run into another colossal economic 'bust' as a result of inflation brought on by the cost of the cold war.

"Russia is counting on the latter to happen.

"The question which will naturally occur to everyone is: 'How will your proposed Union lighten the burden and enable us to avoid both a shooting war and an economic bust?'

"The answer to this question, I believe, is as follows:

"Federal union of the democracies will greatly reduce the danger of a third world war, and the cost of defense measures.

"Federal union would bring the armed forces of all its members under one command, with bases wherever needed. Enormous savings would result. Take the combined navies of the democracies, for example. When brought into one navy, it would have 90 percent of the naval strength of the world.

"I am for the Atlantic Pact, as an important first step, but it doesn't go far enough. History proves that alliances do not prevent—they merely postpone—wars.

"Fear of war, and fear of the integrity of certain European currencies, is freezing literally billions of private capital, and immobilizing the creative genius and activity of its owners.

"Federal union would largely dissipate this fear, and release this money and brains for the vital task of European recovery, modernization, and development.

"Because this money and brains is in hiding while the war clouds hang so low, governments have been compelled to undertake a very large part of the job of recovery. But if recovery is to be complete, with western Europe restored to a condition of financial independence and a decent standard of liv-

ing, the job must be done largely by private enterprise. Government cannot do it.

"Private enterprise will operate again in Europe only when there is peace and when confidence in currencies is restored.

"Today, there is neither.

"Federal Union would bring peace.

"There would be only one currency in the Union and it would be the strongest in the world.

"The Union could have no dollar shortage.

"The shortage in production which causes the dollar shortage would quickly disappear with the release of frozen capital and private initiative.

"Soviet Russia couldn't get anywhere in a cold war—or a hot war either—without her satellites.

"In nearly every case the satellite governments are dominated by Communist minorities—15 percent or so of the Czechoslovakian people, 25 percent at best of the Poles, for example.

"A Federal Union of the democracies would be so powerful, prosperous, and free that the pull on these satellite states lying in between would be so much greater from the West than from the East that in time Soviet Russia would surely lose them—and her drive for world conquest would end in failure and without world war III."

Amendment of Displaced Persons Act

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Genera' Court of the Commonwealth of Massachusetts:

Resolution memorializing Congress to make certain changes in the Displaced Persons Act of 1948, so-called

Whereas the present Federal law, known as the Displaced Persons Act of 1948, allowing the admission into the United States of certain displaced persons, is manifestly discriminatory against members of the Catholic and the Jewish faiths; and

Whereas said law discriminates against persons because of their land of origin, religion, and occupations: Therefore be it

Resolved, That the General Court of Massachusetts strongly urges the Congress of the United States and the leaders therein of the Democratic and Republican Parties to lend their strongest efforts for the enactment of legislation to end such discrimination and to liberalize said law by removing therefrom in the definition of "eligible displaced person" the restrictive admittance date of December 22, 1945, and by removing the preference granted to those eligible displaced persons who have previously been engaged in agricultural pursuits; and be it further

Resolved, That copies of this resolution be sent forthwith by the state secretary to the President of the United States, to the presiding officer of each branch of Congress, and to the Members thereof from this Commonwealth.

In house of representatives, adopted, March 10, 1949.

LAWRENCE R. GROVE,
Clerk.

In senate, adopted, in concurrence, March 16, 1949.

IRVING N. HAYDEN,
Clerk.

Steel Production

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Columbus (Ohio) Evening Dispatch of March 18, 1949:

STEEL PRODUCTION

Steadily increasing steel production in the United States, now meeting a lessening demand in numerous lines, presages a balance in practically all steel requirements sometime after the middle of 1949. This situation becomes the more interesting in the light of President Truman's controversial demand for powers to permit Federal entrance into certain basic businesses where private enterprise does not, in the Government's opinion, provide production equal to demand. He suggested the steel industry in particular.

The much-criticized American steel industry in 1948 made 52 percent of the total world production of steel and the Soviet Union, next biggest producer to the United States, accounted for but 25 percent of the world total. American steel production, in 10 years and in spite of wartime restrictions on expansion, increased 16 percent. Postwar demands for steel, additionally, sharply curtailed the steel available to plough back into expansion of facilities since, when it takes 25 percent of a given amount of new production merely to produce the facilities to turn out that production, it was difficult to allocate steel for new production when consumers were clamoring for all the raw steel that could be turned out from existing production.

The looming balance between supply and demand in steel, and the very definite possibility that supply may ere long exceed demand, takes the wind out of the administration's demands for Federal intervention into the steel business on the ground that private enterprise did not produce enough steel. Actually, in the immediate postwar years, few productive enterprises in any field were able immediately, or even in 2 or 3 years, to overcome the immense backlog of consumer demand dammed up by the years of production primarily for war purposes.

It must have been all along quite evident to the Government interventionists that the shortages in steel, or any other field where supply was short of demand, were the fault of no one in particular and were, instead, the natural and inevitable byproduct of a national productive system geared to fighting a major war. Moreover, the comparative speed with which American industry has erased so many of the postwar shortages has been little appreciated in Washington. Instead, it appears that these inevitable shortages have been used as an excuse for proposals to put Government in the steel or other major industries.

Governments in steel, and other enterprises, exist for comparisons all over the world and their performance records are unimpressive viewed beside those of the American heavy industries. The threat of Federal intervention, posed by the President, hangs over the American steel industry now and it is certain that nothing could be more calculated to discourage it and to dry up its drive for continuing expansion than the threat of Government competition financed by the United States Treasury.

Perhaps such discouragement is what the Federal interventionists seek, since nothing else, neither war nor depression nor postwar inflation, has succeeded in keeping the American steel industry from producing more and better and cheaper steel than any other in the world.

It would be an alarming thing indeed if the threat of nationalization, with all the ugly undertones that this connotes, could achieve what the great challenges of war and peace have not been able to do, namely to throw American heavy industry off base and give the administration socialists the excuse they appear to seek.

A hopeful sign therefore lies in the developments of the past months as industry again shows signs of winning the great postwar supply battle and another hopeful sign lies in the quiet that prevails in the administration ranks on the matter of taking over basic industry.

When You Pay the Fiddler

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mr. CANNON. Mr. Speaker, under leave granted me to extend remarks in the RECORD, I am including further excerpts from letters received by the Committee on Appropriations on Federal expenditures:

WINONA, MINN.

Quite recently a minister in one of our churches in Winona said in part that there are far too many irresponsible people in that they want things given to them without working and without taking on responsibility in making any personal effort toward receiving benefits. These irresponsible voters might very well include the apathetic voters who oppose what is offered, but don't do anything about it.

THE WINONA KNITTING MILLS, INC.

MINNEAPOLIS, MINN.

An individual in financial trouble is declared bankrupt by a higher authority such as a court, but who is to declare our Federal Government bankrupt? I don't know, unless it would be the Congress and I don't suppose they ever will. I do feel that Congress should realize that we cannot continue deficit spending indefinitely and should make it their duty to whittle the debt.

W. S. JACOBSON.

NEW YORK, N. Y.

Our Government's expenditure at the present time is so large that the only way they will ever be able to pay it back is by inflation. To me this means that the savings which I hope to enjoy in a few years may have only a fraction of their present value.

O. F. MASIN,
Manufacturers' Representative.

ST. LOUIS, MO.

The writer believes firmly that the pioneering instinct that made America the most powerful and wealthiest nation on earth is gradually being eliminated in the generation that is coming along now and our grandchildren definitely will have the entire perspective upside down if they continue as they are going today.

Nowhere have we heard anything mentioned regarding the fact that we must save.

It is perfectly true through the centuries that the costliest thing that the average human being gets is something he thinks is for nothing at the expense of the Government.

LOCKWOVEN CO.

RALEIGH, N. C.

May I express an opinion of my own and that of others in this State whom I serve.

The Federal Government is providing so many matching funds that the States and counties are strained to the breaking point. Local governmental units have been forced to raise taxes to provide the most needed public improvements and now the support of four governmental units—the cities, counties, State, and Federal—are most burdensome to our economy.

It seems to me that we could forego any more public works and social reforms, for the time being, until our huge national debt is curtailed and our national strength against a foreign foe is made secure. The liberal distribution of free money is encouraging indolence, idleness and dependence.

It is my candid opinion that if we extend our public work and social legislation at this, the most prosperous, period in the Nation's history, we will be weakening our domestic economy to such an extent that this Nation will be helpless in case of foreign aggression. Small businesses cannot withstand further taxes.

SENATOR LEE B. WEATHERS, *Chairman.*

DULUTH, MINN.

You can be very sure that many of us out here throughout the United States are definitely counting on you to reduce appropriations this year. Don't fail us.

THE KLEARFLAX LINEN LOOMS, INC.

PITTSBURGH, PA.

Speaking for myself, as well as many others in this area, it is a source of considerable dismay to realize that in most cases the principles of thrift and individual effort which have resulted in this country's dominant position have largely been forsaken in favor of a policy of spending, the return from which can be only a weakening of our inherent strength.

I do not desire to indicate disapproval of projects which are connected with defense or other generally recognized fundamental areas of government expenditures. I do mean to refer to unreasonable tampering with normal price relationships, unnecessary public works, and, most important of all, the maintenance of ridiculous bureaucratic structures. Regarding the latter, I realize that your committee is not primarily concerned with legislation resulting from the recommendations of the Hoover commission. However, any efforts your committee can direct towards the support of this report will be in fundamental accord with general views on the size of Federal budgets. I might also add that in my opinion the carrying out of this commission's recommendations should be the starting point of any program of Federal budget reduction.

Reducing appropriations for the Federal Government is the key to our entire current situation. If the supply of spending money can be reduced, a start will be made on reducing the Federal Government to its designed size and other things can be taken care of in due time.

EDGAR E. BROSIUS CO., INC.

CINCINNATI, OHIO.

We have given considerable thought to items included in the proposed Federal budget for the fiscal year 1950. This is no time to burden the taxpayers, and particularly manufacturers, with added taxes to finance unnecessary programs.

NEWMAN BROS., INC.

PHILADELPHIA, PA.

It is about time that our legislative body thought of the Nation above all else. It is about time that this body attempted to conduct the Nation's business on a sound economic basis. It is about time that all the Members of this legislative body put the true welfare of the Nation above all individual interests. It is about time that the Government expenditures be fitted to a budget that will require taxes that will still foster individual initiative and ambition, instead of a budget that requires taxation that throttles these things, discourages the type of young men that built this country into the wonderful Nation that it is.

SAMUEL K. MACDONALD,
Manufacturers' Representative.

PHILADELPHIA, PA.

Along with millions of other Americans I am worried over the future of our country and feel that we cannot keep on spending without eventually facing a serious depression which will wipe out the savings of that large class of people who want nothing from the Government except good government without waste.

TECHNICAL REPRESENTATION.

MILWAUKEE, WIS.

After all the Government is merely a collection of individuals and the individuals are the people who, in the final analysis, furnish the money. An individual can't go on indefinitely spending more money than he makes and a government can't do it either for any length of time.

C. K. ALEXANDER.

ST. LOUIS, U. S. A.

As a businessman who naturally is directly affected by the tax situation and who also understands probably more clearly and forcibly than the average citizen that there is a limit to the amount of unproductive expense that even this wonderful productive country of ours can stand, it is indeed exhilarating to know that seemingly the tide is finally turning and that our representatives see the wisdom of economizing. I know that I am speaking for many, many people like myself who would like to see an end to so much of this unnecessary, wasteful spending, and only by so doing can we keep our country in a healthy condition.

MILBRADT MANUFACTURING CO.

NORTH BERGEN, N. J.

It is about time some of the men in Congress were willing to stand up and take a stand for the good of the country, and I am quite sure that if they do there will be many reductions in the cost of our Federal Government. The cost of Government is the point to start reducing expenses. When this is done the economy in other departments will follow.

UNIQUE METAL NOVELTY
MANUFACTURING CO., INC.

NEW HAVEN, CONN.

No sound thinking businessman would go on and on increasing his business debts, and good management cuts its expenses whenever necessary to balance its budget.

Surely there must be some good businessmen handling our Government affairs. The public wonders who they are.

MONARCH LAUNDRIES, INC.

STEELTON, PA.

It seems inconceivable to think of the national budget still being in the amount of forty some billions in peace times even considering the ERP program.

I feel there are ample places to cut expenditures and stop new expenditures.

GEO. W. WEAVER & SON.

FLINT, MICH.

There are millions of Americans like me who stand and believe that the key to the whole present situation is in reduction of appropriations for the Federal Government.

YELLOW AND CHECKER CAB CO.

CHICAGO, ILL.

Everywhere I go I encounter instances of reduced business volume. There are plenty of things the people need, but present prices seem to be too high. One of the major items of expense in operating any business, whether it be manufacturing, distribution, or what have you, is its tax business. Tax costs for most businesses have gone up at a much more rapid rate than almost any other item of expense. That portion which is due to the war is necessary expense, in spite of all the waste that war brings. All the more reason, therefore, for economy in the remaining expenditures, as every careful businessman today is endeavoring to trim his costs; and the Federal Government must also consider this same situation. The safety of our future is absolutely dependent on this being done.

AETNA PLYWOOD & VENEER CO.

DETROIT, MICH.

By cutting the budget appropriations by 50 percent your committee would perform the greatest service to our country in its history.

VULCAN IRON & WIRE WORKS.

ST. LOUIS, MO.

We are overspending ourselves to the point where we will be on the brink of ruin unless we call a halt and make a check of our position to find just where we are heading.

It is an easy matter to pass bills, appropriating large sums of money for this, that, and some other apparent worthy cause. But, at the same time, it is another thing to understand from where the money is coming, and whether the economy of the country will stand it.

This country cannot stand this constant increase in spending, and now is the time to put an end to it; in fact, this would be a good time to start housecleaning, with a view of eliminating all of the unnecessary bureaus now in the Government and reducing Government spending drastically.

There is considerable complaint about the present taxation—people being taxed not only by the Federal and State governments on their income, but on everything they buy, to the point that people are not enjoying a real freedom. Many of them really are in slavery, because the amount of money that they receive is insufficient for them to live, and they merely exist.

The costs of materials have been running ahead of the increases in incomes in many instances, and consequently the tax burden put on these people, plus the tax burden placed on manufacturers, which in some measure is responsible for these costs, is assuming such proportions as to be alarming.

STEELCOTE MANUFACTURING CO.

NEW YORK, N. Y.

The greatest danger the world faces today is that the economy of our Nation be irreparably damaged by senseless schemes for spending the taxpayers' money. If our country is made weak, the cause of freedom the world over will lose its greatest champion.

PARK CHAMBERS.

NEW YORK, N. Y.

I firmly believe that if you remove all the padding and stuffing, you can obtain a really streamlined appropriation suit that will fit us admirably in these uncertain times.

R. CRAM & CO.

BLOOMINGTON, ILL.

The welfare of all of the people is at stake, and their welfare should be considered before that of special privilege groups. This country is on the verge of an economic breakdown and a depression with far-reaching results.

The only thing that can save us is the reduction of Federal appropriations to a reasonable amount. The budget should be reduced as much as possible. The economies suggested by President Hoover's Commission on Reorganization should be adopted and put into effect.

SCHWULST LUMBER & COAL CO.

PELLA, IOWA.

Frankly, the enormous public debt and the spendthrift attitude of Congress has been of much concern to me. Unless we bring spending under control, the Nation faces bankruptcy.

ROLSCREEN CO.

CINCINNATI, OHIO.

Push them off the "gravy train," and reduce Federal spending.

KELLEY HEATING & PIPING CO.

LANSING, MICH.

Every businessman at this moment knows the era of high profits is over and is plenty concerned about what reduced sales are going to do to his budget and profit possibilities. It is high time that Congress realizes that expenses must be cut and that debts must be paid or bankruptcy is liable to be the result, whether in government, business, or personal levels.

THE DUDLEY PAPER CO.

BURLINGTON, N. C.

Certainly I think and feel that it is time we stopped and took stock of what is happening before we have gone too far in the "wild orgy of spending."

THE FOGLEMAN-JEFFERIES CORP.

ELKHART, IND.

If there ever was a time when our country needs to be strong financially it is now in the face of world conditions as they are today, but we cannot be strong if we keep on spending and spending.

ELKHART LUMBER & SAWMILL CO., INC.

LOUISVILLE, KY.

This country is wonderful as it is, and, with all the resources it has, it is no different, in the final analysis, from an individual with great resources. Such an individual can go broke.

And, at the rate we are going, just as sure as God has been wonderful to this country, it won't be long before we will be in that situation.

J. V. PILCHER MANUFACTURING CO.

CINCINNATI, OHIO.

Many of us have wondered for years how long the Government could continue spending and going deeper and deeper into debt.

GARDNER DISPLAY CO.

PENSACOLA, FLA.

Recently I had some extra business offered me which would require more money, more men, and materials.

If the venture does not prove profitable I stand to lose money, but if it makes money then the Government through its extravagance will take most of the profits.

It begins to look like it is "Heads I win and tails you lose."

OWSLEY LUMBER CO.

ALTON, ILL.

I have been preaching economy in my own little way for several years. It is very plain to me that if an individual or a Government continues to spend and spend, they will some day encounter a condition that they cannot surmount.

I hope you will be successful in doing something about reducing the Government waste and, thereby, reduce expenses.

SPRINGMAN LUMBER CO.

SUSSEX, WIS.

I recently sat in on a Rotary Club meeting at which a business economist spoke and after he got through he asked the 78 men who were at this meeting whether any of them would go into business again if they had the choice to make. Nearly all of them were businessmen who had been in for 15 or more years; only two out of the 78 indicated that they would start up a new business if they were free to make such a choice. This is a good indication of how business feels about regulations, high taxes, and the "two strikes" that business has from government.

In this week's United States News you have on the front cover an important formula for the amount of weeks people work for the Government; the man who has a $5,000 income works 28 days to pay his taxes; the man who earns $25,000 a year works 52 days to pay his taxes; the man who earns $100,000 works 104 days to pay his taxes.

You just don't build up a strong nation with this sort of a situation and were it not for the war impetus we should feel this situation much more keenly.

MAMMOTH SPRING CANNING CO.

HONEOYE FALLS, N. Y.

The Russians and Communists are looking for us to overspend ourselves and we are about to do that very thing.

I cannot run my business that way and neither can the Government.

ROSCOE S. TOMKINSON.

SHAMOKIN, PA.

I sign nearly 800 pay checks every pay day in our business and when I look at some of the tax deductions, I cannot help but think of the danger this country is in by this vast expenditure of public funds.

SHROYERS, INC.,
Manufacturer of Dresses.

ROYAL OAK, MICH.

Our country is in a very dangerous condition. Our taxation has reached the point of diminishing returns.

This program of more and more taxation and more and more spending can only result in ruin and national bankruptcy. The tendency seems to be for more and more radical spending for unnecessary purposes.

This is more than a political question. It is a question of survival.

North Atlantic Treaty

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. LANE. Mr. Speaker, I should like to include herein my remarks on the North Atlantic treaty. They are as follows:

NORTH ATLANTIC TREATY—INSURANCE AGAINST AMBUSH

The boldest step in American foreign policy since 1823, when the Monroe Doctrine warned that no European power could seize territory or set up a government on the American continent, is the North Atlantic treaty which was signed early this week.

On the principle that in unity there is strength we are giving due notice that any attack will be met with collective resistance. In this way we hope to deter any aggressive moves before they start. Although no one nation is singled out as a possible aggressor, the pact stems from the expansionist activities of Soviet Russia and is intended to place a roadblock on the path of Communist imperialism.

The principal parties to this defense alliance are Belgium, Canada, France, Luxemburg, the Netherlands, the United Kingdom, the United States, and Norway. Italy, Portugal, Denmark, and Iceland are also, or will be, included.

The pact is considered as insurance to prevent or postpone war. The life of the treaty is to be for 20 years, but it will be reviewed and renewed in 1959 to allow for possible readjustments in the international situation at that time.

This is permissible under the terms of the United Nations. It is justified because of Russia's consistent veto of United Nations proposals. It constitutes in effect the development of a new League of Nations without Russia and her silent partners. From this beginning it will grow as a Western Hemisphere alliance and a Mediterranean alliance are formed and are joined to the pact.

By this the United States is reversing its historic position and is turning its back on a policy of attempted neutrality that failed to work. The center of gravity has shifted to the United States. We are assuming a position of leadership befitting our present responsibility and all the burdens that go with it. This decision did not come easily. It was forced on us by the bitter experience of two wars and the realistic recognition that hoping for peace does not preserve the peace.

We are determined that we shall not fall victim again to the policy of divide and conquer.

Remember August 2, 1914? We thought that Europe's business was no concern of ours. Two years and 247 days later we were in.

Another fateful date was September 3, 1939. Again, we turned our eyes the other way, but 2 years and 97 days later we were drawn in. And when we came in, Hitler had conquered most of the continent of Europe by knocking off the democracies like so many clay pigeons one by one. If we had learned our lesson from World War I and had supported the League of Nations and had let Hitler know that we would support democracy against aggression, he would not have invited collective retaliation.

On January 20 of this year, in his inaugural address, President Truman said—and I quote: "If we can make it sufficiently clear, in advance, that any armed attack affecting our nation's security would be met with overwhelming force, the armed attack might never occur."

At last we have learned that the United States is not located on another planet, but is part and parcel of this shrinking world where planes can circle the world without stopping and where rocket missiles could—within our time—be fired from one continent in attack upon another continent. The day when we regarded oceans as a natural and insurmountable barrier to attack is gone. Europe is now our next-door neighbor, and we've got to face up to this reality. For our own sake, we cannot permit any bandit to terrorize the world community, to liquidate our friends, and make himself strong with their resources in preparation for that final assault when we might stand alone.

To eliminate this possibility we became prime movers in the effort to establish a system of collective security through the United

Nations organization. We still believe that given time it will mature into an effective instrument for preserving law and order in this world.

As of the moment, however, the plain truth is that the UN is not able to cope with the situation. Under one pretext or another, Russia has absorbed the nations of eastern Europe. By a cynical and indiscriminate use of the veto, the Communists have blocked every effort to solve differences. Events have moved faster than the ability of the UN to deal with them, bringing the world to a tense and dangerous pass which we cannot ignore. To save the situation from degenerating into chaos, we have been obliged to seek a new approach to the problem of world security. We are, as it were, trying to form a new and workable league of nations within the structure of the UN.

As the only nation possessing that fearful weapon called the atomic bomb, we generously offered to surrender our monopoly and share the know-how of developing atomic energy for the arts of peace with all nations. To this offer we attached one reasonable condition: to guarantee security for all. That condition provided for an inspection system, administered under UN authority, and applicable to all countries to make certain that such knowledge would never be used for aggressive purposes. Was there anything one-sided in such an offer? Certainly not. Yet, Russia refused to go along with it. We are led to suspect from this that she wants an unfettered hand for the time when she will have the bomb to use as she sees fit in defiance of the world community.

To protect those nations which are searching for a method to protect the peace and to salvage those constructive possibilities within the UN which have been sabotaged by the Russian vetoes we have made a fresh beginning.

Piece by piece the mosaic assumes form and substance. Within the institution which free nations are building is a cooperative spirit which is its main strength. It is forced by the necessity of self-preservation, but it also contains the elements of fair play and of reasonable compromise upon which any future system of international morality must rely if it is to succeed.

Here is the timetable of events.

Remember the Russian pressure on Iran and the Communist-supported rebellion in Greece? We established the Truman doctrine by giving help to Greece and Turkey to enable them to withstand Russian blackmail. Under the Monroe Doctrine we discouraged foreign powers from attempting to gain that foothold on this continent that might endanger our young Nation. By the Truman Doctrine we recognized the fact that a threat to any nation is a threat to all. It was obvious that the democracies of the west, weakened by war, could offer no resistance to Russia if she decided to sweep to the English Channel. But the Communists preferred an easier way. By boring from within and playing upon fear and poverty and despair they thought they could undermine existing governments.

The first mistake the Communists made was in overthrowing the Government of Czechoslovakia by minority infiltration. From within this democracy patterned after the United States, which was now a Communist prison, Jan Masaryk took his own life as a means of warning the world of the creeping peril. This tragic gesture did succeed in shocking us out of our innocence. The cold war was on.

When the Marshall plan went before Congress this time last year it was called a calculated risk in the effort to prevent poverty, starvation, and political chaos from playing Russia's game in western Europe.

In this counteroffensive the Marshall plan is slowly winning the fight against aggression on the economic front. It was felt that France held the key to recovery on the Continent, and that the success or failure of the Marshall plan in that country would determine the swing of the pendulum for all Europe. We can now say that high hopes for the recovery of France are justified. The effectiveness of the coalition government, aided in no small measure by its realistic and courageous cooperation, is bearing fruit. The success of the recent internal loan and the drop of the black-market rate of the franc prove that France is regaining her strength.

Another mistake of communism was to order its stooges in various nations to declare that they would betray their own countries and support Russia in the event of a conflict. Far from intimidating the governments of the respective countries, it had the opposite effect. The mask was off. People recognized the Communists not as one of several political parties within the framework of an individual country but as the agent and tool of Russian imperialism, and they took steps to defend themselves against this treason. Where there was division, there is now unity. To economic improvement has been added the vital quality of morale.

Taking heart, Britain, France, Belgium, the Netherlands, and Luxemburg, on March 17, 1948, at Brussels, formed a western European union, called the Brussels Pact. Its purpose was to broaden the security system and to define the obligation of its members against attack from the east.

Three months later, on June 11, 1948, the United States Senate gave its blessing to the idea that this country should take part in a defense set-up which should be an extension of the Brussels Pact.

It is hoped that this will put a dead stop to Russia's strategy of swallowing up nations one by one.

How? By pledges of mutual assistance backed up by military plans and military strength.

The North Atlantic Treaty takes in almost all the North American Continent, the Atlantic Ocean and the islands in it, Europe's western areas; part of north Africa, the northeastern Mediterranean shore, and occupied territory including the Allied sectors of Berlin.

This is the answer to Russia's veto in the United Nations and her opposition to the unification of Europe. Russia has blocked efforts to form an international army under the United Nations and in so doing has obstructed the development of an effective world organization to prevent war. Now the nations of the Atlantic alliance are building such a police force whether Russia likes it or not.

Soviet attack upon any member, or even upon the Berlin airlift, would require all signatories to the Pact to consult immediately. They would then decide whether to go to war, impose economic sanctions, or just break off diplomatic relations, depending on whether or not the incident could be contained.

Also—and this is important when we consider the Communist tactic of boring from within—the treaty calls on members to consult if "the political independence of any of the parties is threatened."

All of these provisions are consistent with the UN. The United States and South American countries signed the Inter-American Defense Pact at Rio de Janeiro in 1947. A Mediterranean alliance composed of Italy, France, Greece, Turkey, the United States and Britain is next. There is the possibility of an Indian Ocean alliance embracing some Arab states with Iran, India, Siam, and Australia. Such a chain would unite most of the world into a cooperative organization which Russia and others could join once they gave evidence of obeying the rules.

To provide the pact with teeth will take money. Our bill for arms to strengthen the alliance will amount to $1,200,000,000 the first year, increasing later as the organization is perfected.

Some people question the right of this Congress to commit a future Congress to approve automatic resistance to aggression. Others doubt whether Congress can delegate authority to the President to use American forces to resist an aggressor without a formal declaration of war.

If the North Atlantic Security Pact includes a provision specifying conditions under which the United States would automatically fight, and the treaty is ratified by the Senate, then future Congresses would be bound by article 6 of the Constitution which states: "All treaties made or which shall be made, shall be the supreme law of the land." Again under articles 43 to 45 of the Charter of the United Nations, which has been ratified by our Senate, the President can put American forces into action against an aggressor without a formal declaration of war by Congress.

At Pearl Harbor it was Japan who decided that we would wage war. The declaration by Congress was inevitable and automatic.

Stop Russia—this is the first intent of the Alliance. It is an emergency move, born of necessity. Do not overlook the fact, however, that it culminates a series of moves which are promoting economic, political, and cultural cooperation in a world which must move toward such adjustments, if the human family is to survive.

The Atlantic Pact is defensive. We do not intend to stop at this point. With this strong foundation of security we shall be better able to concentrate on the problem of building real peace through negotiation. That after Senate ratification of the pact is the next step in civilization's program.

Alaska

EXTENSION OF REMARKS

OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include the following article on Alaska which appeared on the editorial page of the New York Journal-American on March 30, 1949:

ALASKA—AMERICA'S FINAL FRONTIER

(By Harry H. Schlacht)

Today marks the eighty-second anniversary of the purchase of Alaska. It is America's richest territory. It is America's final frontier. Alaska was bought from Russia in 1867. It cost $7,200,000. It covers an area of 586,400 square miles. Its population is 92,000. Its capital is Juneau.

Alaska is not a land of tradition. It is a land of tomorrow. It is a land of today. It is a fabulous country. It is a source of inexhaustible wealth in quintals of fish, in sands of gold, in the choicest furs, in the most beautiful ivory.

Alaska is preeminent as the empire of scenic wonders. There is no sea trip in all the world to equal it. There is no lure of mountain, stream, or valley to surpass it.

Gems of landscapes pass before you like some glorious panorama of grandeur. Sparkling rills and river courses, marked by emerald tints of verdure. The earth, and air and sky unite—water, mountain-top and valley, bathed and lost—in one grand union, in one gorgecus overflowing.

You see the crystal rivers run musically through the pretty valley alive with flowers and other beauties of nature. You see a mirage which gives the appearance of Nebuchadnezzar's hanging gardens of Babylon as recorded in Biblical history. You gaze in speechless wonder. Every breath in charmed suspense.

Blending in such matchless splendor, in such pure, translucent beauty, that it seems the gates have opened and the world beyond the shadows, has drawn near and shed its glory over all. While nature silent bends in reverent awe, receiving from the glorious land a blessing, from the sun a benediction.

And you lift your eyes to our banner of liberty as it proudly floats in the whipping breeze radiant in all its majestic glory. In it are centered all the inspiring memories of our past, all the blessings of our present, all the hopes of our future.

Today from the ice peaks of the Arctic to the jagged green fjords of the inside passage, the Territory of Alaska is in grave danger of Soviet sneak attack. Undefended Alaska—the attic door to America—invites another Pearl Harbor.

The Hearst newspapers have revealed the shocking inadequacy of military defense in the Arctic and sub-Arctic areas. It was the Hearst newspapers that warned our country of the Japanese menace for more than three decades. It was William Randolph Hearst who foresaw the treachery of the Nipponese and their aggressive designs upon the world.

If the American people heeded his prophetic editorials there would never have been a Pearl Harbor tragedy. Today Soviet spies are pouring into Alaska. Today Soviet spies are planning our destruction.

Their recipe for world domination is working splendidly in Alaska. First, infiltration and soothe well. Then place prepared people in boiling pot of war. Thence comes the realization of the Russian dream—America, the strong, America, the beautiful, bound in chains.

The defense of Alaska centers largely around the airfields at Anchorage and Fairbanks. We poured millions of American dollars into big airfields throughout Alaska during the war—but now they are abandoned. Russia is building air bases in Siberia. Russia is concentrating on its air power. Americans! What are we waiting for? Are we waiting for an Alaskan Pearl Harbor?

Members of Congress, forget party, forget party divisions, unite as patriots for your country.

Alaska needs airports with hangars and housing facilities, heavy bombers for strategic purposes, jet fighters to intercept attackers. We must have a radar screen from Alaska—across Canada to Greenland and Iceland. We must do this at once.

We must have airplanes activated and ready for instant use. We must be ready until the Soviet gunmen government recognizes the futility and stupidity of trying to communize the world and dictate to the American people. The monsters of Moscow recognize strength. They shrink from strength.

To preserve the peace of the world we must have air power, for air power is peace power. The longer we delay, the greater chance for war.

America, the best hope of freedom, America, the best hope of humanity will defend its Alaskan territory.

Flag of the free heart's hope and home!
By angel hands to valour given;
Thy stars have lit the welkin dome,
And all thy hues were born in heaven.

Forever float that standard sheet!
Where breathes the foe but falls before us,
With freedom's soil beneath our feet,
And freedom's banner streaming o'er us?

—*Joseph Rodman Drake.*

The Late Honorable Sol Bloom

EXTENSION OF REMARKS
OF
HON. LAURIE C. BATTLE
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mr. BATTLE. Mr. Speaker, under leave to extend my remarks, I would like to include a poem by Horace Carlisle which was written as a tribute to our former colleague—the late Sol Bloom:

SOL BLOOM

To Congress great men come and go,
Some hold their own, some of them grow
Into great statesmen, and serve on—
While years have come and years have gone—
But, of the ever swelling stream,
Few have enjoyed such high esteem,
Methinks, we safely may presume,
As has the widely known Sol Bloom.

Some men are born, so it appears,
For leadership, and through the years
They, far beyond their fondest dream,
In power, prestige, and esteem,
Grow, but they seem to never feel
The greatness that their works reveal—
How few great statesmen would presume
To fill the place left by Sol Bloom.

Someone must occupy the place,
That he filled with becoming grace,
Left vacant when his voice was stilled,
Which cannot easily be filled—
But New York State has never yet,
When some grave problem must be met,
Failed—may she, in her day of gloom,
Give us another great Sol Bloom.

—*Horace C. Carlisle.*

What the Missouri Valley Authority Means to the Entire Country

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 6 (legislative day of Friday, March 18), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "What the Missouri Valley Authority Means to the Entire Country." The article was originally prepared by me for printing in the Business Review of the City College of New York.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT THE MISSOURI VALLEY AUTHORITY MEANS TO THE ENTIRE COUNTRY

(By HUBERT H. HUMPHREY, United States Senator from Minnesota)

Since you have asked a Midwest Senator for a brief article, you should not be too surprised that I am going to write about a definitely Midwest topic. I can justify the choice, however, by showing that the Missouri Valley presents this country with one of the most challenging problems in economics, business administration, and democratic government.

I need not, I think, preach to business students of a large college the obvious relationship of this Midwest project to the East and the rest of the Nation. Cheap navigation and electricity to the Midwest has a direct effect on the other parts of the Nation in lowered costs. Soil conservation and flood control are even more clearly related to the whole economy in their relationship directly to the cost of food, the amount of food available and the regularity of successful crops. Irrigation would tend to diversify crops and reduce the payments of price supports on the staple commodities.

These effects, it seems to me, are obvious. Just as clear is the fact that the functions of flood control, soil conservation, navigation, and irrigation are Federal responsibilities and are from now on to be handled by the Federal Government. That is a political fact as well as an economic one.

With this understood, we can discuss the most efficient and worth-while development of our river valleys, and specifically, of the Missouri Valley.

At present the valley is being developed under a plan called Pick-Sloan, a marriage of the Bureau of Reclamation of the Interior Department and the Army engineers. The marriage has not resulted in full agreement and understanding, however. Let me quote what the Hoover Commission had to say about the recent method of Missouri River development:

"There is simply no escaping the fact that so long as the present overlapping of functions exists with respect to the Corps of Engineers, the Bureau of Reclamation and the Federal Power Commission, costly duplication, confusion, and competition are bound to result. It has been demonstrated time and again that neither by voluntary cooperation nor by executive coordination can the major conflicts be ironed out. * * * Consolidation o these agencies is the only remedy. The Commission feels there is a possibility that the disastrous Portland floods last year reflect the failure of the present divided program."

I might interject here, that figured in engineering terms, it can be proved that the Missouri River floods of the spring of 1947 were not only not alleviated by the work the Army engineers had done, but contrarily, the floods were apparently intensified by the single-purpose planning of the engineers for navigation, a plan which overlooked flood-control.

So the Hoover Commission calls for multiple-purpose projects of unified control.

Floor control is not the only failing of the present Pick-Sloan plan. Even the navigation part of the development has been incompletely planned. The 9-foot channel planned by the engineers was apparently set up with no consideration of the water needed for irrigation. It did not even consider the most practical sized channel for navigation. Twelve-foot channels are being proposed in the Mississippi and Ohio Rivers. The Missouri's 9-foot channel, then, would require shifting barge loads from one sized barge to another when loads are to transfer from the Missouri to the Mississippi or back. This would surely affect eastern freight costs. Furthermore, engineers have figured that the present Army engineers' plan will either make irrigation inconstant and impractical or navigation inconstant and impractical. Yet the 9-foot channel the Army is digging is scheduled to cost $222,000,000—and no one seems empowered to deny them the money to literally throw into a useless ditch.

The Bureau of Reclamation is planning a recreation project which would spend considerable money and use enough water annually to irrigate 55,000 acres. W. G. Sloan of the Bureau told a St. Louis Post-Dispatch reporter, Rufus Terral, that he didn't think that was the best use of the water, but that he was doing it, "to get those people over there to stop talking."

Now MVA must provide—and plans to provide—plenty of room for the valley citizens to talk, but it will not, if it is an over-all authority responsible directly for its actions and expenditures, go against its own estimation of useful projects simply because there was pressure for it.

Electric power is perhaps the worst failure of the whole Pick-Sloan arrangement. Mr. Lester Walker, engineer of the Federal Power Commission, said 2 years ago: "In our examinations into the ultimate hydroelectric potentialities of the Missouri River Basin, we find with our as yet unfinished investigation that the 1,600,000 kilowatts provided by the Pick-Sloan plan of development is less than one-half of the total potential power of the basin. We consider 5,000,000 kilowatts a somewhat conservative estimate of the potential hydroelectric power of the basin." That is perhaps the reason why private power companies who violently oppose MVA are in favor of the Pick-Sloan plan. W. G. Sloan himself admitted that the large Gavin's Point dam, which will cost $200,000,000 is unnecessary and not worth the expenditure. There is, furthermore, another irrigation and power project called Colorado-Big Thompson which will produce electricity at startling high costs. The charge has been publicly made and never denied—and I said this on March 2 on the floor of the Senate—that unnecessary costs have been added to this dam without adding one acre foot of irrigation or one kilowatt hour of electricity.

Planning on the basis of loosely connected and jurisdictionally jealous agencies for proper resource development in a single river valley has been proven impossible. The Hoover Commission states that bluntly in their recent report. The facts on the Pick-Sloan plan state it just as graphically in wasted dollars, wasted time and wasted water.

One of the most essential concerns of any river valley plan must be soil conservation. Yet the Pick-Sloan plan cannot even begin to integrate soil conservation into its planning, since Pick-Sloan only has jurisdiction over 1 percent of the surface area of the Missouri Valley. Soil conservation must begin where the rain hits the ground, not where it flows into the river—carrying rich topsoil with it.

We can talk about wasted resources and mismanagement under Pick-Sloan but it is fair to ask, "How do we know MVA would do any better?" We can only speak about what TVA has done and say that the same principles of administration will apply to MVA. Today the Tennessee is one of the most flood-proof rivers in the world. The use of electric power by homes, farms, and industries has boomed. Residential users who consumed only 55 kilowatt-hours a month in 1933, 11 years later consumed 129 kilowatt-hours a month. Rates have fallen from 4 cents a kilowatt-hour to 1.88 (as compared to 3.55 cents on the national average). At the same time TVA was a successful business, electrically speaking, making payments in lieu of State and local ad valorem taxes, paying all expenses, straight-line depreciation, and earning 4 percent on investment in the fiscal year ending June 30, 1948. TVA's electric-power industry earned 5½ percent in the previous fiscal year under the same circumstances.

But power is not the only achievement of TVA, although often we are deluged into thinking so, both by opponents of TVA (who are almost all private power representatives) and by proponents of the bill who recognize that the attraction to nonvalley residents can most easily be made with statements of low-cost electric bills.

Opposing the Pick-Sloan method of two agencies planning single dams singly, TVA operates 26 dams as a single unit. There is a newly usable 630-mile navigation channel carrying raw material out and finished goods in. Current savings by shippers are estimated at $2,000,000 a year. Soil has become more productive through planned soil conservation and greater phosphate production.

While national per capita income increased 56 percent, income in the valley went up 73 percent between 1933 and 1940. Furthermore, the people of the valley are so clearly in favor of TVA that it is difficult to argue that TVA has lessened their freedom.

Can we actually compare TVA to the proposed MVA? We often hear the assertion that MVA could never be successful as TVA is, because the area involved is so much larger than TVA. Yet the opposing suggestion is that we have national instead of regional administration. Surely, if we agree that development of one river must be made according to an over-all plan, we must admit that the smallest practical unit—large or not—is the whole Missouri Valley. There is an alternative plan, opposed both to the present Pick-Sloan arrangement and the proposed MVA solution. That is the suggestion of the Hoover Commission task force (not the Commission itself) which suggested a unified national department of natural resources and under the department a water-development service. While the department and service would have regional offices and local liaison, the administration and decisions would be in Washington hands.

The advantages, according to the task-force report, of a vertical national directorship for resources development instead of regional valley authorities are these:

1. Greater assurance of similar treatment throughout the country.

2. Makes possible utilization of central services.

3. Makes possible the development of standards for all programs.

4. Restrains sectional tendencies which might lead one region to develop to its own advantage but against the national interest.

I submit that these are scarcely strong arguments and seem rather the rationalizations of a mind already decided in a course. The MVA type of organization can make use of these same advantages and the further advantages of constant on-the-spot planning, close to the region and its people. Indeed, the task force suggests that TVA is good enough to be excluded from the other over-all plan. The regional authority plan has and will make use of central services already provided by the Government or capable of being provided. That need not affect the direct administration of the valley development. (This is acknowledged in a discussion of TVA.) With a number of valley authorities common standards of any of the authorities can still be established for all. They will be the best accomplishments. There is no more need for one agency to set a standard for all authorities than there is for the auto industry to follow a single standard set by a central agency.

Restraint on development against the national interest will probably be necessary since what is to the best interests of the region—what they can produce most efficiently—will be to the best interests of the Nation in most instances. However, there is now, and will be continually under regional authority systems, such restraint. The MVA bill provides for congressional approval of the over-all plan before work is begun.

The same treatment will surely be given all sections under an authority plan, for only in that way can general principles of Federal participation be set up and followed through. Under a Washington-directed administration, there is always more chance for favoritism and "pork-barreling" than under a system where each region operates to develop its own resources most efficiently within the general framework of a Federal law and congressional approval.

The task force is not altogether certain that the plan they suggest is superior to the authority system and does say that should their suggestion not be followed, an authority would almost surely be necessary. Indeed, the report goes as far as to say, "Another more unified organization with less centralized agency responsibility and more regional responsibility might presumably adhere more closely to the spirit of democracy in some respects, and probably would operate more efficiently."

In a minority report of the Commission itself, signed by 3 of the 12 Commission members, Vice Chairman of the Commission, now Secretary of State, Dean Acheson wrote: "We propose a single agency whose major purpose is the conservation, development, and use of our natural resources. This unification can be achieved on the national level * * * or on the regional level with the regional authorities for river basins, such as the Tennessee Valley Authority. * * * A combination of the two is practicable."

The majority, acknowledging the present gross inefficiency, seeks to solve the problem with unified control of construction projects on the river in the hands of the Interior Department and advice from local authorities and review by the Department of Agriculture, which would direct all land programs. This seems highly inadequate in view of the interrelationship of problems of land and water, industrialization, resources development and human welfare in regional development. Under the majority plan the land and the water would be administered separately, but land programs may affect floods and water programs affect farm land and industry. With more than 300,000,000 tons of silt going down the river annually, land programs may easily determine the feasibility of half the dams and all of the navigation plans. Land and water programs are hard to separate. On-the-spot administration and grass-roots administration—not simply advice sent to Washington after the plans are drawn up—are much more valuable for valley development, as TVA has proven.

What we have now, then, is an open and shut case against the present Pick-Sloan plan and some uncertainty of decision by the Hoover Commission members between centralized control and regional unified control of river valley development. The main groups opposed to any effective development seem about to drop support of the totally discredited Pick-Sloan plan and about to accept delaying tactics, specifically sponsorship of a commission to study the whole problem. Actually, the problem has been studied under TVA, under Pick-Sloan and under smaller localized projects ever since the New Deal. There are experts who have studied the problem thoroughly, and they include just plain United States citizens in the Tennessee Valley. The destruction of valley settlements through floods, of farm land through erosion, of farm settlements through the discomfort of electric-less living is going on now, not in 10 years. Valley development like so many other tasks of this Congress is not too new or radical a subject—it is decades too late.

The MVA bill, which Senators MURRAY, GILLETTE, and I introduced last month, affects you—whether you live East or West. Its efficiency, effectiveness, and democracy are basic to effective American government. It poses one of the basic problems of our day—how to achieve democratic, effective government through governmental units large enough to do the job yet still sensitively responsible to the people they serve. MVA does this through clear lines of responsibility running directly to corporation directors who are on the spot in the valley, who are, in a large part, citizens of the valley and who are constantly kept advised by an official body composed of the governors and valley leaders in the fields of labor, industry, farming, and conservation, and outdoor recreation. Responsibility is clear—who to shape up or fire to get action is clear. Where valley people

can go to be heard is clear. And the success of the system in the Tennessee is clear.

MVA should be on the list of bills you in the East are lobbying for, just as we in the Midwest will go down the line to favor similar developments in the eastern river networks. It is a symbol of liberalism in that it is an acknowledgment that the meaning of democracy in 1949 that responsible Government should be the agency through which the people can act together to do for themselves what each individually cannot do. It is a symbol of conservatism in that it is a champion of efficient and economical Government and practical business administration. It is plain good sense. And it is urgent.

MVA should come out of the Eighty-first Congress.

Orphans of the European Storm: The DP Children

EXTENSION OF REMARKS

OF

HON. FRANK L. CHELF

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. CHELF. Mr. Speaker, under leave to extend my remarks, I wish to include several newspaper articles which appeared in the New York and Washington papers describing the arrival of 67 displaced European war orphans brought into this country under the provisions of the Displaced Persons Act of 1948. One article refers to the desire of two little displaced citizens of the Western World to see a circus. The reply from the owner of that greatest show on earth is typically American—seats are provided—and Rose and Jackie will be the honored guests of Ringling Bros.-Barnum & Bailey. I congratulate and commend the owners, managers, artists, and employees of Ringling Bros. and wish to them everlasting good luck and prosperity for their sympathetic understanding and cooperation in spreading this bit of sunshine and happiness into the hearts of these two children.

Mr. Speaker, about a year and a half ago I saw these poor little unhappy, forlorn creatures—deprived of their parents—undernourished, sad, and neglected, languishing in camps in Germany and Austria. It is a pleasure indeed to be able to see that the law that we passed last year is operating and is helping to bring these youngsters into the United States, where we can mold strong, good, substantial, God-fearing, God-loving American citizens of tomorrow from the little, tired, lonely, friendless orphans of today. I have repeatedly expressed my interest in the great humanitarian aspect of the law passed last year, but most certainly no other phase of the operation of this law focuses the good that it does more clearly than the arrival of these 67 youngsters who will soon be placed with American families for adoption and for a future home.

I regret that it is impossible to reproduce into the CONGRESSIONAL RECORD the many pictures of these new little pilgrims taken as they landed in the United States. Nevertheless, I know that their smiling faces and the joy that was in their hearts which burst forth into a song on their lips as they landed on the soil of our native land was far more than sufficient to repay a generous and hospitable America whose Representatives in Congress enacted the necessary legislation which has given to these pathetic youngsters succor and a haven of refuge.

These warm-hearted and kindly citizens of our great Nation will surely be blessed for their charity and their generosity in providing homes for these poor unfortunates who have weathered the storms of war in Europe; who have been subjected not only to the ravages of war, but the cruel inhuman atrocities which stalked in the wake of the most recent world conflagration. Yes, these foster parents will be blessed, for was it not said by the Master: "Suffer little children to come unto Me, and forbid them not; for of such is the kingdom of God."

[From the Washington (D. C.) Times-Herald of April 1, 1949]

RINGLINGS TO PLAY SANTA CLAUS AS TWO DP KIDS SEE FIRST CIRCUS

NEW YORK, March 31.—Nine-year-old Rose Gelbard stood and stared at the bright circus poster with the laughing clown one day.

That night she wrote a letter. Although Rose, her parents, and her brother, Jackie, 4, had arrived in this country only a week before as war refugees, her English was clear:

"DEAR RINGLING BROTHERS: I saw a picture with a funny clown and it says there will be a circus. Please, can I come to your circus. In the place I was before I came here to U. S. A. there was never circus or anything for us to laugh. Always we are running from war. My mother saw a circus. My mother says before the war we could see circus monkeys and everything and things to eat. But I wasn't born then.

"I would buy a ticket but I am 9. I thought maybe you would have a seat nobody wants and you would write me a letter because I would want that seat so much. If you have no seats I could stand up. I would be glad to stand up just to see your circus. If you have a seat my brother could come. We only need one seat. He is 4.

"Thank you please rite to me.

"Your friend,

"ROSE GELBARD."

Yesterday, Rose received a reply from the Ringling Bros. and Barnum & Bailey circus from its winter quarters at Sarasota, Fla. It said two seats had been reserved for Rose and Jackie for an afternoon performance of the circus at Madison Square Garden April 13.

Rose read the letter over and over again. She laughed and cried.

"I once saw a monkey in Antwerp," she said, "but never a circus."

BREAD AND MEAT AMAZE 67 DP ORPHANS, IN BY AIR

At the reception center of the United States Committee for the Care of European Children at 661 Cauldwell Avenue, Bronx, 67 children awoke today, rubbed the sleep out of their eyes and prepared for their first real glimpse of the United States.

Last night they spent trying to catch up with the succession of bewildering experiences since their arrival at Idlewild Airport in a Transocean Air Lines plane from Hamburg, Germany.

BREAD—SOMETHING NEW

First was the huge city itself. Then came food. Bread. They didn't know what it was. Oranges they held in their hands until someone showed them how to peel them to get at the juicy fruit. One little 6-year-old blonde began to cry when she was given a plate of pot roast. She said she didn't know what it was.

All from the Baltic states of Latvia, Estonia, and Lithuania, the 57 boys and 10 girls ranged from 5 to 14 years old. All their parents dead, they were brought here from a displaced person's children's home in Germany.

WILL STUDY AT CENTER

Jacob Reingold, director of the center, said they will be placed in foster homes by religious agencies of their own faiths, the National Lutheran Council, the Catholic Committee for Refugee Children, the European Jewish Children's Aid and the Church World Service. While at the center they will attend classes in English, American history and civics.

They remain citizens of their native countries since the United States still recognizes those Baltic governments. Later the children or the persons who adopt them must provide for their citizenship through regular naturalization channels.

[From the New York (N. Y.) Sun of March 17, 1949]

WAR ORPHANS HAPPY LEARNING UNITED STATES WAYS—102 HERE FROM DP CAMPS—WAITING AT CENTER FOR FOSTER HOMES

(By Mildred Faulk)

Six little boys, one in baggy pants anchored uneasily somewhere around mid-thigh, were forcing a satisfyingly horrible uproar from an old piano today. Their grins for the moment were of blissful friendship.

Baggy Pants had arrived in America about 2 hours earlier from a displaced children's center in Germany. The other five came yesterday.

Yesterday's batch of 67 war orphans, originally from Latvia, Estonia, and Lithuania, came by plane and were already temporarily established at the reception center of the United States Committee for the Care of European Children, 661 Cauldwell Avenue, the Bronx. Thirty-five more from Poland, Yugoslavia, Romania, and other countries, arrived today on the steamship *Hahn*.

PICKED UP SOME ENGLISH

Although their first day here had scarcely begun, yesterday's arrivals had already learned a few Americanization preliminaries. In a drawing group they had picked up the English words: nose, eye, ear, hair, head, face, house, window, door, and roof. They had learned the meaning of "How are you?"

Breakfast was a delightful, but somewhat baffling novelty. Faced with a mysterious concoction called orange juice, they poured it over their cereal, and they ate sugar right out of the bowl. One boy made a sandwich, spread first with sugar, then marmalade, and finally with butter.

Last night most of them made their first acquaintance with oranges. Today the pungent odor of the fruit lingered throughout the halls of the high-ceilinged center, once a nurse's training school for Lebanon Hospital. And the stands and tables in the rooms were scattered with peelings.

The bewildered obedience of the group who came today was slow in dissipating. The first relaxation came at the sight of a French poodle pup, which brought a few grins with its friendly waggling. Holding tight to their few belongings in small knapsacks, the girls were escorted first to their rooms on the upper floor.

TAKING CARE OF SISTER

A small shaggy-haired boy trotted along. Every one smiled a bit when he was sent back, but their eyes were sympathetic as he explained that it was his business to take care of his sister.

Relaxation finally became complete once every one was upstairs, assigned to rooms in groups. Without orders, meager possessions were secretly stowed away in drawers and

closets, and in no time at all the more venturesome were exploring the halls and joining the stomping, incessant traffic up and down the steep stairs.

A query about a name frequently brought a quick flash of a wrist, around which was wound an identifying band of adhesive tape.

"It's simply amazing how quickly they accustom themselves to a new place," said a staff member. "Yesterday I touched that little girl on the shoulder to steer her in the right direction, and she jerked away in complete mistrust. Look at her now."

The little girl was blowing a toy horn with utter abandon, interestedly following another staff member around at the same time.

STAY FOR WHILE AT CENTER

At the center, which was set up in May 1946, children remain from 2 weeks to 3 months awaiting placement in foster homes found by sectarian agencies—the Catholic Committee for Refugee Children, the National Lutheran Council, the European Jewish Children's Aid, and the Church World Service.

In rare instances, a child may have American relatives and be placed with them. Today Hilda Sieber, an 11-year-old pigtailed blonde from Hungary, who is going to an aunt in Pennsylvania, was greeted at the center by three other aunts, one of them Mrs. Anna Non, of Jersey City, bearing gifts of chocolate bars and cookies. She accepted with silent thanks, but her only conversation was an occasional "yes" or "no."

As soon as possible after their arrival at the center the children receive a thorough medical examination. The passive calm with which they accept this routine comes from many other such tests in the course of their movements as war orphans.

GET NEW OUTFITS

Their oddly assorted clothing is discarded and they receive new outfits, sometimes rebelliously when a beloved but dirty old hat is taken away.

While waiting for placement they attend morning classes, starting in their native tongue and slowly incorporating English. The educational program also includes talks by doctors, who explain the strange American standards of daily bathing, washing hands before meals, and brushing the teeth regularly.

[From the New York (N. Y.) Times of March 17, 1949]

DP CHILDREN HERE, DAZZLED BUT HAPPY—LITTLE BALTS ARE BEWILDERED BY POT ROAST, ORANGES, AND THINGS IN GENERAL

When 6-year-old Erna Kulmanis, a shy, blonde war orphan, was given a plate of pot roast yesterday, she started to cry. She said she didn't know what it was.

She had arrived a few hours earlier at the New York International Airport, Idlewild, Queens, with 66 other war orphans from a DP children's home in Germany.

The children were taken to the reception center of the United States Committee for the Care of European Children, 661 Cauldwell Avenue, the Bronx, where they will remain until their transfer to welfare agencies throughout the country for adoption.

The children—57 boys and 10 girls ranging in age from 5 to 14 years—originally came from Latvia, Estonia, and Lithuania. When they arrived in Hamburg on Tuesday to board the plane for America, they broke into cheers; they thought they were already in the United States.

When they stepped off the plane at Idlewild they seemed so impressed that most of them couldn't speak, but Alexander Kleins, 10, started to sing Latvian folk songs and said he wanted to be a musician. Austra Kurse, 7, said her "stomach was sick" and she didn't know what she wanted to be.

Only a few have any remembrance of their war experience, but the older ones talk about it sometimes among themselves at bedtime, said Edward Francel, an officer of the International Refugee Organization who was with them.

At the reception center they were greeted by Jacob Reingold, director, and his staff.

Mr. Reingold said they will be placed in foster homes by religious agencies of their own faiths—the Catholic Committee for Refugee Children, the National Lutheran Council, the European Jewish Children's Aid, and the Church World Service.

Today each youngster will get a physical examination and a set of clothing. While at the center they will attend classes in English, American history, and civics.

In the recreation hall Immonts Franks, 9, kept asking joyfully: "Is this America?" A little girl played with a yo-yo. A group of boys happily pressed the levers on the vending machines. Two curly-haired youngsters hugged each other as tears streamed down their reddened cheeks.

Then they were given lunch. Some were hesitant about taking slices of bread. When a basket of oranges was passed around some stared at the fruit. "They don't know how to eat it," explained Mrs. Olga Kiwul who acted as interpreter. Volunteers helped the youngsters peel the oranges.

After a short rest, they went to their rooms, took baths, and got into their new pajamas. Then they straightened out their worldly belongings and climbed wearily into bed to dream about the new world ahead of them.

Why Risk Another Depression?

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Wednesday, April 6 (legislative day of Friday, March 18), 1949

Mr. O'MAHONEY. Mr. President, it was my privilege last night to be invited to talk at a dinner at the National Retail Furniture Association at the Shoreham Hotel in this city. The subject was Why Risk Another Depression? I ask unanimous consent that the text of the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHY RISK ANOTHER DEPRESSION?

Do not misunderstand the title of this talk. There is no depression just around the corner. On the contrary, all indications point to a continued high level of prosperity for several years to come. The recent slight decrease in certain prices is not a signal that the inflationary pressures have been lifted from our economy, but rather a warning that we must not be content merely to let things drift.

I am talking not about the near-future, but about the long-range outlook for our country and for the world. I am talking about peace and the preservation of the American system of free competitive enterprise. I am talking about the preservation of opportunity for the masses of men and about the stabilization of a high standard of living for all. I am talking about the individual and the growth of big Government. I am talking about the appearance throughout the world of a new form of dictatorship and about the responsibility of business leaders and political leaders with respect to it.

Winston Churchill, speaking the other night in Boston, declared that if it had not been for the possession of the atom bomb by the United States, western Europe by this time would already have been taken over by Communists. Let me say that if the atom bomb is the secret weapon by which we have prevented military aggression from the Kremlin, the Russian secret weapon is the hope that we cannot avoid a depression here in the United States. Capitalism, to protect itself, must prevent another depression.

MOSCOW WANTS ECONOMIC CHAOS

The policy of Moscow ever since the end of the shooting war has been directed primarily to the creation of economic chaos in the countries of western Europe and everywhere else their saboteurs can work. They have acted in the belief that the capitalist world is unwilling to take effective steps to prevent depression. They have thought, therefore, that by obstructing the processes of recovery they can hasten the economic collapse which, in their judgment, would result in the triumph of communism.

A depression here would render utterly fruitless everything that we have done abroad during and after the war in the defense of freedom and for the establishment of peace.

Without us, western Europe would be an easy prey to communism. Consider only the fact that in Italy, in France, and in Germany as well there are already substantial Communist minorities, tough and well disciplined, ready to take over with all the ruthlessness they have already exhibited in Czechoslovakia, Poland, Hungary, and the other satellite nations. The hope of Russia is not based upon any plan of military aggression against us, but upon a deliberate plan of hastening by every means in their power the capitalistic collapse which they believe to be inevitable. Since a prosperous free economy in the United States is the essential key to the whole effort to maintain peace in a free and prosperous world, the supreme duty of our people and particularly of our leaders in business and in government is to devote every energy to the maintenance of prosperity here in the United States.

Let me now recite one or two of the reasons why we need not fear that a depression is just around the corner, why we should not mistake a little decrease in the cost of living as the beginning of a slide into recession. The Congress is presently planning the extension of the Economic Cooperation Administration Act. The only real debate now taking place in the Senate has been whether the authorization should be reduced 5 or 10 or 15 percent. Congress, like the country, is convinced that we must continue to support the economic basis of western Europe. That means that here in the United States we shall continue to produce food and fuel, raw materials, semifinished products and machinery for export to Europe. According to the February report, 62 percent of the total European recovery program authorizations of $3,707,000,000 has been spent in the United States. Agricultural and industrial commodities, raw materials and fabricated commodities totaling in value $2,300,000,000 were purchased here in the United States. That makes business. It will continue to make business throughout next year because it will continue to create the demand for United States products no matter what happens to the purely civilian economy.

Add to this the fact that here at home we shall spend $15,000,000,000 for national defense. Add to that the fact that other billions of public funds are being spent by the States for public purposes of various kinds. Add, also, that the civilian economy is running at a high level. Billions of private funds are being expended for expansion and development. More than 57,000,000 civilians are employed and are drawing compensation at better rates than before the

war. The latest information available from authentic sources shows that during the month of March 1949 there were fewer unemployed in the country than during the month of February. Thus the predictions of growing unemployment which were made earlier in the year seem already to have been shown to be without basis. Employment creates the purchasing power which, in turn, creates the market for all the goods and services which are produced by and distributed among the civilian population of the United States.

Industrial production in the United States in February 1949 was still running at a higher level than in either 1946 or 1947. It is true that in 1948 we allowed prices to reach by far the highest peak in history whether measured in the wholesale market or in the consumer market. They have declined somewhat in 1949, but this decline has brought us only to a level which is still far above the levels of 1947 and early 1948 when we were all screaming about the high cost of living. This explains why Dr. Nourse, head of the Economic Advisers to the President has coined a new word, "disinflation," to describe the present situation.

SIGNIFICANCE AND EFFECT OF NATIONAL DEBT

No, it is not the short-range picture that should give us concern. We must think of the long-range outlook and of the sort of world in which we want to live when peace has been restored, when people once more are able to go about the ordinary and normal activities of living, when it will no longer be necessary to spend billions to maintain armaments, billions for the occupation of foreign lands, billions for international cooperation, billions for the payment of the interest on the national debt.

War inflation resulted from the fact that we were producing goods and services for destructive purposes and paying for them, not with other goods but with Government I O U's. The Government was buying almost 50 percent of all the goods and services that were produced and was hurling them into the bottomless pit of war. To do this we incurred the greatest debt in history. More than $252,000,000,000 it still is. It is a mortgage on all the future production of the United States. The very existence of this debt is the fact which should compel us to organize all of our forces now that we may maintain a civilian economy of high-level production and employment when the peace comes. We must provide a substitute civilian market for the market which is now created in large part by Government in its effort to put the cap of permanent peace upon the figure of victory.

The furniture dealer or the dealer in consumer goods of any kind who sells upon the installment plan knows that the installment buyer is pledging his future income for whatever period within regulation W the purchase contract may run. The dealer will not make the contract unless he is reasonably certain that the purchaser has the capacity of producing the income necessary to meet the installments. Every such dealer knows that no profits are to be had in the repossession of such goods.

It is the task of Government so to organize the economy that all of the people will be able to produce at a sufficiently high level so that the Government, through taxation, may have the income necessary to carry and to reduce the national debt. Only the Government can provide the plan under which agriculture, labor, and industry, working as partners, may develop a new permanent high standard of living, the necessary substitute for the false, unstable standard of living built up on the production of commodities to be destroyed in war. Just as it was necessary for the Government to organize industrial production for war, so now it is necessary to organize production for peace.

Everyone agrees that modern mass production must have mass markets. Every businessman, manufacturer, or retailer knows that prosperity requires purchasing power, but not everyone has learned yet that the biggest markets are in the low-income brackets. There are so many people receiving less than $2,000 a year that they have three times more money to spend than all who receive over $25,000 a year. The under $2,000 group have a total income of more than thirty-five billion as compared with less than eleven billion for everybody in all the income brackets above $25,000. Indeed, the total income of all who receive more than $10,000 annually is fifteen billion less than the total receipts of the little fellows who earn less than $2,000.

Why risk another depression? It's not the purchasing power of the wealthy that will furnish business the market it needs, but the purchasing power of the masses at the bottom of the scale. If they lose their jobs, business loses its market and prosperity goes out the window. We must have prosperity if we're going to beat communism. Surely it is cheaper to have prosperity on a rising standard of living than it is to have another war.

WHAT MAKES BIG GOVERNMENT BIG?

The greatest obstacle to the establishment of a mass market is the fear that the Government in doing so will threaten the freedom of business; so I want to talk about government for just a moment and show what makes it big. No American who believes in the principles of the Declaration of Independence or the Constitution of the United States desires to see established here an authoritarian government. Despite all the name-calling one sees in print or hears in debate, the Government in Washington grows and grows, not because anybody with influence in public affairs wants to change our system, but only because stern facts over which we have no control compel the expansion of government.

Take the case of atomic energy, for example. The appropriation for the Atomic Energy Commission this year will be about three-quarters of a billion dollars. That will be a sum greater than was ever expended by the Federal Government in a single year prior to World War I, except during the Civil War in the years 1863 and 1864. The nature of atomic energy is such that everybody in Congress agreed that its development could be entrusted only to the Government although the whole project is managed from the top. This was not because anybody in the Government wanted to give the Atomic Energy Commission the extraordinary power it has, but only because nobody in Congress had the slightest idea how else to handle the new scientific fact.

But someone will say that is not a proper illustration. Very well, let us consider the activities of the Hoover Commission and the plan to reorganize the executive branch of Government. Letters pour into Washington urging the Congress to approve the reorganization plan submitted by former President Hoover. Yet, after all, it is clearly not a plan to remobilize big government, but to make big government more efficient. It is based upon a proposed statute recommended by both President Truman and former President Hoover by which the Congress will delegate to the President the power which only the Congress now possesses to define the form and the organization of Government bureaus. It is a proposal to place in the hands of the President the full power to make any changes he determines to be desirable.

It would be absurd to say that the former President wants to establish an authoritarian government and yet it must be clear that a grant of power to the President to reorganize the whole Federal Government by executive order is a development which results only from the fact that the problem is of such magnitude that this seems to be the only way by which the task can be accomplished.

GOVERNMENT HAD TO GROW

The growth of the Federal Government and the expansion of its powers bears no relation to any partisan division, past or present. New boards and commissions have been created indiscriminately by both Republican and Democratic administrations. The Federal Power Commission was established by a Republican Congress. It simply had to be created because the electrical and gas industries which once were merely local enterprises had become national with transmission lines and pipe lines extending throughout the country, across public and private lands without regard to mountains, rivers, or State boundaries. Back in 1931 there were handled by the Commission 64 applications for the construction of about 864,000 kilowatts of new hydroelectric capacity. Now there are 91 such applications for more than 5,579,000 kilowatts. With this sixfold expansion of this single aspect of the electrical industry, the Power Commission had new duties thrust upon it to prevent the imposition of unreasonable rates upon consumers. Without this Federal agency there could have been no effective regulation in the public interest, for the States are without authority in interstate commerce.

A check of all the bills introduced in the Senate in this Congress up to March 30 reveals that no less than 132 titles have been offered which involve the Federal Government directly or indirectly in activities affecting private enterprise. There are no less than 12 separate bills setting forth a complete program for Government support and supervision of air transportation. Government subsidies for aviation or for shipping seem to occasion no surprise and even those who are frequently most voluble in calling for the reduction in Federal expenditures are themselves the sponsors of measures which can only result in increasing Federal expenditures.

There are 15 bills having to do with financial assistance to education in various forms. Nine bills are concerned with legislation to improve public health. Ten bills propose Federal housing programs, principally slum clearance and the improvement of rural housing. One of the most striking proposals is the bill which provides for direct Federal loans to meet the housing needs of low-income families. One bill dealing with the aviation industry would put the Government into partnership with a single private management to assume financial, if not managerial, responsibility for a worldwide air transportation monopoly.

There is no sense in getting mad about these things or calling names about them. They are just plain facts. They are merely the measure of a great and growing nation. The Government is growing bigger and we are trying to make it more efficient because science, invention, and industry have made business bigger than it ever was before.

National and international business, which had little or no influence in shaping the economic lives of men when George Washington was President, now constitute the determining factor in all the economic issues before the Congress. Little business and local business, and particularly retail business, operate on an altogether different plane from that of the great aggregations of capital which dominate trade and industry in the national and international field.

INDUSTRIAL CONCENTRATION

The meaning of this is illustrated by the statistical fact that out of about three and one-fourth million business enterprises in the United States, 29,000, or eight-tenths of 1 percent, employ more than 52 percent of all the workers. Of these 29,000 businesses,

less than 5,000, or to be exact, 4,900, have so many workers each that their employees constitute 40 percent of all workers. These employers and these employees are engaged in interstate and foreign commerce, the regulation of which was committed by the Constitution to the Congress. That is the reason and the only reason why the Government at Washington has been expanding. It had to expand or else the regulation of the economy of the people would have been abandoned by their elected representatives into the hands of the private managers of the private corporations which carry on so tremendous a segment of all the business, trade, and commerce of the United States and of the whole world.

That, of course, is precisely what happened in Europe and brought on the Second World War. Government surrendered the control of the economy to the managers of the world cartels who failed to prevent depression and then the people let the dictators, Mussolini and Hitler, take over both the cartels and the Government.

The Constitution gives the Congress the power to regulate commerce. George Washington was the President of the Constitutional Convention and he signed the Constitution. He was the first President, so nobody can deny that it is good Americanism to have the Federal Government regulate commerce. It must do so if the people are to be kept employed, earning the wages and salaries that will enable them to purchase all the marvelous goods, including furniture, that modern industry makes.

We shall solve our problem according to the American ideal of business and government, not by weakening the Federal Government and thus destroying its power to serve the people or by attempting to destroy big business, for big business fills an essential spot in our economy. The modern world could not operate without it, but it should not be permitted to swallow up little business. The one thing needed is to make certain that neither big business nor big government shall have the arbitrary power to tell the people what to do.

To this end we must recognize that the modern corporation is merely an instrument of commerce. Every organization, whether it be a corporation, a trade association, a labor union, or a cooperative, which carries on the commerce which, according to the Constitution, is to be regulated by Congress is an instrument of that commerce and must be subject to the rule of order under which all groups of our society may work together to promote business, production, and employment. This is the simple way to create the climate in which little business and local business can operate in security without danger from either monopolistic business or monopolistic government. It is the simple way in which the growth of arbitrary big government may be avoided, in which there may be provided the incentives which will promote investment and stimulate the development of our resources in every quarter of the country.

WE DARE NOT RISK A DEPRESSION

Only the Federal Government can regulate national and international business in the public interest, and the public interest now requires that there shall be no depression, for that way lies world chaos. Capitalism is facing its greatest challenge. It must stabilize the economy. Business leaders and leaders in government, both activated by the great traditions of freedom, must unite now to prevent a depression. If we are to confound the Communists and win the free peace for which the war was fought, we must organize production for peace on a standard of living so high that all the world will want to copy our pattern of democratic economic organization just as it was trying to copy our pattern of free government until, in the modern world, economic dictatorship first started the trend toward the authoritarian state.

Communism is a defeatist philosophy, suited only to those who have lost faith in man. We can beat it here by peaceful means. But we must not risk another depression.

The American Cancer Society

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Wednesday, April 6 (legislative day of Friday, March 18), 1949

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by myself in regard to the beginning of the American Cancer Society's annual drive for funds.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

During the month of April, as most of you know, the American Cancer Society conducts its annual campaign for funds to combat the disease that takes the second largest death toll in the Nation.

This year it is estimated that 200,000 of our citizens will succumb to this merciless killer. American Cancer Society statisticians estimate that cancer will strike every other American home if this death rate continues.

President Truman has issued a proclamation naming April as National Cancer Control Month, in accordance with a joint act of Congress passed in 1938. In his proclamation the President said: "I * * * invite * * * all organizations and individuals interested in a national program for the control of cancer by education and other cooperative means to unite during the month of April in a public dedication to this program and in a concerted effort to impress upon the people of the Nation the necessity for such a program."

To aid in this public dedication, a number of my distinguished colleagues from this body and the House of Representatives have joined me in forming a Congressional Cancer Campaign Committee to assist the April drive of the American Cancer Society, which is the largest and oldest voluntary agency engaged in fighting this dreaded disease.

Today we met with leaders of the Cancer Society and heard from them encouraging reports on the progress being made in the all-out cancer war.

There are some edges of light in the dark cancer picture. This year one out of every four persons who develop cancer will be saved by surgery and radiation treatment, by the results of laboratory and clinical research.

This cure rate could be doubled by early detection and prompt treatment of the disease, provided that there were an increase in the number of persons receiving periodic physical check-ups and greater alertness to cancer's early warning symptoms by both the public and general practitioners.

This heartening prediction of a doubled cure rate was made at a remarkable meeting in Memphis last month, the first annual national cancer conference, sponsored by the American Cancer Society and the Public Health Service's National Cancer Institute. Some 500 of the Nation's leading research scientists, physicians, and clinicians pooled their knowledge at the conference which closed on the note of hope that a doubled cure rate was possible.

To help speed this great forward step, the American Cancer Society this year is seeking $14,500,000 to expand its programs of research, service to cancer patients, and public and professional education.

Through pamphlets—more than a hundred million last year—through information centers, through the press, magazines, motion pictures, radio and television, the simple truths that can save tens of thousands of lives are presented by the Cancer Society to the public. More than a million ficld army volunteers work in a carefully planned program of service to cancer patients. Seventy-three fellowships have been awarded to internes and young scientists in 32 institutions to train manpower for the continuing war. Medical films, lectures, exhibits, and publications help keep the physicians abreast of expanding cancer frontiers. The Cancer Society has supported 244 research projects in 86 universities and laboratories in 30 States and the District of Columbia. All this is in addition to the broad program of the National Cancer Institute.

CANCER INCREASE PREDICTED

There is one hard fact indicating the growing menace of cancer that I want to mention here. That is the estimate of the increase in cancer cases that may be expected because of our progressively aging population. Although cancer strikes all age levels it extracts its greatest number of victims from middle- and old-age groups.

To illustrate this point, let us take one segment of our population—our veterans. In the next 10 years it is estimated that cancer will strike more than twice as many veterans as it does today. This year an estimated 25,000 veterans are suffering from cancer. Within 10 years that figure will mount to more than 50,000 as our World War II veterans reach the middle-age bracket.

Last year our Veterans' Administration hospitals took care of some 15,000 cancer cases. The VA estimates that in 1960 it may be called on to take care of more than 43,000 cancer cases. That figure represents 80 percent of the predicted total number of cancer cases among veterans in 1960.

Apart from the humanitarian aspects involved in this sharp increase, let us examine the increased financial burden that will be placed on the Government in expanding VA hospital facilities to take care of these patients. American Cancer Society statisticians estimate that the cost of caring for a cancer patient is approximately $1,000 per year. This means that the cost to the Government in 1960 may be as much as forty or fifty million dollars annually, and that a substantial increase can be expected in each succeeding year.

It is only by the concerted attack being made on cancer by the American Cancer Society and the United States Public Health Service that we can save more and more lives each year and hold back the rising incidence of the disease. That is why the April campaign of the Cancer Society merits our wholehearted support.

The North Atlantic Pact

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, April 6 (legislative day of Friday, March 18), 1949

Mr. WILEY. Mr. President, there recently appeared in two publications in Milwaukee, Wis., two important statements on one of the most momentous

issues of our time—the North Atlantic Pact.

It was my privilege on March 30 to discuss the pact and point out what I felt are some of the important factors which we should review in our consideration of it.

On March 18 the Milwaukee Journal published an editorial entitled "It's a Peace, Not War, Pact."

In addition, in the March 27 issue of the magazine, the Living Church, which is also published in Milwaukee and which records "the news, the work, and the thought of the Episcopal Church," there also appeared an editorial endorsing ratification of the pact.

While both of these items are somewhat extended, I feel that they so clearly present vital comments on so tremendous an issue that they merit the attention of my colleagues and myself.

For that reason I ask unanimous consent that the text of these two splendid statements be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Milwaukee (Wis.) Journal of March 18, 1949]

IT'S A PEACE, NOT WAR, PACT

Every intelligent American should read the entire text of the proposed North Atlantic treaty. It is relatively short, simply written, and crystal clear as to intent.

It is a treaty every line of which breathes the spirit of the United Nations. The UN is mentioned no less than six times in the text. The first line reaffirms the faith of the signatories in the purposes and principles of the Charter of the United Nations and their desire to live in peace with all peoples and all governments.

It is a treaty to promote the well-being of the North Atlantic area, to develop the capacity of signatory nations to resist armed attack. An attack on one is to be deemed an attack on all, and each nation shall take the steps it deems fit to meet that attack. Thus the United States Congress retains its largely theoretical right to decide for or against war measures. But the clear implication is expressed in the treaty that we will stand shoulder to shoulder with the free nations who sign.

The defense measures to be taken are outlined clearly in the spirit, and according to the procedure, of article 51 of the United Nations Charter. That article provides that UN members singly or acting collectively, shall be entitled to defend themselves against armed attack until the Security Council has taken the measures necessary to maintain international peace and security.

That's what the proposed Atlantic Pact also provides. Furthermore, the Atlantic treaty nations shall immediately report any armed attack, and the defense measures taken, to the UN Security Council. The proposed treaty says: "Such measures shall be terminated when the Security Council has taken the measures necessary to restore and maintain international peace and security."

Thus the Atlantic Pact is completely dovetailed into the UN Charter. If the UN Security Council takes effective steps, the Atlantic treaty nations will not have to. But if the Soviets, or anyone else, prevent the Security Council from taking effective action to safeguard peace, then the Atlantic treaty nations will continue their defense against attack.

It should be noticed that the area covered in the treaty includes the territory of any of the signatories in Europe or North America, the Algerian departments of France, the islands under the jurisdiction of any signatory in the North Atlantic north of the Tropic of Cancer. It includes the signatories' ships and aircraft in this area.

The treaty also covers attacks on the occupation forces of any member in Europe. If the Soviets should attack the American, British, or French forces in Berlin, that would be viewed as aggression, just as would an attack on the territory of the United States, Britain, or France.

Ratification of the treaty shall be in accordance with the respective constitutional processes of the adhering nations. No member shall have the right to withdraw until the treaty has been in force for 20 years.

This North Atlantic treaty is a masterpiece of drafting. It marks a tremendous step toward peace. Despite all the flood of calumny and untruth from Moscow and its minions, the proposed Atlantic treaty contains not one line that suggets an alliance to make war, or to carry on an aggressive conspiracy.

It is a pact to maintain peace—by the collective action of free nations. It expresses a determination to "safeguard the freedom, common heritage, and civilization of their peoples, founded on the principles of democracy, individual liberty, and the rule of law."

Moscow papers please copy—if they dare.

[From the Living Church of March 27, 1949]

THE ATLANTIC PACT

One of the most vital decisions in our history faces the people of the United States as we consider whether or not to ratify the North Atlantic defense pact. Because of the moral implications involved in so far-reaching a policy, it is a question that deserves particularly thoughtful and prayerful consideration by sincere Christian people.

For months the public has been awaiting the text of this important agreement, which all the world has known was being negotiated, and of which tantalizing "sneak previews" have been given by the State Department. Now the text has been published, and the representatives of the participating nations will sign it early in April. The next step, so far as American participation is concerned, is the submission of the text to the Senate for ratification. In this connection, we hope that adequate time will be given for full and free discussion by the American press and public, and that hearings will be held in which all pertinent arguments, pro and con, may be presented.

The Federal Council of Churches, in its national study conference recently held at Cleveland and subsequently in action taken by its executive committee on the eve of the State Department's announcement of the text, declined to take action either endorsing or rejecting the pact because it did not have the actual text for consideration. The executive committee did, however, outline the kind of pact that it thought this Nation might support, based on the findings of the Cleveland conference. The committee wired the President its view that since the foundation for a universal structure of law and order is still inadequate, the United States can properly join its political power with that of other nations in such regional pacts as are authorized and encouraged by the United Nations Charter.

In our opinion, the Atlantic Pact does meet that test. It is drawn in careful conformity to the requirements of articles 51 and 52 of the Charter, and should tend to strengthen rather than to weaken the effectiveness of the United Nations. We hope that it will be ratified by our Senate and by the other nations concerned, and that it will be reinforced by such a program of mutual consultation and of lend-lease materials as will make it a genuine bulwark of peace and security to the democracies of western Europe, Scandinavia, and North America. If that is done, we believe it will prove to be a genuine and important step toward the stability and sense of security which alone can be the basis for enduring world peace.

It is unhappily true that the value of the European recovery program has been greatly limited by the sense of insecurity that hangs like a pall over western Europe. The essence of the Marshall plan was that help would be extended by the United States simultaneously with the vigorous mobilization of all resources for self-help on the part of the receiving countries. But, to take a single example, French capital is being largely withheld from constructive use because of the fear of the Soviet Army poised in central Europe, aided by the fifth column of French Communists and bolstered by a flood of propaganda. The recent declarations by Communist leaders in France, Italy, and even Britain and the United States, that in any "capitalistic" war their allegiance will be not to their own countries but to Soviet Russia have added fuel to that fear.

The countries of western Europe, and of Scandinavia, see themselves largely at the mercy of Russia if war should break out. Therefore, before they throw in their lot with America, they want to know what practical measures we are prepared to take to prevent them from being occupied by Soviet troops, as so many of them were recently occupied by Nazi troops. Given the situation, the question is a natural one; and it is one that we must answer, if we want their continued friendship and cooperation.

We have already assured these countries that a Soviet attack on western Europe would be regarded as an attack upon the United States, and that we would doubtless take action to counter it. But this is not enough for democratic leaders in Europe, who fear that any such counter measure would come too late to prevent occupation of their countries and liquidation of their leadership. Eventual liberation is a poor prospect, set against the threat of foreign occupation. Western Europe wants a more immediate and surer guaranty than that, and wants it in terms not only of food and equipment but of weapons and the assurance that our power will be used to prevent any such eventuality.

The problem is not only one of the security of western Europe; it is also and primarily—from the American standpoint—a problem of the security of the United States. This country does not want war; its people are indeed the most peace loving on the face of the earth. But if war is to be forced upon us, or if the world has become too small for the conflicting ideologies of communism and democracy to exist side by side, then we certainly do not want to see all of our friends and potential allies swallowed up one by one, until we are left to face a powerful enemy alone.

As Christians, however, we are bound to weigh the moral considerations underlying any such alliance, and not simply to justify it as a military measure. There is, we believe, strong moral justification for taking measures to knit together the peoples of the democratic nations, and to provide for their defense against the Red totalitarianism which is so destructive of every divine and human value. There is less moral justification, if any, for a purely military coalition, set up on the assumption that war is inevitable and that any means of winning it is warranted.

We do not think that the Atlantic Pact is primarily a military alliance, in the old balance-of-power tradition. True, it has important military features designed to promote mutual self-defense, and these are essential in the present uncertain state of the world. It would be foolhardy to blind our eyes to the threat of military aggression by Soviet Russia, in the light of the history of the past 4 years. But the pact is definitely

defensive, not offensive, in nature. And its objective is not to force American ideas upon European nations nor to hinder the process of peaceful internal change, but to provide the framework of security within which the recovery and rehabilitation of western Europe may go forward.

The North Atlantic Pact is, we believe, a realistic and statesmanlike plan to strengthen and underwrite the community of interest between this country and the European democracies. If it can allay the penetrating fear that now paralyzes western Europe, and that is beginning to affect our own country, it will be a good thing. And it is just as well that we should recognize clearly that the future of America is intimately bound up with that of Europe. The world has become too small for us to return to a policy of isolationism, even if we wanted to do so.

The strongest guaranty of a united free world is not the detailed provision of military commitments in case of this or that contingency, but a common determination on the part of free peoples to throw off the shackles of fear by working together for the good of all, and to remove the evils that lead to the false philosophies that thrive on disunity, chaos, hunger, and fear.

We believe that the proposed North Atlantic Pact will help to underwrite the security and sense of unity which must be the basis for progress toward such a free world. We believe that it is in harmony with the provision of the United Nations Charter for regional pacts, and that it is defensive in nature. We wish it might be universal rather than regional and that it might serve to guarantee the security of the whole world rather than only a part of it. But it is Soviet Russia, not the United States or the other democracies, that has chosen to split the one world into two. If and when the Russians come to themselves and decide to cooperate with the other nations in forming a world community, the door will still be open to them.

It is important that any such far-reaching national policy as that involved in the Atlantic Pact should be made in the light of full knowledge and free discussion, for it will vitally affect every man, woman, and child in the United States. No treaty of a democracy can or should be stronger than the public opinion that stands back of it. Therefore we hope that full opportunity and sufficient time will be given for study of the terms of the proposed pact before it is brought up for vote in the Senate. We are confident that the result will be general recognition that the pact is both necessary and desirable, and that it will give force to what the Cleveland study conference called the moral use of American power.

Necessity for Small Business Committee

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 6 (legislative day of Friday, March 18), 1949

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the complete text of a radio broadcast given by me on March 26. The broadcast was entitled "Halt the Three Bigs," and it dealt with the necessity of reestablishing a Senate Small Business Committee.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

HALT THE THREE BIGS

Thank you, and greetings, fellow Americans.

This week, ladies and gentlemen, I invite you to listen to a brief interview with Senator KENNETH S. WHERRY, of the State of Nebraska, after which I shall make a few remarks.

Senator WHERRY has been one of the country's most outspoken defenders of our American system of free, competitive enterprise. His fine record during the Eightieth Congress as chairman of the Senate Small Business Committee, qualifies him to speak authoritatively on the many problems now confronting American small business. The fate of the Senate Small Business Committee was being debated when the following interview was recorded. Mr. George Burger, federation vice president, from our Washington office, who has worked closely with the Senator, is heard as interrogator.

And now, by transcription, we take you to the radio studio of the United States Senate. The first voice you will hear is that of Mr. George Burger, vice president, National Federation of Small Business, in charge of the Washington office:

I am speaking to you from the radio room of the United States Senate. Across from me is seated a Senator who needs no introduction to millions of Americans, and especially small-business men, throughout the Nation, I refer to the distinguished junior Senator from the State of Nebraska, the honorable KENNETH WHERRY.

At this moment, Senator WHERRY, small business is facing a very critical situation, and for the benefit of our radio audience I am going to ask you some leading questions that may tend to stimulate public interest in what is happening. One, do you think the controversy over the reestablishment of a special small-business committee will be solved for the benefit of all concerned by the establishment of a permanent standing committee for small business in the Senate?

Senator WHERRY. George Burger, if you don't mind I'd like to call you George, because I know you so well. I would like to thank you for the opportunity of expressing these observations, especially to the small-business men of America.

In answer to your question, I believe that if the best interests of the small-business men of America are to be served there must be established by the Senate, a committee that will have broad authority to handle all of the problems which are thrust upon the independent businessmen in their struggle for survival. No single committee of the Senate has jurisdiction broad enough to take care of the many and varied problems of the independent businessmen of America. By that I mean that their problems cut across each and every standing committee line. Efforts are being made to have this great and necessary work done by a subcommittee of only one legislative committee of the Senate, but as I have just said, I contend now that such a procedure will never take care of the small-business men of America adequately because they would have to set up a subcommittee of each of the 15 committees, and you know as well as I do, George, because of your experience here in Washington, that what is everybody's business is nobody's business.

We should have one committee where the small-business men can come and there receive the representation and the relief that they ask for. The problems of the small-business men are just as distinct and peculiar as are those of farmers, and of labor, and of all the segments of our economy. Every great segment in our economy has a place to go in Congress with their peculiar problems. Why not small business?

The more than 2,000,000 small-business men of America have had such a place to go in the Senate, because of the special committees which have been set up over the past 8 years. Their problems involve the encroachment of monopoly. Small-business problems involve getting a fair break in Government contracts; their problems in getting a fair share of the available supplies of materials so they can do business and provide jobs. These problems cut across every committee in the Congress. This is basic. The overall reason why there must be a separate standing committee of the Senate on small business of the small businesses of America, these men should get a square deal. You know, George, that I have been doing my level best to get a committee established by the Eighty-first Congress but up to this very hour in which we are making this recording, I am unable to report much progress in the accomplishment of this purpose.

Mr. BURGER. Thank you, Senator. Now, what do you think would be the effect upon small-business enterprise if the Senate fails to reestablish a special committee, or a standing committee, as it is sometimes called?

Senator WHERRY. My answer to that question, not only from my experience as a Senator but as a businessman as well, would be that it would be a serious injury to fail to establish this committee. A serious injury would befall the small-business man of America if the standing-committee proposition is just fumbled out of existence. Small business is the backbone of American industry. It is a great field of opportunity for the youth of our land. We want to preserve in our country every advantage of freedom of opportunity and freedom of choice. That is my chief reason for being so interested in the welfare of small-business concerns.

Our Nation is suffering today from three bigs; big monopoly business, big labor, and big government. We must change this trend or our ship of state will land on the rocks.

Mr. BURGER. Believe me, Senator, we are very happy to hear you speak in this manner. You have spoken this way as long as I have known you and your actions have been in keeping with every statement you have made over this microphone. No one has fought harder than you to see that the small-business men of America get a square deal. I have just one more question that I would like to ask you. The small-business men have noticed a growing tendency in the legislative branch of our Government to absolve industry from the liability of the antitrust laws. Do you believe that if this trend continues, it will have a disastrous effect upon the future of small business?

Senator WHERRY. My answer to that question is, indeed there is such a trend. I have noticed this in a lot of hearings, especially on our small-business committee, and the small-business men of America should be vigilant and make it their duty to watch these developments, because if they do not do so, and if they do not interest themselves in this branch of our Government, they will find themselves crowded out of business entirely. We want America to be strong, so that we can be prosperous and fulfill our obligation to the world. To be strong we must have a flourishing and prosperous business economy based upon free, competitive enterprise for small business as well as big business and all segments of our economy.

Mr. BURGER. Thank you very much, Senator WHERRY. Ladies and gentlemen, you have heard some very important remarks from the distinguished Senator from Nebraska. Senator WHERRY is the minority leader in the Senate and at present he is

facing many twofold duties. It is a great tribute to the many small-business men of America that he has taken this time out of a busy day to give you these words of encouragement. I have known Senator WHERRY since he came to Washington in 1943. I have found him consistent; delivering on the line every promise he has made to protect the small business of this Nation.

My parting advice is that every American keep in close contact with Members of Congress, insisting upon the fact that no amending or weakening of the antitrust laws take place.

Mr. WIMMER. Ladies and gentlemen, I know you have gathered from the remarks of Senator WHERRY and Mr. Burger that both men are in hearty agreement that small business needs a good strong voice in the United States Senate. It is true that many sincere Members of Congress have the feeling that some other agency or committee will serve just as well, but both the House and Senate Small Business Committees have performed such valuable services that reconstitution of each was sought with great vigor.

In the first of a series of articles on small business, Tully Nettleton, who is a staff writer for the Christian Science Monitor, referred to American small business as "big business," which he further described as "the bulwark of these United States." Mr. Nettleton quoted from a report of the Committee for Economic Development, which stated that 95 percent of all business could come within the definition of "small business."

This is unquestionably true. The little shoe-repair shop is a very, very small business when compared with the smaller independent motorcar manufacturer; which in turn is small business indeed when compared with the largest manufacturers of automobiles. It should therefore be very clear to everyone that preservation and expansion of, let us say, independent enterprise, is mighty important to every person in this Nation.

The House and Senate Small Business Committees have been a bulwark against special-privilege groups who have made numerous attempts to disrupt the channels of free, competitive enterprise with unfair monopolistic practices. These committees have been the guardians of the rights of individuals to participate as independent enterprisers in the production and distribution of goods and services, and as such they have not only served small-business men but they have served all of the people of the Nation.

Last week I discussed the various problems which these committees have studied and acted upon, and we shall return to this same subject in future broadcasts.

One thing is certain. No stone must be left unturned that will protect the independent enterpriser from unfair competition if we are to open the avenues of opportunity to the millions of boys and girls now pouring from our schools and colleges.

The National Federation of Small Business speaks for these boys and girls when we come to you with such facts as have been brought out in the interview with Senator WHERRY, and in all our other activities.

Give Freedom a Chance

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. REED of New York. Mr. Speaker, it may be possible for President Truman and his Congress to pump enough billions of dollars from the taxpayers' pockets to temporarily stem the tide of depression, but the more billions given away under ECA will eventually deepen and prolong the approaching depression.

Reports coming to congressional offices confirm the correctness of Mr. Babson's observation with reference to the factors which point to the approaching financial storm.

Under leave to extend heretofore granted, I am inserting an article by Mr. Babson, which appeared in the Dunkirk Evening Observer on April 2, 1949:

BABSON SAYS

WASHINGTON.—Harry Truman told voters last fall they needed a Democratic Fair Deal Congress to protect their pocketbooks, their homes, their futures, and even the happiness of their children. I know a few workers who are beginning to smart under this Fair Deal. Today they can't pay the grocer or the landlord.

THE BLOOM IS OFF THE BOOM

The postwar boom has faded so badly that nearly all of our governors are crying for Federal aid. Unemployment in some States is up 100 percent. In some New England towns where the normal working population totals five to ten thousand, as many as 40 percent of the working population are unemployed.

The economic laws of life are catching up with Mr. Truman in spite of the clairvoyant prognostications of his economic pontificate. Retail sales volume has shrunk. Unemployment consequently continues to increase. Carloadings have likewise slumped. Rail, plane, and bus seats are vacant. Hotel accommodations are available without advance reservations. Automobiles are once again procurable. Food prices are down. Clothing prices have been slashed. The housing boom is busted. Business failures are up. Warehouses are full, and many concerns are burdened by too heavy inventories. Why?

HAVE AMERICANS LOST THEIR INITIATIVE?

The fact of the matter is, some thinking Americans are pretty well convinced that Harry Truman himself is not only killing the proverbial goose, but also smashing the golden eggs. Many sharing this opinion are American businessmen. They are the ones who supply the jobs. They are the mainspring of every Main Street in every city, large or small, of the United States. They are best symbolized by sweat and ulcers.

In the face of bureaucratic waste and inefficiency and demands for greater bureaucratic control to create more waste, businessmen are getting discouraged. With the President wanting to embark upon steel making, regardless of the consequences to jobs and savings of millions involved, businessmen rightly question the President's business acumen.

GIVE FREEDOM A CHANCE

Perhaps there are no longer men left with the competitive spirit. Perhaps all Americans are fast becoming a bunch of leeches unwilling to exert the individual energy necessary to keep this country great. I cannot believe this. I am old fashioned enough to believe in America and in those creative principles which have made her great. I think Mr. Truman needs to develop a similar faith in our country. He needs to add a fifth freedom to the now famous four, namely, freedom of enterprise.

The fruits of freedom will ripen only if the social climate is conducive to good growth. The human organism may have the experience, knowledge, and necessary inheritance to develop into a full-blown freeman. But, how humans use these assets and their savings depends on environmental factors which alone develop industry, perseverance, competitiveness, and self reliance. In short, the human organism must be adequately conditioned and motivated to "git up and git." This is a lesson in elementary psychology of human relations which President Truman overlooks.

GOVERNMENT'S TRUE FUNCTION

If Mr. Truman is sincere in his desire to fulfill his campaign promises, he will try to remedy his gross misunderstanding of business functions. He will realize the importance of the competitive spirit and the profit motive in a healthy and free national economy. Government is justified in preventing monopolies and assuring that business is carried on honestly; but otherwise politics and business do not mix to make prosperity.

The Dangers of Communism

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, April 6 (legislative day of Friday, March 18), 1949

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Jurist's Warning," by the Honorable Hugh C. Todd, a very distinguished jurist.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Seattle Post-Intelligencer of March 28, 1949]

A JURIST'S WARNING

(By Hugh C. Todd, judge of the superior court)

I wish to warn the American people of the dangers of communism to our institutions of free government and to the worship of God in this country. You are slumbering in a complacent sense of security because you do not physically see or feel any danger, yet overnight, freedom and religion might fall prostrate in America, and when you awaken you will realize that another Pearl Harbor has struck you down.

If you are not aroused by that statement, you are not aware of what is going on in the world at large and right here in the United States. If you have no fears, you had best take heed and take action. The time has come to act against communism.

This is a duty which rests upon every American citizen, and particularly upon those in public authority: every officer administering the affairs of our Government—the legislators, the Congress and the President, the prosecutors and the Attorney General, and the members of the judiciary as well. A judge is opposed to robbery, burglary, and murder, yet in an American court the robber, the burglar, and the murderer can get a fair trial.

The menace is the growing force of a foreign government that has declared war on freedom and liberty, on democracy, and on Christianity, and all forms of religion. This force is marching on us with a fervor no less than that of those who sing Onward Christian Soldiers, Marching as to War. This force is encroaching on nation after nation, not only breaking down their territorial boundaries, but spreading its devastating ideology in the minds of millions of their peoples,

until today it moves toward our shores with vicious propaganda and marshaled military power.

The Soviet Government recognizes no God; religion is banned; all labor is slave labor; private property is forbidden; liberty and freedom of the individual do not exist. Soviet Russia's sphere of influence has spread to satellite after satellite in eastern Europe and to the hordes of starving orientals in western Asia. Soviet Russia enslaves the millions of the new states it has engulfed and imprisons those in authority who pray to God—Catholic and Protestant, Jew and Gentile—those who on bended knee profess any religion.

Do you Americans realize what kind of government you enjoy—and that you may lose it? Your Government is founded on this premise: "All men are created equal; they are endowed by their Creator with certain inalienable rights; among these are life, liberty, and the pursuit of happiness": freedom of religious worship, freedom of speech, freedom of press, right of assembly and petition. If the onward march of communism is not stopped, you will surrender every such right and principle.

Soviet Russia has planned the destruction of free America for years. Ten years ago, on October 27, 1938, I decided a case in the King County Superior Court—Case No. 305196, entitled *"Northwest District Communist Party* v. *City of Seattle."* This was the first case in America where a judge has ruled, based on evidence and testimony, that the Communist Party believes in the overthrow of the capitalistic, republican, and democratic Government of the United States by force and violence.

Exhibits introduced in evidence in that case, which included the constitution and bylaws of the Communist Party and the program of the Communist International, proved to me that the war for the destruction of liberty and religion was on.

Under the Communist International program, the Communists' fight is pedagogical and administrative, which means that they will seek high public office and professorships and attempt to influence the public and students, both in Government and in the schools, colleges, and universities of America.

Freedom-loving Americans — Catholics, Protestants, all believers in religion—ask God on bended knee tonight to give us wisdom to realize our peril, and courage and strength to arm and defend ourselves before it is too late. Now is the time to get tough and rough with communism.

Aid to China

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. KLEIN. Mr. Speaker, in casting my vote against H. R. 3830, which was a simple measure authorizing the President to expend the unobligated balances remaining from the China Aid Act appropriations, I was making a protest against what I cannot help regarding as a plunderous attitude on the part of Nationalist officials in China and in this country.

Because I was one of 70 Members voting against the bill, and because it would be hard to find two of those 70 Members who voted from the same motives, I think I owe my constituents this explanation.

The present bill is not a bad bill; and, if we are to try to prime the pumps of recovery in all the United Nations, we can scarcely omit China from our beneficence.

However, I have a strong distaste for using American money to bolster up corruption and reaction in the name of progressive American democracy, and I am afraid that nowhere in the world have well-meant American contributions done less good, in proportion to funds expended, than in China.

For many years the Washington press corps has seethed with rumors of a great scandal about to break around the purchases of real estate in New York by Chinese officials in this country, beyond all reasonable expectations of their known incomes; the break has never come, and it may be that the rumors were only rumors, having no substance in fact. Nevertheless, the presence of the rumors cannot be attributed to malice alone; predominantly, the sympathy of America and of the American press and its working writers has been with the Chinese people.

There has been no such reticence in regard to scandals of expropriation, fraud, bribery, theft, and discrimination in China.

Our military aid during the days of war was partly nullified by stupid jealousies and indecision and favoritism and corruption in the Chiang Kai-shek government. Suppression of the moderate political parties of the middle way took the place of long promised reforms, reorganization, and popular government under a written constitution; the constitution was produced finally more as a sop to American public opinion than as an instrument of enlightened popular government.

In an editorial published in the New York Post Home News Wednesday, March 30, that newspaper declared:

By now it should not be necessary to remind the most fumbling of old hands that a vote of no confidence has already been registered against the decadent nationalist crew. Not by our State Department which might have continued to support Chiang Kai-shek and his henchmen until they had plundered China bare of all democracy and gold, but by the non-Communist Chinese people. By the soldiers, the peasants, the intellectuals, the coolies who lost faith in the nationalist fight because many nationalist leaders sat in silks at home, fattening on black-market profits and languidly waving their secret police into repressive action.

Instead of daydreaming that any moment now, Chiang will return on a white steed to win the people back to his discredited and empty cause, the alleged China experts might better catch up on their reading.

Post Home News correspondent Robert Martin reports that normally progovernment Chinese newspapers are demanding that the United States refused to extend the nationalists further aid. They argue that any assistance now would give the Nanking government a semblance of strength which it does not possess, thus fatefully undermining peace negotiations.

If more money must be appropriated for China, let the President assume complete charge of the spending. Through the settling dust, Mr. Truman may discern the need to spend the full sum on relief—and relief alone—for the victimized Chinese people.

Mr. Speaker, I, too, have complete faith in the ability of the Chinese people to find their way to a democratic way of life; I am glad, in reality, that the bill passed over my protest vote.

But I had to voice that protest against corruption, reaction, and stupidity in the nationalist government.

Government Propaganda

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. REED of New York. Mr. Speaker, the task force report on public welfare, prepared for the Commission on Organization of the Executive Branch of the Government, and submitted to the President of the Senate and the Speaker of the House of Representatives by a letter of transmittal from former President Hoover, devotes a part of the report to Government propaganda. Under unanimous consent heretofore granted, I insert as a part of my remarks that part of the task force report dealing with the self-serving propaganda emanating from the agencies of the Federal Government, as follows:

Old-age and survivors' insurance has given a long-existing problem of American Government a new significance in a new political setting. The problem is: To what extent should administrative agencies use funds not specifically appropriated for the particular purpose to promote the extension of a program beyond the limits thus far established for it by the Congress, and thus to put pressure on the Congress as a whole and sometimes on individual Congressmen in particular to support the extension? A close liaison between the administrative agency and private individuals or organizations may develop in such a way that the private individuals or organizations carry on the activities which would be patently improper for administrative officers on the pay roll of the agency, but the material which they use has been prepared for them by these officers who may be privy to the proposed use.

The division of powers between the President and the Congress increase the complexity of this problem. The Constitution makes it the duty of the President to "recommend to their consideration (the two Houses of Congress) such measures as he shall judge necessary and expedient" (art. II, sec. 3). If the President has recommended a program for the consideration of the Congress, he may raise no objection to the activities of the administrative agencies under him in promoting that program. On the other hand, the Constitution provides that "no money shall be drawn from the Treasury, but in consequence of appropriations made by law" (art. I, sec. 9) and the Congress has specifically constituted it a criminal offense to use appropriations to pay for personal services to influence Members of Congress to favor or oppose legislation (41 Stat. 68).

If this provision of the criminal law is to be enforced the action must be taken by the Attorney General, the President's own appointee who holds office at his pleasure. The Comptroller General, the congressional

watchdog of the Treasury, does not have the mechanisms for getting at the situation. Salary for the position has been properly provided by law and hence payments to the incumbent are approved in the final settlement of accounts. It is entirely impracticable for the Comptroller General to determine the actual activities of employees as distinguished from their nominal ones and to withhold payment of salaries because the activities actually carried on were prohibited by law. The facts often do not come to light until after all payments have been made and accounts finally settled. They generally come out after the event and through congressional investigation.

Although this situation has always presented some difficulties, it has become increasingly important in recent years with the advent of new philosophies as to the functions of the state in relation to economic and social policies. In the administrative branch, both in political and in permanent civil-service positions, are a substantial number of employees considerably to the left of the majority of the Members of Congress. Some of them appear to have a conviction that it is their duty to attempt to influence Congress and in interpreting and applying laws to go as far as possible in achieving the reforms in which they believe. They are not satisfied to act and administer within the intent of Congress. The experts in the executive establishments, according to this philosophy, know more and are better equipped than the Congressmen, and the view is not accepted that the experts should be on tap but not on top.

Such attitudes affect both the research work and the publications of some governmental agencies. The most common manifestation is to give wide publicity to the material that will popularize a program and lead to its expansion and to play down the material that might raise opposition to it.

The office of the actuary of the Social Security Agency has, for example, prepared a number of studies of the ultimate costs of old-age and survivors insurance, showing a future magnitude so great that they may have a profound effect on the economic and social system. They have not been widely publicized or popularized. What has been widely publicized is the benefits which people get from the system and the need for more extended coverage, higher benefits, and more liberal eligibility provisions. Very little has been done to dispel an apparently prevalent notion that the present taxes of 1 percent on the employee and 1 percent on the employer will supply the benefits.

Such a course might be more excusable if the problems of financing an old-age retirement system were a matter of common knowledge. On the contrary real understanding is exceptional rather than general. One of the most common ideas is that the excess of receipts over benefit payments in the early years of the system is at least evidence of solvency if not that the system can afford to pay much more liberal benefits without increases in taxes. The question should be raised as to whether in a democracy the government should not present to the people in clear and simple form an analysis of all the problems involved and of their ultimate social and economic implications. The system has its benefits and its costs, and the people should decide whether the benefits are worth the costs. More specifically, initial opposition to a means test is almost instinctive, but there appears to be very little general understanding of the degree of control over the earnings of the people that will ultimately result from a universal no-means test system paying substantial benefits. If the degree of control was widely understood, it seems possible that large numbers of citizens would desire an unbiased and comprehensive study of the possibilities of developing a means test which will be stripped of most of the old features which account for its disrepute.

Interview With Hon. Spessard L. Holland, of Florida, on the Program "Meet the Press"

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 7 (legislative day of Friday, March 18), 1949

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting and educational radio program entitled "Meet the Press," in which the junior Senator from Florida [Mr. HOLLAND] was interviewed by several newspaper reporters, on March 4, 1949.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

ANNOUNCER. From Washington, D. C., news center of the world, Mutual brings you the most revealing half hour in radio—Meet the Press, America's press conference of the air.

We invite you to listen to an unrehearsed and spontaneous press conference, as four of your country's ace reporters fire questions at Senator SPESSARD L. HOLLAND, of Florida, who is taking an important place in the Senate filibuster now in full swing.

Each week Mutual presents Meet the Press in cooperation with the editors of the American Mercury, one of America's most fearless, outspoken, and stimulating magazines. Our press conference will begin in just a moment.

What about the filibuster? Has it a legitimate place in a democratic government? Is it, as its defenders claim, a protection for a minority against an all-powerful, hard-hitting majority? Or has it become, as its opponents insist, a device whereby a handful of wrong-headed, willful legislators can defeat the will of the people? Is the filibuster the best guaranty of free discussion and deliberation in democratic legislative halls? Or is it a travesty upon the whole democratic process, leaving the door open to the tyranny of a backward minority? Once again, as so many times in the past, lines are drawn in the Senate for a battle over the issue of the filibuster. This time the battle will be more hard-fought than ever before. A large part of President Truman's program is at stake. The administration is determined to bring the filibuster under control before the highly controversial civil-rights bills are presented for passage. The southern legislators in the Senate know that their only hope in keeping these bills from becoming law is in maintaining the age-old right of the upper House to unlimited debate. They will fight to the last man against any change in the rules. An important participant in the fight is Senator HOLLAND, of Florida, whose colleague, Senator PEPPER, is with the administration and against him. He is here tonight to answer some of the questions you would ask if you were here.

And now, here is the well-known commentator, Albert Warner, to welcome Senator HOLLAND and the gentleman of the press.

Mr. WARNER. Welcome, everybody, to another weekly news conference. Seated around the press table are: Lawrence E. Spivak, of the American Mercury Magazine; Marquis Childs, of United Features; John T. Carlton, of the Miami Daily News; and Louis R. Lautier, of the Atlanta (Ga.) Daily World, who this week won a Wendell L. Willkie award in Negro journalism. Facing the press table is Senator SPESSARD L. HOLLAND, Democrat, of Florida. He is a lawyer, a former judge, and a student of the law. He was Governor of Florida before coming to the United States Senate in 1946. He's a veteran of active service in the First World War and a winner of the Distinguished Service Cross. Senator HOLLAND has been a leader this week in the fight against a new Senate rule to limit debate. After speaking for 3 hours, he fortified himself with a glass of Florida orange juice and continued on for 1 hour and 52 minutes more, but always on the subject and always with logic. After speaking that long, he may be excused for having a rather hoarse throat tonight. Now the President has entered the fight urging limitation of debate by a simple majority vote. And in the background of the conflict lies the waiting civil-rights legislation.

I see Mr. Childs has the first question.

Mr. CHILDS. Senator HOLLAND, you talk a lot about unlimited debate and the right of unlimited debate. But when does unlimited debate become a filibuster, and will you please for us define the word "filibuster"?

Senator HOLLAND. Well, Mr. Childs, the matter of defining a filibuster depends on who's defining it. We speak of unlimited debate because we're given that right, we are proud to have that right, we feel that it's worth something to our States and to the people of the Nation, we think that it's not only legitimate, but it was one of those features that was in mind when the Senate was set up, and that for 128 years there was no departure from the rule that there should be no limitation of debate in the Senate except during the War Between the States, and then only as to war measures.

Mr. CHILDS. But there is something called a filibuster, isn't there, Senator? What is it?

Senator HOLLAND. Mr. Childs, the filibuster is a term used by people who don't like to go up against unlimited debate, particularly when they don't have sound arguments to meet the arguments of those who are conducting what the critics call a filibuster. In this instance I think it's completly wrong for anyone to speak of what has happened so far in this debate as a filibuster, because as a matter of fact, only 7 have spoken out of around 22, and each of them comes from a separate State. There are several other States whose Senators haven't been heard at all, and under our belief that the Senate is the peculiar forum where the States are given the right to be heard through their Senators, we haven't even made a beginning as yet. And so I think that it was a travesty when, on the occasion that Senator GEORGE rose to his feet the other day to make the first speech, a 44-minute speech, that the papers all blazoned out with the news that the southern filibuster had begun. Now that's simply ridiculous.

Mr. SPIVAK. Well, Senator, actually you are out to stop a vote. You aren't out just to clarify an issue and get a vote—you're out to stop this vote from being taken on the amendment. Isn't that so?

Senator HOLLAND. Mr. Spivak, we are out to beat the change of the rule, and we don't even know in what shape a vote might finally be presented. We know that while the committee has reported in a resolution to perfect, as they call it, the two-thirds cloture rule, we know that the majority leader, Senator LUCAS, and the majority whip, Senator MYERS, and the Vice President of the United States, and the President of the United States apparently all want a majority cloture of one kind or another. And they're not even together—some of them

want the constitutional majority cloture, that is, by 49 Senators; and some, including the distinguished President of the United States, have come out for a simple-majority cloture, which means by 25 of the Senators when there's only a quorum present.

Mr. SPIVAK. Well, Senator, sooner or later you're going to clarify this issue. Some of the men who are with you in this debate—not filibuster—insist that they'll talk in order to stop the vote. Now, would you admit that at that time this thing would become a filibuster? Is there any danger of that?

Senator HOLLAND. When the time comes that people run out of arguments and are talking about matters that are completely extraneous to this debate, then and then only will anybody be properly and legitimately entitled to call this a filibuster. As a matter of fact, Mr. Spivak, more Senators have spoken since this debate started on Monday who have not been in accord with the views of the group from the South, of which I'm one, than have spoken on our side. We've had seven to speak. There've been four or five to speak directly against us, and then there have been some seven or eight others who've spoken on other subjects during this period of time. So by no means have we trespassed or in any way hogged the time up to now.

Mr. LAUTIER. Do you think, Senator, that the Senators who framed the present cloture rule in 1917 intended that the Senate should have a rule which would enable two-thirds of Senators voting to limit debate on any matter before the Senate?

Senator HOLLAND. That's a good question. It's a question that I wish I could answer definitely. I wasn't here. I knew some of those distinguished gentlemen. They were among the finest statesmen that we've produced in this world—I mean, in this Nation—and it's very hard for me to believe that that large group of both parties who were on the committee failed to see these two defects which have come in, particularly when there is in the Senate rules, and was then, a provision that an amendment or motion to correct the Journal was a privileged motion which anyone was entitled to bring at any time. And, to close my position on that, I would like to call your attention to the fact that the defects in this rule appeared while most of the men on that committee were still Members of the Senate. And we have no indication that they tried to correct or strengthen the rule. And we're forced to the conclusion either that they knew that the defects were there when the rule was prepared and adopted, or that when the defects appeared they had found that the rule was vicious, and that they didn't care to attempt to perfect it, one of the two, because certainly none of them ever spoke up to correct the defects which you speak of.

Mr. CARLTON. Senator, various members of the press gallery today, in talking to Senators from off the floor, got the very definite impression from a great many of them that the southerners had this attempt to change the rules beaten, and that if a vote was put today, the so-called southern group would have won. In view of that fact, if it is a fact, would you not be willing to have a vote tomorrow or Tuesday or Monday or at any time on this question?

Senator HOLLAND. Jake, we'd have been glad to have a vote today. And so far as we're concerned, if the vote could have come today by our merely stopping, we would have welcomed it. But as to what the vote will actually be when it does come, I have no idea. You must remember that with the President and the Vice President and the majority leaders all in this fight, that all of the trading material is against us, and that therefore the fact that we might have been in ascendancy today, which I believe to be the fact, shouldn't make us feel that we've won the battle by any manner of means, and we do not so feel.

Mr. WARNER. Well, Senator, are you intimating that President Truman's intervention yesterday hurt his own cause?

Senator HOLLAND. No; I haven't intimated that at all.

Mr. WARNER. Well, your suggestion that today you might have won out, I thought carried the implication that perhaps the situation was different today from what it had been yesterday morning.

Senator HOLLAND. Well, there were several things that happened yesterday and today which contributed, I think, to better the situation. Now, what will happen from now on we can only wait to see.

Mr. CHILDS. I'd like to ask you, Senator HOLLAND, why, in your opinion, your colleague Senator PEPPER takes an opposite stand from you. He's a southern Senator from Florida. Why does he disagree with you?

Senator HOLLAND. Why, Mr. Childs, I couldn't possibly answer that, except upon the theory that he conscientiously believes in the other side of the question. I accord to him the quality of good conscience, which I think every Senator must accord to every other Senator.

Mr. SPIVAK. Senator, instead of the two-thirds or majority provision, would you be willing to accept a provision that would give you the unlimited right to debate, continue the unlimited right to rebate, as long as you stuck to the subject?

Senator HOLLAND. You mean a relevancy provision?

Mr. SPIVAK. Yes, sir.

Senator HOLLAND. Well, that isn't before us now, Mr. Spivak. I have frequently thought of that. It might be the answer to this whole situation. I did, in my speech yesterday, as you may recall, state that not only I, but I thought the southern group as a whole, would be agreeable to support the Stennis resolution, which proceeded to clear up all the defects but to cut down the number against whom cloture could be voted to not to exceed 10, on the theory that we didn't want a small obstreperous group left in position where they might hurt the Nation in time of grave emergency. And 10, you know, is a considerable number. They might represent the five most populous States in the Nation with nearly 50,000,000 people.

Mr. WARNER. May I—may I suggest at this point—don't the present rules provide that there must be relevancy in speech making? Don't you have to keep to the subject under the present rules, if you have a presiding officer who interprets them strictly?

Senator HOLLAND. Certainly not. Certainly not, Mr. Warner. If that were the case, then a Senator with a message of tremendous importance to his people, and something which he felt should by all means be promptly called to the attention of the Nation, would be precluded and shut off from doing so just by the pendency, perhaps, of some inconsequential measure. So that there is no rule at this time of that kind in the Senate.

Mr. SPIVAK. I was going to say that I'd understood that there was a Senate rule based on Jefferson's Manual which states no one is to speak impertinently or beside the question superfluously or tediously, and I just wonder whether that has been enforced. Evidently it hasn't, and has gone by default.

Senator HOLLAND. I think it's been enforced during this debate, because I don't believe anybody, certainly on our side, has spoken either tediously, impertinently, or beside the question.

Mr. SPIVAK. Senator, Senator RUSSELL, your leader in this fight, has said, "We shall show that the present rules of debate have been productive of more good than harm." Do you agree with that statement

Senator HOLLAND. Entirely.

Mr. SPIVAK. Well, can you name a recent instance where that has been so? Where a debate has been stopped that has been productive, that has gone on that has been productive of real good?

Senator HOLLAND. Well, there's a long list of legislation to which cloture has been attempted to be applied, and then before the rule of cloture was adopted, in 1917, there's a considerable list of attempted legislation which was stopped by long debate, and I believe when you read that,, you'll come to the conclusion that there has been nothing good that has been so stopped. As a matter of fact, since this rule was adopted, it is absolutely a demonstrable fact that nothing has been stopped except these three measures which are most often mentioned in this so-called civil-rights program. Now, while it's true that two or three other measures were stopped for the time being, they became law and became law shortly, and there is nothing that has been held up since 1917 under this rule and denied permanent passage, except these three items which are so offensive to the South, its laws, its custom, its philosophy, and which we believe will very greatly harm us and turn us backward in the tremendous progress that we've made on our path of good will and understanding, in which both races have progressed greatly.

Mr. LAUTIER. In the light of your opposition, Senator, to any change in the cloture rule except the Stennis proposal, I'm wondering whether you would be willing to make any concessions on the civil-rights program first.

Senator HOLLAND. Yes, I certainly am. I was one of those 10 southern Senators who, you recall, joined to introduce an amendment to the Constitution which would take care of the poll-tax question. And we think that's the only legal way to approach it, that is, from Washington, the only legal way to approach it, except by handling through the several States, seven States I believe it is, who still have the poll tax. That is, I think can be properly stated to be, a concession.

Mr. LAUTIER. On the matter of antilynching, I'm wondering whether you would favor Federal action in cases where persons are taken from law-enforcement officers, where they are suspected of crime, and are lynched without the imposition of penalties on the community in which the lynching occurs.

Senator HOLLAND. No; I wouldn't, because I think you'd get no good results, and I think you'd get very bad results. As a matter of fact, when under the present laws and under the present mandate of popular opinion in the Southern States the situation is so good that in 2 years within the last 5 there has been only one lynching in each of those 2 years—and I deplore the fact that there was one—I say that you've gone far beyond what you can do through the force of law, and that we've made the progress that we've made most largely through good will and through understanding and through patience and through the insistence of the good people of both races, yours and mine, that this blot shall be removed, and I don't believe that there's any other capital offense that you can mention or that any of us could mention, unless it is dueling, which has been so nearly extinguished, and I'm perfectly willing to put up, as I did in the Senate yesterday, our record in the South, which is so vastly better in this field, against the record of some other parts of the Nation, where the same kind of cause, that is, intense race feeling, has provoked race riots and other difficulties in recent years, as, for instance, the one at Detroit in 1943, when 34 people were killed and 471 wounded, and the one at Harlem that same year, when 5 were killed and about 500 wounded, and I'm not making any suggestion of criticism against those communities. I'm sure they deplored those things worse than anybody else anywhere. I'm sure that they had good laws and good enforcement officers.

But this thing we're talking about, this matter of race hatred, when it explodes, is something that flies in the face of the law, it doesn't follow the law, and those things didn't happen because there was no law, but they happened because there was a conflagration that came too quick to be stopped.

Mr. SPIVAK. Well, Senator, if you've succeeded in handling the lynching law as well as you have, what objection have you got to a law? You won't have to worry about it at all.

Senator HOLLAND. Mr. Spivak, having served as governor of a southern State, I have seen the emphasis which is placed by every southern governor, by every attorney general, by the law enforcement officers generally, by the good people in general, upon building a decent record based on fair treatment and on justice and on insistence that the law shall prevail, when we're standing on the soundest ground that people can stand on——

Mr. SPIVAK. I know, but Senator——

Senator HOLLAND. That is, a good conscience——

Mr. SPIVAK. We have a——

Senator HOLLAND. And my point—let me conclude my answer, please, sir—my point is that to inject compulsion here from outside, voted by people who haven't the slightest understanding of this problem, will take us off of that good, sound rock of sound conscience, and instead will put us in the position of having to do something—and we won't get anywhere——

Mr. SPIVAK. Senator—Senator, all laws——

Senator HOLLAND. On that basis.

Mr. SPIVAK. All laws are compulsion. We have a Federal lynching law today, and that hasn't bothered you fellows too much. Why should you worry on any Federal kidnapping law? Why should you worry about a lynching law, especially if you've handled the lynching matter so well?

Senator HOLLAND. The Federal kidnapping law, if I understand it, relates to the transportation of kidnapped persons across State lines, and is built on the thought that here's an interstate matter. There's no such point as that at all in the antilynching law. I'd certainly have no objection to an antilynching law which would include only that element of Federal jurisdiction, because I think you'd be building on sound grounds.

Mr. CHILDS. Senator Holland, leading off this question on which you are so very sensitive, don't you feel your party's come in here, the Democratic Party, with the tremendous promises your President has made—I say "your President" advisedly—don't you feel this unlimited debate—I won't call it filibuster—is going to hold up vital measures—rent control, European aid, and so on—that will destroy your party in Congress?

Senator HOLLAND. Mr. Childs, if that results, it won't be the fault of the southern Senators——

Mr. CHILDS. Well, it doesn't matter whose fault it is——

Senator HOLLAND. Let me conclude my answer——

Mr. CHILDS. I'm talking about your party—you're a Democrat, aren't you?

Senator HOLLAND. You bet I am a Democrat. And I've supported the President and I've supported the party. But let me tell you this—that I'm one of those who foresaw the coming of this question, and after talking to the leaders and getting nothing out of talk, I addressed a letter—a formal letter—to the majority leader now, Senator LUCAS, on January 13, calling his attention to the fact that if this fight were precipitated now, that those who precipitated it would have to take the responsibility for knocking down the chance for bringing up other important legislation. And notwithstanding that, notwithstanding the fact that many splendid Senators in the South and elsewhere in our party agreed with that, the leadership insists on butting its head into a wall—I think you saw the cartoon in the Star the other day which shows so clearly that that's what's going on—they're butting their head into a wall, and they've done it after notice and knowledge of what was apt to happen.

Mr. CARLTON. Senator, we recognize, of course, that you are no Dixiecrat and that you supported the Truman-Barkley ticket in the last election. I want to ask you this question—the President, Mr. Truman, and Mr. Barkley carried Florida, as they did all except four of the other southern States. Do you think that victory indicates public support of everything in the Democratic platform?

Senator HOLLAND. Not at all, Mr. Carlton. If the Governor—the then Governor of Florida—this is my humble judgment—and myself, the junior Senator from Florida, and the six Congressmen, all of whom had taken the same position that I had, and the six Cabinet members, who are elected every 4 years just like the governor, and numerous county officers throughout the State, had not stood loyally by the party even though we were not in accord with this civil-rights program, and not in accord with at least one other thing in the platform, the State would not, in my humble judgment, have remained in the Democratic column. You'll recall that our party got only a plurality down there this last time, Jake, and that the Republicans were right closely on our heels, and that the so-called Dixiecrat Party also got a quite heavy vote in Florida.

Mr. CARLTON. Well, Senator, I understand that there's some consideration, or at least it has been suggested that the President could dissipate a great many misunderstandings about his program and about his personality should he make a trip through the South, similar to the one he made through the Midwest, or the several he made through the Midwest prior to the last election. What do you think the reception would be that the southerners would give to President Truman should he make such a trip?

Senator HOLLAND. Why, Jake, we'll give him the same courteous, cordial reception which we always give to the President of the United States. I'm leaving here tonight by plane to meet the President and others next Tuesday morning at Rollins College, where he'll receive an honorary degree. We are proud of the fact that he has placed his out-of-town White House there. He certainly would receive cordial welcome in Florida, and I'm sure in every other Southern State where hospitality is part of our nature.

Mr. CARLTON. Well, don't you think he would render a real service to his party and to the Nation should he make such a trip?

Senator HOLLAND. Perhaps.

Mr. WARNER. Supposing he makes such a trip berating the Eighty-first Congress?

Senator HOLLAND. Well, that's his prevlefe—that's his privilege.

Mr. LAUTIER. Do you think, Senator HOLLAND, that the Democratic Party is duty-bound to carry out the pledges it made in the platform adopted at the Democratic National Convention in Philadelphia last summer?

Senator HOLLAND. Well, now that—you've asked a question that's pretty big. It—some of them are. People who were elected upon the strength of that platform I should say are. There are many of us who are not in that position. I personally have taken my own personal position against civil rights, both when I ran and ever since I've been up here, and though I stayed with the party I made it very crystal clear when I came out to stand with the party this time that I wasn't yielding on civil rights and on one other question with which you're familiar. And I think that those of us who had our own platforms and were elected upon them have the perfect right to stand upon those platforms and records.

Mr. WARNER. Senator, may I ask if the action in the Senate Labor Committee today in reporting the administration bill without considering any amendments—has that had any effect on the filibuster fight?

Senator HOLLAND. Well, I haven't heard of any yet, but I should think it would, because it's a practical, specific demonstration of what a majority, working with the administration, can do to beat down ordinary rules of fair play and of parliamentary procedure.

Mr. CHILDS. One thing I'd like to hear you explain, Senator HOLLAND, and that is the fact that in the Southern States the Truman ticket got far more votes than the Dixiecrat ticket, even though in many States the Dixiecrat—the Truman ticket was barred from the ballot. Don't you believe that that indicates that the southern Senators represent a minority of the South, rather than a majority?

Senator HOLLAND. I do not. I think if you'll check the States you'll find that in those States where the Governors and the Senators and the Representatives and the important State officials and county officials went Dixiecrat, that the State went Dixiecrat. And where those officials to the contrary stayed with the party, the State stayed with the party. And I think that I'm speaking for every southern State and the vast majority of the people in every southern State insofar as I know they were, when I say that they are opposed to this so-called civil-rights program, because they think it will roll back the tremendous progress which we made in this field and of which we're very proud. And we think, Mr. Childs, that the rest of the Nation ought to be expressing their approval and praise of the fine record that has been made in the South.

Mr. CHILDS. Well, exactly, you fought for antipoll tax legislation in Florida. Why do you now oppose it on a national scale Senator?

Senator HOLLAND. I certainly don't. I've offered an amendment to take care of it, but I'm certainly not going to support a statute which I believe to be not only hopelessly unconstitutional, but an entering wedge and an invitation for other Federal measures which would be equally unconstitutional and which will disturb even more the States' control of their own election machinery.

Mr. SPIVAK. Senator, the South has been tremendously concerned with the constitutional issues involved. Have you always been so concerned with the Constitution as you are today in this issue—in these issues?

Senator HOLLAND. Why, I think so.

Mr. SPIVAK. I mean the Southern Democrats? What, for example, have you done about the fifteenth amendment? Do you think the South has attempted to enforce that?

Senator HOLLAND. Now, which is the fifteenth? Just——

Mr. SPIVAK. The fifteenth amendment——

Mr. WARNER. Mr. Spivak, I sincerely don't think we've got time to go into that. I'm sorry to interrupt, but we must bring this to a close. This has been a relatively short time in which to air the views of our guest—after all, he kept the Senate floor for 4 hours and 52 minutes yesterday. But we have at least touched on some of the highlights of the issue of restricting debate in the Senate. We leave it to our listeners to decide whether the resistance to limitation of debate has become, as Republican Senator TOBEY suggests, just words, words, words, or reasonable opposition to the threats of high-handed action by an uncompromising majority. For this press conference of the air, the thanks of the Mutual network go to

you, Senator SPESSARD L. HOLLAND of Florida, and to my colleagues of the press: Lawrence Spivak of the American Mercury; Louis Lautier of the Atlanta Daily World; John Carlton of the Miami Daily News; and Marquis Childs of United Features. Until next time, this is your correspondent Albert Warner.

The European Recovery Program

EXTENSION OF REMARKS

OF

HON. RAYMOND E. BALDWIN

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, April 6 (legislative day of Friday, March 18), 1949

Mr. BALDWIN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address regarding the European Cooperation Administration and the European recovery program, by Harold G. Stagg, editor of the Marshall Plan Letter, before the Export Managers' Club, at the Hotel Statler, New York, N. Y., on March 23, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, members of the Export Managers' Club, and distinguished guests, I was very pleased by your invitation to discuss with you my impressions of the European recovery program and the operations of the Economic Cooperation Administration, particularly as they relate to you in your business. As editor of the Marshall Plan Letter I have some knowledge of your problems, and of the problems which confront ECA.

But in trying to explain the workings of the European recovery program objectively, there is one fact which everyone must consider. That is, that there are two sides to the question—yours, and the other fellow's.

I could probably make many friends by saying that ECA is a foe, not a friend, of American business. And I believe I could document that statement reasonably well. On the other hand, I could say with equal emphasis that ECA is a friend, not a foe, of business. And I could easily document that statement, too.

But neither statement would be wholly true. ECA is much too aloof from the routine problems of American business to bear so human a label as friend or foe. It is more like a benevolent tyrant, impersonally trying to guide the world into the utopian sunshine of economic prosperity and political good will.

Perhaps it will be best to remind you at the start that your support of the European recovery program is not a matter of choice. It's a matter of necessity. To use a homely and undoubtedly odious comparison, it's something like paying alimony to a divorced wife. There's a lot of justification for it, you're not very keen about it, but you'd certainly be a lot worse off if you withheld your support.

And so, whatever your quarrels with ECA, you've got to continue giving it your support. Right now the program is primarily a European recovery program. But in a few years it may well become a vital necessity as an American prosperity program, or even an American recovery program.

I want to tell you a few things about the situation we are going to face in a few years in regard to American world trade. But first I'd like to tell you a little about the men who run ECA, things you rarely hear unless you have close and constant contact with them.

With few execeptions, you can say this for the men around Paul Hoffman, the ECA boss: They're not afraid of hard work and long hours. From the bright boys fresh out of Harvard and Yale to the big boss himself, they tackle Europe's problems with an attitude of consecrated devotion. That attitude is emphasized by the astounding number of overtime hours they put in on the job. And if you know about Washington, you know that this is a rare phenomenon.

Recently, just before Mr. Hoffman was scheduled to present ECA's case for more money to the Senate and House Foreign Relations Committees, you could find the elevators in the ECA building crowded at 11 o'clock every night. And not all of the members of ECA's varsity team were on their way home. Many of them were going out for a quick cup of coffee to keep them on their feet until 2 and 3 a. m. Now they've settled down again into a normal routine that includes working all day Saturday and at least half a day on Sunday.

It isn't hard to explain this gluttonous appetite for long hours of work. First, there's the nature and scope of the job. Give a group of men several billion dollars, tell them to reshape world trade and the economic lives of 270,000,000 Europeans, and they're bound to feel a sense of God-like power and responsibility.

Second, there's the leadership within the organization. Hoffman is the kind of man who inspires his aides to maximum efforts. With his ability as a supersalesman, he wins support from almost everyone he comes in contact with. He does this with what appears to be amazing ease. And his assistant deputy, Richard Bissell, provides the drive needed to back up Hoffman's inspiration.

Third, there is the caliber of the men themselves. That it is extremely high is explained by the fact that many of the policy men are on loan from high-salaried industrial jobs, to which they anticipate an early return. Their work for ECA is their stint of patriotism. And why not, with the whole world to play with, and a salary of from ten to twenty-five thousand dollars a year?

Unfortunately, in some officials, this consecrated, single-minded devotion becomes bigotry. Their eyes and minds are so firmly fixed on the European horizon that the United States is just a blur in the distance. They yell "team, team, team" so loud and so often that they can't hear the dissatisfied grumblings of businessmen in this country, businessmen who for good reason feel that ECA has no interest in their problems.

Much of this holier-than-thou tone is set by Deputy Administrator Dick Bissell, whom my associates describe as an almost inhumanly brilliant economist, and by his young assistants who are dubbed by the press as the "palace guard." These youngsters keep themselves well-insulated from the everyday problems of businessmen, and the queries of a frustrated press, with glib mental wanderings through a field populated with phrases like "balance of payments," "deficits on current account," and "exportable surpluses."

Bissell without doubt is the know-how man of ECA. The press speaks of him privately as the "know-how-but-won't-tell man." He's a phenomenal worker. He's honest and sincere. But his shy and chilly personality and his passion for abstractions keep him from being popular. As a planner, ECA needs him; but as an administrator, he doesn't quite measure up to his reputation, because he doesn't seem able to delegate authority. If it weren't for Hoffman's warm charm and the good-humored practical shrewdness of Deputy Administrator Howard Bruce, ECA would be far more unpopular and misunderstood than it is now.

Here, then, we have a handful of handpicked American economists, businessmen, and politicians reshaping world trade policies under a congressional edict to bring about the complete recovery of Europe by 1952. There is nothing in the Foreign Assistance Act under which ECA was created which authorizes or instructs ECA to use its funds to stave off a depression in the United States, or to save American businessmen from the results of softening markets.

Hoffman was very emphatic in explaining his position in this regard to the Foreign Relations Committee. Here is one sentence from his recent testimony, and I quote:

"If Congress for any reason wants us to give particular support to any segment of the American economy and thus make this somewhat of an American recovery program, all we ask is that we be given very specific and direct instructions, because if you do not give us those instructions we are going to buy where we can buy at the lowest possible price."

Where ECA is concerned, the recovery of Europe is the only keynote. Where ECA is concerned, the recovery of Europe is the only goal.

Anything more is in the future and is up to you and up to Congress.

What happens to American business in the meantime is rightfully your concern. But it is not the concern of ECA under the law which Congress wrote and which has been widely supported by the public.

Despite the complaints of many businessmen and groups of business representatives, the economy of this country is better off today as a result of ECA than it otherwise would be. For without ECA Europe would have no dollars to buy our products.

At the moment the short-range outlook for American world trade is good compared to prewar years. But the long-range outlook holds a serious threat to United States exporters, and this threat appears certain to reach the acute stage by 1952. When that time comes, it will be necessary to continue the European recovery program as an American recovery program—a program which will be vital if this country is to maintain its place in the trade pattern of the world.

Therefore, whether we like it or not and by this or any other name, the European recovery program—in some form or other—is going to remain with us.

The over-all accomplishments of the European recovery program have been substantial and the basic operations of ECA are wise and sound. But there is much room for a little giving here, and a little taking away there, that would make ECA operations of more genuine help to greater numbers of American businessmen. That's why the Marshall Plan Letter occasionally appears critical of ECA's stubborn adherence to the strict letter of the law and its somewhat fawning willingness to proceed on the theory that European governments, like Caesar's wife, can do no wrong.

ECA has emphasized again and again that it is a financing and not a purchasing agency. Although this is manifestly true, United States exporters who are losing their traditional markets under ERP inevitably turn to ECA to register their complaints.

The policy of letting participating countries make their own Marshall plan purchases, subject, of course, to the approval of ECA, was designed to encourage the use of private trade channels and to avoid placing ECA in the position of acting as another huge Government buying corporation.

However, some exporters complain with considerable justification that under ERP, private trade channels are not being used in the true sense of the word. The United Kingdom, France and Italy, which receive most

of the money under the recovery program, are using Government agencies, or quasi-governmental purchasing monopolies such as the French groupments, for nearly all purchases.

In many cases, the purchases consummated under the Government-controlled program are not those most desired by the countries' own importers.

The view of American suppliers has been confined largely to specific problems of their own particular businesses. ECA tends, quite properly under the law, to view ERP as a whole. Consequently it feels that the governments of participating countries must decide themselves what goods they will import from the United States.

With limited dollars available, ERP countries, as a matter of self-interest, will be forced to reject many requests from their own importers for the right to import specific commodities and materials.

However, the fact remains that the impact of ERP on our domestic economy must be assessed realistically. It must be assessed not only in terms of its fast-disappearing inflationary aspects, but on its possible undermining of the markets of United States business.

The eyes of ECA still view only the European scene and there is a continuing tendency to deny United States business groups opportunities for greater participation which are possible within the present scope of the European recovery program.

American suppliers have tried to have the buying programs of the various countries publicized in advance so they could compete for some of the business. But ECA has given them little help in their efforts.

Time changes all things and it has already brought into focus the need to reexamine some of the fundamentals of our foreign aid program. Before the basic ERP legislation was submitted to Congress last year, the probable impact of this type of spending on the American economy was thoroughly studied by a number of Government committees. However, because the studies were undertaken in the fall of 1947 and the spring of 1948—when inflationary pressures were causing considerable concern—the principal emphasis in the basic studies was on softening the impact of the program on price levels in this country.

This concern with the possible inflationary effects of ERP was carried over to Congress, and in writing the authorizing legislation Congress included specific provisions to limit the quantities of various commodities that could be bought in this country. Except for the sections of the ECA Act dealing with the procurement of "surplus agricultural commodities," almost no attention was given to the problems of sectors of the American economy which already have felt the effects of a sharp down trend in foreign demand for their products.

As a result, ECA and other Government agencies concerned with United States exports under the Marshall plan attempted, with a considerable degree of success to limit the quantities of certain goods exported from this country.

The limitations on exports imposed by ECA and the Office of International Trade were generally confined to commodities in short supply. But the European countries in attempting to stretch their limited dollars displayed an immediate tendency to schedule purchases in the United States, only if supplies were available nowhere else in the world.

As you well know, the effects of this general policy have been disastrous to some segments of the United States economy.

As a result of complaints some Members of Congress gradually are becoming aware that this year they face an entirely different problem in gauging the impact of ERP on the domestic economy, than in 1948. Now the problem is how to increase buying in the United States of a relatively large number of items, instead of trying to limit purchases. This problem should come to the fore when the new ECA bill reaches the floors of the House and Senate.

The position of ECA—which is still largely concerned with the inflationary aspects of the program—has already been outlined before Congress in considerable detail. But with a very few exceptions it would take an alert Diogenes with an awfully bright lamp to find many Members of Congress who know what it's all about.

Except for some Members of the Senate and House Foreign Relations Committees, there are few Congressmen who have more than a superficial knowledge of how the European recovery program operates—of why ECA does what it does—or why businessmen sometimes complain about ECA practices.

ECA has published and continues to publish numerous documents and charts which provide excellent reviews and graphic illustrations of what the European recovery program is, what it means, how it functions, what it has accomplished, what problems still lie ahead.

Unfortunately, too few Members of Congress and almost none of the general public ever give these charts and documents more than a casual glance. For all the good they do in spreading the gospel of ERP, they might just as well be buried in the cornerstone of the renovated White House.

ECA marshaled all of its big guns from Europe, brought staff aides winging home across the Atlantic, burdened with great masses of impressive reports and statistical information. They were allowed to make their formal statements before the Foreign Relations Committee. They were permitted to point out the fact that they had available beautifully drawn and colorfully decorated charts, and were prepared to explain them in detail. They were questioned briefly and instructed to make way for the next witness.

Formal hearings on ECA's request for additional funds began before a joint meeting of the Senate and House Foreign Affairs Committees on Tuesday, February 8. The scene was one of great conviviality, with klieg lights and cameras and a majority of the members of both committees on hand.

When the lights had dimmed, when the cameramen had gone, only a handful of interested committee members remained to show their interest in ECA and its $5,000,000,000-a-year program.

Most people spend too much time looking at the export picture entirely from the point of view of the American businessman. They overlook Europe's own recovery objectives, which are bound to have a very far-reaching effect upon American trade.

It isn't generally known, but Europe's recovery objectives during the life of ERP involve reducing imports from the United States by a thumping big 40 percent and capturing half of the United States markets in Latin America for her own products. These, undoubtedly, are overly ambitious goals, but the fact remains that the impact of trade shifts in the next 3 years will seriously dislocate the present United States trade pattern and demand difficult decisions by Congress, the Government, and business.

Government trade experts predict that United States exports in 1949 will average $1,000,000,000 a month. That will be close to 1948 levels, but far below the 1947 bonanza. However, in the days ahead, American traders are going to face keener competition in almost all world markets.

The trade pattern of the last half of 1948 will probably continue for the next year because of continued heavy spending of ERP dollars. After that, however, the determination of all the western European countries to reduce imports from this country will become a matter of urgent concern. It will be of concern, not only to producers already feeling the effects of the collapse of the extraordinary 1947 demand but to the entire domestic economy.

Price declines in the United States will have little effect on the short-range picture, which, as I said before, is favorable. Although European buying in this country is encouraged by price declines here, this is somewhat offset by the fact that European exporters will receive less for products they sell here and their supply of earned dollars will be proportionately reduced.

The over-all trade problem is complicated by the fact that Europe is aiming not only at reducing imports from the United States but at increasing its exports to this country and to the rest of the Western Hemisphere.

This export campaign already is causing trouble. Some United States suppliers complain they are losing markets in Latin America and some domestic producers are concerned over the threat of European competition in this country.

Despite the fact that an increase in European exports to the United States is a basic objective of the Marshall plan, there is trouble brewing on this score. It will come in connection with the extension and strengthening of the President's powers to negotiate tariff reductions under the reciprocal-trade program.

The Truman administration is adjusting slowly to the conclusion that the end of postwar shortages in this country requires an entirely new assessment of trade policies. And although some tariff reductions will be made at the conference next month in France, they will not be as far-reaching as the ERP countries would like.

Building long-range markets for United States exports will require aggressive action in the coming year as European imports become more and more limited to a few products which can be obtained only in this country. The road ahead is rough.

For example, by 1952 France plans to cut its annual imports from the United States from a prewar level of about $900,000,000 to about $365,000,000.

France's exceptional postwar imports of coal, bread grains, and dairy products are already being reduced substantially. And coarse grains, fats, and machinery will soon feel the pinch of cutbacks as well.

By 1952, France hopes to restrict dollar purchase to oil, cotton, copper, machinery, leaving only $95,000,000 for miscellaneous items.

Belgium, the Netherlands, and Luxemburg are moving rapidly toward economic union. Traders should begin analyzing export opportunities to these areas as a unit. Imports by the Benelux countries from the United States will continue through next year at the present rate of about $700,000,000, four times the prewar rate, then move downward to a goal of about $500,000,000 for 1952.

On the other hand, exports to this country from Benelux countries are programed to rise from the present level of about $100,000,000 to nearly $250,000,000.

Italy plans rapid changes in its supply markets. Imports from the dollar area, which amounted to 44 percent of her total imports in 1947, will be reduced to 15 percent by 1952, and purchases in other areas will be increased.

Italian exports to this country, now at 6 percent of the total, are programed to reach 10 percent by 1952.

Bizone Germany, that is, the American and British occupied areas, is now making nearly 50 percent of its purchases in the United States. But it will begin lowering this proportion late this year, with the objective of

reducing the United States share of total imports to about 15 percent of the total.

However, the United States may be able to continue the actual volume of its exports to Germany at a high level. But only if recovery there proceeds speedily enough to permit a planned 75 percent over-all increase in German imports in the next 3 years.

The United Kingdom, whose trade plans are being urged as a guide for other ERP countries, is making giant strides in reducing its purchases from the United States. Imports from this country in 1948 were cut 42 percent, and a further 17-percent reduction is planned by 1952.

These factors are not related to frighten any segment of the American business economy. Rather, they are emphasized as a reminder that while European recovery may be the paramount consideration today, maintenance of the American high level of prosperity may well be the big issue tomorrow.

To keep ourselves vigorous and healthy in the field of world trade we're going to have to continue casting our bread upon the waters. Congress will be compelled to approve the extension of some form of foreign-aid program after 1952.

Undoubtedly, emphasis then will be placed on guaranties of purchases in the United States as a prop for our own domestic economy. And the scope of aid will spread out to encompass assistance to backward areas of the world in line with President Truman's point 4.

Perhaps, in the interim, political unity in Europe and peace throughout the world will brighten the outlook for all of us. At least, it's something nice to think about.

Address Before the Sentry Club in Philadelphia by Hon. Kenneth S. Wherry, of Nebraska

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, April 7 (legislative day of Friday, March 18), 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by our distinguished minority leader, the Senator from Nebraska [Mr. WHERRY], to the Sentry Club of Philadelphia, meeting in the Hotel Bellevue-Stratford in that city on April 6, 1949. The Senator from Nebraska spoke by telephone from the Radio Room in the Senate Office Building, through loud speakers, to the meeting of the Sentry Club in Philadelphia.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening, Madam Chairman, and members of the Sentry Club.

From the Capitol of the United States I am speaking to you. As you know, by this time, my plans to attend your meeting have necessarily been changed. We have approached the closing moments in a historic Senate debate on foreign aid, and these closing moments have been dramatic.

A brand-new issue has developed. Is ECA an authorization to feed destitute people and rehabilitate their economies, or is it now an authorization to subsidize the participating countries for expansion of their foreign trade to heights never dreamed of before?

This is a weighty decision that the Senate is called upon to make, for it may have a tremendous impact upon our domestic economy, the very subject I have been asked to speak on tonight. It is a great pleasure for me to address you. I fully realize that I am on the spot, so to speak, when I am asked to discuss prices, controls, economics, and related ponderous subjects with you women.

There are innumerable organizations of mere men in the various trades and industries, mining, and agriculture. With tremendous seriousness they debate, weigh, plan, and consider the raging currents of government, economics, labor, and management relations. They strive to keep the factory wheels humming and to find their way in a confused Nation and world.

But when all their labors are ended—I might as well say "we," for it is quite evident that I, too, am a man—we have yet to consider what milady—the women—will think of it all.

For, isn't it true that women, chiefly women, do the buying and make the decisions on the end products of factory, mine, and farm; whether it be food for the table, clothes for the family, or the homes in which we live? So, when I told the boss, my good wife and severest critic, Mrs. Wherry, that I was going to address a women's organization in Philadelphia, she said: "It better be good."

I told her I did not know how good it would be, but that I was full of courage, and that, after all, women are just as vitally interested in problems, local, State, national, and international, as are men, and we will get along all right. She gave me a comforting "Amen."

The problems that confront us as a Nation are so fundamental to the future of our country, and to the world, that this is a time when we must stand up and be counted, counted for or against our republican principles of government. What we do in Congress, during the next 100 days, will be the most crucial in our country's entire history, save the declaration of and waging of war.

This is a time for Paul Reveres to get busy. Your organization is the Sentry Club. You want to be alert and vigilant and hand on to future generations the heritage handed down to you through the years by such great statesmen as Benjamin Franklin. There is no more suitable place for this highly patriotic endeavor to flower and spread its influence than from Philadelphia, amid its hallowed shrines of liberty.

Let us be specific. Let us examine briefly some of the crucial problems crowding for decision.

H. R. 2756, self-styled "a bill to implement the established national policy of promoting maximum employment, production, and purchasing power" is one of them.

This is the administration's bill, a bill to delegate to the President, one man, broad, sweeping power to manage all or any part of our national economy as he chooses, a sort of, or a kind of "papa-knows-best" proposition. This is not a surprise measure. It is in keeping with a philosophy of government with which we have become familiar in recent years. Its advocates boldly assert their support of a planned economy and their determination to drive it through Congress.

The President has told the country he wants power from Congress to fix ceiling prices over commodities and wages, and floors under prices and wages, power and more power to tell businessmen what they shall produce, how much and at what price, power and more power to tell workers when and where they can work and for what wages. I wonder whether the rank and file of workers in America relaize how their inherent rights would be violated by such legislation. What would become of their fair and just rights to work where they please, to organize, bargain collectively, and strike?

Do they realize once this tremendous power is vested in a President, one man, it would lead to the next step, a planned economy, in which shackles for their freedom would be hammered out? This bill was introduced into the House of Representatives on February 15, 1949. There is a companion bill in the Senate.

The bill is designed chiefly to increase supplies of goods and materials in short supply. Under its provisions the President, acting of course upon advice of this group of master planners, would determine maximum goals of production, and then put the resources of the Government to the job of attaining those goals, by loans, price-and-wage fixing, mandatory priorities, and allocations.

The bill further provides that where private enterprise does not measure up to these requirements, the Government may build facilities for the manufacture of steel, or any other commodity the planners deem short in their idea of a balanced national productivity.

Here, then, within the provisions of this bill is the big stick, or club, the President asks to be held over the owners of industries and the working men and women. To the businessman "Comply with my orders, or I will put the Government in direct competition with you." And, to the working men and women, "I'll tell you where you can work."

Section 201 provides that to encourage increases in production and supply, the President shall designate materials or facilities in short supply, and shall:

(1) Determine the quantity goals to which it is necessary and feasible to increase the supply within a reasonable time; (2) explore the extent to which these goals can be attained through the efforts of private enterprise, and (3) develop and administer the programs needed to supplement the efforts of private enterprise.

Section 401 would authorize the President to require sellers, that is, sellers of commodities, to give 60 days' notice prior to any announcement of price increases. After such notice the price increase may become effective, provided the President meanwhile has not, himself, set a maximum price. This was one of the main provisions imposed upon sellers during the war, setting price ceilings, and subsidizing producers that ceiling prices might be maintained. Coupled with this power to impose price ceilings, there would also be delegated the power to distribute materials. This is done by rationing. It is just another factor that must be imposed to control all prices, which involves fixing wages.

This bill is the imposition of OPA all over again, except it grants additional power not even granted during the days of the war.

Now, as you housewives know, something has happened since last November. It would have happened much earlier, if it had not been for the tremendous commitments made abroad. We, of course, all believe in feeding hungry people, but in doing so the tremendous amount of foodstuffs shipped out of this country, held up our price levels. But due to the maximum production of materials accomplished over the past 3 years, the slump in prices which began last November is now generally noticeable throughout the country.

The administration demanded the passage of H. R. 2756 under the word "inflation," and is now urging its passage to alleviate what it calls disinflation which is generally becoming known as the Truman depression. That is being acrobatic. Has it become circus time for the administration? Think of

it, prices fall and unemployment rises. Yet, advocates of a planned economy, tell us they want power to control our economy against high prices, and against low prices. That is Red fascism.

We were told by the President the leveling off in prices was just what the people wanted; "Fine," he said. But, as the drop persisted, the old pumps to stem the tide were put to work. Credit controls have now been relaxed and reduction in cash requirements for margin accounts in the securities markets has been ordered by the President.

Along with control of prices, the administration bill provides for the establishment of a Wage Board independent of the Department of Labor. It requires a wage increase may not be considered as an increase in cost of production for price-adjustment purposes for 6 months, except to the extent that the increase can be justified by any one of the following reasons:

(1) To compensate for increases in the cost of living; (2) to correct inequities in the wage; (3) to correct substandards of living; or (4) to maintain essential production.

The exceptions, obviously, give wide latitude for wage increases. But, in the final analysis, wages are to be controlled. But let me warn you, ladies, if we are to have an effective price-control act, it is mandatory that wages and prices must be controlled from the producer all the way to the consumer, because one man's price is another man's cost.

Those of us who believed in the free competitive system, full production, fair prices, and wide distribution have failed to get our story across to the people. Too many people last November listened to the Pied Pipers who promised lower prices, higher wages, full employment, free medicine, free hospitalization, free old-age pensions, free everything.

You ladies are the shoppers of the family; you know there isn't anything free. None of these things are free. They all cost money. They all come out of the income of the people in direct taxes and in the cost of everything we buy. These master planners think these things are as free as water, as free as the air. These party intellectuals have a deep yearning to apply their slide rule to soulless mass welfare, to regiment our people according to bureaucratic statistics, to make each individual a robot in a socialized state, and yet they never figure the cost. They never consider who is going to pay the bill.

Their attempts to repeal or nullify the law of supply and demand by the imposition of artificial controls, by providing a blueprint for businessmen and farmers, employers, and workers have frightened the people and they have lost confidence in the leadership at Washington. The fear of adoption of a socialistic program is chiefly responsible for this loss of confidence and has resulted in a slowdown in business in general.

To prevent further recession, we must get away from this socialistic trend. We must reestablish confidence among our people so that business and labor can go ahead. Depressions, like the rain, fall upon all of us. None of us want a depression; our country comes first above any partisan consideration. And so, we cannot have all the things we want because we can't afford them. In our efforts to pay for them the tax burden would be unbearable.

Congress, then, is confronted by inescapable alternatives: cutting the President's budget, increasing the taxes; or returning to deficit spending. It is a problem of simple arithmetic. Either we reject billions in money-spending proposals made by the President, or we must slash appropriations, or we will have to go back to an unbalanced budget. We will no longer be on a pay-as-you-go basis, which, may I recall, the Eightieth Congress accomplished for the first time in 16 years.

That do-nothing Eightieth Congress did cut the President's padded budget, reduced the national debt, rolled up the biggest Treasury surplus of all time, and cut taxes $5,000,000,000. If the Eighty-first Congress does not cut the present budget by at least 10 percent, taxes will have to be increased $5,000,000,000 or the Government must resort to sale of bonds to balance the budget, and these bonds will be the basis for credit expansion. That is deficit-financing. It is highly inflationary. It cheapens the dollar. It is the road to wreck and ruin, and jobless millions.

The bedrock of business is confidence. It is the formula for good times. Confidence today, confidence in the future, confidence that earnings and savings will not be confiscated by the Government, and, above all, confidence in the wisdom and stability of our leaders in Washington. Senator GEORGE, of Georgia, chairman of the Senate Committee on Finance, a Democrat, has sounded the warning that an increase of $5,000,000,000 in taxes will be required, if the spending program submitted to Congress by the President is approved.

He said, such a program would add momentum to the downward spiral of prices, and the upward spiral in unemployment. It would cause a terrible slump in business and could only end in one thing, a depression, hard times. Senator MAYBANK, of South Carolina, Democrat, chairman of the Senate Committee on Banking and Currency, said:

"Nothing worse could happen for the economy of the country at this time than to have Congress place additional taxes upon the people of the United States.

"Approximately 70 percent of our appropriations are now earmarked for debt service, the various defense units of the Government, veterans' care, and for pensions. These items cannot be reduced as they are obligations and for the defense of the country. Hence, only a small percent of the total budget, some 30 percent, can be reduced. No one knows what the trend of business will be 6 months from now, but everyone knows that it is on the down grade, and unless something is done to aid the taxpayers and business it will continue."

And may I again give warning, as I have done many times before, that higher taxes would be prohibitive. Some levies are already confiscatory. Incentive and initiative of private enterprise has been discouraged. The thinking in Congress must be changed, there must be a return to the homely principle of thrift in Government. Thrift is becoming a lost word, a lost virtue.

For my part, I am going to fight for reduction of the President's budget all along the line. I am going to fight against an increase in taxes. I am going to oppose deficit-spending. Oh, it won't be popular with the pressure groups, but they will have to be pushed overboard if we are to save America from disaster.

The action of the Senate in refusing to reduce the $5,580,000,000 authorization for the Economic Cooperation Administration was disheartening. ECA should have been cut 15 percent.

It was the first money authorization to be considered by the Senate in the Eighty-first Congress. We lost a golden opportunity to set a pattern in ECA that could have been followed all along the line in our appropriations. I introduced an amendment to cut ECA by 15 percent, but that failed. I also supported the Taft-Russell amendment to reduce the authorization by 10 percent. That also failed. Let's take a look at ECA. It was offered as a plan to make freedom-loving war-torn countries strong against the lure of communism.

It was also presented as a program to strengthen our own national security, on the ground that a communized Europe would in time, threaten our own security. Senator SCOTT LUCAS, the Democratic leader in the Senate, told the Senate on April 1, last Friday, "Communism has been stopped dead in its tracks in Europe." Paul Hoffman, the Administrator of ECA, said communism in war-torn Europe has been stopped cold in the cold war.

I agree with them. There is ample evidence to support these observations. The recent elections in France and Italy showed a sharp drop in Communists in those countries. The record shows western European countries have recovered above prewar levels; that productivity is 25 percent greater than it was before the war.

ECA's stated objectives of a year ago, to restore the participating countries to where they were before the war, has been accomplished. It's goal of relief for the utterly destitute, the jobless, the hungry, the sick, the famished, and the underclothed has been attained.

ECA's broader goals of financing the participating countries in attaining their own plans for expansion of their industries and world commerce, are now being carried out at the expense of the American taxpayer. This is the part of ECA that calls upon America to provide dollars, factories, materials, and ships.

The pipe lines to western Europe are full and overflowing. There are still two and one-half billion dollars' worth of goods and cash out of this year's appropriation that have yet to be processed and shipped. Add to this two and one-half billion the five billion five hundred and eighty million in the present authorization and it makes a grand total of over $8,000,000,000 in cash and goods that would go to the participating nations in the next 15 months. That's a lot of money.

Oh, yes, I know, we have become accustomed to big figures, to big government, big business, and big labor, but it is difficult to appreciate the value of $1,000,000,000.

The $5,580,000,000 requested by the President is $100,000 more than the combined farm income of Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas in 1945. And that area is the breadbasket of our country.

It is more than twice as much as the total assessed valuation of all the property in my State of Nebraska. It would take 100,000 men, earning $100 a week, 10 years and 9 months to make that much money.

Of course, Americans do not begrudge what we have done for the relief and recovery of Europe. It was the neighborly thing to do. But there is no moral obligation upon our people to finance our friends overseas in attaining goals of prosperity set by themselves.

We are now subsidizing the imports of materials from the United States to the 16 participating ECA nations for manufacture and shipment back to the United States, to be sold in competition in our own domestic market, in ships built with the American taxpayers' money.

Fellow Americans, rehabilitation is one thing, but subsidizing their plans for foreign trade in the dollar areas is another. Pennsylvania is one of our great industrial States. How many Pennsylvanians, how many American workers and employers, generally, know that Great Britain, for example, has mapped a program that calls for an increase in exports to this country for nearly double what they were before the war?

How many American workers and employers know that already the revived European countries have begun to compete effectively for the American market?

Leaders in the woolen-goods industry have testified before congressional committees, that the American woolen-cloth industry is threatened with disaster by ECA. Other lines of business have begun to feel the impact of foreign competition. By 1952, the British Government plans to ship us 82 percent more goods than she exported to us in 1938.

Not only have our markets suffered this impact by ECA, but the downward slashes in our tariff by the administration, under the Reciprocal Trade Agreements Act, have put the United States virtually on a free-trade basis. How long do you think America's full employment and America's living and wage standards can be maintained if we continue on a free-trade basis?

Before the Senate there is an administration bill to extend the Reciprocal Trade Agreements Act. The Eightieth Congress put limitations in the law to give American industries and American labor protection. But this administration is demanding a completely free hand to fix the tariff rates, practically no limitation for protection of our own economy.

This is another "papa-knows-best" link in the administration's goal for a socialized American economy. Some of us will make an effort to have inserted into the reciprocal-trade-law extension bill, a provision to prohibit reductions in tariff below peril points, which means floors on the tariff, for protection of American industry and labor.

The House of Representatives already has passed the administration bill, and we in the Senate, are facing a hard fight to obtain this protection for American industry and for American labor. The picture is simply this: The ECA bill is passed to expand foreign industries and shipping, so that the participating countries can sell their products in the United States, and at the same time, keep our tariff low enough, so that there will be no hindrance to the sales of those products in competition for our own American markets.

I am opposed to that kind of treatment for the American-business man, American labor, and for the American people. The business outlook in America is too cloudy, too uncertain, to warrant high-living spending by the Government both at home and abroad. We must be prudent. The recent action of Canada in reducing taxes, nearer to prewar levels than we have in the United States, has shown sound thinking.

Canada has contributed magnificently to the recovery of Europe, but Canada thinks it is equally important that she remain spiritually, financially, and economically strong, and what we need in this country is more of that kind of thinking. Have we become so calloused, so softened by the constant cries of emergency and crises in Washington, that our people no longer care what happens?

Have our people become so demoralized and confused that they just don't care? Given the facts, I still think the American people will find their way. I have an abiding faith in the wisdom of the American people. They will make the right decisions, and our Republican Government will live.

An aroused American people will see that our ship of state weathers the storm.

America must go forward, America will go forward, as a free people, adding ever more to the happiness of its people, and keeping them strong and alert as the lighthouse of liberty for all mankind.

You are sentries. You know, eternal vigilance is still the price of liberty.

General Pulaski Memorial Day

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution, adopted on March 1, 1949, by the Common Council of the city of Cudahy, Wis., relevant to the observance of General Pulaski memorial day. One hundred and seventy years have almost passed since the day when General Pulaski gave his life at Savannah while fighting for the freedom of our great Nation, but time has not taken away any luster from his great and heroic deeds. Mindful of the supreme contribution he has made to our national existence, millions of Americans each year pay tribute to the memory of this great man. There is at present the General Pulaski memorial day resolution pending in Congress, and the Common Council of the City of Cudahy joins with others in petitioning the President, Hon. Harry S. Truman, and the Congress of the United States to give their approval to this measure.

The resolution adopted by the council reads as follows:

Resolution 790

Resolution memorializing the Congress of the United States to pass, and the President of the United States to approve, if passed, the General Pulaski's memorial day resolution now pending in Congress

Whereas a resolution providing for the President of the United States of America to proclaim October 11 of each year as General Pulaski's memorial day for the observance and commemoration of the death of Brig. Gen. Casimir Pulaski is now pending in the present session of the United States Congress; and

Whereas the 11th day of October 1779 is the date in American history of the heroic death of Brig. Gen. Casimir Pulaski, who died from wounds received on October 9, 1779, at the siege of Savannah, Ga.; and

Whereas the States of Arkansas, California, Connecticut, Delaware, Illinois, Indiana, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Hampshire, New Jersey, New York, Nevada, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, West Virginia, Wisconsin, and other States of the Union, through legislative enactment designated October 11 of each year as General Pulaski's memorial day; and

Whereas it is fitting that the recurring anniversary of this day be commemorated with suitable patriotic and public exercises in observing and commemorating the heroic death of this great American hero of the Revolutionary War; and

Whereas the Congress of the United States of America has by legislative enactment designated from October 11, 1929, to October 11, 1946, to be General Pulaski's memorial day in United States of America; Now, therefore be it

Resolved by the Common Council of the city of Cudahy and State of Wisconsin:

SECTION 1. That we hereby memorialize and petition the Congress of the United States to pass, and the President of the United States to approve, if passed, the General Pulaski's memorial day resolution now pending in the United States Congress.

SEC. 2. That certified copies of this resolution, properly authenticated, be sent forthwith to the President of the United States, the Vice President of the United States, and each of the United States Senators and Representatives from Wisconsin.

Passed and approved this 1st day of March 1949.

VINCENT TOTKA,
Mayor.

Congress, Not the Federal Register, Is the Place To Change a Law, and Federal Savings and Loan Associations Should Deal Fairly With Their Customers

EXTENSION OF REMARKS
OF
HON. JOHN JENNINGS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. JENNINGS. Mr. Speaker, in the Federal Register of Friday, March 11, 1949, on pages 1001 to 1113, inclusive, is printed a proposal by the Home Loan Bank Board to change the essential character of Federal savings and loan associations from institutions in which their shareholders invest their money into what appears to be an institution authorized to accept money on deposit. Actually, when a person places his money in the hands of a Federal savings and loan association he becomes the owner of stock in such organization and does not become a depositor in it. Such a share account in a Federal savings and loan association represents ownership in such association and is clearly distinguished from a debtor-creditor relationship such as exists between a savings bank and its customer or a customer of a commercial bank. A depositor in a bank is a creditor of the bank; the bank owes him the amount of his deposit. The depositor, unless he places his deposit with the bank for a definite time, is entitled to withdraw it upon demand. Under the Federal savings and loan plan, the association may repurchase from its shareholders their shares in it, but an association cannot be forced into liquidation because of financial inability to meet promptly its obligation to repurchase the shares it has sold to its shareholders.

Federal savings and loan associations are the creatures of Congress. The Home Owners Loan Act of 1933 authorized the Federal Home Loan Bank Board to provide for:

The organization, incorporation, examination, operation, and regulation of associations to be known as "Federal savings and loan associations," and to issue charters therefor, giving primary consideration to the best practices of local mutual thrift and home-financing institutions.

Said act provides that:

Such associations shall raise their capital only in the payments on such shares as are authorized in their charter, which shares may be retired as provided in their charter.

It is further provided in the act:

No deposits shall be accepted and no certificates of indebtedness shall be issued except for such borrowed money as may be authorized by regulations of the Board.

The home-loan nature of these associations is further established by the provision in the act that:

Such associations shall lend their funds only on the security of their shares or on the security of first liens upon homes or combinations of homes and business property within 50 miles of their home office.

The act further provides that:

No charter shall be granted except to persons of good character and responsibility, nor unless in the judgment of the Board a necessity exists for such an institution in the community to be served, nor unless there is a reasonable probability of its usefulness and success, nor unless the same can be established without undue injury to properly conducted existing local thrift and home-financing institutions.

The Home Owners Loan Act and the Federal savings and loan associations authorized by it have fulfilled the purposes of the act.

There has, however, developed a disposition upon the part of some of the officials connected with the Federal Home Loan Bank Board and a few of the directors of the Federal savings and loan associations to change the name of Federal savings and loan associations to Federal savings associations. Bills containing such a proposal were introduced in the third session of the Seventy-fifth Congress as S. 3874 and H. R. 10558 in April and May 1938, respectively. These bills were identical in terms. Section 8 of each bill contained amendments to subsection (a) of section 5 of the original act of 1933 as amended by providing that the Federal Home Loan Bank Board is authorized to provide for the organization, incorporation, examination, operation, and regulation of associations to be known as Federal savings and loan associations, or Federal savings associations, as the Board may determine.

This proposed amendment to the act thus sought to clothe the Board with authority to change the name and, therefore, the character of the savings and loan associations theretofore organized by it to Federal savings associations. Neither of these bills was reported to the Congress. In the following year, 1939, a bill was introduced in the House seeking to change the name of the Federal Savings and Loan Insurance Corporation to Federal Savings Insurance Corporation. The bill passed the House, but not until after it was amended by striking out all of section 11 which contained the proposal to change the name of the insurance corporation to Federal Savings Insurance Corporation. Congress thus stood by its original purpose as expressed by the Home Owners Loan Act of 1933 as amended to create and operate Federal savings and loan associations.

It is, therefore, seen that the Home Loan Bank Board in the amendment to its rules and regulations which it published in the Federal Register of March 11 of this year is attempting to do the very thing which Congress refused to do. This action on its part is clearly an unconstitutional attempt to usurp and exercise a power which is vested only in the Congress.

The proposed amendment to the rules and regulations smacks of a deliberate attempt to mislead the public. The promulgation and adoption of these rules and regulations is intended to make it possible for Federal savings and loan associations to hold themselves out to the public as savings banks authorized to accept deposits, when in fact they are authorized by law to accept only money for purchase of their shares of stock. I have heretofore emphasized the fact that, under the law creating these Federal savings and loan associations, they are essentially different from savings banks and commercial banks. The person who places his funds in a savings bank is a depositor. If he writes a check for the withdrawal of his deposit and the payment of such check is denied, the bank is deemed in law to be insolvent. On the other hand, the person who places his funds in a savings and loan association thereby becomes a part owner of the association. If his request that the association repurchase or redeem his share, or shares, is denied by the savings and loan association, he must wait until such time as the association may have sufficient funds to meet his request.

It is common knowledge that numerous Federal savings and loan associations throughout the country have sought to convey the impression, and are now seeking to convey the impression to the public that they are savings banks. Many of these institutions are placing on the front of their places of business the words "and loan" in their names in exceedingly small letters, much smaller than the letters in the words "Federal savings * * * association." Others are advertising to the public that they accept "savings accounts." Men with experience and ability enough to conduct savings and loan associations are charged with knowledge that they intend the necessary consequences of their own acts. They are, therefore, chargeable with misrepresentation when they seek to give the impression that the investment in the shares of the association is on the same basis as a deposit in a mutual savings bank or in the savings department of a commercial bank.

At this time banks throughout the country are paying only 1 percent on certificates of time deposit. Federal savings and loan associations pay their stockholders dividends of 2½ percent on their stock. They are able to do this because they are not under necessity of maintaining their assets in a liquid condition. The assets of these associations are loaned on the security of long-term mortgages. If the increasing depression which has hit the country becomes more severe, many mortgage debtors of these associations will default in their payments. And the time may come when a substantial number of investors in Federal savings and loan associations may seek to withdraw their investments in these institutions. The accounts of investors in Federal savings and loan associations are insured up to $5,000 by the Federal Savings Insurance Corporation. In 35 cases Federal savings and loan associations have had to call upon the insurance corporation to settle their liabilities.

All bank deposits, both checking and time deposits, up to $5,000 in amount, are insured by the Federal Deposit Insurance Corporation. Since the enactment of this measure there have been only 26 bank failures in the country and the depositors insured by the Federal Deposit Insurance Corporation have been promptly paid 100 cents on the dollar. Should a Federal savings and loan association become unable to promptly pay its shareholders the amount of their investments in the event they should seek to withdraw them, their accounts would be paid as follows:

(1) Not to exceed 10 percent in cash, the remainder in negotiable non-interest-bearing debentures of the Federal Savings and Loan Insurance Corporation 45 percent due within 1 year, the balance of 45 percent within 3 years.

In what amounts to amendments to the Home Owners Loan Act of 1933, as amended, embodied in the change in the rules published March 11 of this year in the Federal Register, it is provided that the association is not required to distribute earnings on short-term savings accounts. Under these provisions Federal savings and loan associations are permitted to issue certificates indistinguishable from certificates of deposit issued by commercial banks and the associations will thus be permitted to mislead the public into the belief that these associations are deposit institutions. The proposed amendment to the rules and regulations is further against the law and the public interest. These rules permit Federal savings and loan associations, with the approval of the Board, to establish one or more branch offices. No such power is conferred upon them by the Home Owners Loan Act of 1933. The Supreme Court of the United States held that the power to establish branches had not been given national banks expressly or as a necessary incident to carrying on the business of banking (*First National Bank in St. Louis* v. *Barrett*, S. Ct. 213, 68 L. Ed. 486). As a rule, power not granted by an act of Congress is, in effect, denied.

A careful examination of these amendments to the rules and regulations governing Federal savings and loan associations leaves the impression that they are carefully and shrewdly designed to make the Federal savings and loan associations into institutions which they are not and were never intended by Congress to be. If the Home Loan Bank Board desires to accomplish such a result, in all candor and honesty, it should seek to accomplish it through an act of Congress. Certain it is, a fraud by any other name is nothing more nor less than a fraud. Obtaining people's money by false pretenses is indefensible. An attempt by a Federal bureau to usurp the legislative power of Congress is indefensible. In order to implement what I have just said it is my purpose to introduce a bill making it unlawful for the Home Loan Bank Board to change the essential character of Federal savings and loan associations as set out in the rules published by it in the Federal Register of March 11, 1949.

It is characteristic of bureaucratic legislation that the proposed rules are enshrouded and befogged in approximately 17,000 words.

British Health Plan

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. MULTER. Mr. Speaker, on April 5, I placed in the RECORD the tenth of a series of articles appearing in the Brooklyn Eagle describing the British health plan. The following, which appeared in the Eagle on March 29, 30, and 31, are the eleventh, twelfth, and thirteenth of the series:

BRITISH HEALTH HEAD HAS TOO MUCH POWER, DOCTORS SAY—MEDICAL MEN FEEL INSECURE UNDER SET-UP

(By E. J. Delaney)

(Eleventh in a series)

LONDON, March 29.—The British medical man never will know where he is at when a Minister of Health can make any regulations for the National Health Service that suit his fancy. One of England's prominent physicians makes such a declaration, and most of the members of all professions agree heartily with him.

"Aneurin Bevan can do anything he likes under an emergency clause of the Health Act," the doctor states, "and it is much too much power to place within the discretion of any man."

This physician takes quite a liberal view of the whole health program and has not been an opponent of it. He believes wisdom has been lacking in the initiation and projection of the system.

HAS BROUGHT CHAOS

"The whole trouble is the plan was not brought in gradually as recommended by the British Medical Association, long a supporter of the movement for a good general health program," this veteran diagnostician says. "It has brought chaos and we have not recovered from it. We will recover.

"We had an insurance medical service for workmen making less than $1,600 a year. If that had been expanded broadly and also made available to all the dependents of the workman it would have been enough for one step and would be a happy deal for everybody.

"There is no doubt the present health plan is doing a tremendous amount of good, but it has encouraged many abuses, too."

The medico being interviewed recalled that when the profession and the Ministry were at a deadlock on health-plan arrangements last year, the doctors raised a $5,000,000 fund.

STRIKE INTENT DENIED

They refuse to acknowledge they were going to strike against the plan, but prefer to describe the plan as a means of providing a living for needy physicians who were about to refuse to join at that time and who might not have been able to maintain private practices. Concessions by the Government through intermediaries ended the battle and the doctors signed up.

"At the present time," he says "We are organizing something new, a medical guild, and it will seek to amass a fund of $20,000,000. If a time ever comes when the doctors feel they do not want to work under the Government health arrangement, there will be money to save their families from economic hardship."

Some physicians are doing quite well and others are poorly off under the scheme, a second man of the medical sphere tells us.

"There are two classes of doctors," he analyzes, "those with big industrial practices being the first class. Let's consider them a minute. They have benefited. They are getting a decent fee for every person on their lists and the income is good, but they are working hard for it. When this doctor treats one member of a family he is likely to be asked to check them all.

"Then there is the second class. This is the man in a smaller place, who must rely on some private practice along with his scheme duties. He is hurt badly. He can't uproot and move somewhere else, because there is no house for his family somewhere else."

Staying on the general economic theme, our informant says: "Before the plan, a fair income for a doctor was $6,000 to $8,000 a year and $8,000 to $12,000 was well above the average. Very few doctors made $20,000 a year in private practice. Under this plan, a doctor with 1,000 patients takes in $3,600; one with 2,000 receives $7,200; one with 4,000 will be entitled to $14,400.

TOO MANY PATIENTS

"But 4,000 patients is too much, even though the plan contemplates that number for a man, as his maximum. If a doctor in the city has 2,500 and one in more open spaces 2,000, they are doing all the work that is reasonable. An average of 2,300 will give the physician with such a list $8,250, plus some mileage."

Under the health payment plan, a doctor receives $1,200 a year anyway, even if he does not have enough patients to give him that amount at a rate of $3.60 a year each. But now the physicians find some fault with the arrangement and do not like the way it works.

"The objection to the fixed payment is that it comes out of the local pool of money," a doctor says, "and when there are some physicians with only a handful of patients, they really collect their guaranty from the other doctors, not from the Government.

"The cost of conducting the local committees and councils and headquarters also comes out of the local pool, so the doctor really doesn't get $3.60 per patient per year—the overhead comes out of him."

SOCIALIST DOCTOR PREDICTS GOVERNMENT SALARY PLAN IN ENGLAND—SEES PHYSICIANS WORKING ON A FULL-TIME BASIS

(By E. J. Delaney)

(Twelfth in a series)

LONDON, March 30.—All physicians eventually will work on a full-time basis for the state under an annual salary arrangement, one of the busiest practitioners in central England predicts. It will be a good arrangement, too, he thinks. He is a member of the Socialist Party and the organizer of the Socialist Medical Association.

"When all physicians are under full-time annual salaries we will become a profession and not a trade," he declares, "and that will not make us civil servants.

"There is too much showmanship in medicine now and there is need for a physician to attract patients to him by something other than ability and good service. Yes, there will be an emerging, through the National Health Service, into a real profession. It is the vehicle."

CATCH IT AT THE START

"This is a great thing," he chats on. "Now we see children when they have some minor ailments and we are able to treat them and to prevent them from affecting them seriously. We catch it when it starts. Under the old way we never saw anyone until a disease had dragged him down into a serious condition and it was too late for us to save him much sickness."

This physician has two assistants and no private patients. His office waiting room has four rows of benches in it, each seating five people, but he says, "My office never is crowded now. I am having much consultation by appointment.

"There are always two of us on duty at one time and we can give good care to 4,300 people without any rush or haste," he points out. "If a doctor arranges his work well he will not have to extend himself beyond reason."

LIKES RETIREMENT PLAN

He likes the plan to pay for practices when one retires.

"If I average $8,000 for my last 5 years I will get $12,000 and maybe $14,000," he says. "I think a physician should make at least $4,000 a year to live decently and support a wife and two children. With care he can put those children through college, but not if he has big parties and has expensive automobiles.

"When the new health centers are opened it will be possible to give everyone a thorough check-up occasionally. We can now, if one wants it, but we are not doing it generally. The best place for the general practitioner to be effective is in the home, but the people are showing a tendency to come to us. The ratio of home visits to office calls is going down."

CITES PARTNERSHIP

"At the new health center the physicians can work as a team and can form a partnership. Of course, we cannot have any competitive medicine in a health center and no private practice at all. In Dartford, 11 doctors have formed one partnership and they are giving good service to 40,000 people."

Asked if he thinks there is any abuse of the system, the doctor says:

"I have not seen one abuse. Take the spectacles field. It has been shown that the vision of the people is not good, nearly everybody has some defect. This plan has brought about an improvement and the eyesight of the nation will be better. The spectacles division is working out marvelously."

YEARS OF ARREARAGE

"Remember, there are years of arrearage to be taken care of and that can't be done in months. The same is true in dental work, too. Many people are getting attention they should have received years ago, so we are trying to catch up with everything all at once. We are doing very well at it, I think."

"A voluntary plan for medical care would not work in England," our doctor says. "We have had some associations for hospitalization and insurance-company schemes, but they were not enough. A health plan must be operated by the government to be a success; nothing else will do it."

LOW-INCOME GROUPS ENTHUSE OVER BRITISH HEALTH SERVICE—RESENT FIGHT DOCTORS WAGED TO HEAD IT OFF

(By E. J. Delaney)

(Thirteenth in a series)

LONDON, March 31.—The English people like their National Health Service in varying degrees, but far more than a majority regard it highly and will make use of it as they require.

The industrial sections prize it most, the white-collar employees think it is fine and one has to reach into the junior executive class to begin to encounter distrust. The upper groups condemn its administration.

The mill operatives, construction forces and transportation corps consider it something wonderful added to their lives and they harbor a strong resentment against medical men for opposing its installation.

NEARLY WENT ON STRIKE

The doctors did practically threaten to strike against it and organized a $5,000,000 fund with which to fight, but their opposition was against administrative arrangements, not the plan itself.

Medical men can show a long history of support for a good public health system. They have been trying to minimize regimentation and they have won most of their points.

The workers do not make any fine distinctions. All they recall is that the doctors were against it and tried their best to prevent it from being adopted. They think the physicians were thinking too much about their own incomes.

EASIER GOING FOR DENTISTS

The dentists do not seem to have aroused so much hostility against themselves, although they were more reticent about cooperating than were the doctors.

Here are some informal expressions by individuals:

A dock worker's wife—"I have wanted a denture for a long time, but I couldn't afford one. I have four children. I hope to get my denture tonight. It will be wonderful."

A seaman whose merchant ship had just docked to unload a cargo—"What do I think of the Health Service? There's nothing like it. I need some work to be done and now I am going to have it."

"We haven't had any sickness, but I'm glad to know I can have a doctor for my children if they do get sick."

A businessman—"They have led the country into a Fool's Paradise. We will be broke in 3 years and they the Communist will try to take over. If America should cut off the Marshall plan there would be no National Health Service and we would be sunk tomorrow. I hate to say so, but I think it would be a good thing to cut it off so the country could wake up."

Retailer—"It's like a lot of other things. When everybody becomes broke they will try something more radical on us. I'm making money, yes, but a regulation is liable to come along without any notice and my capital will be cut in half, just like that."

A jewelry salesman—"When I want medical aid for me or my family I get the same doctor I always did and I pay him myself. I think I will be surer of better service. I think the Health Service is just a step toward full socialism which I abhor."

Resolution of Americans of Lithuanian Descent

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution which was adopted on February 20 of this year, by a group of Americans of Lithuanian descent, who assembled in St. Gabriel's Church Hall in Milwaukee to commemorate the thirty-first anniversary of the rebirth of the Lithuanian nation. Similar celebrations were held in many other cities and communities throughout the country, as the estimated hundreds of thousands of Lithuanians in the United States joined in expressing their hope that the country of their forefathers, which is striving so bravely to resist the attempts of the Soviet to annihilate Lithuania as a sovereign state, will be able once again to enjoy a free democratic form of government and to attain her rightful place among the nations of the world. At this particular gathering resolutions were adopted petitioning the President, Hon. Harry S. Truman, the Secretary of State, Hon. Dean Acheson, and the Congress of the United States that they may aid in creating conditions which would make it possible for the people of Lithuania to realize these ambitions.

The resolution adopted reads as follows:

Whereas (a) the ethnic, cultural, and linguistic individuality and the political traditions of the Lithuanian people,

(b) the ancient Lithuanian statehood dating back to the year A. D. 1200, its splendid historical record of tolerance; of individual, racial, linguistic, and cultural liberty,

(c) the long, unceasing, and determined struggle of the Lithuanian people against the foreign—Muscovite and German—domination and oppression,

(d) the heroic sacrifices of each succeeding generation of the Lithuanian people in the great mass insurrections of 1794–95, 1812, 1863–64, 1905, 1918–20, and the epic Lithuanian fight for basic human rights, for human dignity, for the fredom of the press and of the printed Lithuanian word during the 40-year suppression of all Lithuanian literary activities, 1864–1904,

(e) the imposition by the Soviet Union—by threat of superior force and in connivance with Nazi German war criminals—of a "mutual assistance pact" on October 10, 1939, whereby Lithuania granted and leased to the Soviet Union military bases in the strategic centers of Lithuania in exchange for a solemn Russian guaranty of the independence of Lithuanian and of Russian noninterference in the domestic, political, social, and economic order of the country,

(f) Soviet invasion of Lithuania June 15, 1940, violating all treaties—the peace pact, the nonaggression pact, and the mutual assistance pact with a guaranty of the political independence and noninterference in domestic affairs—then and now in force between the Soviet Union and the sovereign Republic of Lithuania,

(g) the Atlantic Charter declaration holding out a promise of the restoration of sovereignty to the peoples forcibly deprived of same, and the subsequent embodiment of the Atlantic Charter as a part of the declaration by the United Nations, including the Soviet Union, on January 1, 1942,

(h) the effective Lithuanian underground liberation struggle during the 3 years of German occupation and continuing to this date, directed against Soviet attempts to annihilate Lithuania as a sovereign nation,

Be it resolved, To petition the Congress of the United States to create conditions enabling the formation of broadly representative interim governments of Lithuania, Latvia, and Estonia; to repatriate Baltic deportees from Siberia and northern Russian exile, under the supervision of the United Nations and evacuation of the Russian troops, police, and Communist Party apparatus from the territories of the Republics of Lithuania, Latvia, and Estonia, helping the sovereign peoples of Lithuania, Latvia, and Estonia to restore their democratic self-governments after the harrowing experiences of three successive hostile occupations.

To initiate the move for an immediate admission of Lithuania, Latvia, and Estonia, still full-fledged members of the League of Nations, into the United Nations Organization.

REV. JOSEPH KUPREVICIUS, M. I. C.
FRANK JURKUS.
STANLEY MILANCIUS.
JOHN BAUKUS.
PAUL LABANAUSKAS.

German War Crimes Trials

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including excerpts from a petition for writ of habeas corpus filed by one Willis M. Everett, Jr., in the Supreme Court of the United States on behalf of Valentine Bersin et al. against Harry S. Truman, as Commander in Chief of the Armed Services of the United States, et al.

Valentine Bersin, and others, are German citizens and formerly German soldiers, and they were found guilty of alleged war crimes by a general military government court at Dachau, Germany.

Willis M. Everett, Jr., is a counselor at law, and from September 1, 1940, to June 15, 1947, was an officer in the United States Army. In May 1946, while serving under the commanding general, United States forces in the European theater, he was directed to serve as chief defense counsel for the above-named defendant and others. Obviously, he had intimate contact with and knowledge of the facts in relation to the trial of said accused persons.

Mr. Speaker, on page 3 of said petition, Mr. Everett alleged that the trial before the general military government at Dachau, known as the war crimes trial or Malmedy trial, was utterly void. On page 4 of said petition it is alleged:

11. Plaintiffs had been illegally and forcefully incarcerated in Schwabisch Hall, Germany, a German penitentiary the equivalent of one of our United States Federal penitentiaries and used by the United States Army as an interrogation prison, for varying lengths of time but generally in excess of 10 months prior to being served with charges of war crimes as set forth in paragraph 10 above. There were approximately 500 other German soldiers, suspected war criminals, also confined thereat. With few exceptions, each was placed in solitary confinement throughout this period. That the said Schwabisch Hall was exclusively under the control of and used by the United States Army for all suspects in the Malmedy case. One Lt. Col. Burton F. Ellis JAGD United States Army was the senior officer thereat and responsible for the abuse and mistreatment of plaintiffs herein at said penitentiary.

On pages 5, 6, 7, 8, and 9, containing allegations 12, 13, 14, 15, 16, 17, 18, and 19, as follows:

12. The forced and illegal detention of plaintiffs as aforesaid was in violation of the Geneva Convention which provides that prisoners of war must be humanely treated and protected, particularly against acts of violence and insults. They should be equally treated. No coercion may be used on them to

secure information, and under no circumstances will they be threatened, insulted, or exposed to unpleasant or disadvantageous treatment of any kind whatever. They are entitled to have their honor and person respected. They must have sanitation, open air, and exercise. Under all circumstances, prisoners of war are subject to the laws in force of the detaining power.

13. As illustrative of those violations of international agreements, the American prosecution team in Schwabisch Hall, Germany, would place a helmet hood completely over the head of individual plaintiffs herein, then usually a beating would be administered, after which they would be forced into a completely dark cell which was their trial room. The hood was removed and each plaintiff would see before him a long table, draped with black cloth touching the floor, with candles burning at both ends of the table and a crucifix in the center. Sitting behind this table were varying numbers of American civilians, members of the prosecution team, who were wearing illegally the uniform and rank of United States Army officers. A mock defense counsel, usually an officer of the United States Army on the prosecution team, was furnished these youthful German soldiers, who, although he was not an attorney, held himself out to the plaintiffs herein as their defense counsel. They were informed or led to believe that they were being tried by the Americans for violations of international law. At the other end of the table would be the prosecutor who would read the charges, yell and scream at these 18- and 20-year-old plaintiffs and attempt to force confessions from them. If this method of threats failed to force desired false confessions from these plaintiffs, the mock trials would proceed by bringing in one false witness after another against them, proving beyond a doubt by falsehoods that these plaintiffs were guilty of many war crimes. During the entire mock trials these purported defense counsels were making a sham and pretext of defending them. At the end of these illegal trials conducted in the name of the United States of America, these guileful defense attorneys would pretend to make a plea to this purported Army court for mercy. Upon conclusion, these sham courts would render death penalties within 24 to 48 hours by hanging. Thereupon said false defense attorney would express his sympathy, stating that he had done the best he could for these various plaintiffs. After these mock trials, the pretended defense attorney would attempt to and was in a majority of instances successful in coercing these plaintiffs to sign false and void confessions, admitting any and all charges brought against them, because, as this false defense counsel would in effect say, "You will be hanged in 24 hours anyway, so why not absolve someone else by taking the blame and writing out this confession I will dictate to you." Many variations and modifications were made in the conducting of these mock trials which appeared entirely regular to these plaintiffs as they were devoid of any knowledge of the American Army courts martial system or war crimes trials. There were 74 defendants, and there were 74 prosecution-dictated statements. All of the above-described acts, deceits, and chicanery of American justice were performed by United States civilians, under Army jurisdiction, and by officers of the United States Army or executed under their immediate supervision and control.

14. As further illustrative of the violations of said international agreements and treaties, many plaintiffs herein at various times were deprived of food for days, all blankets were withdrawn in the middle of winter, many were given severe and frequent beatings and other corporal punishment, many were forced into what was called the death cell for days and weeks, others were given promises of immunity or light sentences if they would sign confessions implicating others, and endless tricks, ruses, and so-called strategem, all performed by these United States civilian employees of the Army or enlisted men in the United States Army, or under their direct supervision, instruction, or acquiescence. Said group of American investigators or a majority of them subsequently became the prosecution team in said Malmedy trial.

15. As illustrative of promises of immunity or hope of reward, various behooded plaintiffs herein would be conducted to a room, then allowed to look out of a window where unknown persons were playing volley ball and similar games, at which time some American member of the prosecution team would urge plaintiffs to sign a confession, stating that they were not interested in punishing them, but were trying to convict their high-ranking officers, and if they would sign these dictated confessions implicating their officers they would be released within a few months and be out playing games with those other boys. Various plaintiffs herein would be assured and promised by the Americans that if they assumed full and complete responsibility for all the acts or alleged crimes committed by the soldiers under them and signed these prosecution-dictated statements or confessions, then the prosecution would not prefer any charges against members of their command.

16. As illustrative of the cruel torture and inhumane treatment of these plaintiffs as well as others in Schwabisch Hall, Germany, while prisoners of war, reference is made to the introduction into evidence of an unsigned statement by Arvid Freimuth, a young German soldier who had been through the various tricks, ruses, and stratagem administered by the American prosecution which ended in one of those fateful mock trials. Lt. William R. Perl, an officer of the United States Army, had purportedly defended this youth was found dead hanging from his those forced confessions in March 1946. Only 16 pages had been written by this boy and due to the lateness of the hour the completion was delayed until the next day. His death would not occur until then, according to the fake verdict of this false American military court. He was forced to write lies about his comrades in arms pointing to their guilt in crimes never committed. About 2 o'clock in the morning other prisoners heard him crying out in his cell, "I cannot utter another lie," or words to that effect. The body of that 20-year-old German youth was found dead hanging from his prison cell in Schwabisch Hall, Germany, when the guard opened the door a few hours later. The American prosecution was not satisfied with having the blood of this youth on their hands. During the real Malmedy trial the prosecution, over the objection of the defense staff, introduced this unsigned and unfinished statement in evidence against other plaintiffs herein, all with the approval and favorable ruling of the law member of the court. It was then that the American prosecution commenced asking this Lieutenant Perl, under oath, what this dead German youth would have said in his statement if he had lived. This incident is illustrative of the total lack of justice both pretrial and during trial.

17. In furtherance of illustrations wherein violations of international law were carried out by the United States Army investigation team or prosecution while holding plaintiffs in solitary confinement in Schwabisch Hall, Germany, the investigators would forge the names of certain of plaintiffs' superior officers to confessions or statements, which would completely detail and point out the purported guilt of another accused. Then they would confront these young German soldiers with one or more of these forged statements and induce them to sign confessions to acts never committed by them. Many of the plaintiffs herein, while in Schwabisch Hall, Germany, would be hooded and taken to the "death chamber" and there unhooded and shown bullet holes in the wall where gruesome human flesh and hair would be imbedded from one of their "latest executions." By this method the American prosecution would force confessions of crimes never committed. On other occasions various hooded plaintiffs herein would be taken to the "hangman's room" and there unhooded, placed on a high stool and a hangman's rope placed around their necks. It was then that various plaintiffs herein would, upon belief that they would be hanged forthwith, sign directed statements, not only admitting their own guilt of crimes never committed but implicating other plaintiffs herein of crimes they had committed, which in truth had never been committed.

At the conclusion of many of these mock trials where other ruses had failed, the United States prosecution team would suggest and allow these youthful plaintiffs to write farewell letters to their parents before they would be hanged, which was in furtherance of the duress, scheming, and conniving of the Americans. Also the American prosecution would offer the privilege of seeing a priest in order to secure the "ministration of a Catholic priest before death." The American prosecutors would make many threats of violence and torture directed toward mothers, fathers, sisters, wives, and children of various accused unless they signed complete dictated confessions of acts and deeds never committed by them and acts and deeds of other accused never witnessed by them.

18. One favorite rule of the United States prosecution team in Schwabisch Hall, Germany, was to place plaintiffs in solitary confinement upon first being captured. These German youths had no knowledge of why they were placed in this penitentiary. For weeks and months they would stay in the same cell without seeing a single person, not allowed to receive or write even a letter to their parents or wives, and not allowed to read anything. Then a "stool pigeon" would be placed in the same cell who was another German soldier. This youthful plaintiff was anxious to know what it was all about. This prosecution stool pigeon would relate an imaginary story of how he had just been tried by the American Army for shooting many Belgian civilians and maybe a few American soldiers. The stool pigeon would go into much detail about his own trial and then conclude with how light the verdict had been because he had cooperated, admitted everything whether true or not, and had written exactly what the Americans had dictated. Although he, the stool pigeon, had admitted many murders he had received only 1, 2, or 3 years' confinement for all that he had done. It was ony a few days thereafter until that German lad would be hooded and brought before one of these mock trials with the hope and expectation of a light sentence such as the stool pigeon had described if he would sign an American prosecution dictated statement.

19. All of the foregoing illustrations of violations of international laws, or practically all, were laughingly or jokingly admitted by the American prosecution team during their presentation of their case in the Malmedy trial or on direct examination of the witnesses. At this point those questions strongly suggest themselves: What did the American defense do about these forced confessions at the real Malmedy trial? Why were these confessions admitted as evidence and in many cases constituted the sole and only evidence against certain of these plaintiffs? Attached here, marked "exhibit C," and made a part of this petition, is a copy of Motion to Withdraw Confessions or Statements of Accused, which was properly pre-

sented and pleaded at the Malmedy trial, but this motion was promptly denied by the ruling of the law member of the court.

Mr. Speaker, it is difficult for me to believe that American citizens would stoop to such acts as set forth in the petition of Mr. Everett, yet he was in a preferred position to know what happened. The Army officers who participated in these un-American activities so revolting to our sense of justice and fair play should stand court martial without further delay.

Comments on Labor Legislation By Hon. Thomas H. Werdel, of California

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, April 7 (legislative day of Friday, March 18), 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD some labor-legislation comments which were recently made by the Honorable THOMAS H. WERDEL, of California. I have not studied Mr. WERDEL'S views, but I am pleased to draw the attention of others to his views.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

I want to say a few words about labor legislation.

THE DIMINISHING PAY CHECK

The high cost of maintaining an extravagant government will only be a part of the burden placed upon the American worker's pay check before he gets it, if the Lesinski bill, the Democratic administration's "Labor Relations Act of 1949," is enacted into law. This bill represents the Administration's attempt to buy votes with public money—including the worker's money.

If the Administration and its spokesmen in Congress have their way, union officials will be given the authority to get their organization and political expenses and profits out of the worker's pay before he gets it. and with or without his consent.

A most obnoxious and resentful provision of the Administration's bill to repeal the present law of the land is that which gives union officials the special privilege of confiscating for their own unrestricted use as much of a worker's earnings as they wish.

In short, the Truman Government supports wholeheartedly the unions' private power of taxation through an unrestricted check-off system.

UNION FINANCES

Section 107 of the Lesinski bill contains another so-called improvement of the original Wagner Act, which gives legal sanction to the deduction from employees' pay, without their consent, of virtually any sums the unions might assess.

In restoring the closed shop proviso of the Wagner Act, the Lesinski bill slips in language which seeks to legalize contracts under which an employer is required to deduct from the employees' pay envelopes and pay over to the union, any membership obligations or sums equivalent thereto.

While neither the majority report on the Lesinski bill nor the report of the Senate committee on S. 249 mentioned this adroit bit of draftsmanship, its effect is far reaching. There are many jurisdictions, including some of our major industrial States, which have statutes prohibiting any assignment of wages without the written consent of the individual workers. In those States a blanket check-off of union dues has always been illegal. Moreover, Congress in enacting wage provisions covering employees of Government contractors has frowned upon the check-off. Both the Bacon-Davis Act and the Walsh-Healy Act require payment of prevailing wages without subsequent deduction or rebate on any account. The adroit language of the Lesinski bill was aparently deliberately designed to sweep away all of the State and Federal restrictions in this regard that were unaffected by the original Wagner Act.

By extending the automatic check-off to all membership obligations the bill would authorize the deduction from the pay envelope of any sums which a union assessed against its members, and for any purpose. This would include not only members' dues and initiation fees, no matter how discriminatory or exorbitant, but also any fines or assessments which the union might levy either against members generally or against particular individuals. This would mean that unions in many cases, by a simple majority vote of those present at a union meeting, could assess all members substantial sums to be used for political activities to which many members might be opposed. Likewise, it is not uncommon for unions to levy heavy fines on members for infractions of union rules. All of such assessments and levies under the language of the Lesinski bill could be deducted from the employee member's pay without his individual consent or authorization.

The penalty for objection by the individual would be loss of his job and livelihood. The net effect of this provision, combined with the legalization of the closed shop and the abrogation of State laws dealing with compulsory union membership, is to deny to individual employees even what little freedom and rights they enjoyed under the original Wagner Act, and also to deny them any legal redress whatever if they are discharged and deprived of their livelihood because they happen to incur the displeasure of the union official.

The attempt of the majority of the Democratic members to foist such cynical provisions as this on the American people and the Congress under the guise of improving the Wagner Act should receive the overwhelming condemnation of the Congress.

POLITICAL ASSESSMENTS

The repeal of section 304 of the present law of the land by section 402 of the Lesinski bill leaves individual and minority members of unions completely helpless to prevent the majority from levying any and all kinds of political assessments on them, no matter how strongly they might be opposed to the purposes for which such political expenditures are to be made.

Section 402 of the bill simply reenacts section 610 of the Corrupt Practices Act, prohibiting political contributions by national banks or corporations, as it existed prior to the War Labor Disputes Act and the Taft-Hartley Act. Its effect is to leave unions free to use their funds, whether raised by regular dues and initiation fees or special assessments, for any kind of political purposes the majority may wish.

Taken in conjunction with the legalization by the bill of the closed shop with no safeguards for individual rights, as well as an unlimited check-off of any sums which the union calls membership obligations, the effect will be in a great many instances to make an individual's job and livelihood forfeit if he objects to the use of his money for political purposes which he opposes. It would be possible under H. R. 2032 for a Communist-controlled union to levy a $100 political assessment on all its members for support of the Communist Party and, if it had a closed-shop contract and check-off as authorized in the majority bill, the only recourse a loyal American worker would have would be to quit his job. It is inconceivable that the Congress intends to permit such a ruthless invasion of the rights of free Americans to become possible.

Section 304 of the existing law developed out of the War Labor Disputes Act, which made political contributions by both unions and corporations illegal under the Corrupt Practices Act. Several congressional subcommittees had reported that the prohibition in the War Labor Disputes Act was being evaded by making direct expenditures rather than contributions, and this section in the existing law was taken verbatim from a bill pending before the Senate Judiciary Committee in 1947, drafted as a result of the various recommendations of these subcommittees.

Congress had three objectives in mind in prohibiting political expenditures by either corporations or unions, all of them still justified:

1. To protect the essential political freedom and right of individual and minority stockholders and union members not to have th ir funds used for political purposes they oppose.

2. To prevent the improper diversion to political purposes of stockholders' and union members' funds contributed and meant to be used primarily for other purposes.

3. To remove the possibility of improper influence corrupting Government as a result of excessive political expenditures.

The major argument against this provision in 1947, when the present law of the land was pending, was that it would prohibit union publications from publishing voting records of Members of Congress and urging their election or defeat because such publication would constitute an expenditure. This interpretation was denied on the Senate floor by Senator TAFT and others. Subsequently the United States Supreme Court held that the section did not apply to campaign views expressed in union publications during an election.

WELFARE FUNDS

With no apparent reason discernible on the record, the Lesinski bill wipes out all of the safeguards on so-called health and welfare funds now provided by law.

Section 302 of the existing Labor Relations Act simply requires, whenever direct employer contributions to welfare funds are provided by contract, that the fund shall be a trust fund with the employee entitled to protect his rights by appeal to the courts, that such funds shall be jointly administered by employer and union representatives, and that the detailed basis on which benefits are to be payable shall be set forth in the agreement establishing the fund.

Its purpose is to protect such funds from becoming union slush funds and to assure that they are held in trust for the purpose of paying the benefits to employees for which they are established.

Section 302 also requires that check-off of union dues be authorized in writing by the individual employee affected, which is a minimum protection for employees against having their pay checks diverted for purposes which they disapprove.

More than 3,000,000 employees are now covered by such welfare funds, and the total in such funds runs into tens of millions of dollars. Payments into the United Mine Workers' fund alone, for instance, amount to $250,000 per day. With such huge sums involved, the necessity of protecting employees against improper diversion or use of the funds is apparent.

Secretary of Labor Tobin, in testifying before the Senate Labor Committee agreed that

statutory protection of employees' rights in such funds was advisable and necessary, but objected to the present provision on the ground that it interferes with free collective bargaining. Secretary Tobin suggested a separate statute.

There appears to be no basis for the charge that the present law has interfered with the negotiation of welfare funds, since the record shows that the number of employees covered by such funds has doubled in the past 2 years.

The unjustifiable destruction of the personal right of workers to disburse their earnings as they wish, and the wiping out of protections of their union and welfare funds, are the most reprehensible proposals of power and special privilege ever suggested to Congress.

Politics Has a Part in International Oil

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES

Thursday, April 7 (legislative day of Friday, March 18), 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Politics Has a Part in International Oil," published in Life magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POLITICS HAS A PART IN INTERNATIONAL OIL

The extension of American oil enterprise to Saudi Arabia in 1933 committed Aramco to a new venture in the rough, tough field of international politics. It is obvious that Aramco can never again separate itself from big politics. Recently, in fact, a mass of fascinating evidence has tended to show that Aramco accepted its fate in 1941 and entered into high-level political activity on a scale equal to its size. Many of the revelations of Aramco's diplomatic adventures have come from a veteran oil man named James A. Moffett, a long-time friend of Franklin D. Roosevelt. In a Federal court in New York in February a jury decided that Aramco should pay Moffett $1,150,000 for services which involved using his influence with F. D. R. on Aramco's behalf. Moffett already had outlined his story in Washington for the United States Senate's BREWSTER committee, investigating sale of Aramco oil to the United States Navy. The story, as it developed in Washington and New York, was this:

In 1940 the King of Saudi Arabia found his revenues badly thinned because Europe's war, nearing the Middle East, had cut off the profitable flow of pilgrims to Mecca. With this trade lost, the King needed $10,000,000 from other sources; he could raise $4,000,000 from Britain. He asked Aramco for $6,000,000. Aramco already had advanced the King $6,800,000 more than he had coming from royalties, but it was afraid to turn him down. Moffett, chairman of two affiliated oil companies, talked it over with Aramco's president. In April 1941 Moffett put Aramco's problem to his friend at the White House.

At F. D. R.'s request Moffett obtained an offer from Aramco: If the United States would advance $6,000,000 to the king annually for 5 years, the Navy could have petroleum products at attractive prices. But the Navy at that time did not feel that it needed Aramco's oil. Another complication also arose. When King Ibn-Saud learned of the company's effort, he angrily advised Aramco that he "knew he could borrow money from the United States Government if he so wished, and that if he did so wish he would do so directly and * * * not restrict himself to requesting such an inadequate sum." Nevertheless Aramco and Moffett pursued their project.

Harry Hopkins wrote Jesse Jones, "Some of it might be done under lend-lease although just how you could call that outfit (Saudi Arabia) a democracy I don't know. * * *." But temporarily another way was found. The United States was lending Britain $425,000,000, and F. D. R. wrote Jones, "Jesse, will you tell the British I hope they can take care of the king of Saudi Arabia. This is a little far afield from us." An interested Standard Oil executive wrote, "Perhaps something can be worked out to let the king know, and the British admit, that this is our money." Three years later, when Aramco warned of "increasing British economic influence in Saudi Arabia," the United States put Ibn Saud on direct lend-lease.

Moffett later charged that when Aramco finally did sell oil to the Navy, it charged $20,000,000 too much. Aramco replied that it saved the Navy $26,500,000. The Brewster committee found Aramco had overcharged. This argument may never be settled, but Aramco is trying by an appeal to win the case over Moffett's pay. Aramco's attorney told the court during trial, "I have yet to learn that friendship with the President is a salable commodity," and also argued, "This suit wasn't brought until Franklin Roosevelt's lips were sealed in death, but I wish to God he were alive today to tell this jury how he would have reacted to a suggestion that * * * Jimmy Moffett was telling that he was going to be paid for influencing the conduct of the President."

Moffett's lawyer summarized the plaintiff's case, "This is indeed a sad commentary on the morals of big business. * * * They are * * * saying that this man has volunteered to do this job, a story that is absolutely and totally unworthy of belief." The jury's award of $1,150,000 was far less than the $6,000,000 Moffet had asked, but he said, "I feel fine." If the award sticks he can count his long career in the oil business satisfactorily ended. Aramco knows its career is only started.

Legislative Record of Hon. Alexander Wiley, of Wisconsin

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, April 7 (legislative day of Friday, March 18), 1949

Mr. WILEY. Mr. President, I believe, as I am sure my colleagues do, that it is the responsibility of every legislator to keep his constituents adequately informed of exactly what he is doing in their behalf, what bills he has introduced, how he has voted, and so forth. For that reason, I send out, as I am sure many of my associates do, numerous reports to the people of my State outlining my actions so that they will know exactly where I stand on important issues and so that they can give me their frank reactions, their suggestions, their criticisms.

I have prepared a brief listing of some of the general bills which I have introduced in the Eighty-first Congress thus far. I ask unanimous consent that the text of this list be printed in the Appendix of the CONGRESSIONAL RECORD in order to acquaint my constituents and other folks with my over-all efforts and to invite their reactions.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

LIST OF PROPOSED LEGISLATION INTRODUCED TO DATE IN THE EIGHTY-FIRST CONGRESS BY THE HONORABLE ALEXANDER WILEY

Tax reduction—S. 1029: To kill the wartime rates on hundreds of goods on which there are heavy excise taxes, like cosmetics, baby lotions, drugs, purses, wallets and other leather goods, furs, jewelry, long-distance telephone calls, telegrams, admission fees, etc.

Tax Commission—S. 810 (co-sponsor): To end the duplication between Federal, State, and local taxes by establishing a National Commission on Inter-Governmental Relations, along the lines of the Hoover Commission. One purpose of this Commission would be to survey the problem of Federal tax-exempt property causing a financial burden to many hard-pressed localities.

Antistream pollution—S. 1118: To give businessmen tax advantages in order to develop industrial facilities to treat wastes so as to curb stream pollution. (Endorsed with Congressman JOHN BYRNES' companion bill by Izaak Walton League officials and other leading conservation organizations and individuals.)

Farm parity—S. 762: To direct the Secretary of Agriculture to announce immediately 90 percent of parity support for dairy products. (This and House legislation by Congressman REED MURRAY was one of the factors leading to the Agriculture Department's long-delayed action to support certain dairy prices which had been disastrously nose-diving and which are still in a difficult situation.)

Social security—Senate Concurrent Resolution 7: To establish a Joint Committee on Social Security to plan a comprehensive revision of the Nation's obsolete old-age security structure.

Decentralization—Senate Resolution 30: To provide for an immediate investigation into ways and means of decentralizing the National Defense Department and getting it out of Washington, D. C., to other areas of the Nation (so that if an atomic bomb hit Washington, our military set-up would not be paralyzed).

Overtime definition—S. 252: To fairly define regular hours and rates of pay and overtime (thus ending the terrific confusion and chaos facing businessmen as a result of muddled interpretations on overtime-on-overtime by the courts).

Veterans' earnings—S. 325: To permit disabled ex-servicemen to earn on their own initiative a little more money without losing pensions to which they are legally entitled. (This legislation endorsed by Veterans of Foreign Wars of the United States.)

Dairy amendment to H. R. 2023 (cosponsored by Senator WILEY and 26 other Senators): A State's rights amendment to ban the shipment of yellow-colored oleo in interstate commerce.

Quartermaster Laboratory—S. 1438: To authorize construction of a Quartermaster Corps Research Laboratory at or in the vicinity of Madison, Wis.

Widows' pensions—S. 565: To permit widows to earn a little more money on their own initiative without, as at present, losing the modest pensions which the Government gives them under the social security laws.

Displaced persons—S. 1055, S. 1315, S. 1316, S. 1317: Amendments to liberalize displaced persons law. (These amendments have been generally endorsed by citizens' committee on displaced persons and leading Protestant, Catholic, and Jewish organizations.)

Miscellaneous bills, plus other legislation for electrical voting by the Senate (in place of present time-consuming horse-and-buggy system) (S. Res. 41), for Emblem Day on June 20 (S. J. Res. 62) (endorsed by Fraternal Order of Eagles); legislation to encourage hiring of handicapped veterans (S. 677) (endorsed by Disabled American Veterans); Pulaski Day bill (S. J. Res. 8); bills for justice for postal employees in third-class offices and for employees who served in our armed forces, but have received no credit for sick leave (S. 1461 and S. 1462) (endorsed by National Federation of Post Office Clerks); for protection of American Legion insignia (S. 646, S. 647, S. 676), etc.

Communists Subsidize Teaching at Columbia University

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, Plain Talk magazine for April 1949 contains an article by one Arthur P. Coleman entitled "Munich in the Academy." It is a story of his experience at Columbia University. For 20 years, from 1928 to 1948, Dr. Coleman taught Slavic languages and literature at Columbia in New York. Last summer he resigned his position because the university, with the approval of General Eisenhower, its president, accepted a subsidy from the puppet Polish regime in Warsaw which inaugurated a policy of similar endowments from Soviet satellite states.

Mr. Speaker, it seems incredible that Ike Eisenhower, a great American, should permit the pollution of the minds of the students at one of our leading educational institutions by accepting these endowments so that Communist propaganda may be advanced under the guise of academic freedom.

But here we have the personal narrative of a reputable teacher, with a distinguished record who would not sacrifice his independence and who refused to knuckle-under to fellow-travelers on the faculty at Columbia. Today, Mr. Speaker, he is paying a heavy price for his refusal to sell his academic birthright. More power to him and to Plain Talk for its determination to smoke out the Red rats in our institutions of learning. The fight must go on. I insert the article under my permission to extend my remarks:

IT HAPPENED TO ME AT COLUMBIA—MUNICH IN THE ACADEMY

(By Arthur Prudden Coleman)

This is a personal story. Like all things we know best, it happened to me. I am telling it to prevent others from learning what I did in as painful and expensive a manner. What happened to me occurred at Columbia University. It may, and unless steps are taken, it will happen to others elsewhere. I do not exaggerate when I say that the independent character of American university education is endangered. I am therefore telling my story while there is still time.

It is one of the tragedies of our time that personal testimony regarding the infiltrative techniques of totalitarianism has often come after the event, when it was too late. With this knowledge I speak now, when democratic counterforces in American education can still accomplish a good deal. But before protective measures are considered it is important to know what happened to me.

Who am I?

For 20 years, from 1928 to 1948, I taught Slavic languages and literature at Columbia University in New York. The department of which I was a member ranks fifth chronologically among such American centers. Under the influence of its founder, the late John Dyneley Prince, a distinguished linguist, one-time Governor of New Jersey and American diplomat, this Slavic department resisted all Soviet blandishments. It was a free department, devoted to the interests of independent American education. In October 1945 Mr. Prince died; his intimate friend, Nicholas Murray Butler, universally respected scholar and president of the university, suffered declining health.

It was at this time that rumors spread among the faculty that the Slavic department was being slated for expansion. In time, the members of our department were assembled at a luncheon and introduced to the new executive officer, Prof. Ernest J. Simmons, of Cornell University. This was a change and it was evident that we could expect overnight, as it were, to be transformed from a solid and sound Slavic department to the most advanced, as a peculiar terminology which is fashionable would have it.

What is Professor Simmons like? One can perhaps achieve some insight into the personality of this advanced academician if he is aware of certain of his administrative regulations. At this point it is necessary to mention only one: Professors in his department must clear all visiting speakers in their classes with his office.

He writes well and undoubtedly receives admiration in some quarters for a sentence like this: "The difference between the Soviet realist and the bourgeois realist is essentially a difference between faith in life and lack of faith." Or this: "Soviet literature has scarcely begun to realize its vast potentialities, but its present vitality, positive affirmation and soaring faith give promise of a great future." He has written a good deal in this vein, and so it is no surprise that in these same admiring circles he has come to be known as an expert on the Soviet Union. The fact that he is deserving of such a mantle of distinction is perhaps best indicated by occasional revelations of the professor of which even the best informed authorities on the Soviet Union are unaware. Speaking before a large section of the Modern Languages Association in December 1946, he revealed the absence of concentration camps in the Soviet Union. His latest gambit is an attempt to correlate the pacifism of Tolstoy with the new Stalinist peace front. All in all, the professor is a most learned gentleman and, obviously, quite deserving of the recognition he has won as an authority.

This may all seem humorous to the reader but the activities of Professor Simmons were quite unfunny to those who recognized what they meant in terms of independent American education. He began slowly, quietly. He established an important precedent, which was to be useful later. The first step was persuading Columbia to accept $7,500 a year from Benes' Czechoslovakia for the Thomas G. Masaryk chair of Czechoslovak studies. (At present, according to the recently published report of the former acting president, Dr. Frank Fackenthal, the amount provided by Communist Dictator Gottwald is now $22,500 a year this on a departmental budget of approximately $60,000.)

With the grant from Czechoslovakia accepted by the trustees, Simmons boasted to me that he had great plans for our department, hinting broadly that promotion, a new office, research grants, all these were in store for me. I also understood quite clearly that reverse treatment would be forthcoming if I did not cooperate with the new plans.

One day he waxed expansive.

"You know, Arthur, I want more. I'm already in contact with the Polish Ambassador. The Yugoslav is favorable. I also hope to obtain a grant from Hungary. With these in tow, I'll go after $100,000 from the U. S. S. R. Then we'll really have a department."

Soon I heard that Simmons was attempting to obtain a Soviet visa. He did receive one; his expenses were paid by the Rockefeller Foundation through the American Council of Learned Societies. He sailed in June 1947.

Just before he left, however, Simmons recommended to the President that he reject an offer of $1,200 from an American businessman in Georgia. The grant was offered to aid an anti-Soviet Polish writer, whom I proposed, to give a series of lectures at Columbia's summer session for the benefit of students in Polish. On Simmons' recommendation, Columbia refused this grant.

Privately, Simmons told me that he was opposed to the acceptance of such money; his reason was that it might embarrass the Russian institute and the Slavic department in their efforts at a cultural rapprochement with the Soviet Union. I, of course, was unable to follow such reasoning, but in all such matter, I am proud to say, the record shows that I have always been pretty dumb.

But let no one say that Simmons totally lacked fairness. For example, before he made the adverse report on the $1,200 gift he informed me that he had telephoned Polish Ambassador Winiewicz in Washington, and that Winiewicz had courteously agreed to contact Warsaw for their opinion of the Polish refugee I had in mind—a well-known anti-Communist.

I am understating my reaction when I say that this amazed me; that the executive officer of the Slavic department of an American university should feel it necessary to ask Warsaw and its secret police to pass on the reliability of a Polish refugee before this same American department head would O. K. his appointment.

It would have been better for me academically, and financially, if I had been pleased instead of shocked. Stalinist heat began to be turned on me soon after Simmons returned from the U. S. S. R. (house guest of Ambassador Smith, full use of diplomatic pouch, etc.) in September 1947.

At any rate, soon after this, a well-known fellow traveler said to me: "What Ernie (Simmons) now needs is a sharp denunciation in the Soviet press. Since he has been the only American professor this past summer to obtain a Soviet visa, his pro-Soviet statements will not gain so wide a credence as they would if he were to be denounced in Moscow."

And even this came to pass.

Moscow attacked Simmons. Mrs. Simmons ruefully told me: "They owe a great deal to Ernie."

It was time to act. With the aid of a number of other Slavists, those with unbroken records of resistance to Soviet cultural aggression, I succeeded in persuading the American Association of Teachers of Slavic and East European Languages, which I founded in 1941, and of which I still am national secretary-treasurer, to vote at their fifth annual meeting on the proposition that all national officers be required to swear to a non-Communist affidavit before being allowed to assume office.

The present text of the affidavit reads:

"I am not a member of the Communist Party or affiliated with such party. I do not believe in, and I am not a member of, nor do I support, any organization that believes in or teaches the overthrow of the United States Government by force or by any illegal or unconstitutional methods."

This is a simple oath and, frankly, I do not see how anyone devoted to this country could possibly object to subscribing to it.

The Bulletin of the above Association, making public the fact that its national officers had formally sworn to such an affidavit, was published on March 15, 1948. Two copies of the Bulletin went as usual to Moscow, by air mail, and arrived there in advance of publication date. Shortly after, the Polish Embassy in Washington canceled an order for a wholesale lot of my books on Polish literature.

The rest of the story I shall transcribe from my diary, which was kept carefully, on a day-to-day basis.

May 4, 1948: Simmons told me, while riding downtown in a taxi to Laurence Duggan's Institute of International Education, that after a lull of 1 year, the Polish Ambassador had suddenly invited him to a swell lunch, and had informed him that he was ready to grant a large sum to Columbia for Polish studies. I was stunned as I attempted to observe the amenities at the subsequent meeting attended by the Czechoslovak cultural attaché as well as by a sprinkling of Soviet sympathizers. * * * Returning home I told Mrs. Coleman: "I guess the CP'ers have got me, and I'll have to resign before I get out of this." My wife said that she had been wanting to go to work. (Note: She has had to since.)

Later in May (undated): Simmons said that he had gone to Washington, at the request of Acting President Fackenthal, to consult the State Department, and that they had not objected to the grant. Also he had consulted Ambassador Winiewicz as to who was to be invited to become Adam Mickiewicz Professor of Polish Studies. The Ambassador wanted Professor Manfred Kridl of Smith College, whom Simmons hardly knew. Kridl, for the record, had easily obtained a Polish visa during the past summer, and had returned praising the Communist regime.

May 20: Ambassador Winiewicz brought the first check for $10,000 to Acting President Fackenthal today. * * * I did not attend Simmons' cocktail party for Winiewicz. * * * Ernie said that I missed a good time.

May 28: I left for Indiana University where the Polish consul general in Chicago, not guessing the step I was contemplating, greeted me on behalf of Ambassador Winiewicz in Washington, and asked for my help in persuading a certain American university of note to accept a similar subsidy from Warsaw. He said that this task would be easier now, since they could use the name of incoming President Eisenhower to convince officials of the pure motives of the Polish Ambassador in his support of Polish studies in the United States. * * * My growing resolve to fight back was strengthened by the statement of the son of a former professor under Hitler to the effect that if German professors had fought nazism hard enough in the early days, fewer of them would later have died in the concentration camps. My own situation was no doubt somewhat smaller in scope, but unless each individual fights back in his own situation, the problem becomes enlarged soon enough. My determination to fight Simmons was fixed. I would let the Columbia administration decide for or against his appeasing policies. I was to supply all the information I had available.

June 3: Simmons told me that Kridl, whose English is not good, was to lecture in English next autumn on recent Polish literature, correcting mistakes which had crept in during the thirties. I knew that this meant the usual anti-Fascist line. He said also that he hoped I would arrange a large meeting at which the ambassador would speak, and a fine banquet at which the new set-up could be announced appropriately. This meant that I was to exploit my popularity as an exponent of the Polish Christian tradition to bring a large group of New York Poles to do under my lead what they previously refused to do: listen to the ambassador, a man whom 99 percent of them recognized as a representative of the Communist government of Poland. I said nothing to Simmons, but my Irish was mounting fast.

June 10: Met President Eisenhower at a reception for professors and alumni who have performed conspicuous service for Columbia's endowment drive. * * * I wish I could tell the general how his name and that of Columbia have already been used in the Soviet-satellite drive against free American Slavic studies.

Later in June (undated): Depressed to learn that President Eisenhower thinks it not unwise to allow a Communist organization to hold a meeting in a Columbia building, this in response to a protest by the daughter of a large donor to the university.

Still later in June (undated): Further depressed to learn that President Eisenhower in a letter to the editor of the Polish-language Everybody's Daily (Buffalo) confirmed the act of his predecessor in accepting a 3-year grant of $30,000 from Bierut's regime.

June 30: Provost Jacobs received a delegation of protest from the Polish-American Congress, stating that Columbia was not able to accept their position, and would definitely initiate the new Warsaw-supported program in the autumn. * * * I wrote my resignation. * * * This letter of protest was addressed personally to President Eisenhower in the hope that I could somehow convince him that it was unwise to let the Communists subsidize instruction in our Slavic department. * * * Over the week end I pondered why I must sacrifice the fruits of 20 years of teaching, but when I heard Ike speaking to hundreds of American war heroes, scattered among the thousands who listened to his inspiring words, telling them, with his wonderful dynamism, to give, if necessary, their lives for their country, I thought to myself: "Yes, Ike; I'm ready to resign for my country."

July 9: Provost Jacobs received me cordially, informing me that President Eisenhower had carefully considered my case. He was, nevertheless, determined to go ahead with the Polish grant; I could terminate my service at my own pleasure. I stated that I was sorry to go and would stay, (1) if the courses by Professor Kridl were withdrawn; (2) if the $10,000 already accepted were devoted to the purchase of needed scientific instruments for the devastated universities of Poland; (3) if President Eisenhower would investigate Stalinist infiltration at Columbia. These were rejected and I walked out determined to fight publicly the prostitution of American Slavic departments by means of Communist subsidies.

For my efforts to help keep American education free, I have been rewarded with the following: Threat of a libel suit, slanderous epithets, abuse, and worse. I have been investigated again and again. A Federal personnel officer told me that the publicity which my case received has made it difficult for me to get admitted to Government service (United States Government service, lest the reader has forgotten). The dean of a great eastern university denied me mailing privileges. In Prague I have been called a Communist agent; in Wisconsin it has been said (oh, these smear campaigns) that I was motivated by a desire to have a free trip to Poland. Ad nauseam.

As for financial rewards (since the great Stalinist myth is that anticommunism pays big dividends), I need only note that this year my income tax will be 10 percent of what it was formerly. I have already spoken of my wife's necessary excursion into the business world.

One point needs to be expressed explicitly. Most American universities perpetually need additional funds, nor is this to their discredit. Adequate staffs must be maintained, new courses must be added, new talent must be attracted to the universities. In view of this state of affairs, Communist offers of subsidy may be difficult to refuse now that so well-known an organization as Columbia has set a precedent. That is the danger. It must be fought. It can be fought only by those who are willing to conduct a full-fledged fight against the spread of such monied Communist infiltration.

That is why I tried to make my contribution to this democratic, antitotalitarian fight. Was I wrong?

Address of Hon. W. John Kenney, Under Secretary of the Navy

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Under Secretary of the Navy W. John Kenney before the Hampton Roads Maritime Association at Norfolk, Va., February 24, 1949:

Congressman Hardy, Mayor Darden, President Seawall, of the Hampton Roads Maritime Association, members, and distinguished guests, as my plane descended today I was again impresed by the glorious sight of the ports of Greater Hampton Roads: The storage, terminal, and handling facilities; the piers, warehouses, and grain elevators; the Army, Navy, and Air Force installations; the drydocks and the shipyards and the ships—naval ships and merchant ships; ships at anchor, under way, and in reserve.

No American can gaze down upon this composite symbol of industrial and commercial achievement without pride and without confidence in our country's might. The emotions which Virginians must experience, particularly those who have taken part in the planning and developing of this area, I will not attempt to define.

The wartime record of the ports is so well known that I need pay only collective and passing tribute to their vital contributions to the winning of World War II. Their war and postwar accomplishments have been impressively set forth in terms of facts and figures in the maritime association's annual for 1949.

But from where I sit in the Navy section of the Pentagon, the ports take on a significance outside the scope of cold statistics. From a Navy viewpoint, strictly from the point of view of national defense, I visualize them as a great reservoir of sea power, actual and potential. I do not refer to the present only. I am looking back to both world wars and ahead. The ships built here, whether carriers, cruisers, or destroyers; whether cargo vessels, oil tankers, or passenger ships, all are essential both to the peacetime and wartime needs of our country.

The great new aircraft carrier, the U. S. S. *United States*, about to be built in nearby Newport News, will be a great advance from the 200-foot frigate which bore the same name and which was launched 151 years ago.

Although the designers of this mighty carrier drew upon the lessons of World War II, they did not fall into the error of designing a ship to fight the same kind of war all over again. They looked back only so that they could better see ahead.

Carrier-based air forces take with them all necessary components for immediate action and sustained air operations. The great extra range for naval aircraft is built into the carriers themselves. Their planes arrive at combat zones—no matter how far distant—with tanks full and flyers fresh.

No other nation has this form of air power. It gives our country great advantage, not only in event of war but in the support of our national policies anywhere.

In the initial and highly critical stages of a war, the Navy's air power can buy time during which the weight of the Air Force and the Army can be brought forward. This modern power—more correctly, air-sea power—is not a duplication of the land-based air power of the Air Force. It is additional air power, tailormade to sea and amphibious operations. In short, naval mobile air power is the other arm of our national air power.

Our minds are storehouses of impressions of the wartime devastation of air power. Current headlines, photographs, newsreels, and spectacular air shows contribute to mass respect for, and appreciation of, its potential fury. The sight and sound of our planes flashing across the skies fill us with pride, fill us with confidence, and with a vague and pleasant sense of security; and this is certainly proper. But, the accumulative effect of this should not lull us into a false sense of security.

Today Americans are searching for simple solutions and easy roads to victory—victory without pain and sorrow—victory without denial of the comforts and without the loss of life—that have always accompanied, and will always accompany, wars. This search has led in some cases to extreme views.

As General Bradley, Chief of Staff of the Army, recently stated: "If we construct air power at the fatal expense of ground and naval arms, then we may foolishly be forced to desert our allies and forsake our capacity to wage a sustained blow."

The Chief of Staff of the Air Force, General Vandenberg, has also said: "It has always been, and is now, our belief that the security of our Nation depends on the proper combination and employment of our land, sea, and air arms. We do not believe that a strategic air offensive alone will win the next war, if it comes."

In spite of our great technological advances since VJ-day, war within our lifetime is not going to be a push-button struggle. War will require the concerted efforts of all three services—in fact, of all of us, man, woman, and child.

And in our preparation for war, we must never forget the merchant marine. It is essential not only to our Nation's economy, but to its national security. This country is wholly dependent on imports for many of its essential materials—manganese, chromium, tungsten, iron and copper ores. These materials are vital to our existence, and they must constantly be brought to us across the seas in ships. The merchant marine is the backbone of the logistic support of our land, sea, and air forces. The armed services cannot carry out their assigned missions without sufficient troop transports, cargo vessels, and oil tankers. These vessels must be appropriately designed, readily available, and capable of being swiftly produced.

In World War I $3,000,000,000 in emergency ship construction were required, and the program was not completed until after hostilities ended. World War II required an outlay five times greater and did not reach its peak for 3 years. It would be folly to assume that we again will have as much time to prepare for war.

In both World Wars friendly maritime powers furnished us with greatly needed ships. Although these nations today are building better and faster merchant vessels in quantity, there is no guaranty that they would be available for our use in the event of another war, and especially so if these nations were overrun by enemy forces. Therefore we should not rely on others to provide the ships that may mean the difference between victory or defeat.

In our planning the menace of the high-speed, long-range, and deadly "schnorkel" submarine of today must be taken into account. Despite improved antisubmarine equipment, weapons, techniques, and tactics, ships inevitably would be sunk by underwater attack. How many is anyone's guess. For a long time after the start of World War II, ships were being sunk more rapidly than we could build them.

Consequently, next time, if there be a next time, we must have faster cargo ships, faster tankers, faster troop ships and plenty of them. The Maritime Commission already has taken a realistic and forward-looking step toward this objective. It is a step which also may provide a possible answer some years hence to the worrisome problem of the block obsolescence of our Liberty and Victory ships of the last war.

The step I refer to is the building of two prototype cargo ships by the Maritime Commission to meet requirements based upon the wartime experience of the Navy. One of these ships is designed to meet the general cargo-lift needs of any future emergency; the other will represent the commercial version of a wartime auxiliary vessel used by the Navy as attack cargo ships and attack transports. Both should have peacetime commercial uses, particularly the strictly cargo type vessel. Private industry already has expressed interest in it. The President and the Congress have given this prototype project enthusiastic approval and support. It is hoped that actual construction of these two vessels will get underway this summer, and that eventually they may be turned out on a large scale by private shipbuilding firms.

Other important steps also have been taken to revive our merchant marine and to keep it vital and flourishing. Chief among them are the recent and pending congressional appropriations totaling several hundred millions for the construction of a substantial number of high-speed tankers, passenger and combination passenger-cargo vessels.

Among such ships to be built is one of particular interest to the Navy, the 48,000-ton liner ordered by the United States Lines. Her special defense features will, in time of emergency, make her invaluable as a troop transport.

The bid opening of last December 1 indicates that this outstanding ship will be built in this vicinity. Negotiations are going forward and it is hoped they soon will be consummated. The building of this liner will be a three-year project and should afford a great measure of employment for this area. More passenger liners are greatly needed to meet our military needs.

Obviously, all the needs of our Military Establishment cannot be met through the medium of ships built by private interests. Nor can private industry be expected to bear the full financial load. Appropriate construction and defense-feature differential subsidies as well as operation-differential payments have been and must continue to be provided by the Government. They are key incentives to attracting private capital and to convincing the American investing public that the upbuilding of our merchant marine is not only essential to the security of this Nation, but also a good business risk.

Private industry appears ready and willing to assume its share of the burden if the Government will extend a fair and reasonable amount of construction subsidy assistance and assume the total cost of any national defense features incorporated into the design of ships. In fact, practically every major American ship operator seems willing to further the extension of the current ship construction program.

The current level of employment in both naval and private shipyards throughout the country is far below the level at which emergency shipbuilding expansion could be rapid enough again to meet defense requirements. The Navy estimates that "safety level" at from 80,000 to 100,000 workers. Today it is in the neighborhood of 50,000.

If a strong and effective nucleus of both ship design and shipbuilding workers is to be a reality, there must be reasonable assurance of definite periods of employment. Our shipbuilding industry cannot develop properly through an occasional shot in the arm. There must be a long-range program.

The ship construction and conversion program of the Navy is a part of this over-all program. At this time it involves a total of 49 ships, of which about one-third represent new construction. To provide the necessary and continual maintenance work on the reserve fleet vessels, laid up at a time when adequate repairs could not be made upon them, a 5-year overhaul program was initiated. In 1948 20 percent, or approximately 400 vessels, were thoroughly overhauled. The same percentage is scheduled for the fiscal year 1949. This program will be continued under the new Chief of the Bureau of Ships, Rear Admiral David H. Clark, who, from his days spent in Norfolk, is well known to all of you, and who succeeded Vice Admiral Earl Mills, retired.

Since the surrender of Japan, our merchant marine has shrunk to less than one-third its wartime size. Coastwise shipping is virtually nonexistent. How it best can be restored is not yet clear, but it is clear that something must be done—and soon.

I have touched upon a few steps that have been taken toward the revival of the merchant marine so necessary for our defense requirements, and for our Nation's economy. These steps are only a beginning.

The sum total of the efforts to date is to reverse a downhill trend. The climb back will be long and hard. Many obstacles will have to be overcome.

However, because the survival of our merchant marine and a vigorous shipbuilding industry are so essential to our national defense, the National Military Establishment, along with the Maritime Commission, has put its shoulder to the wheel. It intends to keep it there until the job is done.

With the help of all hands, I am confident that it can be done and that it will be done—because it must be done.

Oppose Restriction of Hospital Facilities for Veterans

EXTENSION OF REMARKS

OF

HON. MERLIN HULL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. HULL. Mr. Speaker, in Wisconsin there is rather widespread disapproval of the plan to reduce the authorization for hospitals for the veterans of our wars. The press relates that the plan is to so reduce the hospital program as

to prevent the construction by 16,000 beds.

This move is particularly resented by many veterans, especially those who are in need of hospitalization and are denied it at present. In the near future, that need will become even greater.

To limit the building of new hospitals for veterans at such a time, when veterans of our wars are on waiting lists of the hospitals already in use, is unwise and is unjust to the veterans and to all who recognize the great service they rendered in our time of greatest need. While economy in government is necessary to prevent bankruptcy, to start economy by depriving thousands of veterans of the medical and surgical treatment they need, is little short of outrageous. Contrasted with the recent congressional action is the fact that we are sending billions abroad to benefit nations whose armed forces fought against our own, which is a poor form of economy.

The Eau Claire Post, chapter 10, of the Disabled American Veterans, Don Comerford, commander, recently entered its strong protest in the unanimous adoption of the following resolution:

Whereas this Nation's primary obligation is to its wartime-disabled veterans; and

Whereas Gen. Carl Gray, Jr., the Veterans' Administrator, said in an address to the last national convention of the Disabled American Veterans that the greatest debt of government is to the wartime disabled; and

Whereas the wartime-disabled veterans are the ones who suffered most for the preservation of this Nation; and

Whereas proper and ample hospitalization and medical treatment is the first step in the rehabilitation of the war-handicapped as well as vital to their continued rehabilitation; and

Whereas the originally authorized building program of the Veterans' Administration is necessary and the delay in getting hospitals built is bringing pain and misery and death to hundreds, if not thousands, of American veterans; and

Whereas the recent Executive order reducing the Veterans' Administration hospital-building program by 16,000 beds is in direct conflict with the need for these hospitals; and

Whereas powerful organizations are working to retard if not destroy the accepted hospital program of the Veterans' Administration as authorized by Congress and that the Hoover Committee in its report to Congress recommends the merger of the veterans' hospital program with other agencies which will mean the complete destruction of the VA hospital program; and

Whereas any merger of VA hospitals with other services as recommended by the Hoover Commission is the complete breach of faith between this Government and its wartime defenders;

Now, therefore, the Eau Claire chapter, No. 10, of the Disabled American Veterans, hereby expressed itself on record as being vigorously opposed to any reduction in hospital beds and asks the reinstation of the original building program; we also militantly attack any proposed merger of VA hospitals with any other agencies and urge the speeding up of completion of hospitals now planned.

Adopted this 17th day of March 1949 at Eau Claire, Wis.

It is further resolved that copies of this resolution be sent to the President, the Veterans' Administrator, and our congressional representative.

Yalta—George Sokolsky on the Crime Committed at Yalta

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include an editorial which appeared in the Times-Herald on April 5, 1949, as follows:

In an effort to explain away history, some of our current statesmen excuse their errors of knowledge and judgment, which have been so costly to the human race, by insisting that their conduct must be judged according to the necessities of the moment.

They created the necessities of the moment by failing to understand the forces of history, and now shirk the responsibility for their shortcomings.

History, however, gives no man so advantageous a break. It writes its story regardless of personalities.

Franklin D. Roosevelt and Winston Churchill were the representatives of western civilization at the court of Joseph Stalin. It was a curious situation both at Tehran and Yalta.

Stalin had been in alliance with Hitler for 22 months. During the period of the Stalin-Hitler alliance, the Molotov-Ribbentrop agreement governed conquered Europe.

The Marxist-Leninist line had been changed to make possible an alliance of Communist and Fascist countries. Y. Matsuoka, the most vivid anti-Democrat in Japan, had been welcomed in Soviet Russia.

In the United States, Communists picketed the White House; their slogan was, "The Yanks are not coming."

Then Hitler broke with Stalin and invaded Russian territory, marching with such speed that it seemed that Moscow would fall to the Germans.

The great battle was the siege of Stalingrad. At that moment, Churchill adopted the policy that whoever kills Germans is a good man, even though shortly before he was a bad man.

Harry Hopkins flew to Moscow. The Roosevelt grand design was integrated. The United States, through Roosevelt, assumed leadership in the war, engaged in lend-lease, poured billions into Russia, Great Britain, and other countries.

Stalin immediately and wisely adopted the attitude that victory or defeat for the western allies depended not upon American production and wealth but upon the manpower of Soviet Russia.

He permitted himself to be courted, and Roosevelt and Churchill accepted his valuation of the war situation, and courted him.

Pearl Harbor strengthened Stalin's position because, in spite of more than a century of intercourse between the United States and China, our military were astoundingly ignorant of that area.

Furthermore, all the most competent and long-experienced Far Eastern experts in the State department had been pushed out of it; in their stead, Mr. Roosevelt had employed Communists, fellow-travelers, and pro-Russians who have not stood up well in the recent loyalty tests.

When all the evidence is in it will be shown that they were employed to please Stalin. Furthermore, the British were overconcerned with the problems of India, Burma, and the Malay States, for which they were willing to sacrifice China as well as Japan, displaying an ignorance of Far Eastern geopolitik so astounding that one still wonders how it could possibly be.

Obviously, under such circumstances, Soviet Russia had all the advantages which she used freely at Tehran and Yalta, and even subsequently at Potsdam.

At Yalta, America and British policy displayed total moral bankruptcy and all our costly current troubles are rooted in the errors of knowledge and judgment there.

The record clearly shows that at Yalta, from his own standpoint and for the accomplishment of his objectives, Stalin made no errors.

It was not until after Potsdam, where the untrained and unskilled Harry Truman caught on to the play, that the United States altered its policies and began to reckon the consequences of Stalin's brilliant maneuvers at Tehran and Yalta.

This compact statement of the case can be documented now, although at the time the American people were not adequately informed.

If Winston Churchill or anyone else says that we need to forget all this and go on from here, the proposal is untenable because policy has to be based upon understanding of the problem, and understanding is impossible except with Tehran and Yalta as a basis.

Nor can the British adopt the attitude that they have no moral responsibilities for what has happened to all of Europe east of the Stettin-Trieste line, and to all of Asia. They cannot say that they followed the leadership of Roosevelt blindly. That they did not is clear in the record of the Singapore conference; that they should not have done so is in the spirit of British history and tradition.

Colorado River Compact of the Upper Basin

EXTENSION OF REMARKS
OF
HON. WALTER K. GRANGER
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. GRANGER. Mr. Speaker, yesterday was a day of great significance for the people of the upper-basin States of the Colorado River Basin. The President of the United States signed a bill allowing the States of Utah, Wyoming, New Mexico, Colorado, and Arizona to enter into a compact, or an agreement, confirming a division among them of the water of the Colorado River and its tributaries. This agreement was consummated in conformity with the Colorado River compact which had previously allotted a certain amount of water to the upper-basin States.

The significant thing about the compact was the fact that the agents of the States, after long and arduous deliberation, finally came to a unanimous agreement as to the division of the water for each of the States. Water is a precious thing for the present and future development of all these States, therefore, the representatives of the various States were expected to get every drop of water to which his State was entitled.

All of the distinguished negotiators of this compact were men of experience and were determined not to repeat the sad experience of a long-drawn-out, costly

litigation, so they wrote a new chapter in the history of western irrigation and reclamation and demonstrated that agreements can be reached through considerate understanding. By their action they hope to avoid costly lawsuits, thereby setting a good example to their neighbors to do likewise.

Government and Education

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Floyd Poe from the Dallas Morning News of November 12, 1948:

THIS, THAT, AND THE OTHER

"The time of our departure is at hand." This is a sort of paraphrase of the last words of a great man. The thought in mind is that for public education in the United States—the time of its departure is at hand. I mean, its departure from its original conception. Our founding fathers had learned from their homes across the sea that the most unhappy things in their lives came from the admixture of government and education. They had seen education controlled and used for the propaganda of rulers. To prevent this happening in their new world they resorted to some strange devices. They determined in their new constitution to keep government and education entirely separate.

These forefathers of ours set up independent colleges which could not be touched by the Federal Government. They divorced public elementary and secondary education from political control and authorized local units to elect their own boards and trustees. These local school boards were given power to levy their own taxes separate and apart from Federal Government. Private educational institutions were free from taxes for two reasons—because their purpose was the making of good citizens and because if the Government could levy taxes for them it could also control them, for the power to tax is the power to perpetuate or destroy. These regulations showed the determination of the constitutional fathers to keep education separate and apart from government.

Now there was another feature—the religious element. Many of our forefathers came from living under state controlled religion. The church was a state church and was largely controlled by the state. Our forefathers were determined that their religion should be free. It was not to keep people from being religious but to make it easy and natural for them to be religious that it was written into our Constitution that the Government would neither favor nor prevent the right to worship according to the dictates of one's own mind and heart.

Now we are coming upon a time when we are departing in a hurry from these early attitudes and decisions. This is brought about by two practices. First, the politician is for education. He is for it regardless. He will advocate any sort of tax for education, whether it is an absurd plan, a duplication of facilities or what not.

The second danger lies in the wild dreaming of educators themselves. I have never met an educator who didn't need funds. There you have it. An educator who needs funds and more funds and the politician who votes more taxes from any source for education. Even a blind man can see this danger. It eventually means Federal taxes for local schools.

Now revert to an earlier statement—the power to tax means the power to control. The United States, even according to the report of the President's commission on higher education, looks to a program which calls for Federal aid, which means Federal control for our whole school system, and that means a distinct break with the original ideas which this country has steadfastly held throughout its history. The time of our departure is at hand for free education.

FLOYD POE.

Army Day

REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, I was asked yesterday to participate in a parade and dinner given to commemorate Army Day in Lowell, Mass. It was the most striking affair I have ever seen in this country. There was the marching of the infantry, there was the mechanized equipment of tremendous size and impressiveness, also the great tanks. It was a parade that should give every country food for thought.

Mr. Speaker, those who marched yesterday were in our peacetime Army, undoubtedly the greatest peacetime Army of all times. I observed the expression on the faces of the people in the street who were watching; I watched the expression on the faces of the children. The children realized the impressiveness of all of it and the older people realized our peacetime Army and what it stands for, this in contrast with an army that would today march in Russia or in Europe where they would be flaunting their might. Instead our Army was telling the world that it was ready if there should be aggression, that they were a bulwark against communism and other isms all over the world.

I want at this point to call attention to the exceptionally fine job being done by Maj. Gen. R. W. Grow, the Army commandant at Fort Devens. Through his wise administration, his extremely able leadership, there has developed the highest type of friendly relations between the Army and the people of the Commonwealth of Massachusetts, and especially so in the vicinity of Fort Devens.

In addressing the dinner given by The American Legion in Lowell last evening, to commemorate Army Day, I said, in part:

Three hundred and twenty-nine years ago a small group of people, some of them your ancestors, landed on the shores of this continent in the search for freedom from tyranny, oppression, and fear. They were a tired and weary group who had braved the unknown dangers of a long sea voyage fraught with peril, storm, and pestilence in the hope that in this land there would be a life worth living, a land yet unknown but full of promise and hope that here man could raise his eyes to the skies and see his God in his own image and breathe into his lungs the freedom that man has, since time began, dreamed of. The landing here was not the end of the quest, but only the beginning. Through many years of hard work, sacrifice, starvation, death, and new life these people opened up a new world for others who followed, others who were seeking the same goal. Tyranny and oppression followed but did not stay in this bright new land. Soon this way of life began to become apparent to all and suddenly a new nation was born, a nation of free people who understood the meaning of freedom and opportunity and individuality—and the sanctity of man.

Today that Nation has reached greatness. It did not acquire this quality easily. Wars were fought, people died, man sacrificed again and again in order that his children would be able to enjoy the fruits and privileges that are inherent in a democratic world. The principles of freedom and democracy have been challenged twice within our own lifetime. We have witnessed and many of you have participated in the two greatest wars in the history of mankind. Today, April 6, marks the date of our entry into the first of those two.

In spite of the fact that we defeated the enemy in both these wars, we did not achieve the peace for which we fought. In fact, but four short years after World War II we are again engaged in a struggle against tyranny, oppression, and fear. The eyes of the world, the hopes of the countless millions bent upon us, beseeching us to provide not a haven but a bulwark against the force of communism which threatens to overrun them. There are some in this country who claim that we should not supply such a bulwark, that it is a thankless task to lend a helping hand to these needy peoples. It amazes me how short-sighted such persons are. They apparently cannot see that the real basis of our greatness is the ideals for which we stand and for which we are ready to fight.

Fortunately, these opponents of a dynamic America are a minority and we can show to the world the American soldier as concrete evidence that our Nation is today and every day a bulwark against the forces of tyranny and oppression. Your Army, along with the Air Force and Navy, are recognized as great factors for peace in this troubled world. It is hard to picture the chaos and confusion which might result if the restraining hand of our Army was withdrawn.

As these thoughts pass through our minds on this Army Day, we cannot help but feel a sense of obligation to do all in our power to retain and maintain this Army of ours as an army for peace. And we can do this only by lending support to a program of adequate preparedness for all the services. The unselfish support given by veterans' organizations to adequate national security is better understood when one stops to reflect as we have done here today. The rest of us can ask whether we have been derelict in this regard.

And finally on this occasion our thoughts cannot help but stray to Army Day services in other countries and compare ours to theirs. In an increasing number of sections of the world an Army Day merely serves as an occasion to flaunt one's military power in the faces of one's neighbors and the rest of the world. I pray that ours will never be used as such an occasion. But if Army Day is to be a day of peace and not war, then our Army deserves our wholehearted confidence and support. Let us take this day to demonstrate this confidence and support.

Inside Soviet Russia

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. KEEFE. Mr. Speaker, we have appropriated millions of dollars in an effort to develop the most effective programs of action and education to reveal the true nature of communism and other forms of totalitarianism. We need to make crystal clear the reactionary, oppressive, and tyrannical character of these modern apostles of regimentation and to constantly contrast them with our own democratic way of life and thus demonstrate to our own people and to the world the great superiority of the American democracy. To achieve these purposes the Congress has appropriated funds to finance studies, to pay for the preparation and publication of various documents, for investigative activities, and to provide for the strengthening of the United States Office of Education in the field of the social sciences. By these means, and many others, Congress, as our most representative body of citizens, has stimulated and encouraged many private organizations, particularly those engaged in broad programs of enlightenment and education, to do increasingly effective work along this line. The Honorable John Studebaker, former United States Commissioner of Education, resigned his position and accepted a position as vice president and chairman of the editorial board of Scholastic Magazines. As United States Commissioner of Education, he initiated a magnificent program for the school systems of this country designed to expose to the youth of America not only the real truth about communism and its threat to our way of life, but to also educate our people to know and understand the glorious heritage which we enjoy under our system of government. I am happy to note that in his new work he is carrying on this program.

In the April 6, 1949, issue of Scholastic magazine appears one of the most revealing articles on this subject that has come to my attention. Here for the first time in an article entitled "Inside Soviet Russia" is presented by description and translation the powerful influence of distortion over the minds of children exercised directly by the Soviet Government through the publication of its own periodicals for use in their schools. This article supplements an outstanding series of 30 articles carried by these magazines last year to help millions of our young people to appreciate more thoroughly our American system of government and life and to acquaint them with the evil nature of communism.

I asked the privilege of including the article referred to in the CONGRESSIONAL RECORD as an extension of these remarks to enable the Members of Congress and many others to see another illustration of the way in which falsehoods, exaggerations, and distortions are skillfully used by the Soviet rulers to poison the minds of Russian children. This article serves to show by contrast the great blessings we daily experience under the freedoms of our American system of life and government.

"INSIDE" SOVIET RUSSIA

(By Irving DeW. Talmadge, foreign affairs editor, Scholastic Magazines)

I have just returned from Soviet Russia. I got through the iron curtain without a passport, without a visa, completely unnoticed by the Soviet secret police.

In fact, I did all that without leaving our offices. Mine is, perhaps, the first and only armchair visit to Stalinland. How I did it is no state secret. I shall readily confess it at any Soviet trial.

To make a short story long and intriguing, it all started one revolutionary morning in January. With the mail dumped on my desk—press releases, catalogs, orchids, and brickbats from readers—was a mysterious letter bearing a Moscow postmark.

"Dear editor," it said. "Your magazine has come to our attention and we should like to be placed on your exchange list. We, in turn, shall send you copies of the Pionerskaya Pravda and the Komsomolskaya Pravda." The letter was on the stationery of the Soviet Anti-Fascist Youth League.

To this cultural swap, we readily assented. And ever since then the volume of mail between the United States of America and the Union of Soviet Socialist Republics has taken a sizable jump. We have been getting stacks of copies of the Komsomolskaya Pravda and the Pionerskaya Pravda.

Both of these publications are the official organs of the Komsomol—the Young Communist League of Soviet Russia, Pravda is Russian for truth.

NOTHING BUT THE TRUTH

Komsomolskaya Pravda, a 4-page daily, with a reported circulation of more than a million, is the mouthpiece of the young Communists up to 25 years of age. Pionerskaya Pravda speaks for the youngest Communists (ages 10 to 16).

The pioneers of Soviet Russia have been likened to the Boy and Girl Scouts in the non-Soviet countries. The resemblance is most remote. Actually, the pioneer movement is a government-sponsored and controlled organization for the indoctrination of Soviet youth with Communist ideology.

Since Pionerskaya Pravda is addressed to a reading audience of the same age level as our own Scholastic Magazines, I spent several painstaking hours perusing its pages. Fortunately I am able to read Russian fluently.

It was like a trip to the Soviet Union.

If you want to learn first-hand what the life of Soviet youngsters is like, I strongly recommend the reading of this official youth publication. Here reflected in its columns is the Soviet pattern for regimenting young minds—the teaching of half-truths, the distortion of facts about conditions in non-Communist lands, the uncritical praise of everything Soviet. All this in a publication brazenly calling itself Pravda (The Truth).

Yes, reading the Pionerskaya Pravda was, indeed, like a visit to Soviet Russia. For, as a matter of fact—and I hope I am not betraying any professional secret—that is all foreign correspondents in Moscow are able to do. With sources of news barred to them by government authorities, they have to depend almost exclusively upon the Soviet press for their material.

THE "LINE"—OR ELSE

No less than 99 percent of all dispatches filed from Moscow are based on stories which had appeared in Soviet newspapers. Soviet censors will not approve a dispatch unless the hard-pressed foreign correspondent can prove to him that the story was culled from either the Izvestia, Pravda, or some other Soviet publication.

Now, with you looking over my shoulder, I'll leaf through the copies of the Pionerskaya Pravda. (To spare our typesetter, I shall refer to this journal hereafter as PP.) It is a 4-page tabloid, with five narrow columns on each page.

PP is published twice a week (on Tuesdays and Fridays), and sells for 10 kopecks (roughly, 2 cents) a copy. The only name appearing on the masthead is that of the "responsible editor," V. I. Semyonov. Under the Soviet system, the "responsible editor" is indeed responsible. He is responsible for any straying from the party line in his journal. Until recently all Soviet publications had to list the code number of its Glavlit (censor). This listing has recently been abolished.

All "responsible editors" are, of course, Communist Party members. But every article in a Soviet periodical is also carefully screened by a government censor for ideological boners. If such boners appear in the print, the censor, the responsible editor, and the author of the article are all held accountable—and, occasionally, all three are purged.

On the front page, over the logotype, Pionerskaya Pravda are two slogans: "Workers of the world, unite" and "Be ready to struggle for the cause of Lenin and Stalin." Under the name of the publication is the legend, "Organ of the Central and Moscow Committees of the Komsomol." To the left is a reproduction of the badge of the pioneer member.

So much for the physical appearance of the sheet. Now let's examine its contents. (I'll provide the translations, as we go along.) Before us are the first nine issues of PP for this year.

Issue 1, the New Year's issue, is a gay affair (see reproduction of first page). A headline across the first page proclaims, "Ours are happy vacations." Under it are photographs of youngsters skating on the frozen river in Pushkino, near Moscow. There is a brief story by Liuba Kukhticheva, a girl student of school No. 624 in Moscow, entitled "At the New Year's Tree." (By Soviet edict, Christmas trees must be called, "New Year's trees.") Liuba's story describes a celebration at the Moscow clubhouse of the pioneers.

MARTHA LEE'S FATE

In the inside pages, there is an article under the heading, "The might of our fatherland is growing." It tells of the reports submitted to Stalin by the coal and steel industry stating that they had fulfilled their 1948 programs ahead of time. Another article describes a visit to the Lenin Museum and repeats Stalin's advice to remember, love, and study Lenin. This article is continued in subsequent issues. The back page is devoted to puzzles and riddles by Grandfather Frost (the Russian equivalent of Santa Claus).

All told, a cheerful, gay issue—except, except for one story, the only foreign news item in that issue. It is called "the fate of Martha Lee Funderburk." It reads:

"On the eve of the New Year, on December 31, 1948, in the American city of Baltimore, a young Negro girl, Martha Lee Funderburk, died. She had been starving for a long time and then contracted pneumonia. Martha's parents, impoverished sharecroppers, had applied at various hospitals for several days, but none of them would admit a Negro girl.

"The New Year brought no happiness to millions of other American children. * * * Newspapers report daily that owners of large plants and factories are continuing to dismiss workers. The children of the discharged will live in the New Year even worse, even poorer, than they had lived heretofore. But even for the children whose parents are still employed, the New Year—the papers say—holds no promise of happiness."

(We looked into the case of Martha Lee Funderburk. We checked the facts with Editor-in-Chief Hamilton Owens of the Baltimore Sun. He replied, "There is no truth in the statement that no hospital would admit a Negro girl. The sister of the child in question had been in the City Hospital for 2 months." Mr. Owens enclosed a clipping from his newspaper giving the ungarbled version of what had happened.

(As will be seen in the other examples mentioned, it is characteristic of Soviet propaganda methods to build their yarns on a minor element of truth. This grain of truth, they amplify, exaggerate, and distort beyond recognition, to serve their own purposes.)

What else are Soviet students taught about foreign countries? In the issue of January 18 there is a news story headlined, "Every seventh American is starving." Here is the story in its full version:

"The number of unemployed in the United States is continuing to grow. For example, in the State of New York the number of jobless increased by two-thirds during the last 3 months.

"Recently a census was taken in a number of American cities and it was established that during the last year every seventh person starved."

Or take this item from the January 28 issue, "Children on sale in Japan":

"The Japanese newspaper, Asahi, reports that 2,500 children from various villages have been sold to slave-owners in the province of Yamagata."

Belgium? In this little capitalist country, according to another news item in PP, there are hundreds of thousands of unemployed. As explained by the Communist editor, "The number of jobless is rapidly rising because under the Marshall plan many industrial products are no longer manufactured in Belgium but are imported from the United States. As a consequence a series of Belgian plants and factories are either curtailing production or shutting down completely."

UNITED STATES DREAMING OF NEW WARS

One more item from the Soviet classroom publication: "English students hiss Assistant Minister Mayhew." According to this story, British Under Secretary for State Christopher R. Mayhew was booed by London students when he dared to suggest in a lecture before them that the strained world relations may be the fault of the Soviet Union.

My esteemed colleague the foreign-affairs editor of PP has a comparatively soft job. In all the nine issues there is a total of only 10 foreign news stories. In addition to those already listed, there are 2 attacking the rebirth of fascism in Italy; ditto western Germany (American capitalists are dreaming of new aggressive wars); another praising the people's government of Poland, while attacking the capitalist regime in France and, finally, a story hailing the victory of the Communist liberators in China.

What makes up the rest of the contents of PP? There are no comics, no jokes. But there is an abundance of puzzles and games and, occasionally, what the Russians call a krossvord (which is just a transliteration of our capitalist crossword puzzle). Also, in the lighter vein, there is a serial, called The Unusual Adventures of Thaddeus Balakirev. Balakirev is somewhat of a Baron Munchausen. The idea is to have readers send in letters putting him straight on geographic and historic mistakes in his tall tales. Those scoring highest get their names printed in the paper.

Now and then the pages of PP are brightened with poems. Here is an excerpt from one:

"We follow Stalin to our goal;
'Lenin-Stalin-Victory' are the three words
We proudly carry on our banner."

And another, with the repeating refrain, "Hold sacred, my son, the name of Stalin."

Most articles express a strong Russian (not just Soviet) nationalism, which is a comparatively recent development in this presumably internationalist society. There is even a lengthy essay praising the career of the Czarist hero, Adm. S. O. Makarov, who perished in the Russo-Japanese War of 1904.

This stressing of Russian superiority is carried to ridiculous extremes. The readers of the PP are taught that it was not the Englishman, James Watt, who invented the steam engine but the Russian, Ivan Ivanovich Polzunov. The radio was invented not by Marconi but by A. S. Popov; the electric bulb not by Edison but by A. N. Ladygin; the first airplane was built not by the Wright Brothers but by A. F. Mozhaisky; etc., etc.

What about Soviet teachers? What sort of information are they fed? The answer is supplied by Joseph Newman, Moscow correspondent of the New York Herald Tribune. In a dispatch, dated February 12, he quotes from an article written by one Sergei Kozelski in the Soviet Teachers' Gazette.

"If you visit a New York school," writes Tovarich Kozelski, "you will see two policemen there. They peep into every corner of the school. During recess periods these policemen go to the playground to watch the children. They are present at this school, because crime is reigning there. There is a special policeman for the examination in arithmetic, because the children send anonymous letters to the teacher threatening to cut off her fingers or put her eyes out in the event she gives them a bad mark for the exam."

Will all American teachers who have had their fingers cut off by their pupils please send us their names and addresses? We are sure we can get Pionerskaya Pravda to furnish them with new, Soviet-invented fingers.

4–H Club Movement

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on the 4–H Club movement:

NATIONAL RURAL YOUTH MOVEMENT HAD LOCAL START—EVIDENCE DISCLOSES CLARK COUNTY MAN ESTABLISHED FIRST OF CLUBS—BEGAN ON JANUARY 15, 1902—GROUP FORMED BY A. B. GRAHAM LATER DEVELOPED INTO 4–H ORGANIZATION

(By George M. Barmann)

More than 2,000,000 American youths are observing National 4–H Club Week.

Forty-seven years ago this week the Nation's first boys' and girls' agricultural club was scarcely 2 months old. It formation marked the beginning of the vast 4–H movement.

It was a Clark County club.

The evidence which establishes the fact that the movement had its beginnings in Springfield is not obscure. It is voluminous; it is indisputable. Yet, encyclopedists are vague; their reports, contradictory.

On January 15, 1902, A. B. Graham, superintendent of Springfield Township Schools, organized an agricultural club for boys and girls. There were 30 members at the initial meeting. They elected a president and a secretary. They held monthly meetings on Saturday afternoons in the new county building. The room is now occupied by the Clark County Board of Elections. By the time the schools closed that year, club membership had risen to 85.

Although Mr. Graham was a school superintendent, the club was not under the control of any board of education. It was purely a self-governing, independent group of rural youths interested in agriculture and willing to follow a definite program under the tutelage of Mr. Graham. The club program was not a school exercise.

Club members were interested in soil tests, experimental corn plots, vegetable and flower gardening. Each youth maintained a record of his work. The system closely resembles the so-called project work with which all 4–H youths of today are familiar.

In February, 1903, the club held its first exhibit in the Clark County Courthouse. The display was held in connection with a farmers' institute.

Theodore Spears, who lived near Reid School, won a first-place award for his corn entry. Mr. Spears now lives at 530 West Liberty Street.

The courtroom in which the exhibit was displayed was crowded to capacity that day. Mr. Graham singled out young Theodore. He asked him to stand. The applause was long and vigorous. He then asked the club members' parents to rise and they, too, received an ovation.

This was the first demonstration of public acclaim for the successful completion of a club project.

It is interesting to note that Mr. Graham's efforts were made easier with the cooperation of many individuals and firms. A widely known florist concern furnished a variety of plantings at cost. About 1,000 year-old rose plants were supplied at 1 cent each. Tulip bulbs cost 2 cents apiece.

James M. Cox (at that time a Member of Congress) furnished a small mailbag full of garden and flower seeds.

On June 4, 1903, a gift of $75 enabled Mr. Graham to finance a club excursion to Ohio State University. In the January 5 edition of the Springfield Press-Republic (now the Springfield Daily News) a story of the trip appears. It recounts at length the details of the excursion.

About 100 members and their parents left Springfield at 7:30 a. m. over the Columbus, London, and Springfield electric road. The group was met by a special car in Columbus and was taken to Ohio State University.

"The visitors received a royal treatment from the officials of the university," the Press-Republic reported.

During the morning there was a lecture on color photography and a picnic dinner was held at noon. The visitors toured the campus and inspected the livestock departments, according to the story. W. O. Thompson, president of the university, and Dean Thomas F. Hunt of the College of Agriculture gave short talks.

Joseph Hartman, an amateur photographer, accompanied the tour. Mr. Hartman's efforts during the years the group was active were responsible for the remarkable photographic history of the organization now in existence.

A Press-Republic reporter met the group upon its return to Springfield.

The excursion to the university was destined to be an important step toward the development of boys' and girls' agricultural clubs throughout the country.

This reporter has photostatic copies of letters exchanged between Mr. Graham and university officials following the Columbus visit.

On June 18, 1903, Dean Hunt wrote to Mr. Graham requesting information and photographs dealing with the club. He said he wanted to prepare a pamphlet on the work of the Clark County group.

The story of the club's work was outlined in Dean Hunt's pamphlet, issued shortly thereafter. Part of that publication contains a letter of Mr. Graham's, explaining the functions and achievements of the organization. The OSU dean concluded his publication by pointing to the Clark County project as a model for those who would form similar groups.

Another letter from the university, dated September 25 of the same year, indicates that the story of the Clark County movement was being disseminated throughout the country. Dean Hunt's bulletin had a wide circulation in Ohio, and it is significant that 100 agricultural newspapers were given the information about Superintendent Graham's club.

It is reasonable to assume that the farm publications which had been furnished the novel story were important in giving impetus, if not actual inspiration, to the formation of similar groups which within the next few years were springing up throughout the Nation.

The Springfield Township organization had no name in the early days. The trademark of "4-H Club" to designate boys' and girls' agricultural groups was not introduced until about 1910, and it was not generally accepted until several years after that date.

But there is reference to three of the "H's" in the early history of the Clark County club.

In 1904, L. E. Brown, a printer in St. Paris, published Mr. Graham's "Report of Springfield Township Schools." Few copies are known to be in existence, but photostatic copies of the work from the United States Department of Agriculture reveal the stress placed upon the "H's."

An excerpt from page 38 of this report, which outlines the extracurricular activities of some of the pupils, reads as follows:

"Not only must provision be made for the three R's but for the three H's, as well; the head for wealth of information and knowledge, the heart for moral and physical strength, and the hand for manual dexterity and skill. The study of the science of agriculture and the practice of the art at home provides much for head, heart and hand."

A reference to the "H's" again appears in a bulletin compiled by Homer C. Price, a later dean of the OSU College of Agriculture. The pamphlet, published in 1904, outlined agricultural club programs, using the Clark County efforts as a model.

In 1905 Mr. Graham became superintendent of extension work at Ohio State University. In 1907 the forms and the bound records used by the Springfield Township club were exhibited at the Jamestown Exposition. It was the only extension display at the exposition.

There are other counties in the United States which claim to be the cradle of the 4-H movement. The evidence that these claims are baseless fills a considerable space in the vaults of the Ohio State Museum, Columbus.

On file in the museum are complete records of the Clark County club. There are also numerous letters and publications, which prove that the club antedates all other boys' and girls' agricultural organizations.

Supplementing this material are histories and records compiled and owned by the Clark County Historical Society, County Agent C. E. Rowland, and J. Lynn Gower, a member of the original club, and now chairman of the Clark County Agricultural Conservation Association.

L. H. Bailey, a professor of horticulture at Cornell University, Ithaca, N. Y., encouraged interest in nature study prior to the formation of Mr. Graham's group. Professor Bailey has been designated by some writers as the originator of the club movement.

But a letter is on file, signed by the Cornell professor, which dismisses this contention. Referring to organized clubs, he wrote: "We have done nothing in this particular line." The letter was written in 1903.

In 1900, 500 boys of Macoupin County, Ill., were mailed packages of seed corn. Many planted it, harvested it, and showed it at a farmers' institute. There was no club organization or meeting program.

On February 22, 1902—a little more than a month after the initiation of the Clark County project—O. J. Kern, school superintendent of Winnebago County, Ill., formed a boys' corn club of 32 members at Rockford. The club also raised sugar beets.

Records show that numerous independent clubs began bobbing up in midwestern and southern counties from 1904 to 1907. One was formed by C. E. Miller in Keokuk, Iowa, in 1904; another was organized by O. H. Benson, Wright County, Iowa, in 1907. Benson called his group a 3-H club.

This 3-H group has been referred to as the first club in the movement. Efforts have been made by overzealous Iowans to push back the date. But authorities refute this claim. P. G. Holden, who was in charge of the Agricultural Extension Service in Iowa, assisted Mr. Benson in his first efforts. Mr. Holden, who is still living, has confirmed the date of his assumption to the Iowa post. It was in April 1906 according to his statement.

Mr. Holden also helped Jessie Field Shambaugh, another Iowan, in her efforts to promote club work. The story that the 4-H Club was originated by a woman gained wide circulation and credence after the idea had been propagated by a nationally known writer, who incidentally lived in her neighborhood.

There is documentary evidence that Jessie Field Shambaugh was seeking information on the best way to form a club and follow a desirable program more than 4 years after the organization of the Clark County group. She was not named to the post in which she was active as a club organizer until the summer of 1906.

The addition of the fourth "H" and adoption of the four-leaf clover as a club symbol have been subjects of wide speculation.

Whatever the origin of the name or trademark of the present 4-H movement, it is not important. It is the priority of the activity, not the priority of the name that is significant.

Origin of the fourth "H"—for health—is generally credited to O. B. Martin, of Aiken County, S. C., who is said to have added the letter in 1910. Use of the figure "4" in front of the "H" was suggested by Martin at the Conference for Education in the South, held in Richmond, Va., in 1913. The 4-H emblem was afterward used as a trademark for produce and canned goods exhibited by club youths. Use of the emblem was considered practical, inasmuch as it was intended as a label for 4-H goods that were marketed. It was thus first considered merely as a brand name for products that met certain club requirements or standards.

Benson's 3-H Club in Wright County, Iowa, had used a clover leaf, according to some writers. This may be true. However, the fact that Mr. Graham had stressed the three "H's" in connection with the work of the Springfield Township club and that this emphasis was widely circulated, it is likely that the generally accepted name of the club also had its origin where the actual movement began.

Among early clubs in the 4-H movement was one formed in Nebraska by E. C. Bishop in 1905; a corn club organized in Indiana by John Haines in 1905, and a similar group formed in 1906 in Mississippi by William Smith.

After the formation of the early clubs, Dr. Seaman A. Knapp, of the United States Department of Agriculture, enlisted the aid of children in his war against the boll weevil. He previously had been only moderately successful in his boll weevil fight before this time, but the boys' and girls' club idea proved to be very effective.

Clubs spread throughout the South. Farmers were urged to grow a variety of crops, instead of only cotton and tobacco.

All of the early youth club organizers did commendable work, for which they deserve commensurate credit.

What is Clark County doing to comemorate the first club?

A plaque to memorialize the first meeting is located in the courthouse. Local 4-H leaders believe this is but a small memorial for so important an event.

Apparently the board of directors of the Clark County Agricultural Society agrees.

The board has approved a master plan for the Clark County fairgrounds. The plan provides for a 4-H memorial museum.

Consensus among agricultural leaders here, however, is that erection of such a building should be at least a State-wide project. The cradle of the movement, they reason, is of interest not alone to the county but to the Nation.

Mr. Graham, interviewed at his Columbus home, disclosed that more than 50 persons who were members of his club during the early years still reside in the Springfield area.

He said Mrs. Clara Valentine Reid, 111 West Jefferson Street, one of the original group had done considerable research and can account for the whereabouts of nearly all of the early members now living.

According to her list, those in Clark County and vicinity—not previously mentioned—who were club members include Ralph Hansel, 1401 S. Center Boulevard; William Gross, Springfield, route 5; Mr. and Mrs. William Irie, 1189 Longview Drive; Joseph Kessler, Springfield, route 6; Mrs. Mildred Butler, 2031 Columbus Avenue; Mr. and Mrs. Elliott Goodfellow, Springfield, route 6; Harry Otstott, Springfield, route 6; Herbert Lucas, Springfield, route 6.

Mrs. Jessie Butler, Springfield, route 6; Mrs. Ralph Runyan, South Vienna; Addison Colegrove, New Carlisle; Lee Quick, Selma Road; John Shafer, 632 Woodlawn Avenue; Armine Arthur, Springfield, route 4; Harvey Miller, Springfield, route 4; Roy Frantz, Springfield, route 10; Oscar Lightner, Springfield, route 10; Mrs. Frank Click, 215 North Western Avenue; William Kadel, Urbana.

Elden Chrissinger, 517 East Liberty Street; Roy Dickerson, Springfield, route 10; Lester Crabill, Troy Road; Oscar Laybourne, Springfield, route 5; Mrs. Frank Layton, Springfield, route 4; Frank Click, Springfield, route 2; William Click, Springfield, route 2; Ivan Wertz, 1025 West Jefferson; Joseph Anderson, 51 Dartmouth Street; Noah Anderson, Springfield, route 3; Robert Allender, 727 Linden Avenue.

Harry Bruney, 1027 West Pleasant; Roscoe Bean, Beatty; Hiram Von Huben, Springfield; Earl Hislop, Springfield, route 2; Walter Shuirr, Springfield, route 5; Raymond Click, Springfield, route 2; Mrs. Helen Dolber Burton, 1628 West High Street; O. P. Hause, New Moorefield; Charles Schneider, Springfield, route 6; Robert Petre, Springfield, route 4; Bernard Tavenner, Springfield, route 4.

Harry Hicks, 545 East Leffle Lane; Mrs. Charles Drumm, Christiansburg; Charles

Turner, Springfield, route 2; Warren Fenton, 617 Snowhill Boulevard; Karl Hertzinger, Springfield, route 2; Roy Kohl, 2856 East Main Street; Ralph Kohl, 1576 Fulton Street.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. ELLIOTT. Mr. Speaker, I publicly endorsed and advocated Federal aid to education for 13 or 14 years before I came to Congress. I have, and will continue the fight here. I have many times stated publicly that I thought Federal aid to education was the most important legislation from the standpoint of the future of the children of the United States that this Congress would have to deal with.

I had a letter from the students of Curry High School, of route 4, Jasper, Ala., under date of February 7, 1949, which impressed me very much.

Curry is a rural community in northern Walker County, Ala., my home county, and its high school is typical of hundreds of rural high schools throughout the South. Its needs are great. Its accomplishments are wonderful, and bear testimony to the faith of its teachers and patrons.

Mr. Speaker, we are the greatest country in the world. We are the richest Nation on the face of the earth. Our democratic school system is the bedrock of our greatness.

Let us listen to the plea of the students of this rural high school. It is more eloquent than I could ever be.

CURRY HIGH SCHOOL,
Jasper, Ala., February 7, 1949.

HON. CARL ELLIOTT,
House of Representatives,
Washington, D. C.

DEAR SIR: As students in a rural Alabama high school, we realize the importance of Federal aid to education. We need so many things which we do not have, which would help us to obtain a better education. We are crowded terribly with as many as 60 pupils in one room under the guidance of one teacher, poor toilet facilities, poor heating systems, poor transportation, and poorly trained teachers, poor library and laboratory facilities, and poor health and recreation facilities.

We believe Federal aid would help remedy these situations, and help us as rural children of Alabama to obtain better educational advantages.

We know you are a friend to rural education, having been educated in a rural section yourself. We, therefore, urge you to do everything you can for the passage of the Federal-aid bill.

STUDENTS OF CURRY HIGH SCHOOL.

Vivian Stewart, Brenda Faye Stewart, Ruben Gaines, Alton Kimbrell, Glenn Gregory, Jerry White, Tommy Roberts, L. O. Uptain, Dorothy Willingham, Doris Goodwin, Joan Anderson, Gail Lay, Linday Lindsey, Mike Gossett, H. D. Albright, Dwayne Gilland, Gary Davis, Tillmon Elliott, Ollie Fay Murry, Johnny Elro, Alene Couch, Larry Robertson, Eugene Durham, Frances Findly, Jewell Lay, Crable Stover, Rose Cooper, Jean Dickson, Billy Estes, Gary Hallmark, Iva Nell Bennett, Nell Williams, Patricia Phillips, Charles Lay, Georgia Allen, Wayne Swindle, Robert Holloway, Paul Ray Gilliland, Max Barber, L. Smothers, Reba Jane Noles, Frances Noles, Doris Borrow, Yvonne Letson, Mary Alice Bobo, Shirley Jean Gilliland, Glenda Ann Myers, Troy Lee Moore, Geraldine Bennett, Dorothy Gallimore, Claris Chambers, Barbara Hill, Coleen Dailey, Dorothy Uptain, Hoyte Farley, Anna Faye Shaw, Wayne Smith, Betty Faye Williams, Jeraldine Holloway, Curtis Tidwell, Carl Brown, Kenneth Wilson, Ray Wilson, Betty Faye Wilson, Harold Couch, Clarisie Chambers, George W. Truett, Johnnie Shumate, Marie Ivey, Joyce Chambers, Betty Joe Robertson, Betty Ruth Gosa, Hansel Holloway, Robbie Faye Drummond, Kenneth Black, Ulendell Black, Bill Hambric, Ruth Bennett, Joan Fay Bennett, June Elmore, Virginia Ferrell, Buddy Estes, J. L. Drummond, Billy Joe Frye, Wilford Uptain, Shelby Jean Stewart, Betty Joyce Robinson, Betty Lou Burgett, P. F. Currie, Florence Letson, Jimmie Sue Gilliland, Ruth Helen Harris, James Brock, H. L. Couch.

Mr. Speaker, these students present to us their problems which are real, which are vital. These students and unnamed hundreds of thousands like them are crying out for more and better school buildings, heating, toilet, transportation, library, laboratory, health, and recreational facilities.

I trust that this Congress will hear their cry and will enact legislation providing Federal aid for schools.

The Growing Need for CVA

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. MITCHELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article entitled "The

Growing Need for CVA" by Joe Miller, published in the New Republic magazine of April 11, 1949. Mr. Miller, formerly of the Seattle Post-Intelligencer staff, is a well-known writer on the development of the Pacific Northwest. His article presents a timely account of the background problems relating to a CVA.

THE GROWING NEED FOR CVA—FLOODS, EROSION, DEFORESTATION, AND AN INADEQUATE POWER SUPPLY ALL THREATEN THE ECONOMY OF THE COLUMBIA RIVER BASIN

(By Joe Miller)

SEATTLE.—When President Truman's proposal to create a Columbia Valley Authority was told to Purcell L. Smith, $65,000-a-year lobbyist for the private power interests, he exclaimed, "But the Northwest's people neither want nor need a CVA."

Perhaps a farmer in Washington State's Columbia Basin might disagree with him. The farmer wonders as he watches the dark snow clouds gathering over the distant Cascade Mountains, "Do those clouds mean more floods this year?"

There is good reason for his fear. Last June he was one of the thousands of Pacific Northwest farmers who lost the greater part of their crops as Columbia floodwaters inundated more than 224,000 acres of farm land. Since that catastrophe the fear of floods has become a major one to the people of the Pacific Northwest. The United States Geological Survey Bureau has warned them in a recent report that "these floods, or the conditions that created them, will undoubtedly recur in the future." Those who live near the Columbia realize there is little to protect them if the waters run wild again, since flood-control plans remain largely in the blueprint stage.

Perhaps a worker in one of the Northwest's hydroelectric-powered industries might disagree with Smith too. The worst power shortage in the region's history browned out the Northwest this winter and threw 155,000 men out of work, according to the recent congressional testimony of Dr. Paul Raver, Bonneville power administrator. A region that contains 42 percent of the Nation's total hydroelectric potential doesn't have enough power for its own industries. Only 10 percent of the potential total is developed.

Many an idle worker remembers that at a Seattle hearing in 1946, representatives of Washington Water Power, Pacific Power & Light and Northwestern Electric helped hold up construction of more dams on the Columbia by testifying that "we would have a surplus supply of power so great that it would run a million kilowatts or more for a period of 10 years."

"We'll have kilowatts running out of our ears," said Kinsey M. Robinson, president of Washington Water Power. Last year the same Robinson blamed the shortage on "the lack of Government foresight along with the Federal attempt to force private power into a subordinate position by expropriating all major dam sites."

Whatever the reasons, many Pacific Northwesterners are beginning to have deep-rooted fears over the future course of this region. The latest population figures for the Northwest show an increase of 36 percent since 1940. While this increase has been triple the national average, unemployment figures in the Northwest are double the national level. The lag in industrial development has meant that nearly 200,000 persons are without employment in Washington and Oregon today.

If the region is to survive economically, new jobs must be found for these people. The Northwest must produce goods and services worth $8,500,000,000 a year and provide about 2,500,000 jobs.

Regional planners agree that the way to accomplish this task is to develop the twenty-five- to thirty-million-kilowatt potential of the Columbia and reclaim the 9,000,000 sagebrush acres for farm use. The question is, How it is to be done?

No less an authority than Bernard DeVoto believes that, of all the American "colonies," the Northwest has the best chance to free itself from its provincial status. DeVoto contends that the area's economic and social homogeneity and its war-built industrial development provide the opportunity to break away from the East's economic control.

Cheap power is the answer. During the war boom, and after, industrialists were anxious to locate plants in the Northwest because of the Federal power rate, the lowest in the Nation—$17.50 per kilowatt-year. Henry Kaiser saves $500,000 a month in power alone at his Spokane aluminum mill, and other industrialists who got in before the power ran out are making similar savings.

But the power shortage, which is expected to last until 1954, has discouraged manufacturers from locating new plants in the Northwest. "We're losing new industries every day because of the kilowatt crisis," moans an official of the Portland Chamber of Commerce. Other communities, such as Hoquiam and Aberdeen, Wash., have been forced to discourage prospective businesses.

It isn't merely the farmers, workers, and industrialists who would benefit by a uniform program of Northwest development. At Glenns Ferry, Idaho, which lies in a semi-desert between Boise and Twin Falls, a young mechanic I talked with complained that little land-reclamation work had been done in that area.

"We were told that family farms would be provided for veterans," he said. "I've been working in this garage for 3 years and nothing has happened yet."

A lumberman I talked with at Coos Bay, Oreg., was worried for another reason. "Less than 25 percent of the Northwest's timber is left, and the United States Forest Service says all the region's privately owned timber will be gone in 15 years," he said.

"Timber has been the No. 1 resource of this country. It has supported 25 percent of us; we've thought it was inexhaustible. Look at it now. Unless we do more than point with pride at the few showcase tree farms, there won't be any more lumber industry."

Mining men say the same thing. "We've dug and dug, and pretty soon there won't be any more," one of them told me. "We've got to explore for new mineral resources."

It was an increased realization of these common problems that led the voters of every Northwest State but Oregon to give Truman a good-sized majority last November. In the far West where he campaigned largely on the issues of public power and river-valley development, the President received an electoral-vote majority of 59.

Western voters remembered the record of the Eightieth Congress in slashing reclamation appropriations and saw through Governor Dewey's lengthy platitudes on western development. They seemed to think that Republican policy would be to build dams at Government expense, then sell power to private utilities at preferential rates, getting the taxpayer going and coming.

Creation of a CVA was one of the Democratic Party's campaign promises, written into the platform by young Representative HUGH B. MITCHELL, of Washington. The CVA bill, now being drawn up by a Presidential team headed by Charles Murphy, will not create any new Federal authority in the region, but will be "primarily just a machanism for better operation of existing agencies in the region."

The quote belongs to C. Girard Davidson, Assistant Secretary of the Interior. Davidson believes that the bill will contain the "better parts" of the TVA, with added provisions for reclamation and irrigation, problems foreign to the Tennessee Valley.

The CVA, like the TVA, would be independent of everyone but Congress, but would be required to consult with State governments and provide for cooperative research to be done with regional universities and colleges. Its offices would be located in the Pacific Northwest—a chunk of Washington, D. C., moved to the grass roots. The CVA's job would be:

Full development of the region's vast sources of hydroelectric power. This power is not only important for the Nation's defense; it is also the basis of the Northwest's hope of creating a diversified economy.

Preparation of some 9,000,000 acres of sagebrush land for agricultural development. Reclamation of this land would provide more than 100,000 family-sized farms for new settlers.

Development of a river transportation system which will furnish the region's internal areas with cheap and easy access to the sea.

Exploration of the region's untapped mineral wealth.

Development of power technology with a view to concentrating the electrochemical and electrometallurgical industries of the West. A good start has been made. During the war northwestern plants produced 600,000 pounds of aluminum a year—one-third of the Nation's total—and contributed an equally impressive output of calcium carbide, magnesium, and ferrosilicon.

Protection and stabilization of the Northwest's valuable fishing and lumber industries, which have suffered from boom-and-bust exploitation.

Development of the region as a tourist and recreational center.

Effective flood control.

Supported by the Republican Governors of Oregon, Washington, and Idaho, the Seattle and Portland Chambers of Commerce and other businessmen's groups, the private-power interests have sounded a die-hard opposition to such plans. The same groups which opposed Bonneville and Grand Coulee are now determined to stop the CVA.

Lined up against them is the first farmer-labor coalition in the Northwest's history. Eleven AFL, CIO, Grange, and Farmers' Union State organizations have joined in a League for CVA.

At a recent region-wide meeting in Portland, leaders of these groups voted financial support to the CVA campaign after Evan Weston, Washington State AFL president, warned that the giant power combines will spend big money to mislead the public about CVA.

Also backing the CVA are many Northwest residents. A young businessman from Pasco, Wash., said: "We've always operated on a raw-material economy. We buy pots and pans made from our aluminum in Cleveland, furniture made from our lumber in Grand Rapids. What we've got to have is a diversified economy to give us stability, a good standard of living and the materials to compete successfully with other sections of the country.

"No one has come up with a better idea than CVA, and that's why I'm for it."

The Northwest's outstanding businessman, E. B. McNaughton, has publicly expressed support of the CVA. A lifelong Republican, McNaughton told a luncheon of amazed Portland businessmen that a CVA "had tremendous possibilities for the region." He recalled business' bitter opposition to Grand Coulee and Bonneville years ago and asked the group: "If Roosevelt had not given Bonneville and activated Grand Coulee, where would we be today?"

Such influential heretics keep the CVA's enemies awake nights. Hugh Mitchell, who fathered the original CVA bill in 1945, believes that the most powerful opposition stems from eastern absentee owners. They do not want a new Federal agency which might halt their rapid exploitation of the Northwest.

However, most Northwest Republicans have faithfully recited their denunciations of the

CVA. The anti-CVA Seattle Times reported on January 29 that the local Republican county commissioners passed a resolution opposing the CVA, although two of the three commissioners admitted beforehand that they didn't know a thing about it.

Most of the Northwest's daily newspapers have continued to lay down a barrage of editorials condemning the CVA. "It must be fought with all the vigor we possess," said the Spokane Spokesman-Review. Last year President Truman called this paper one of the two worst in the Nation. One newspaper, the Tacoma Times, has published a pro-CVA editorial. The Portland Oregonian and the Wenatchee World are maintaining open minds, but most of the others have shouted that the CVA is communism, socialism, or fascism.

President Truman, who saw the floods in the Northwest on his campaign tour last summer, is reported to have placed the CVA high on the agenda for congressional action. Perhaps he has been looking at some of the region's anti-CVA newspapers and remembering what the Nation's press said about him until the day after election. From that point of view, the prospects for the CVA should be good.

Sound Advice

EXTENSION OF REMARKS
OF
HON. JOHN A. McGUIRE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. McGUIRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I invite the attention of the Members of the House to the following editorial which appeared in the Bristol (Conn.) Press on March 22, 1949:

SOUND ADVICE

Former Postmaster General James A. Farley whose unquestioned ability as a political administrator ranks him as one of the best, has also proved that he is no mean shakes as a businessman. As chairman of the board of directors of the Coca-Cola Export Co., Mr. Farley is becoming concerned over the policies of the administration with respect to the future of business.

Speaking recently at a New York State Bankers Association meeting the Coca-Cola board chairman said that ever increasing services from the Federal Government will ultimately destroy the American way of life.

"No private business could afford to operate under the conditions prevailing in most Government departments," Mr. Farley said. He put partisan considerations aside when he pleaded for the adoption of the report of the Hoover Commission on unnecessary expenditures. Mr. Farley said: "The last election shows that a majority of our citizens are determined that the Government must, to a greater extent, bring its services to all the people. They are no longer going to be satisfied with the maintenance of an Army, Navy, Air Force, Post Office Department, and a diplomatic service."

Thus we must operate more efficiently in order to provide what the people want, he reasons. In plain English, we must get more public service for each taxpayer dollar than we are now getting. In order that business will not suffer, Congress and the President must go easy on appropriations and consider the implications of our present rates of spending.

This should be plain enough for administration leaders to see. Mr. Farley usually speaks to the point.

Playing Down the Bomb

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Atlantic Monthly for April 1949 by Dr. I. I. Rabi:

PLAYING DOWN THE BOMB—BLACKETT VERSUS THE ATOM

(By I. I. Rabi)

Published in this country last month by Whittlesey House, "Fear, War, and the Bomb" appeared in England under the more restrained but less accurate title "Military and Political Consequences of Atomic Energy." It created a minor sensation in England and a greater one at the UN Assembly meeting in Paris. There it served a most useful purpose, to the Russians, because in it they found almost all the arguments which they had used to frustrate all attempts at a reasonable international settlement of the problems of atomic energy set forth anew and with some novelties in addition.

The great windfall for the Russians was that Professor Blackett is no Soviet stooge from a satellite country, but an upper-class Englishman with a high scientific reputation made more popularly resplendent by the award of the Nobel Prize in physics for 1948. Furthermore, Professor Blackett is an important authority on methods of antisubmarine warfare, so recognized by the United States Government by the award of the Medal for Merit. Support from such quarters is not easily obtained and was gleefully used by the Soviet debaters.

There is little question as to Professor Blackett's attainments in physics or in military matters. His credentials as an analyst of political and social and economic matters are more obscure, and not evident from his book. He is known to be politically well left of center, yet there is no trace of doctrinaire Marxism in the book. On international affairs he writes like the amateur which he is, with no penetration into the underlying causes of present tensions. In matters which concern political life and thought in the United States he manifests the hopeless confusion of the average Englishman.

Actually, Professor Blackett's book is an emotional and, indeed, almost hysterical personal reaction to the mounting tensions in world affairs, which have resulted in part from the development of the atomic bomb—hysteria disguised in the prose of the scholar. Although there is a great and ostentatious display of scientific objectivity, it is only a thin veneer which covers an extraordinary piece of special pleading.

A deep responsibility devolves on the scientist when he writes for a lay public in a field outside his special competence. The public is avid for conclusions. It cannot follow critically and in detail the arguments involved, particularly if important factors are suppressed or smoothly glossed over. The prestige of science is so great that the lay reader will naturally consider a high scientific reputation as a guarantee of intellectual honesty, objectivity, and general competence. A misuse of this prestige can lead to lamentable consequences when a wrong doctrine catches the fancy of the public or of lay persons in high places.

There have been many examples in recent years. The racial doctrines of the Nazis led to the slaughter of millions of innocents. The atavistic teaching of Lysenko has led to the suppression of Soviet genetics and now threatens other sciences as well. A more cogent example was the effect of the pronouncements of Lindbergh on the invincibility of the Nazi Air Force, which emboldened the Germans and intimidated many groups in France, England, and the United States.

It would be disastrous for all, and for the Russian people in particular, if Professor Blackett's book had the effect of making the Soviet rulers believe that the atomic bomb would be of minor importance in a war between the Soviets and the West.

II

The first half of Professor Blackett's book is devoted to his analysis of the military consequences of atomic energy. Here he marshals his data on the general effects of bombing as revealed by the Allied experience in the bombing of Germany and Japan. His chief source is the United States Strategic Bombing Survey, an excellent United States Government report too little known in this country. His knowledge of atomic bombing is gleaned from official unclassified publications, newspapers, and magazine articles. He cites his ingeniously selected authorities chapter and verse and makes, superficially, a fair-minded and scholarly impression. As Professor Bancroft once remarked in a book review, "The author is at his best when quoting."

Some of the facts which Professor Blackett presents will be startling to the lay reader. The British and American bombing of Germany up to the end of 1944 did not seem to bother the Germans at all. Indeed the graph reads as if they thrived on it. The British night bombing, in his opinion, was useless and wicked. The American daylight bombing had its chief effect in reducing the German air fighter force which rose up to intercept it. On the other hand, the use of air power in support of ground troops and its concentration on specific objectives like transportation is a paying proposition in a military sense, unlike the area bombing of cities. He cites the Russians as understanding these basic principles, whereas we and the British largely ignored them in a futile destruction of German cities.

In his opinion, the B-29 bombing of Japan was more successful, but largely unnecessary and cruel, since Japan was already beaten and its air force had been destroyed. The success of the blockade by ships, submarines, and mines had made the area-bombing effort unnecessary.

It is clear from the foregoing that Professor Blackett takes a dim view of area bombing. Since the atomic bomb can hardly help being an area weapon (8 square miles is his estimate of severe damage), it too, comes under his general condemnation as an effective military weapon. His syllogism runs; area bombing was no great shakes in the last war; the atomic bomb is a weapon for area bombing, therefore, the atomic bomb will not be decisive or even very important in the event of a war with the Soviets.

Let us examine the argument more closely. The early bombing of Germany was in driblets, and clearly permitted recovery when important centers were damaged in air raids. Other centers and alternative plants could be brought into play. There were places where refugees could be housed. But if the British or we could have succeeded in bombing Hamburg, Bremen, Hannover, Lubeck, and Rostock in one raid, that tale of recovery could have been quite different. Atomic bombing could have accomplished such a huge raid more easily than a single raid on Hamburg alone with ordinary bombs. This implication of damage causes a kind of supersaturation of defenses and recovery facilities and is a logical extension of the tactical idea of mass bombing introduced by the British in their air attacks on Germany.

Professor Blackett points out that a great improvement in the effectiveness of the bombing of German industrial centers occurred when the pathfinder technique was introduced. The pathfinders were specially selected crews who accurately spotted the target with flares. The rest of the mission bombed on the flares. This expected increase in accuracy is most important since a large number of raids over Germany were really wasted on open fields. Because of the much smaller number of air crews necessary for atomic bombing, they could all be trained up to the quality of pathfinders.

There is, in addition, an important morale factor difficult to evaluate, but which the Japanese and those who have seen an atomic explosion are not likely to minimize. The omission of these three factors—supersaturation, target accuracy, and morale effect—entirely vitiates Professor Blackett's elaborately constructed arguments, charts, and tables.

Strangely enough, even though he actually speaks of it, Professor Blackett nowhere seems to appreciate the possibilities of atomic warfare with a really large number of bombs. This is, unfortunately, a general tendency. People talk of the bomb or of dropping a bomb somewhere. The American scientists have always warned of the effect of a large number of bombs. One of Professor Blackett's odd points is that the atomic bomb is too big for many targets—as if that were an argument against the bomb, rather than a prediction of the complete annihilation of the target. Only few worth-while military targets cost less than an atomic bomb. This point is one which students of military affairs would do well to consider. Atomic warfare is very different when considered in terms of dozens or hundreds or thousands of bombs.

The first atomic bomb was dropped on Hiroshima on August 6, 1945, the second on Nagasaki on August 9, and on August 14 the proud Japanese Empire surrendered by radio. Many people, Professor Blackett included, have tried to shrug off that stupendous sequence of events. At this point Professor Blackett's objectivity as an operational analyst breaks down completely. His strong bias against strategic bombing, which dates back to the early war years, will not permit him to absorb this fact into his system of thought. His strong pro-Soviet or anti-American bias (it is hard to tell which is stronger) makes it impossible for him to live with the idea that the atomic bomb, an American monopoly, could play such a decisive role in a future war.

The impact of Hiroshima on Professor Blackett reaches its climax in chapter X, the Decision To Use the Bombs. Here Professor Blackett permits himself to indulge in a dignified tantrum. The sum and substance of this chapter is to show that we dropped the bomb on Hiroshima on August 6 to steal the newspaper headlines away from the Russians, who were expected to invade Manchuria on August 8, and thus win a diplomatic victory. "The dropping of the bombs was not so much the last military act of the Second World War, as the first major operation of the cold diplomatic war with Russia now in progress." That this statement can be put forth by a man of Professor Blackett's intelligence is astonishing. He assumes that we knew that the Russians would win a quick victory in Manchuria—an assumption which is belied by the initial phases of the other two Russian campaigns in the last war, in Finland and against Germany. Our own contacts with the Japanese did not give us reason to hold their military prowess in low esteem.

Professor Blackett argues further that if the use of the bomb was not the first act in the cold war, it was at least very tactless to steal the headlines away from the Russians, and showed a lack of the finer sensibilities. This argument had best be left to stand unanswered.

It is a plain fact that the United States had consistently pressed to have the war over in a hurry. We prodded a reluctant Churchill on the invasion of Europe and when that was over we went all-out for Japan. Europe was facing starvation and chaos. We could not delay a conclusion with Japan with the whole world degenerating into anarchy. We had the weapon to end the war and we used it, and it ended the war, even though, as Professor Blackett says, an atomic bomb is only equivalent to a raid of 300 B–29 bombers carrying 10 tons of bombs each.

As a matter of actual fact, the bomb was dropped at the first opportunity. Depending on the weather, it could have come earlier or later than the August 6 date. Furthermore, the Russians were informed by Mr. Truman at Potsdam that we had an atomic bomb. Judging by their insistence on a second front, they certainly would have interpreted any delay on our part in using the bomb as a device to put more of the burden of the war on them.

Professor Blackett does not forego the opportunity to castigate us on moral grounds for the use of the atomic bomb on Hiroshima and Nagasaki. Even though he proves to his own satisfaction that it is only the equivalent of an ordinary B–29 raid or the kind of bombing the British did so well over Hamburg, this particular raid gives him a special horror. He does not say why, but the reason is clear. Deep down he shares the view of other scientists that this raid could be the beginning of a new era of horror. This feeling he tries to talk away, but the vision remains as an afterglow.

The wailing over Hiroshima finds no echo in Japan. The Japanese knew that Hiroshima was an important headquarters and staging area and a legitimate target. They are very glad that something, anything, happened to stop the insane war. However, with sufficient propaganda, they might in time be induced to feel that they were greatly wronged. Hiroshima, by the way, is largely rebuilt.

Professor Blackett is not alone in his views. There seems to be a general playing-down of the importance and effectiveness of atomic warfare. That our own military people play it down is understandable. Owing to security restrictions, they know little about it and, further, it is difficult to defend UMT or expenditures for enormous conventional military installations — naval, air, and ground—if the atomic bomb is too strongly stressed. As a result of some of our misguided secrecy, we are not only paying for the atomic bomb but for a large conventional military set-up which the atomic bomb has made obsolete. Congressional committees pass on military expenditures without a knowledge of how many atomic bombs we have on hand or how many we shall have in future years. What is the rate of production? To what figure can it be increased? How can it be used for maximum effectiveness? The Congress would not tolerate such ignorance in any other sphere of our activity. The mystic power of the atom secrecy has dulled common-sense perceptions, not only in Professor Blackett but in many responsible people on this side of the Atlantic.

III

Almost half of Professor Blackett's book is devoted to an attack on the majority plan which grew out of the Acheson-Lilienthal-Baruch plan for the control of atomic energy within the UN. He does not pull his punches when they are directed at the United States. Although he does not strongly defend the Russian plan, he tries to show that the Soviets could hardly have taken any other position in view of the intransigence with which we pursue peace and security.

Although the negotiations in the United Nations Atomic Energy Commission have so far produced no tangible results except for a sharpening of the division between the Soviet planetary system of states and the Western World, a certain moral glow, perhaps only of innocence, has dwelt in the breasts of most scientists and statesmen on our side of the iron curtain. Our plan, the Acheson-Lilienthal-Baruch plan, as modified by prolonged discussion to become the majority plan of the UNAEC, was a great and generous gesture. It was an offer to surrender our greatest weapon of military power in the interest of the security of all nations. While guaranteeing solid advantages to ourselves in terms of our traditional immunity from military attack, it aimed to achieve this end without depriving any nation or people of the legitimate use of discoveries in the field of atomic energy. It is a significant first step toward the ultimate abolition of armed conflict between peoples.

That the Soviets could not agree to this plan has been held variously to result from the original sin of communism, the intrinsic inability of a totalitarian state to withstand impartial inspection from outside, ignorance of the Kremlin of the fatal power of the atomic bomb, and lastly to plain cussedness. The result, in any event, has been a greatly heightened tension in the Western World, particularly here in the United States. The mounting fear and frustration have resulted in vastly increased military appropriations, a severe loyalty check to weed out all leftist elements from any important phase of American life, and in general an effort to put the country and in fact the whole non-Soviet world in a state of preparedness for war.

Under such conditions, it appears that the two great ponderous machines are rolling on a single track to an inevitable head-on collision, which can bring only sorrow to hundreds of millions of well-meaning innocent people and advantage to none.

Professor Blackett brings no new bridge with which to cross the chasm separating the Soviets and the West. He is fully aware, as some of our statesmen are not, of the advantages to us in the proposals for an international authority to control atomic energy, but he implies a certain contempt for our profound desire for security to work out our destiny in peace and freedom from foreign interference. He sees nothing which the Soviets can gain from these proposals. They would be outvoted in any international body not subject to the veto. This assumes a continuation of the Soviet attitude of no compromise. They would give up the solid advantages of the iron curtain, which hides the location of their vital industrial plants and military installations, for the dubious attentions of foreign spies in their midst (this point had best be answered by the Central Intelligence Agency). Not the least of the Soviet objections, which Professor Blackett endorses, is the proposition that our policy of gradualness or stages, on which the whole system of international control would be set up, would deprive the Soviets of an early utilization of atomic energy for industrial power.

This last remark is not meant humorously by him; in fact, it is pointed up by facts and figures that the United States has more kilowatts per capita than any other country, including the Soviets.

Professor Blackett did not work on the atomic bomb project during the war, and his professional interest in recent years has not been primarily in nuclear physics. There are many points in the book which show that his thinking in this field is that of an outsider. Our security has apparently been much better than many people expected. These points cannot be discussed in detail in this place. However, one conclusion has become quite clear and has been reiterated by members of the United States Atomic

Energy Commission. Atomic power is not around the corner. Atomic power which would be economical and competitive with coal or oil, even in Russia, belongs to the distant future, far beyond any time-scale envisioned in the principle of stages. The Soviets would lose nothing and gain years through the disclosure of American and British knowledge now necessarily held secure. In any event, the matter has never come up for negotiation because the Soviet Government has rejected the majority plan in toto.

The final chapter of fear, war, and the bomb is called A Way Out? The question mark is appropriate. It presents a rather frightening concept. According to Professor Blackett, the bright dawn will come when Russia has made a few atomic bombs. Although we will have many more, the Russian weapons will be more effective when used in conjunction with her vast land armies. Under such circumstances, Professor Blackett feels that the United States and the Western powers will be more in a mood to negotiate, to trade off reduction in the number of our atomic bombs and carriers against reductions of the Russian armies by so and so many divisions. (This is exactly the kind of dreaded armed truce which American scientists have sought to avoid.) At a much later stage, if no third world war intervenes, a proposal like the majority plan of the United Nations Atomic Energy Commission could be taken up again.

This is the sum and substance of Professor Blackett's positive contribution to the subject of the political consequences of atomic energy, and his advice to a world torn asunder by a battle of giants. He also agrees that it doesn't amount to much.

Rehabilitation of Germany

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. HOLIFIELD. Mr. Speaker, I am one of those people who has become very much alarmed over the attitude of our military leaders in the occupied zones of Germany. The coddling of former Nazis, and the reconstruction of the monopolies and cartel interests of pre-war Germany, are, in my opinion, a nullification of all the principles for which we fought. Not only have a great many of the United States military leaders failed to protect the democratic principles in the rehabilitation of Germany, but we find the same lack of understanding on the part of certain officials in the State Department. We also find a certain willingness to "go along" with pre-war Nazi cartelists.

A recent article in the March-April issue of the pamphlet entitled "Prevent World War III," presents an analysis that is worth the careful consideration of the Members of the House. I submit this article to be inserted in the CONGRESSIONAL RECORD.

BLUNDERS IN THE MAKING

As reported in the press, certain State Department officials quietly instructed United States consular officials in Germany that Nazis may immigrate to the United States under quota arrangements. We think the word "quietly" is a very apt description of the manner in which some of the more nauseating pro-German policies are made. Some officials prefer to work that way. They don't like publicity. But as it is always the case in a democracy, there are leaks. We are, therefore, thankful to an alert press for this information.

We wonder how long the American people are going to tolerate these slick maneuvers which are intended to fool them. The officials responsible for this new decision are very careful. When they put out this new welcome mat for the Nazis they made sure that it had all the blessings of the law.

Several months ago, Mr. Herve L'Heureux, Chief of the State Department's Visa Division, and Hugo Carusi, Chairman of the Displaced Persons Commission, were interviewed by newspapermen. When they were asked if former members of the Nazi Party would be allowed to register for admission to this country under the displaced-persons program, Mr. L'Heureux said: "Under normal immigration laws, there is nothing that would exclude a Nazi or a Fascist * * *." When asked by the press if the Nazis would be denied entrance under the Government rule that prevents persons from immigrating to this country who advocate the overthrow of the United States Government by force and violence, Mr. Carusi replied: "I don't think so. At least we have never determined that." Mr. L'Heureux further clarified this point and said: "Well, there may be an individual case of a person who is a Nazi and who also believes in the overthrow of the Government by force, but I don't think we have ever concluded that the Nazi Party agreed that it is for the overthrow of government by force." The newspapermen were astonished. They told Mr. L'Heureux and Mr. Carusi that it had been their assumption that the Nazis were bent on overthrowing governments by force and violence. Mr. L'Heureux very calmly retorted: "Well wouldn't we all believe in the overthrow of government by force and violence if we were at war with another country?"

Where was Mr. L'Heureux when the Germans raped Czechoslovakia and set their fifth column to work in Austria, in Norway, etc.? Has Mr. L'Heureux ever read Mein Kampf? Dr. Goebbels, Hitler's chief propagandist, did not hide the aims of the Nazi Party in a speech delivered March 23, 1936. He said: "The government has decided to extend the German order over the whole world. The world will have to reckon with German economy, German soldiers, and cannons."

It is strange that an official of the Department of State should be so unmindful of the basic principles which guided Hitler and his gang of cut-throats. To equate the aims of the Allies with those of the Nazi Party is unfair to all those who gave their lives for democracy.

In accepting the theory that the purposes of the Allies were in essence similar to those of the Nazis, it is logical for Mr. L'Heureux to interpret the law in favor of the entrance of Nazis into this country. This is the General Patton attitude which viewed Nazism as a political movement on the same plane as the Republican and Democratic Parties in this country. It is a perversion of everything America stands for. The attitude of those who are responsible for this new interpretation is in sharp contrast to the indifferent treatment meted out to the victims of the Nazis. There are thousands of these tortured souls all over Europe and in Germany who seek the protection of these shores. For years as inmates of the concentration camps they dreamed of the day of liberation. They had faith in America. But their hopes were shattered; and now responsible officials would have the American people warm up to our deadly enemies while the victims of German bestiality languish in DP camps.

America is a big country. It has always been big enough for those who sought refuge from the tyranny of Europe. But it can never absorb those evil creatures who brought so much misery to this world. Each one of them is a sower of hate, a potential enemy within our midst. They will bring disunity and more bigotry to this land and put new zest into the conspiracy of pan-Germanism which has never given up the dream of including the United States of America into the concept of "Deutschland uber alles."

Immigration quotas may be an administrative problem, but to admit Nazi Party members to this country through legal loopholes of one kind or another most certainly requires the attention of the American people. More is involved than technicalities. The good name of America and the strength of its institutions are threatened. This is not an exaggeration. On the contrary, we would be remiss in our duty as a responsible organization which understands the true face of the pan-German conspiracy if we remained silent. Let us not forget that the Germans have not as yet been accepted into the family of nations, that the United States has not as yet made peace with them, and that nazism is by no means a dead issue.

There are even more grandiose plans afoot to flood the United States with German itinerants of one kind or another. For example, some top American officials are trying to convince Washington that German businessmen should be permitted to travel and reside freely in this country and elsewhere. These so-called German businessmen would be accorded all the rights and privileges which are given to other foreign business interests. They will try to reach their old contacts and travel up and down the land for this purpose. They will spend American dollars—the hard-earned dollars of American taxpayers. They will be permitted to make market surveys and analyses and establish permanent branch agencies in this country.

One press report reveals that German business interests plan an industry fair, to be held in New York in April. Apparently, the American military government is trying to make this a successful enterprise, and so public relations has gone to work. It has changed the original name of the exhibition from the Germany '49 Industry Show to Military Government German Exhibition. But no matter how they try to change the name, the leopard never changes its spots.

There are several important facts which must be considered with regard to these new plans for the revival of German business influence in this country. For one thing, the Germans are in the position to dump millions of dollars worth of goods in the American market because of their cheap labor. Europe is already undergoing the pressure of German dumping methods. The English and the French are very much concerned and have minced no words in condemning the unfair-competition methods of the Germans, which, incidentally, is nothing new. The kind of shoddy commodities which the Germans would want to sell in the American market could never compete with the products of American industry or that of other foreign imports under ordinary conditions. This, the Germans know very well, but they are confident that their undercutting methods will win out in the end—with our benevolent help.

In view of the fact that consumer-goods industries in this country are now facing difficulties and that unemployment is growing, we think it would be suicidal for our Government to permit the Trojan horse of German business to penetrate our country. It becomes all the more ludicrous when these German business projects are going to be subsidized by the American taxpayers, many of whom may find themselves out on the streets once German business methods get a good grip on the American market.

From a long-term point of view, there is even a greater danger. As one American correspondent put it, there are people who are disturbed over these German plans because they "remember how German political dominance has so frequently followed German trade channels." It was not so long ago when agencies of German business concerns in this country were acting as the eyes and ears of the German military and were subsidizing on a large scale subversive movements in this country. It was not very long ago when German "businessmen" were devising all kinds of schemes to tie up American productive potential.

The blissfully ignorant may say that this is no longer possible. But the sad truth remains that the German cartel network has not been at all touched and is beginning to operate with new life. We have no doubt that Germany's economic penetration in this country or in any of our allies will be the prelude to political activity. This is the way German business has always worked. It has always been the arm of the geopoliticians and the German General Staff.

We resent treating the Germans as though they are now our bosom friends. They have a long way to go to prove that they are trustworthy in economics and politics. So far they have merely confirmed our fears that they remain unrepentant supernationalists who are waiting for "der tag." America cannot afford the luxury of inviting German businessmen to take up where they left off.

Congratulations to the New York Post

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. MULTER. Mr. Speaker, the following announcement appeared in the New York Post of April 6, 1949. The New York Post is to be congratulated upon its forthright action and its splendid statement of policy. More power to it!

The board of directors of the New York Post Corp. today accepted with deep regret the resignation of T. O. Thackrey as editor and publisher.

Irreconcilable differences on fundamental questions of policy made a request for his resignation inevitable.

Ten years ago when the present ownership acquired the New York Post, there was no other newspaper in New York City supporting the liberal policies of Franklin D. Roosevelt. With him we fought for many things—for the rights of minorities, against fascism and nazism, for social security and public housing, for the recognition of the rights of labor, and for the establishment of the United Nations. We also supported his efforts to convince the U. S. S. R. that cooperation with the West was necessary for world peace.

Since President Roosevelt's death, however, the Communists have not only blocked the United Nations by misuse of the veto but have taken over the governments of helpless neighbor nations.

This newspaper, in line with its policies of the past 10 years, must and will meet these new threats to democracy by opposing with equal vigor all totalitarianism, whether Fascist or Communist. We believe that this is the true path to a lasting peace. The world has learned that appeasement leads only to war.

The Post Home News readers are aware of the passion with which Mr. Thackrey fought for the cause of Israel. We will continue that fight, and the fight for all new democracies seeking to free themselves from imperialistic domination. We will insist that their efforts be upheld by the Government of the United States and that they be admitted promptly into the United Nations.

The Post Home News agrees in principle with President Truman's Fair Deal. We shall work unceasingly for its achievement.

Today we are engaged in a great struggle at home and abroad for the cause of liberal democracy. This newspaper will keep up its fight for that cause.

DOROTHY SCHIFF THACKREY.

Churchill's Challenge

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial which appeared in the Manchester Evening Leader, published in Manchester, N. H., under date of April 1, 1949, entitled "Churchill's Challenge":

CHURCHILL'S CHALLENGE

Winston Churchill has probably never before in his long and distinguished career as a world leader and orator delivered a more significant address than the one last evening in Boston. Its quality was marked not only by its eloquence but by the inspiration it brought to the people of America and the world.

He gave a realistic analysis of current conditions as only a person of his wide experience and keen insight into international affairs is capable of offering. There was no attempt to minimize the perils of the East-West conflict. But his words gave reassurance that war was not inevitable. He set the course by which the freedom-loving peoples of the world may secure themselves against aggression and the sacrifice of liberty.

Speaking as a private citizen, the former wartime British Prime Minister's remarks were not restrained by diplomatic responsibility. There was sincerity of purpose in his tone and a challenge to the Western World in his stirring words. He made it clear that unity among the democracies has been forced upon us by the tactics and ambitions of Russian leaders, and only through such unity can we hope to survive.

He placed particular stress upon the motivating reason behind the Soviet's stubborn resistance to settlement of cold-war issues. "It is because they fear the friendship of the West more than its hostility," Mr. Churchill said, adding that "they cannot afford to allow free and friendly intercourse to grow up between the vast area they control and the civilization of the West."

Pointing out that peace can be achieved ultimately through the creation of a "world instrument capable at least of giving to all its members security against aggression," the speaker sounded a significant note when he declared that "we need not abandon hope or patience." The former British leader knows full well that the development of lasting peace will not come easily or without superhuman effort and sacrifice. He is equally aware that the people of the Western World cannot allow themselves to become impatient by the delay or they may suffer as a consequence.

America has reason to be thankful for Mr. Churchill's visit and the challenge he made to all of us in this critical hour. His words have brought greater realism to the issues we face and increased hope for ultimate peace and universal liberty.

Praise for Clair Engle

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. POULSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I think the Members will be interested in this article commending my colleague CLAIR ENGLE of California, written by Frank Rogers, Washington representative of the Los Angeles Daily News, and printed in the California magazine Fortnight of April 1, 1949. I join Mr. Rogers in praising CLAIR ENGLE.

WASHINGTON LETTER
(By Frank Rogers)

"With both guns blazing, Representative CLAIR ENGLE charged out of the legislative sagebrush, shooting wildly and—"

The gentleman from Red Bluff, Calif., likes to recount how some now unidentified big-city newspaperman once wrote a line like that about him. He regards most Washington newspapermen as friendly and unintentionally helpful enemies.

Likewise on his friendly enemy list are big-city people, big-city issues, and just plain big cities. For CLAIR ENGLE almost, but not quite, makes a political profession out of lambasting the folks from the paved areas where no deer and no antelope roam.

Like some Dixiecrats who win many votes by crying out in anguish when the damnyankee newspapers attack them, ENGLE gets a pixielike satisfaction out of seeing metropolitan dailies in California take out after him when he cuts a legislative caper—which he frequently does.

But important events of the past fortnight proved all this was not an all-out pose with youth (37), vigorous, ebullient CLAIR ENGLE. As few Members of Congress can, he simply enjoys the comfort of knowing that no matter what the big-city press says about him—so long as it isn't flattering—his folks at home like him all the better.

But he doesn't trade too much on that happy circumstance—although he might if political times turned tough, which they haven't yet for him. Proof of a more honest inner attitude came when he demonstrated that the rural boy who represents perhaps the biggest rural district in Congress is not above turning a favor for his big-city colleagues.

His performance was generally overlooked, underemphasized—and still mystifies some Capitol Hill observers, who wouldn't bet their pyramid-club winnings on where CLAIR ENGLE will land next.

The upper basin States were before the House Public Lands committee with a bill for congressional ratification of their new Colorado River compact. California, a lower basin State, and already locked in mortal combat with Arizona over this precious supply, wanted assurances that nothing in the new compact would be interpreted as having any bearing on California's interests.

Southern California, most affected by the river battle, had no Democrat on the Public Lands Committee. Its only Republican member, NORRIS POULSON, was barely out of a hospital with pneumonia. ENGLE had never

shown much friendly interest in southern California's thirst—had, in fact, feuded with Los Angeles for years over the ancient Mono Basin deal.

But, in desperation, he was asked to carry the fight—this time for southern California—and he did. Always an effective man in committee, ENGLE hammered so hard on California's reservations about the upper basin compact that the basin's five commissioners felt obliged to put their reassurance in writing to him. Nothing in the upper basin compact was to apply to California's compact. Positively.

It was almost exactly what the southern Californians wanted and they accepted ENGLE'S favor with slightly stunned looks of appreciation.

He hasn't always been so amenable, has often been perverse and exasperating. Usually, however, he has a reason—even if it is only to let the folks back home know he isn't being sold any wooden nickels.

His ancient feud with the Los Angeles Department of Water and Power over water and property rights in the Mono Basin-Inyo County area (one of the 18 counties in his district) is an example.

When representatives of all the counties and agencies involved landed in Washington with compromise legislation to which all had agreed, ENGLE at first agreed to go along—then blocked the deal at the last minute. That was more than a year ago; now he promises to support a new compromise. Angelenos are keeping their fingers crossed.

Perhaps, as some say, he simply enjoys being a character. And maybe, they admit, one needs to be a character to cover and represent a district which stretches down California's backbone from the Oregon boundary to the San Bernardino county line.

Personally popular in the California crowd despite some strong differences of opinion, ENGLE has reason to be content as well with the attitude of his far-flung constituency. He was elected district attorney of Tehama County at 23, State Senator at 31 and Congressman at 32. As the current secretary of the California delegation, he has achieved some distinction as the only member who can talk as tough as, and faster than, Chairman HARRY SHEPPARD.

One reason for ENGLE'S apparent new mood, if it lasts, is that he may have been infected with the still weak but growing virus of cooperation on State matters. There are some signs of a delegation-wide epidemic on this score.

If ENGLE has contracted this happy malady, not many others can resist it.

Communist Words Versus Communist Teaching

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. MULTER. Mr. Speaker, the following article appeared in the Washington Post on March 29, 1949. It is an excellent exposé of how the Communists attempt to hide their real intentions.

COMMUNIST WORDS VERSUS COMMUNIST TEACHING

(By Julius Epstein)

In their statement of March 2, Messrs. Foster and Dennis, the chairman and secretary of the Communist Party, said: "We do not regard a new world holocaust as inevitable. We hold the peaceful coexistence of two different systems wholly possible."

With this statement, both leaders of the American Communist Party expressed an opinion which is in the strongest possible degree at variance with the classical teachings of their masters, Lenin and Stalin. Messrs. Foster and Dennis' opinion is not only in complete contradiction to the Bolshevist theories of the past; it is in obvious opposition to everything taught by the Communists at the present time.

No real Communist, Messrs. Foster and Dennis included, ever believed that the U. S. S. R. would be able to live in peace with the non-Communist part of the world. They not only believe in the inevitability of the third world war, they have professed this basic belief a thousand times.

It may suffice to confront the hypocritical utterance by Foster and Dennis with some of those classical expressions of Communist opinion as written by Lenin and Stalin and distributed at present time throughout our country.

It was Lenin who said: "We live not only in a state but in a system of states, and the prolonged existence of the Soviet Republic side by side with the imperialistic states is unthinkable. Finally either the one or the other will be victorious. And until this happens a series of terrible conflicts between the Soviet Republic and the bourgeois states is unavoidable." (Lenin's Complete Works, vol. XXIV.)

And it is Stalin who echoes Lenin's ideas in his most widely distributed book, Problems of Leninism (more than 30 million copies sold) when he emphasizes: "It is inconceivable that the Soviet Republic should continue to exist for a long period side by side with imperialistic states—ultimately one or the other must conquer."

One of the most important paragraphs on the duty of the first victorious proletariat to support the revolutionary struggle of the workers of other countries all over the world was written by Lenin as early as 1915. The paragraph, a cornerstone of the whole Bolshevist theory, has been quoted by Stalin time and again. In the latest American edition of Stalin's Problems of Leninism it reads as follows:

"Uneven economic and political development is an absolute law of capitalism. Hence, the victory of socialism is possible, first in a few or even in one single capitalist country taken separately. The victorious proletariat of that country, having expropriated the capitalists and organized its own socialist production would rise against the rest of the capitalist world, attract to itself the oppressed classes of other countries, raise revolts among them against the capitalists, and in the event of necessity come out even with armed force against the exploiting classes and their states."

The very purpose of the Bolshevist revolution of 1917 has been defined by Stalin as "to consolidate the dictatorship of the proletariat in one country, using it as a base for the overthrow of imperialism in all countries." (Stalin, Foundations of Leninism, American edition, 1939.)

There is no doubt that the Communists regard the United States as the foremost imperialistic country in the world and that, therefore, they regard the overthrow of this American "imperialism" as their foremost duty. From that follows their strategy in case of war. Any war again the U. S. S. R. is an imperialistic war and their duty would be to sabotage it as much as possible.

The old slogan, "Turn around the rifles," created by Lenin during the First World War, is certainly still the only valid guidance for the Communists all over the world and especially for the American Communists. It is, therefore, not at all surprising when Messrs. Thorez, Togliatti, Pollit, Foster, and Dennis in a well-timed movement declare that they are not going to fight the Red Army in case of war against the Soviet Union.

On January 11, 1948, the New York Herald Tribune carried over three pages of an interview with Foster. One of the questions submitted to him read: "In case of war between Russia and the United States would you bear arms for the United States against Russia?"

Mr. Foster's answer to that question was exactly the same as he gave it on March 2, 1949. Sometimes even the wording is the same. Said Mr. Foster 1 year ago:

"Communists like progressive Americans generally, distinguish between just and unjust wars, supporting the former, and opposing the latter. The Revolutionary War, the War of 1812, the Civil War, and World War II were all just, democratic wars, and they played a constructive role historically. But, on the other hand, several of our wars were reactionary, and democratic Americans have opposed them. * * * The Mexican War was a huge land grab against a weaker neighbor, and, as such, Lincoln and many other true democrats condemned it. * * * A war against the Soviet Union would also be an unjust, imperialist, and criminal war, and as such would be condemned by a large section, if not the majority of American public opinion * * * We conceive it to be a high patriotic duty to oppose all imperialist war, whether it be directed against Great Britain, France, Poland, Paraguay, China, the Soviet Union, or any other country. The only possible war between the United States and the U. S. S. R. would be an imperialist war provoked by Wall Street."

On May 29, 1948, Mr. Foster expressed again his opinion about the behavior of the American Communists in case of war with the Soviets. This time he appeared before a Senate Judiciary Subcommittee which dealt with the Mundt-Nixon Communist bill. Asked by Senator REVERCOMB, of West Virginia, whether or not the American Communists would disobey the military orders of the United States, Mr. Foster answered: "We're not going to fight against the Soviet Union. We're not going to fight in any imperialistic war."

We have seen that this attitude of the Communists is completely in line with the classic tenets as proclaimed by Lenin and Stalin. The Communists have never changed these tenets or the necessarily ensuing practical attitude toward the problem of war. What they have changed—and dishonestly changed, because they know the change is a hoax—is their belief in the inevitability of war and world revolution as expressed by their masters, Lenin and Stalin, to this day.

While they profess in interviews given to innocent and gullible Americans to believe in the absolute possibility for the Soviet Union and the Western World to live peacefully together for an unlimited period, they teach to the party members the uncorrected classical tenet of the inevitability of world wars and world revolution. By playing this double role, the Communists follow Lenin's teachings. He always advised the Communists to use every ruse, every lie and every deception in their fight against capitalism.

That is the core of what Lenin called the doctrine of "progress and retreat." Whenever the Soviet Union finds itself on the defense, the Communist world undergoes a process of "zigzags," of "retracing" and "abandoning the course once selected." The most famous instance of such a "retracing" and "abandoning the course once selected" occurred in August and September, 1939, when Stalin and Molotov publicly praised Hitler and the Nazis and when they concluded their public and secret pacts with Hitler. Hitlerism became suddenly a "matter of taste" as Molotov expressed it and the urge to fight fascism and national socialism an unpardonable crime.

Compulsory Health Insurance

EXTENSION OF REMARKS
OF
HON. WILLIAM L. PFEIFFER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. WILLIAM L. PFEIFFER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include a resolution adopted by the Eighth District Dental Society in opposition to compulsory health insurance:

Whereas there are now pending before the Congress of the United States, three bills—S. 5, H. R. 343 and H. R. 783, commonly known as the Wagner-Murray-Dingell bill, the object of which is to establish a system of compulsory health insurance in the United States; and

Whereas the experience of other nations of the world which have adopted such a system has demonstrated that compulsory health insurance does not materially improve the general health of the people of such countries; and

Whereas the people of the United States today have the best and most efficient dental, medical, nursing and hospital service care that the world has ever known; and

Whereas the great advances in the health professions heretofore have been made as a result of individual initiative: Now, therefore, be it

Resolved, That the Eighth District Dental Society of the State of New York does hereby memorialize the Congress of the United States not to enact any legislation containing the principle of compulsory health insurance; and be it further

Resolved, That a copy of this resolution be forwarded to each Senator and Representative in Congress from this State, and to the Speaker of the House of Representatives, and the President of the Senate of the Congress of the United States.

The Atlantic Pact

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial which appeared in the New Hampshire Morning Union, published in Manchester, N. H., under date of April 5, 1949, entitled "The Atlantic Pact":

THE ATLANTIC PACT

A good deal is being said to confuse the issue on the Atlantic Pact, signed yesterday at Washington, that is not being said by Communists.

For instance, we are being told by some conscientious Americans that the pact bypasses the United Nations and calls a return to the old balance-of-power doctrine. We are told also that the pact is an unnecessary affront to Soviet Russia and therefore may result in hastening war.

Both of these statements miss the point of the pact completely. Landing at New York to take up his duties as president of the United Nations Assembly, Herbert Evatt declared that the Atlantic Pact and regional pacts in general are of assistance to the UN. The possibility that regional agreements would be set up, said Dr. Evatt, was foreseen at San Francisco and fully provided for at the meetings at which the United Nations Organization was planned.

As for hastening war with Soviet Russia, the Atlantic Pact has no bearing on Russia or any other nation if it harbors no aggressive designs. It is purely a pledge of mutual assistance against aggression and has no offensive or aggressive purpose whatever. In fact, the pact would never have been thought of it it had not been for Soviet expansion and Communist aggression that put the security of the Western World in jeopardy.

The Western nations were forced to seek some guarantee of security against the threat of Soviet attack. They propose to do this by stabilizing the present military situation so as to prevent Soviet Russia from absorbing any more of the free areas of the world.

To get this question in its proper perspective, consider the situation with no pact at all. That would be to leave the Western nations exposed to Soviet aggression, and thereby stimulate the ambition of the Kremlin to overreach. We must face facts as they are and not as we would hope them to be. The grim fact is that the nations sought world union and world peace through the United Nations.

But the United Nations has failed because of Soviet obstructionism. The Western nations have made every effort to establish a basis of peace with the Soviet Politburo. But these, too, have failed. Meanwhile, through the promotion of Communist aggression in China and Greece, and the fostering of subversion in other countries, the Soviets have given convincing proof of their baneful purposes.

Thus the Western nations have been forced to unite for their own protection within narrower limits than the UN. They are faced with the challenge to unite or to see the nations of western Europe sucked one by one behind the iron curtain, and their freedom destroyed, and the menace of Soviet domination spread across the Atlantic. This situation must be met with cold realism. It is no time for quibbling or controversy over details or what might have been.

The Atlantic Pact

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. CHIPERFIELD. Mr. Speaker, no thinking American objects to positive action aimed at stopping communism. The issue of what to do about the creeping paralysis of Communist slavery is today's most vital issue. It is so important that it affects the today and the tomorrow of you and your children. Unquestionably it is one of the great problems of this generation.

That mainly is the reason for the North Atlantic Security Pact. Few citizens will protest against the United States taking part in it but the thing to which many can, and will, object, with justifiable cause, is the way in which the writing of the treaty was handled by the State Department.

The purpose of the treaty is to obligate the participating countries to use armed force, if necessary, to help any member of the alliance who is attacked. That is a commitment of the utmost importance. It simply means if Luxemburg for example, should be attacked, we would be morally obligated to go to her aid with arms if necessary. That obviously would mean that everyone's sons, including mine and yours, would go back into uniform. That's how close to home the matter stands.

Minority members of the Foreign Affairs Committee who had joined in a minority report to the ECA bill pointed out that—

The House has not been consulted on the formulation of this vast program nor, so far as we know, have any of its members or committees.

Obviously, the bipartisan foreign policy has not been extended to include the House of Representatives. It is apparent, too, that the Department of State has overlooked—or perhaps forgotten—that it is the House that must underwrite the bill with billions of dollars for its accompanying program of lend-lease rearmament and maintenance for 20 years of western Europe by the United States. The House must pick up the check as all appropriations must originate there.

It is conceded that representatives of the United States Senate were included in treaty-writing talks for it is the Senate that must give its approval, under the Constitution, to any treaty this country signs.

But it is difficult to understand why the House of Representatives was completely ignored—and at the same time representatives of foreign governments given the details of the treaty in full confidence.

One Washington columnist and a reporter for the New York Times—both of whom follow State Department policy faithfully—were writing about provisions of the treaty in detail for weeks before it was published. It is easy to assume the Communists knew at least as much about the treaty as did the House of Representatives, since House Members were getting their information from these same public sources.

There is where the American people have a legitimate objection. It would have been a simple matter to call in Republican and Democratic members of the House Committee on Foreign Affairs just as were Senator VANDENBERG and Senator CONNALLY, who helped write the treaty into its present form.

Members of my Foreign Affairs Committee pleaded with Secretary Acheson in vain for House consideration because if we are to assume responsibility for possible crash landings we should have been consulted at the take-off.

What the treaty does is this: It frankly pledges the United States, Canada, and the non-Communist nations, the free nations of western Europe, to a united fight on communism.

The key to the treaty is article 5. That says in effect that if any member of the alliance is attacked, the brothers-in-arms shall consider that an attack upon all—and all shall go to the aid of the nation or nations attacked.

The power to send your sons to war is kept technically in the hands of Congress. We would have the right to determine whether we should declare war or what action we should take so there would not be an automatic involvement in war under the treaty. But such a determination would be a Hobson's choice—no choice at all. For all practical purposes the language of the treaty is so strong that obviously there would be a moral obligation on our part to resist any aggressor by the use of arms. This country keeps its moral commitments and does not go back on its treaties. In other words a mere 64 of the 96 Members of the Senate, and without any expression of approval by the 435 Members of the House, can morally commit a future Congress—not yet elected by the people—to a possible future war.

In a resolution to strengthen the United Nations which I introduced in the House as early as May 17, 1948, I recognized the possible need for a regional security agreement. The last provision of that resolution advocated support and assistance to free nations in their firm determination to defend their independence and liberty against aggression. But I wanted any such agreement to be passed on by both houses, and our right of self-determination as to future action unequivocally preserved.

Certainly this treaty raises many issues which should have the fullest consideration before ratification by the Senate. In mentioning some of them I do not want it inferred that I am against this pact, but do believe we should consider all its implications.

Does this treaty increase rather than decrease the chances of attack on countries that are not members of the pact? Will we have to enter into similar pacts in other areas of the world? Are there sufficient safeguards in the agreement if one of the members turns communistic within the next 20 years? Do we enter into a one-sided agreement whereby we not only agree to arm the participating countries but to maintain their military strength for the next 20 years? Why does not this Atlantic Pact provide for reciprocal assistance from European nations to support us in the Far East? Does this agreement undermine the United Nations? Is a military alliance sufficient to maintain peace? Are we entering into an armament race with Russia? Will this tend to weaken us at home? In addition to the Marshall plan and the Atlantic pact should we not also strive for political unity in western Europe through machinery of the United Nations?

In any event the importance, the historic significance of the North Atlantic Security Pact cannot be underestimated nor overstressed. Ten years ago almost the same nations refused to take similar steps to stop Hitler. It is the fervent hope of all of us that this treaty will not provoke the very attack it is designed to prevent. Americans can only pray the new treaty will stop Stalin and that it will be by peaceful means.

President Approves Rent Control Act

EXTENSION OF REMARKS

OF

HON. LEONARD IRVING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. IRVING. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call the attention of the Members of the House to the language of President Truman's statement to the press on March 30, when he announced the signing of the bill extending rent controls for another 15 months.

It will be noted that in approving the bill, H. R. 1731, he called particular attention to the provisions which leave in the hands of local authorities the responsibilities for actual continuances of rent controls in their areas and to the fact that he feels the "fair net operating income" provision is not unworkable as it is now written.

I see in his message a note of desire that all rent difficulties be adjusted fairly and equitably between both landlords and tenants.

His message reads as follows:

I have today given my approval to H. R. 1731, the Housing and Rent Act of 1949, which extends rent control for 15 months until June 30, 1950.

This act is a result of the joint efforts of the Congress and the administration to find an equitable solution for a difficult problem.

While affording more effective protection to tenants against illegal or unjustified rent increases, the act also facilitates the making of adjustments necessary to correct injustices against landlords.

In particular, the act will be helpful in the case of any small landlords who may not be obtaining an adequate net operating income.

Specifically, the act strengthens rent control in the following respects:

1. It gives the Housing Expediter the authority to regulate evictions. He has not had this authority since June 30, 1947. Since that time the fear of evictions has been one of the major factors leading to a black market in rents. The restoration to the Housing Expediter of the right to control evictions will make it possible to curb this black market.

2. It gives the Housing Expediter the right to sue for treble damages for violation of rent ceilings. He has not had this authority since June 30, 1947. This will provide another powerful weapon to curb the black market in over-ceiling rents.

3. It gives the Housing Expediter the authority to recontrol on his own initiative any area he may decontrol hereafter. It also permits him, upon the recommendation of a local rent advisory board, to establish rent control in any area not now controlled. The Housing Expediter has not had authority, since June 30, 1947, to establish rent control in new areas or to recontrol any decontrolled areas.

4. It requires approval by the Housing Expediter before additional units created by conversion may be decontrolled. Since June 30, 1947, such decontrol has been automatic. The new provision will assure that decontrol will be permitted only for genuine conversions and will prevent evasive practices and pseudo-conversions which have been taking place since June 30, 1947.

5. It brings back under rent control a number of types of accommodations which have been decontrolled since June 30, 1947. Among these are accommodations not rented for any successive 24-month period between February 1, 1945, and March 30, 1948, trailers and trailer space, except those used exclusively for transient occupancy; and permanent hotel accommodations in cities with a population of 2,500,000 or more, except in predominantly transient hotels.

6. It does away with the much-abused procedure permitting so-called voluntary leases with rent increases up to 15 percent. This removes the possibility of coercion by landlords to make tenants sign such leases in the future, and eliminates the practice of requiring tenants to sign such leases before they can rent vacant units.

7. It restores to the Housing Expediter the authority to obtain all necessary information by direct testimony or from records and to use the power of subpena for this purpose whenever necessary. The Housing Expediter has not had this power since June 30, 1947.

8. It requires landlords who receive rent adjustments to certify that they are maintaining and will continue to maintain all services furnished on the date determining the maximum rent.

In short, the act establishes an effective system of rent control administration—remedying weaknesses in the present law which tend to make rent control ineffective because of inadequate enforcement powers.

With respect to decontrolling areas where rent control is no longer needed, the act gives new responsibility to the States and to incorporated cities, towns, and villages.

In doing this the act extends the principles underlying the operation of local rent advisory boards, that is, the granting of greater discretion to local authorities to say whether Federal rent control is necessary in their localities.

The act provides that in order to obtain decontrol, an incorporated city, town, or village must hold a public hearing after 10 days' notice and must make a finding as a result of that hearing, that there no longer exists such a shortage in rental housing accommodations as to require rent control.

Furthermore, such determination to decontrol must be approved by the Governor of the State. I urge local authorities in reaching their decisions to examine all the facts carefully and to exercise their best judgment in the interest of all citizens in their communities.

The act provides that in making adjustments the Housing Expediter shall assure landlords a fair net operating income. This provision does not create an administratively unworkable standard of fair return, nor does it mean a general rent increase for all tenants. Rather, it provides an equitable standard for adjustments where they are needed.

This act was passed by the Congress despite the propaganda barrage which was designed to destroy rent control altogether. In its final form, it represents a crushing defeat for the real-estate lobby.

The passage of this effective rent-control law clearly demonstrates the purpose of the Congress to maintain adequate protection for tenants until the housing shortage is relieved.

By this action, the Congress has reemphasized the necessity for the prompt enactment of legislation which will help to relieve the housing shortage.

Making Child Abandonment a Federal Offense

EXTENSION OF REMARKS

OF

HON. TOM STEED

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. STEED. Mr. Speaker, I have introduced a bill, H. R. 4057, to prohibit utilization of the facilities of interstate or foreign commerce in connection with the desertion or abandonment of dependent children, and to make available to local enforcement officials more specific information from welfare sources on child-abandonment cases.

The purpose of this bill is to prevent the Federal program for aid to dependent children from abuse by able-bodied parents who abandon their children. Such abuses have increased so rapidly in recent years that they are becoming a national curse and are threatening this entire program.

Today, it is too easy for a father to walk out on his family. He knows that a program authorized by Federal law is ready to furnish cash assistance to his wife and children. He knows that if he leaves the State no Federal crime is committed and the more miles he puts between himself and his family, the less likely it is that he will be sought out, returned to the State, and prosecuted. He knows that, even if he remains within the same State as his family, the law enforcement officials may not be informed of his failure to support his children.

My bill would stop the practice of using the aid-to-dependent-children program to encourage the breaking up of homes. The bill would, first, make the abandonment or desertion of dependent children by a parent who crosses State lines a Federal offense punishable in the United States district court of the district from which the parent departed, or of the district in which he may be found; and, second, require, as a condition for the receipt of Federal funds, that the State or local agency administering the program give prompt notice to the appropriate Federal, State, or local law-enforcement official, whenever aid is furnished to children who have been deserted or abandoned by a parent. Thus, not only would those responsible for enforcing the nonsupport laws be informed of the furnishing of public funds to these children, but Federal law could be invoked against those parents who now disregard State nonsupport statutes and leave the State.

Aid to dependent children is now being provided to more than 1,200,000 children through the cooperation of the Federal and State Governments under the provisions of the Social Security Act. Many of these children would not be living in their own homes or homes of relatives but instead would be residing in institutions or in homes of strangers if the Congress had not provided Federal grants-in-aid to the States for children in families with no breadwinner. The Federal and State Governments in furnishing aid to dependent children have recognized that there is no adequate substitute for a family home for children and that economic need should not result in the breaking up of normal family relationships.

I believe in the general purpose of this program. In introducing this bill, I do not intend that aid should be withheld from any needy child, but rather this bill is aimed at parents who, without justification, shift the financial responsibility for their children to the Federal, State, and local governments.

In fact, my bill should receive the support of everyone interested in seeing that the dependent children of the Nation are furnished adequate care. The cost of aid to dependent children has increased sharply. In the 1948 fiscal year the Federal, State, and local governments expended in excess of $352,000,000 for this purpose. In 1941 total costs were less than $153,000,000. Although I recognize that the rise in the cost of living has had its impact on expenditures for aid to the needy as it has on everything else, I also know, not only from reviewing the statistics, but from my own observations that fathers of children have been taking advantage of the aid to dependent children program and shirking their moral and legal duties. This bill will enable the law-enforcement officials to stop this abuse of the use of public funds and to keep the program from falling into disrepute on a national basis as it already has in some parts of the country.

Proper administration of the program, with strict enforcement of the responsibility of parents to support their children whenever able to do so will be facilitated by the provisions of the bill. Thus, unnecessary expenditures of tax dollars can be avoided and the funds made available for the program can be used to better meet the needs of those children for whom other financial resources are lacking.

Michigan Says "No" on Socialism

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, under permisson granted, there is inserted herewith an editorial from the Chicago Tribune of April 6, 1949:

MICHIGAN SAYS "NO" ON SOCIALISM

The socialism and the welfare State that Gov. G. Mennen Williams and Walter Reuther of the CIO have been preaching in Michigan don't go over with the voters of that State. They said so Monday by repelling the attempts of the Democrats to take control of the State administrative board.

The administrative board in Michigan has wide powers over State policies and the expenditure of State funds. The members include the elected heads of important State departments. The offices at stake Tuesday were those of the head of the highway department and the superintendent of public instruction. The Republican incumbents were returned by comfortable margins, and their party retains its 5 to 3 control of the board.

Last November Michigan reelected its Republican Senator, HOMER FERGUSON, and gave its electoral vote to Governor Dewey, but Williams, a political unknown whose campaign organization consisted of the CIO, defeated Governor Kim Sigler, Republican. Since his inauguration, Williams has shown himself to be a virtual puppet of the CIO, in both policies and appointments.

With August Scholle, head of the State CIO council, calling the signals, Williams ousted the regular Democrats from control of the party organization at the State convention in February. The same forces set out to grab control of the administrative council and to elect two State university regents on Tuesday.

Only about a quarter of the State's voters participated, a circumstance that favored an organized minority group. In Detroit, a Democratic and CIO stronghold, there was the added advantage of a referendum on a $10,000,000 school-bond issue, which was expected to bring voters to the polls. Nevertheless, Williams and the CIO lost all along the line.

Williams and the CIO were promising the people of Michigan a lot of something for nothing. The vote should dispose of claims that Mr. Truman has any mandate, in at least this one highly industrialized State, for the program of socialism that he is promoting on a national scale. A Michigan Democrat, Representative LESINSKI, has been trying to push repeal of the Taft-Hartley Act through the House under a gag rule. The returns from his own State show what Michigan thinks of the CIO leaders whose lust for power the Taft-Hartley Act has curbed to the benefit of the Nation and the acute discomfort of the labor bosses.

The Republicans should look about the Nation before taking too much comfort from the Michigan victory. They couldn't have won in Michigan with Governor Dewey's program of a welfare state. They won because the people didn't want such a program. The socialist Republicans and the internationalist Republicans are doing their best in Washington to keep their party crying "me too." If they succeed, the Democrats will run the country for another 20 years, and into a couple of new wars.

China's Communists Gain Confidence of Businessmen

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. SADOWSKI. Mr. Speaker, I wish to include a very interesting article by Gordon Walker, chief far eastern correspondent of the Christian Science Monitor, which article appeared in the Christian Science Monitor of April 2, 1949:

CHINA'S COMMUNISTS GAIN CONFIDENCE OF BUSINESSMEN

(By Gordon Walker)

SHANGHAI.—Whether or not a peace settlement in China's civil war is reached this time, the military advantage and political power of China's Communists appear to be experiencing new and significant increases.

There is still little hope expressed here and in Nanking that the negotiations which opened in Peiping on April 1 will bring any immediate results.

But the mere fact that the Communists have consented to open negotiations, however, has been of considerable propaganda value among the war-weary Chinese citizenry. And although it might be inaccurate to say that the Communists now are winning further active support among former Kuomintang (Nationalist Party) circles, it is noticeably certain that active opposition seems to be breaking down.

BUSINESSMEN IMPRESSED

Developments in Communist control of Peiping and Tientsin, for instance, have made a profound impression here—particularly among business groups that had been ready to flee at the first sign of a Communist take-over in Nanking and Shanghai.

It is recognized that Communists are doing a highly inefficient job of restoring business in the northern cities. But there also is a growing feeling here that experience in the north has proved that it is possible to do business with the Communists in the future.

Gradual reopening of trade with Tientsin has helped provide some degree of confidence. And recent Communist proposals for banking arrangements with non-Communist areas, together with Communist acceptance of Shanghai shipping advisers, have added weight to this feeling.

CONFIDENCE RETURNING

As one prominent Shanghai Chinese banker put it, "At first we expected the worst from the Communists. Now we feel that we might as well make the effort to work with them."

Coupled with this new assessment of Communists is continually mounting resentment with that portion of the Kuomintang which now is ensconced in south China.

Important Shanghai businessmen who once were stanch supporters of Generalissimo Chiang Kai-shek now talk bitterly about his stubbornness and failures.

The currency reform of last August resulted in heavy financial losses for which they blame the generalissimo. And now, as they try to do business with a new currency which has inflated 3,500 times since August, their bitterness has led to exploration of the possibility of working with the Communists.

IRKED BY SPECIE EXIT

If any lingering support remained for the generalissimo, it has been jeopardized by the conviction that the generalissimo and his rightist clique deliberately removed from Shanghai the bank's gold and silver specie which otherwise might be used to preserve some measure of currency stability.

Another important development, meanwhile, which has strengthened the Communist position is the recent flare-up of Communist military activity in Yunan Province.

It now is reported that well-organized Communist columns have captured between one-third and one-half of that southwest Province, which has contiguous frontiers with Burma and Indochina.

HUGE SOUTHERN FORCE

The significance of these fresh military achievements is increased when it is remembered that at present it is estimated that the Communists have upward of 350,000 armed guerrillas south of the Yangtze River.

The potentially most important portion of this group is centered in Kwantung Province, of which Canton is the capital. Both American and Chinese official estimates state that the Communists have an army of 50,000 just north of Canton and a total of 150,000 Communist followers in the entire Province.

These Communist forces have furthered the feeling here that in the long run resistance is futile and that neither Canton nor Formosa offers the possibility for refugee government headquarters.

Second-Class Mail Rate Should Be Reasonable

EXTENSION OF REMARKS
OF
HON. JOHN KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. KEE. Mr. Speaker, I have noted vigorous protests from newspapers and magazines against what they regard as an excessive postal rate on second-class mail, as proposed by the Post Office Department. Among these protests is an editorial from the Daily Telegraph of Bluefield, W. Va., dated March 25, 1949, which states the case for the newspapers. Under leave to extend my remarks in the RECORD I submit this editorial to the attention of the committees in charge of the proposed legislation:

FREE PRESS TO BE HAMPERED BY OVERWHELMING MAIL COST

The Post Office Department, employing the matter of a deficit as its background and justification, has urged Congress to pass H. R. 2495 which measure provides for enormous rate increases. If this House proposal were passed by Congress and enacted into law, second-class mail rates would be increased by approximately 250 percent the first year it was effective. Another 50 percent increase would become effective the second year.

Some publishers of newspapers and magazines that would be affected by an increase of such size have protested on the ground that it would be impossible to pay the additional cost of delivery if subscription and advertising rates remained where they are. Metropolitan newspapers with circulation figures in hundreds of thousands would have to pay in excess of a million dollars to meet the new exorbitant postal rate. Newspapers in smaller cities would find themselves paying a postage bill $200,000 to $300,000 larger than they now pay. In many cases if subscription and advertising rates remained at present figures the increase in postage expense would wipe out every dollar of profit and leave the publications with a deficit of their own.

Senator JOHNSTON of South Carolina, chairman of the Senate Post Office Committee, said in Washington in commenting on the proposed increases in second-class mail rates that "I think that our Government should in part subsidize the widespread distribution of as many news organs as possible." Why did he say that? It seems to be perfectly obvious that the Senator had in mind the pressing need of the American people for the services performed by the publications of the country if they are to stay abreast of the times in keeping themselves informed, if they are to progress socially, economically, culturally, and politically, if they are to make a worth-while contribution to human advancement in the movement for a better world. He must have thought that if a low second-class mail rate originally was permitted for that purpose it was a good idea in the first place and ought to be continued.

The newspapers and magazines that would be sorely affected by so immense an increase in second-class mail rates are justified in protesting. It ought to be possible year by year to make it easier for the American people to obtain such service instead of harder and in some instances impossible.

Letter of F. Herbert Capps

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include therewith a letter from F. Herbert Capps, a student in the special course for American students at the University of Stockholm, Sweden:

STOCKHOLM, SWEDEN, *January 23, 1949.*
Representative A. S. J. CARNAHAN,
House Office Building,
Washington, D. C.

DEAR MR. CARNAHAN: I wish to thank you for your letter and the list of Members of the House of Representatives and the Senate. I am grateful to both you and my father for this information which is so difficult to get here. I would like to put in a good word for the Information Service and Library here which does its best with the limited facilities it has to help anyone who is interested.

I am very much interested in the events now taking place in the United States. I am a history student now participating in the special course for American students at the University of Stockholm. I belonged to the American Veterans Committee at the University of Chicago and was in sympathy with the Bolte-Roosevelt wing. I was able to vote in the primary at my home, Rolla, Mo., before leaving for Sweden, and therefore pride myself upon having taken a part in helping place such outstanding liberals as yourself in Congress. But, unfortunately, I could not vote in the general election, due to the lack of an out-of-State absentee ballot in Missouri.

I am watching with great interest the activities of the new Congress, and wish to congratulate you upon the great steps forward already taken, especially in breaking the power of the Rules Committee to bottle up bills. I may call upon you to send me information on legislation if I cannot obtain it here.

I am studying the ideological development of the Swedish Social-Democratic Party, and my first great surprise was in finding little of what we in the States think of as socialism in the party. The Swedes have had quite a bit of success in using cooperatives to break monopolies, and there seems to be no plan to nationalize industry, outside of the Communists. Another surprise was that there seems to be agreement on the social welfare program among all parties, except for very small groups on the extreme right and left. There is comparative parliamentary peace here, and it is the consensus that the Social-Democrats will remain the largest party for several years at least.

I like the people, their customs and their school system, and am enjoying my stay immensely. There are some fifty-odd students in the special course. The language barrier is not so great for me, since I had studied Swedish in the Army speed-up program at Minneapolis during the early part

of the war. But I must say it is difficult. I might put in here that we veterans were very inconvenienced over Christmas due to the failure of the VA in London to send our checks. Some of us did not receive our first checks until the middle of January. The Embassy was very nice in helping us tide over.

Should you desire any information about Sweden, I will be very happy to reciprocate your kind action. Thank you again.

Sincerely yours,

F. HERBERT CAPPS.

Federal Aid to Education

EXTENSION OF REMARKS
OF

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. BURNSIDE. Mr. Speaker, the following is a speech made by Hon. C. M. BAILEY, of West Virginia, over radio station WOL on February 17:

The question of Federal aid to education is by no means an academic one. The decision as to whether we shall ask the Federal Government to help equalize educational opportunity may well determine the future of the American way of life.

We are engaged in a cold war—a life-and-death struggle with competing ideologies that sweep across the European continent toward our own. Ideology is specifically the field of education. We must build an intelligent home defense in a vigorously American citizenship for which the basis is laid in the American schools. That defense must be built now. There is no time to quibble.

Not all States and communities can provide adequate schools for their children. It is idle to insist that the financial support of schools is solely a State and local responsibility, when for many years some States and localities have not been able to carry that responsibility. They lack the resources to do so.

There is a wide gap in the ability of the States to pay for education. This inability may not indicate that a State produces little wealth. Wealth moves across State boundaries. It tends to concentrate in industrial and commercial centers. It is taxed there. The State that produced the wealth cannot levy upon it for schools or for anything else. My own State of West Virginia, the richest in the Union in natural resources, has made more New York millionaires than any other State.

There is a great difference between the States in the average per capita income of their citizens. The average personal income in the State of Mississippi is $575. In Nevada it is $1,770. Does anyone think that as a result of any kind of taxation the State of Mississippi can support schools equal to the standard at which Nevada can support them?

Perhaps it will be proposed that the great discrepancy in the average personal income in these two States be ignored, and that a sales tax be imposed to raise money for schools. In Nevada the per capita retail sales each year amount to $1,195. In Mississippi the per capita retail sales each year are only $481. Is anyone prepared to support the statement that Mississippi can raise as much money as Nevada from a sales tax when the retail sales are two and one-half times as great in Nevada as they are in Mississippi?

Of course, the vast gap in the economic ability of the States is reflected in the quality of education which they are able to provide for their children. Some States spend five times as much for the education of a child per year as other States spend. The difference between communities in expenditures for education is still more astounding—some school districts spend 60 times as much as others.

In education as in other things, you get what you pay for. Millions of American children go to school in buildings that are unsafe, unsanitary, and unadapted to a modern educational program. They are assembled in overcrowded classrooms. Many schools must hold two half-day sessions in order to get all the children seated. There are some schools in which three sessions must be held each day to enable all the children of the community to attend.

Approximately 3,000,000 children are taught by teachers who hold substandard emergency certificates, because low salaries have been responsible for driving thousands of qualified teachers from the profession.

Some children have the benefit of 10 months of school a year. School is in session only 7 months for others. Some children can complete their education through college. Others find it impossible to finish the elementary school. There are millions of children of school age in no school at all.

This situation is undemocratic, un-American, unjust, and indefensible, even by so formidable an organization as the United States Chamber of Commerce. It denies freedom to learn and freedom of enterprise to millions who will resent rather than praise the form of government they are called upon to maintain. It offers a weak bastion for popular government based upon the ability of the people to govern. To permit this situation to continue is the first retreat in a battle for the survival of the American way of life.

This condition is not a result of sudden emergency. It has existed for years. It will continue to exist unless the Government takes steps to equalize educational opportunity through Federal aid. Indeed there is every reason to believe that the condition will get worse. The children of the increased wartime birthrate are now entering already overcrowded schools. Census Bureau figures released only this week estimate the enrollment in our elementary and secondary schools will reach a total of 34,091,000 by 1960 as against 24,546,000 in 1947.

The unequal distribution of children adds to the gravity of the condition. Here in the District of Columbia there are 134 children per 1,000 population. Down in New Mexico there are 283 children among every 1,000 people. New Mexico has therefore more than twice as many children to educate as the District of Columbia. The cost is proportionately greater.

Unfortunately, the States with the most children do not always have the most money. As former Senator Josh Lee of Oklahoma once said "Those who have the kids don't always have the cash."

The people of the United States have enough wealth to support their schools. The wealth is unequally distributed. It must be taxed wherever it is to aid the education of children wherever they live. There is nothing novel or revolutionary about this principle of taxation. It is practiced every day. The Federal Government builds post offices in Arizona and Wyoming with taxes raised partly in New York and Pennsylvania. It widens the channel of the Mississippi River with taxes paid in part by the people of Alabama and Maryland. Ever since the first day of this Republic the Federal Government has taxed wealth wherever it is found in order to expend it for national welfare wherever there is a need.

Even if all States were equally able to support their schools, the Federal Government would still have a stake in its young citizens. It hasn't been very long since this Government called upon youth in every community to serve in a great war. Was it of no concern that the selective service had to reject 659,000 for the sole reason that they were practically illiterate, and could not serve in a war in which science and technology played so large a part? There is no less at stake in the issues of peace.

Our people move about. More than half of the people in some States were born in other States. We are citizens of the Nation. We fight our enemies as a Nation. We will survive or perish as a Nation. It is a responsibility of the Nation to help keep the flag flying over every American school.

The Atlantic Pact

EXTENSION OF REMARKS
OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Senator MARGARET CHASE SMITH, of Maine:

[From the Philadelphia (Pa.) Evening Bulletin of April 4, 1949]

PACT NOT SPECIFIC—WOMAN SENATOR SAYS ATLANTIC TREATY IS VAGUE ON RED FIFTH COLUMNS

(By United States Senator MARGARET CHASE SMITH)

WASHINGTON, April 4.—I shall cast, very soon perhaps, the most important vote in all the time that it will be my privilege to serve in the Senate—my vote on the ratification or rejection of the North Atlantic Pact. I hope it will be the most important vote that I ever will make—important in the sense of the treaty being the vehicle for realistic peace and not the fuze for war.

I think the North Atlantic Pact by its very word, "North Atlantic," perhaps means more to all the people of my own State of Maine than to anyone else. Maine is nearer all the nations in the treaty than is any other State. The pact is to Maine what a Pacific pact would be to Hawaii.

AWESOME DECISION

I hope every adult American will read and study this treaty. I hope there will be intense and thorough discussion of it in and out of the Senate before it is ratified or rejected. The decision is awesome.

The articles that have particularly arrested my attention are article 4 and article 5. Perhaps the reason they do is because of my own personal interest as a United States Senator in the question of whether Senate ratification of the pact would commit the United States to war to the extent of short-cutting another and more important article of a more important document—article 1, section 8, of the Constitution, which vests in Congress the power to declare war.

ARTICLE 5 CLEAR

Article 5 of the treaty says, in part, "The parties agree that an armed attack against one or more of them in Europe or North America shall be considered an attack against them all; and * * * they agree that, if such an armed attack occurs, each of them * * * will assist the party or parties so attacked by taking * * * action as it deems necessary, including the use of armed force."

That means that an attack against France would be an attack against us. To be real-

istic, it is France and western Europe that we want to keep Russia from gobbling up—and to do this by this pact. And an attack on us means only one thing—war.

A SAVING CLAUSE

Of course, there is the saving clause of taking such action as it deems necessary, including the use of armed force. Technically, this would permit us to assist the party or parties so attacked by action other than the use of armed force—perhaps lend-lease or economic warfare.

But lend-lease and economic warfare after shooting starts would be hopeless folly in a swift, atomic war. While I agree that the saving clause prevents outright contradiction of article I of the Constitution and abrogation of the power of Congress to declare war, I think that the difference is technical. Under article 5 of the pact, Congress would have an unequivocal moral obligation to declare war immediately on the attacker of one of the signers of the pact. Otherwise, the pact doesn't mean a thing.

But this deals only with external attack. Soviet Russia does not make external attacks. She makes internal attacks. She attacks through subversive fifth columns. The Communists inside the countries take them over for the men of the Kremlin.

Is there anything in the treaty that deals with internal attack?

ARTICLE 4 QUESTIONED

Certainly, there is nothing specific on the point. The nearest approach is in the broad language of article 4, which says: "The parties will consult together whenever, in the opinion of any of them, the territorial integrity, political independence, or security of any of the parties is threatened."

The action authorized is only joint consultation, and you can't stop communism merely by consulting. At the request of the country whose political independence was threatened, we could send men, arms, and food to strengthen that country's government. We have shed the cloak of isolationism. We will fight on foreign land, if attacked. But I am not convinced yet that we will readily send men and arms to another country to help it combat an internal conflict.

That is why I want article 4 spelled out in detail. I want the State Department to tell the Senate exactly what it means, to say how far we are committed in the event of internal attack. I may agree to the extent to which the State Department wants to commit us. But I want to know. I don't want to buy a "pig in a poke" without the American people knowing what they are letting themselves in for.

Veterans of Foreign Wars

EXTENSION OF REMARKS

OF

HON. FOSTER FURCOLO

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. FURCOLO. Mr. Speaker, in saluting the Veterans of Foreign Wars, let us remember that this patriotic organization has always sought to make America a better country in which to live.

The Veterans of Foreign Wars goes back to 1899, when various groups of overseas veterans were formed spontaneously. These organizations were dominated by democratic principles from the very beginning.

Its purpose, as stated in the charter granted by Congress is as follows:

The purpose of this corporation shall be to preserve and strengthen comradeship among its members; to assist worthy comrades; to perpetuate the memory of our dead and to assist their widows and orphans; to maintain true allegiance to the Government of the United States of America, and fidelity to its Constitution and laws; to foster true patriotism; to maintain and extend the institutions of American freedom; to preserve and defend the United States from all her enemies whomsoever.

In the past 30 years the Veterans of Foreign Wars has been a constant guardian and champion of the rights and welfare of the veterans and all the people of America. Posts throughout the Nation have been among the hardest workers in community enterprise.

We do well to pause this week to pay tribute to a great organization, the Veterans of Foreign Wars.

In doing so I wish to especially call attention to the very excellent Veterans of Foreign Wars posts we have in my own home city of Springfield and in the second district. The members of those posts are among the finest in the country.

Armament Economy Seen Costing Nation Ten Billion a Year—Thoughts of Substitute Less and Less in Minds of Government Officials

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by David Lawrence that appeared in the Washington Evening Star, as follows:

ARMAMENT ECONOMY SEEN COSTING NATION TEN BILLION A YEAR—THOUGHTS OF SUBSTITUTE LESS AND LESS IN MINDS OF GOVERNMENT OFFICIALS

(By David Lawrence)

Perhaps the most significant and thought-provoking piece of statistics that has come out in a long while is the statement by Senator MILLARD TYDINGS, Democrat, chairman of the Armed Services Committee, that the "cold war" with Russia is costing the United States at least $10,000,000,000 a year.

Mr. TYDINGS frankly comments that if it were not for the threat of communism, this expenditure would, in large part, not be necessary.

This tells in unmistakable language what the failure of postwar diplomacy has cost America and will continue to mean unless some way of producing an atmosphere of mutual trust is found and some means of bringing Russia into a peaceful relationship with the rest of the world can be devised.

There is no sign that the American Government is thinking just now along those lines. On the contrary, all the talk is of defensive alliances and more military aid of a lease-lend nature to implement the Atlantic Pact.

COULD HAVE BEEN AVOIDED

There was a time, shortly after the war, when an economic plan for world rehabilitation involving much less money might have been used to secure concessions from the Russians, but skillful statesmanship was lacking, and the cold war ensued. The foundations for such a postwar relationship might well have been laid during the war. Possibly if President Roosevelt had lived some formula might have been developed, for he had the confidence of the Russians. It certainly does seem that a line-up of east versus west might have been avoided by the opportune use of reconstruction funds.

Basically, the Soviet demands, which the allies say have been impossible for them to grant, involve at root the matter of money. A treaty with Austria would have been signed long ago if Russian demands for reparations could have been satisfied. The same holds true with respect to Germany. The Russian rulers need and want financial help for their own country.

But today the situation has reached the point where America is helping to build up the democracies, and even former enemy countries, and Russia is on the outside, too proud to beg aid even if she could get it here. To the above line of reasoning, the answer is customarily given that the present Russian rulers are unscrupulous and that any help for Russia would be appeasement. It is, however, a problem of timing and a matter of reaching peoples over the heads of governments. This is where financial and economic assistance can be tempting and the Russian Government would respond or lose its power.

FOURTH OF UNITED STATES BUDGET

Sooner or later a way will have to be found to live in the world with the Russian system alongside the democratic system. Expenditures of $10,000,000,000 a year on a "cold war" cannot be continued indefinitely. It is one-fourth of the Federal budget.

Incidentally, Senator TYDINGS, unwittingly perhaps, revealed the "pump priming" aspects of the $10,000,000,000 stimulus to the American economy. While the Marshall program, for example, he said, is designed "primarily to help our Western European allies to regain strength from the effects of the war, indirectly it does create work for our workmen and markets for the products of our people." He added that "practically all of it is spent in our own country to purchase food, machinery and other supplies which Western Europe needs to regain economic stability and security."

It makes one shudder to think what the outbreak of sudden peace might mean to the American economy. It could make the difference between recession or mild readjustment, such as is being experienced today, and deep depression. Small wonder perhaps that an armament economy is so easy to perpetuate and that all thoughts of a peacetime substitute—a world economy based on normal relationships—seems at the moment to be less and less in the mind of governmental officials.

End of a Hoax

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of April 5, 1949:

END OF A HOAX

Joining the goose-step of the Kremlin satellites, the Chinese Communists and their supposedly non-Communist liberal associates

have now come out with the routine denunciation of the Atlantic Pact and the routine declaration that they will fight with China's ally, the Soviet Union against imperialist aggressors. If anything more were needed to end, once and for all, the great hoax about the Chinese agrarian reformers, this is it.

One of the major causes for our military disasters in the Pacific in 1941 and 1942 was a fantastically ingenious underestimate of the strength of our antagonist. Similarly, one of the causes of our political disasters in the Pacific in the last 3 years has been a correspondingly ingenious misappraisal of what we faced. By this time the Chinese Communists themselves should have corrected our blunder.

Reorganization of the Executive Establishment

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of today:

PUBLIC SUPPORT ESSENTIAL

Former President Hoover has witnessed the rise and fall of a number of efforts to reorganize the executive establishment. His observations have convinced him that much more would have been accomplished in the past had there been widespread and determined public support of the various efforts. One of the reasons for the apparent apathy of the citizens has been the failure of reorganization advocates adequately to educate the people as to the need for more efficiency in Government.

It is gratifying, therefore, to learn that a Nation-wide committee is being formed to make certain that the Hoover Commission's exhaustive findings and recommendations do not suffer from lack of public understanding. This nonpartisan citizens' group is headed by Dr. Robert L. Johnson, president of Temple University, who was a member of one of the Hoover Commission's task forces. More than 700 persons have accepted membership on the committe.

Although the avowed objective of this group, in the words of Dr. Johnson, is to prevent the voluminous Hoover reports from gathering dust at the Capitol, it will not be a lobbying outfit in the usual sense. Most of the education work will be done not in the Halls of Congress but among business, farm, labor, educational, veterans', women's and other representative civic organizations and groups throughout the country. This, then, will be primarily a campaign to inform the taxpayers of the added burdens imposed upon them by costly waste, duplication, and general inefficiency within the Government departments and agencies. Dr. Johnson estimates that the taxpayers could save about $3,500,000,000 a year by eliminating overlapping functions, unnecessary activities and other uneconomic practices.

The idea behind the new committee is a good one. Mr. Hoover has warned that this may be the last chance to do an effective reorganization job. This is a matter which touches the pocketbook of every citizen. If Congress knows that the overwhelming majority of the people want the reorganization effort to succeed, it is not likely that the splendid work of the Hoover Commission will end up in a dormant file.

Pie for Army Officers and Crusts for Retired and Helpless Enlisted Men

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. BURDICK. Mr. Speaker, I desire to present herewith a speech of Hon. John H. Hoeppel, former Congressman, relative to the treatment of helpless retired enlisted men in pay raises authorized by Congress. This injustice should be corrected at the earliest possible moment, and the agreement entered into with them in good faith ought to be kept. To do otherwise would be to make enlistments more difficult, and, above all, this action created a distrust in the Government.

ARMED SERVICES MAKE SCRAP OF PAPER OUT OF SOLEMN PROMISE TO RETIRED ENLISTED MEN—PIE AND CAKE FOR OFFICERS, MOULDY CRUSTS AND CRUMBS FOR AGED AND HELPLESS RETIRED ENLISTED MEN

With a background of over 50 years' experience with the military service, of which 21 years have been devoted to the printing of a publication in the interest and welfare of the armed services, and especially those retired, I feel fully qualified to present a clear and irrefutable statement which proves conclusively how the higher ranking officers grab every advantage for themselves, while at the same time at each and every grab they have taken something from enlisted men in the active service and the retired.

In the Pay Act of June 16, 1942, the armed services leadership prevailed upon the Congress to break a solemn unilateral contract which the Government had consummated with retired enlisted men and which had been in operation for a period of over 55 years.

In this same Pay Act the officers grabbed an increase in pay for themselves and an increase in subsistence allowances for themselves and their dependents, and at the same time they urged to the Congress the repeal of the then existing law which provided allowances of $15.75 per month to those who were on the retired list after 30 years' service in the Army, Navy, Marine Corps, and Coast Guard.

As a result of this grab by the officers for their own individual interest, approximately 7,000 retired enlisted men—some of them veterans of two wars—received absolutely no increase whatsoever in pay in the so-called Readjustment Act of 1942. Ten thousand or more additional retired enlisted men received only a pay increase of $1.21 per month. Men who had been receiving allowances for a period of 30 or more years, in this pay act arbitrarily had their allowances taken from them and, as a consequence, those who did receive a small increase in pay did not receive an approximate increase compared with those of similar rank and service in the active service.

To prove how unfair and unjust was the attitude of the officers in urging the breaking of the solemn contract which Congress made with retired enlisted men of the armed services in the act of March 1885 I reiterate that approximately 20,000 or more retired enlisted men received no increase in retired pay, or only an increase of $1.21 per month, while at the same time the officers, all of them, were given substantial increases in pay, plus an increase in subsistence allowance for themselves and their families.

This unjust and selfish act on the part of the armed-service leadership in the Pay Readjustment Act of June 16, 1942, should be corrected by restoring to all retired enlisted men allowances of $30 per month—allowances which would be in keeping with the Government's solemn promise to these men when they enlisted that if they served to retirement they would receive three-quarters of the pay of their rank, plus allowances for the balance of their lives.

Every official document issued by the armed services since 1885, in appealing to men to enlist, assured them without equivocation that if they served to retirement they would receive the above-designated retired pay, plus allowances for the balance of their lives. What right have we to criticize foreign nations which violate their agreements or commitments with other nations, when we here in America, in our own armed services, arbitrarily break a solemn contract which the Government consummated with those who served 30 years to retirement in taking from their allowances which they had earned because of stipulated service—allowances which they had been receiving for years prior to the act of June 1942?

H. R. 2553 ALSO DISCRIMINATORY

As a whole, H. R. 2553 is an outstanding document and one which should be enacted into law with certain amendments and perhaps certain omissions. It is noted in this proposed pay increase that the very same retired enlisted men of the Navy and Marine Corps who received no increase, or only $1.21 per month increase, are scheduled to receive an insignificant increase in pay under the provisions of this proposed act. For instance, men transferred to the Reserve and who retired after 30 years' active and Reserve credit, under the proposed pay increase bill will receive an increase of $5.75 per month only, whereas the men who received only $1.21 per month increase in 1942, under the proposed bill will receive no increase in pay whatsoever.

When we consider, in comparison, that officers in the active service and those retired will receive increases in retired pay up to as much as 40 percent on their already existing lucrative pay, this is proof conclusive that the officers are in line again for another serving of pie and cake, while the retired enlisted men are again to receive moldy crusts and crumbs.

We ask in all sincerity of the Members of Congress if it is fair that the officers should always be given such liberal consideration and, with each dishing out of liberality, should at the same time take from the enlisted men the meager benefits which they receive in proportion to benefits meted out under existing law to the officers, both active and retired.

A BRIEF PRESENTATION OF SOME OF THE MANY DISCRIMINATIONS PRACTICED ON ENLISTED MEN, BOTH ACTIVE AND RETIRED

In the Pay Act of 1922, for the first time in American history, the officers urged Congress to give to them subsistence allowances for themselves and their families. At the same time, generously and munificently, the armed-service leadership recommended, and the Congress then reduced, the $30-per-month pay to enlisted men to a meager $21 per month.

In Public Law 810, Eightieth Congress, the officers again grabbed a rich plum for themselves. This act provided that young,

able-bodied officers, 40 years or less in age, after 20 years' service, could be retired with their highest attained World War II rank. In this same act the officers provided, however, that warrant officers and former enlisted men be retired and receive a pay of their highest World War II rank only after these latter two groups had served 30 years. In other words, the Regular officers grabbed easy high retired pay for themselves after 20 years' service, but had written in the law a provision that former enlisted men would not come into these benefits until after 30 years' service, active and inactive.

In this same Public Law 810, Eightieth Congress, the armed service leadership discriminated distinctly against enlisted men who served at higher rank in World War I. They refused to permit these aged men (not over 2,000 are today alive) to receive the pay of their highest World War I service. This rich plum of high retired pay to young, able-bodied officers, who easily acquired high rank, was reserved only for those who served in World War II in the Regular service.

It should be recalled, as a matter of principle, that the late General Liggett attributed much of our World War I successes to the high caliber of commissioned service, which was rendered by former enlisted men in World War I. Few of them attained higher grade than captain or major. However, in World War II the sky was the limit, and some young Regular officers, with only the rank of first lieutenant, have been retired at their highest temporary rank of general and thus will be on the backs of the taxpayers for generations to come; whereas the few who served at highest rank in World War I and who were denied pay of their highest World War I rank, few of them attained high rank and because of the attrition due to death their numbers are rapidly diminishing. Yet, notwithstanding this, they, and they alone, do not receive the pay of their highest World War I rank.

I repeat, with an experience of 50 years, or since 1898, when I first enlisted during the Spanish-American War, that I have observed continual unfair dealing on the part of officers directed against the enlisted men, and especially has this discrimination been more and more pronounced since World War I. I could continue to present innumerable instances of unfair treatment on the part of the commissioned personnel toward the enlisted men, and it is because of this that the problems of recruiting are most difficult. From correspondence with men in the active service, I am satisfied that there is much improvement that could be made in the active service in the interest of popularizing and especially in increasing the efficiency of the armed services.

Fair dealing on the part of the armed services heads toward the 50,000 or 60,000 men on the retired list would make of each and all of them walking recruiting officers for the armed services, thus making it easier to obtain outstanding youth through the volunteer method for our armed services.

This periodical is primarily interested in the highest degree of efficiency in the armed services, with the fullest regard to the interests of the taxpayers who must carry the burden in the maintenance of our armed forces. Fair dealing on the part of those in authority to the enlisted men now serving and fair dealing to those retired by restoring allowances rightfully due them would contribute much to improving the mental attitude of those serving, as it would alleviate the financial plight of the thousands of retired enlisted men who have been robbed of the allowance which were promised them for life in all official recruiting documents, provided they served to retirement.

JOHN H. HOEPPEL,
Manager, National Defense.

Mrs. Luce Sees Death Struggle of Christians and Communists

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address of Hon. Clare Boothe Luce at the third annual Philadelphia Bulletin Forum on World Affairs, on Wednesday, March 23, 1949:

The rosy optimism of the past century is no longer possible today except to frivolous minds.

Now wise men ask grim questions. Is the curtain going up on a terrible tragedy? Is the end of our time near at hand? Are two world wars—or will it be three—the prelude to the collapse of our civilization?

Man's life on this planet has never been a matter of high joy or long ease. Since outraged Eden's flaming sword seared his vision, he has sweated in his exile and bled in his banishment. He has stumbled and fallen. And he has risen again and groped blindly on. But never in all his pitiful, tumultuous history has his suffering been so widespread, his misery so abysmal, his confusion so confounded, and his consequent sense of hopelessness so contagious.

Science, his long-heralded liberator, has failed—no, betrayed him into the hands of his ancient enemies; fear and want. The very machines conceived by his own proliferating imagination, to release him from his centuries-old bondage to nature, have turned against him. They have increased what he invented them to abate: his elementary needs for food and shelter.

FALSE STEWARDS

His servants, the technologists, do not seem to have worked their magic on matter to his best interests.

Those adored conquistadors of the telescope and the microscope and of all the world that lies between the fleeting stars and the congregrating microbes, have proved false stewards. In their experiments they have shown a strangely perverse tendency to include man himself as part of nature's raw material; a sort of flesh and blood plastic.

He has seen again and again in the past two decades a handful of men, or one man, buttressed with microphones and armed with the sharp or hard or shining or explosive fruits of their laboratories, exploiting, abasing, murdering millions.

"So he sent the word to slay,
And slew the little childer."

A new breed of Herods offer him the new look in freedom—freedom from freedom itself. And they bid him, on pain of death, to accept the offer voluntarily.

Surely man faces such tribulation as has not been known since the world began. And finally, he must face the possibility of his own obliteration—his atomic suicide.

What is the cause of this bitter condition? And what the cure?

A CONFLICT OF IDEAS

For the first time since the days of the scholastics, historians, philosophers, theologians, and poets are in correspondence on a grave human question: they agree that both cause and cure are to be found in a study of the present conflict between the Soviet Union and the western democracies.

There is further accord: this conflict has three aspects. First, there is the conflict between capitalistic, or so-called free enterprise economics, and Marxian, or socialistic economics. The rapid industrialization of the past century created new relations between men and their employers, and men and their jobs, and overturned all the old relations. The prime casualty of this violent upset was the sense of personal responsibility in both workmen and employer. But the brunt of the resulting hardships fell on the working class. Problems were created, which, it was said, could only be relieved by the state, if men were not to starve at unexpected times, in great numbers.

Despite the quasi-scientific and technical jargon of economists, the plain fact is that economics is simply political arithmetic. The contest between capitalistic political arithmetic and Marxian political arithmetic is being won—and handsomely—by socialism. For those who see our cause as the cause of capitalism, there is small comfort in current events. In the plain language of General Stilwell: "We have taken a hell of a licking."

PLANS ARE READY

The welfare-state is a fait accompli in Great Britain and much of Europe. The blueprints for the completion of the American model, begun under the New Deal, are now on the drawing boards in Washington.

Politicians who deny its general popularity, or threaten to dismantle it, will continue for quite some time to make more newspaper headlines than votes.

It is idle to blink this fact: Whatever socialistic economic solutions have been vigorously put forward to correct abuses caused by the rapid growth of industry, they have been eagerly accepted by the people. Wherever they are not offered, they have been and will continue to be demanded. If they are not forthcoming peaceably, they will be forcibly seized, and the rulers who denied them will be discredited.

Since the conflict between capitalism and Marxian economics has been largely decided in favor of the latter, this conflict cannot in any precise historical sense, provide the issue of war with the Soviet Union Both sides, however, may use it as an additional excuse in case of war.

CONFLICT OF NATIONALISMS

The second aspect of the conflict is the clash of world nationalisms. The gargantuan growth of nationalism is perhaps the greatest and most terrifying political phenomenon of the past three centuries. It is marked by the nations' relentless search—in the name of peace—for a preponderance of physical power over one another.

Among the nations of the west today, this search nears its temporary goal in the Atlantic Pact. The Soviet east replies by enlarging its ring of satellite states. Mounting armament programs are the logical corollary of nationalism's tireless thrust for security through physical power.

Another mark is the Nation's avid thirst for the development of favorable foreign markets, and trade areas, which each seeks to close along with its domestic markets to all competitor nations.

Today, all this is called the cold war.

No one need say that one's own nationalism is worse than anyone's else. But without reference to other and higher ideals espoused by the citizens, no one can claim it is any better.

WE COULD WIN THE CONFLICT

Pure nationalism has its roots in collective pride and arrogance. There are few countries today which are guiltless of this advanced and dangerous form of tribal worship. So there are few who do not stand in

danger of slipping into war in a fit of national hysteria.

Fortunately for us, if the raw clashes of national arrogance and ego detonate in a war within the next ten years, we shall probably win it. We hold vast technological superiority over the Soviets. The great manpower of the U. S. S. R. will not be a match for our engines of mass destruction.

Yes, we would win the conflict. But would we win the struggle?

The third aspect of the conflict is the truly significant one. It is the struggle between Christianity and Marxian atheism. If we study this struggle as it has spread itself out on the pages of modern history, we may come to understand both the cause of our troubles and the cure that we may reasonably hope for.

"It is upon the trunk that a gentleman works," said Confucius.

If we fail to go to the root of the matter, to grasp the real nature of the struggle, we risk losing that aspect of the conflict which alone gives its significance either in the long perspectives of history—or the eternal perspectives of God.

Let it be quickly said that in this conflict there can be no compromise of basic concepts. It is a struggle to the death—the death in our time of either the Christian view of life, or the Communist view.

A LIFE OF MATERIALISM

Communism is the first attempt in man's entire history to found a way of life solely on a single plane: That of the material world. It is the absolute denial of man's dual nature. It rejects the view man has held from the most primitive times concerning himself, that he, too, is fissionable material—part mortal flesh and part immortal spirit.

The prime value that communism gives to economics (if the word "value" can properly be used cogently by a Communist) is consistent with its end: To materialize—to bring down to a horizontal level—the whole of man's life, and on this earth-bound foundation to build an egalitarian or classless society whose only object will be the temporary welfare of the average citizen—or, as he has come to be called, the common man.

CHRISTIANITY VERSUS COMMUNISM

Communism then affirms as its primary article of faith, an unlimited belief in this common man, in his inevitable physical and mental progress, and his final, total, mastery of his environment and nature. Man, in the Communist view, is the measure of all things.

Christianity insists that man is the highest of animals, and the lowest of the angels. It therefore asserts with equal logic the primacy of God. Consistent with this faith is Christianity's goal: To spiritualize all of human life, to raise it to a supernatural level on which alone the eternal happiness of man can be guaranteed—and be it noted, without necessary prejudice to his earthly well-being.

"Seek ye first the Kingdom of God, and all the rest will be added unto you," is a capital article of Christian faith.

There is to be found no tangible evidence or scientific proof in this world, in conclusive support of either position.

Only faith itself will give the answers.

DEFINITION OF FAITH

And faith, as both the common man of the East and the plain man of the West know, is not belief which is held in spite of factual evidence. It is belief that is held in the absence of all evidence. It is intellectual assent to a proposition that can neither be proved nor disproved. Above all, it is a clinging to this proposition regardless of the personal consequences; death, even.

Whether you give the Marxian or the Christian answer to the riddle of man, the answer is valid only because you believe it to be valid. "Not flesh and blood, but my Father who is in heaven has revealed it to you." What the Christian takes on divine revelation as truth, the Communist takes as truth on the revelation of Marx as interpreted by Stalin.

Precisely what is compelling in communism is this very element of blind faith in man. It is the passionate mystique of materialism, the substance of things unseen and hoped for and not communism's accomplishments, that draws men.

THE TRUE COMMUNIST

False or not, a burning faith will ever and always conquer tepidly held opinions. At the turn of the century, the soaring faith Communists had in the ever onward and upward progress of man, and his transfiguration under communism, seemed to sweep before it all loosely held convictions, however decent and liberal and democratic. Its dark grandeur lay in its passionate, single-eyed, unequivocal aim to tear down the city of God, as advertised by nineteenth century bourgeoise Christianity, and to erect a whole new world—the city of Man—upon the ruins.

ILLOGICAL RED VIEW

The true Communist—what you might call the sincere Red—was, and is, the man who is utterly (and properly) disgusted with hypocritical Christianity. He hated the nineteenth predatory century bourgeoise capitalist who had lost all sense of personal responsibility to the workers, but concealed the fact by preaching Christian resignation to the masses, while wealth accumulated and men decayed.

The Communist fails to see that his own solutions have created a situation in which men accumulate and wealth decays and he, the Communist, made one grave error: He wrongly attributed the injustices suffered by the so-called Christian few, not to the hypocrisy of these few, but to the sincerity and gullibility of the many. Illogically enough he blamed Christians and Christianity, rather than those who have failed to be Christian.

Then he allowed his angry eyes to move fiercely over history's pages. In every civilization he found—naturally enough—a coincidence of injustice and a belief in Divinity. He made—most unscientifically—a direct correlation of a coincidence; he announced, as a matter of scientific fact, that all injustice was based in a belief in God.

The Christian believes that all injustices sprang from a lack of belief in God.

During the last century, many in the West have secretly sympathized with the atheistic view of the universe. They have yearned to see the experiment made of forming a society purged of religious myth and fantasy, and brought down to scientific reality. In our time their desire has been gratified.

A DISASTROUS EXPERIMENT

We have seen two great nations undertake the experiment of official godlessness. Nazi Germany and Soviet Russia have provided fine laboratory tests for those who feel that a belief in God has too long hampered man in his forward march.

The Nazi and Soviet experiment of life without our Father, has not, on the record, worked out too happily in Germany or Russia. Ethics and morals seemed also to disappear, and with astounding rapidity, in the wake of religion.

The natural laws, the laws of general human beneficence, of good will toward men, which are to be found in all religions, in all times and climes, no longer appeared in Germany and Russia in any form.

"Thou shalt not kill," cried the ancient Jews. "Who meditates oppression, his dwelling is overturned," warned the Babylonians. "Utter not a word by which anyone could be wounded," cautioned the Hindus. "He whose heart is in the smallest degree set upon goodness will dislike no one," commented the Chinese. But the Golden Rule found no echo in the official codes of ethics of Hitler's or Stalin's lands.

LAW OF LOVE OUTLAWED

Gone, too, were the ancient laws concerning sexual justice, honesty in business dealing, duties to parents and forebears, justice in bearing witness, mercy to the weak and helples, generosity to the vanquished enemy.

Above all, Soviet Russia and Nazi Germany contravened, despised, and wholly outlawed the Christian law of love. This was the law based on the example of Crucified Divinity: "Greater love hath no man than this * * * Love one another, as I have loved you * * * I come to minister, not to be ministered unto * * * Father, forgive them, they know not what they do. * * *"

It is against the background of knowledge provided by the Russian and German experiments in living without God that we must ask ourselves this decisive question tonight:

Is Christianity, the faith of our fathers, an adequate religion for us in this time of awful crisis? Is any faith necessary, any religion useful in the predicament of modern man?

DIFFERENCE IN CHRISTIANS

First, let us remind ourselves once more that it is the Person of the Saviour Himself which constitutes the difference between Christianity and all other religions. Christians believed that He had been one of us; that He lived in a house as we did, on a street; that He ate and drank, and had a mother whose holiness was hidden, as the God of Grace Himself is hidden. We believed that He slept and spoke as we do, and was born and died, as we die; and suffered and bled, and cried out, too, that He was forsaken of God.

We believed in the Man-God Who insisted He was the Way and the Life, Who forgave a thief on his deathbed, but threatened with hellfire and damnation all those who failed to see Him, to see God Himself, in the least of his children who were weak or weary or persecuted or underprivileged.

It is the supreme contention of Christians that in His Person not only were all of God's natural laws, but all His revealed truths exquisitely codified and fulfilled; but that in Him, and by Him, and through Him, man was raised to a new level higher than that of any human justice—he was raised to that level of divine mercy and love which extends even to his enemies.

THE FAITH OF THE WEST

The faith of the West was a faith in God's thirst for the love of man, a man's hunger for the love of God fulfilled in the incarnation. Christ was the ultimate testimony to man's awareness of his intrinsic freedom, his uniqueness, his unrepeatableness, to his sense of worship, and to his need for fruitful, ennobling participation in the life of nature and society. All that was both noble and elemental in man responded to the Christian dispensation.

And a burning faith in it made what we call civilization in the West during the past 2,000 years. All the greatest art, music, architecture were rooted in Him and built in Him.

With God as his Father and Christ as his brother, and the Holy Spirit as his friend, western man dared everything, tried everything, sought everything, endured everything, and triumphed over most things.

When we examine the bases of our American civilization—when we follow to the headwaters the sources of all the values that we treasure in our way of life; the devotion

to humaneness, tolerance, freedom of speech and conscience, the passion for equality, the preference for peace, the insistence on fraternal attitudes, in short, the whole nexus and cluster of democratic ideas and ideals, we find Christianity. If we are honest, we will admit that the catalysing agencies in our democracy were always the Christian ethics and morals, which we evolved in political or economic terms from the tenets of Christian faith.

But man must also love his brother as himself, because his brother is no less unique than himself, nor any less the child of his Father. The Christian preached the indefeasible value of the individual soul, the uniqueness of yourself, the immortality and the inviolability of the unrepeatable you, and of your repeatable neighbor.

DEMOCRACY FROM CHRISTIANITY

Were not what we call liberty, fraternity, equality—all the great ethical values of democracy—born and evolved from His words, "One is your master, and all ye are brethren"? Did not St. Paul emphasize the fraternity and equality of all men (regardless of color or condition of birth or previous state of servitude), "We, being many, are one body in Christ and everyone member of one another"?

We, in our age, will forget to our peril—both temporal and eternal—that Christianity is the foundation upon which the house of democracy was built.

Our forefathers were sharply aware of this fact. The writings of our signers of the Declaration of Independence are full of direct references to Christianity and the Gospel messages as the prime source and justification of the great new experiment in democracy that we began in 1776 on this continent.

WASHINGTON'S VIEW

One passage from Washington's Farewell Address should be enough to convince any American generation of the paramount importance our founding fathers attached to the Christian religion in securing the good of the citizen. Said our first President: "Of all the dispositions and habits which lead to political prosperity, religion and morality are indispensable supports. In vain would that man pay the tribute of patriotism who would labor to subvert these great pillars of human happiness, these firmest props of the duties of men and citizens. * * * And let us with caution indulge the supposition that morality can be maintained without religion. Whatever may be conceded to the influence of refined education on minds of peculiar structure, reason, and experience both forbid us to expect that national morality can prevail in the exclusion of religious principles.

" 'Tis substantially true that virtue or morality is the necessary spring of popular government * * * who that is a sincere friend to it can look with indifference upon attempts to shake the foundations of the fabrics?

"Promote, then, as an object of primary importance, institutions for the general diffusion of knowledge."

MONUMENT TO CHRISTIANITY

It was once considered a cliche to say that Christianity has been tried and failed. It is equally banal—and equally untrue to retort today that it has not failed, because it has never been tried. The plain historical fact is that Christianity has been tried. And wherever it has been tried, with honest intent and passionate purpose, it has succeeded as nothing else ever tried by man has done. Our very form of government is a living monument to the acceptance in political forms of Christian principles.

Today, we are living, says Arnold Toynbee, on our spiritual capital. Our Christianity is a wasting asset.

What is the fate of spiritual parasites? How long can we demand, as individuals, to share in the group benefits of Christianity, and yet insist on our right to disassociate ourselves and our children from the practical task of conserving, no less increasing, those benefits.

CHRISTIANITY NEEDED

How long can we clamor to be treated as Christians, while insisting that we are not ourselves obliged like Christians, or to believe in Christianity?

No day goes by, no forum is held in America, without its quota of stirring appeals for high ideals and noble efforts in the solution of our many melancholy problems. We demand the functions of an organ which we have indifferently allowed to be ripped out of our social body. We want to produce Christian deeds without Christian hearing, Christian thought without Christian minds. We desire to pluck the fruits of faith where we have torn out the branch of faith itself. And the totalitarian night still sweeps westward.

Germany in 1949 may well be the parable of the house that was swept clean of an evil spirit, and garnished, and left empty.

SUCCESSION OF EVILS

We swept Germany free of its Nazi devil with our B-29's and we garnished it, and guarded its emptiness with our military government. Yet will seven new devils, worse than the first, take possession of it, called communism? And then shall we clean Europe once again of the Communist devils, with our atomic broomsweep, and once again garnish the house afresh? If it is not filled by a good spirit will not the 14 devils come to take up their residence? And if we liquidate them, still, even so, what shall be put in their place?

Ah, yes, but of course, we could put an adequate faith—providing always we felt that in Christianity we have one. But shall faith be borne by men who feel that it is bad taste to show any evidence of it? Let us speak plainly.

NO TIME FOR THE LUKEWARM

Our fate, no less than Eurasia's, is sealed in communism if we dare hope we shall defeat communism with embarrassed protestations about feeling good will toward all men, or mealy mouthed murmurs that doing the decent democratic thing is all that counts.

The yawning agnostics, the sneering finger-drumming atheists, the drooling, sentimental, misty-eyed humanitarians who spend their days conceiving plans for saving all mankind while a beggar dies of hunger on their doorsteps. These, and all the Christian Pharisees and hypocrites will not save us from the fiery sons of Marx. These are the tepid ones that Nietzsche and Dostoievsky, those European prophets of doom, retched over 100 years ago. These are the lukewarm that even God spews from His mouth.

We shall walk with the Lions of Love, like the early Christians, or we shall be devoured by those tigers of hate, the Communists.

Only men of deep religious faith can lay down the challenge of totalitarianism. Only the apostolic Christian can win. For he is forever armed against defeat, and most certain of victory. For come what may: let the totalitarian night fold its iron wings above him, let the fires of persecution and torture rain upon him, what does he care if he can still say with St. Paul:

"I have fought a good fight. I have finished my course. I have kept the faith. Henceforth, there is laid up for me a crown of righteousness, which the Lord, the righteous judge, shall give me on that day: and not to me only, but to all them also that love Him."

The Pact and Mr. Churchill

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks, I wish to include in the RECORD an article by Walter Lippmann, which appeared in the Washington Post, April 7, 1949.

In this article, Mr. Lippmann discusses the Atlantic Pact and its effect on diplomatic relations and negotiations. What Mr. Lippmann has to say is of the greatest importance. I do not know that anyone has stated more clearly the effect of the pact on policy decisions of the future.

Mr. Speaker, I call this article to the attention of the Members for their careful study. I repeat, it is of utmost importance.

THE PACT AND MR. CHURCHILL

(By Walter Lippmann)

The pact that was signed on Monday will be remembered long after the conditions that have provoked it are no longer the main business of mankind. For the treaty recognizes and proclaims a community of interest which is much older than the conflict with the Soviet Union and, come what may, will survive it. The peoples who live around the shores of the Atlantic are many nations, but they are also one of the great and enduring communities of the modern age. They are competitors, they have been serious rivals, and are still rivals. They have been at war. But the wisest of their leaders have always known, and events have proved them right, that when the issue was life or death, they would stand or fall together.

The pact, as Mr. Acheson so truly said, does not create this community. But it does record and publish and give legal form to its existence. It would not be worth the paper it is written on if it were not an unwritten law of geography, history, and vital interest that an attack which threatens the existence of any member of this pact is an attack on all the members. The two world wars of this century have proved that this is the unwritten law of the Atlantic world—that Great Britain and France, Canada and the United States, the military powers of the pact, are, whatever their differences in time of peace, natural allies in time of war.

The proof that the Atlantic community is not a temporary diplomatic and strategic contraption dealing with Russia lies in the fact that the natural alliance of the Atlantic nations has already been tested in two gigantic wars, and that neither of them was against Russia. Indeed in both of these wars the Atlantic nations were the allies of Russia, and therefore whatever the Russians may think of us now and we of them, it is the truth which no one can deny that the Atlantic community is not necessarily and cannot be solely a coalition against Russia.

To be sure the pact would not have been signed now but for the fear and frustration, as Mr. Pearson, the Canadian Foreign Minister, put it, that arise from our bad relations with the Soviet Government and with the international Communist movement. But even if we cannot easily and quickly make the Russians understand, we at least must understand, that the community of interest which the pact records, is older and

deeper than the conflict with the Soviet Government, and that it would be a reality if we were at peace with that government, and that it will still be the reality when at long last we are again at peace with the Russian people and their government.

Seen this way, the pact itself does not make better or worse our relations with Russia, make war less or more probable. I do not myself think there is much to the claim that war will be prevented because we have announced formally that we shall go to war if there is an armed attack. The Soviet Government knew that without a pact. It has never entertained the illusion that it could go to war against France or Britain, Norway or Italy, while the United States debated whether it would intervene. Quite the contrary. The Soviets have been insisting for at least 3 years that we were the head and front of a coalition against them. Far from imagining, as Hitler did, that we might be neutral, they accuse us day in and day out of preparing and fomenting a war.

Nor is there much, I think, in the idea that the pact as such, and the military program which is to support it, will make war more probable. It will certainly not make us more warlike to realize, as we shall when the bill to prepare against war comes before Congress, that a war with Russia would be no 30-day affair of atomic bombs and a few airplane crews. Nor can it fail to make our diplomacy more and more responsible to have to consult fully before we take a position—as we are now obligated to do under the pact—our allies on the European continent who would, if war came, have to fight on the ground and not in the stratosphere where the B–36's are at home.

What will determine the outcome will not be the pact, nor even the solidarity which it promotes, but the policy which the Atlantic nations acting as a community take with respect to the great areas of dispute in central and eastern Europe and in the Middle East. If there is to be a war, the Russians will not start it for the purpose of conquering any of the nations that have signed the pact. If there is war, it will be about the control of regions which are not inside the pact—primarily about Germany, and secondarily about eastern Europe, the Balkans, and the Middle East.

The pact, because it binds the Atlantic nations together, will mean that in the diplomatic show-down and the negotiations, which must soon begin, the Western governments must now act together and can no longer act separately. It will, henceforth, be a violation of the spirit, and indeed the letter of the pact, for American Military Government in Germany, or for the British Foreign Office, or for the French, to insist upon, or to carry out separately, any serious policy in Germany which has not been worked out together by the members of the pact. The gentlemen who have been talking glibly about whether we should place our bets for Europe on Germany or on France must now shut up and sit down. The choice, if it ever existed, has been made by signing this pact, and from now on our policy in Germany will not be an American policy but a common policy worked out by the Atlantic community.

The same rule will hold in eastern Europe and the Middle East, for ourselves, the British and the French, for an alliance which binds us all to go to war if there is war that could lead to war. A collective system of defense cannot be created unless there is a collective policy. The alliance would fall apart if at every critical juncture the policy of the alliance does not rest on the understanding and the consent of the peoples who may have to underwrite it with their blood.

The necessity of proceeding by consultation, which will be tedious—rather than by impulse—and by agreement, which will often be difficult—rather than unilaterally—is the surest guaranty that the alliance will not be adventurous. A solemn pact to walk together is a solemn promise that no one will on his own motion go off the deep end. It is an engagement not to be stampeded into that violent or precipitate action, against which Mr. Churchill, who was suspected of contemplating it, advised in his Boston speech—apparently to the surprise and disappointment of those who imagine they can settle great affairs with a big loud bang.

Opportunity in Asia

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Star of April 4, 1949:

OPPORTUNITY IN ASIA

Harold Stassen has done us all a good turn by reminding us of our opportunities and duties in Asia. One may, as he suggested the other night, part company with him on details, but there's no doubt about the crying need for positive American policy in Asia.

Today in Asia, Communist movements—and some loosely called Communist—win friends largely because there is no positive, non-Communist alternative program offered. Asiatics were offended when, during the war—and in the postwar settlements—the principles of the Atlantic Charter were not repeated in a Pacific charter. They have felt similarly snubbed by the fact the Marshall plan was set up for Europe.

Actually, a good deal smaller investment in southeast Asia would likely pay us greater long-range returns that we probably will reap from our great outpouring to Europe. For it is almost exclusively with the backward areas that this country must trade to get the kind of imports needed to maintain our national security and keep up our high standard of living. And southeast Asia is the richest of all those areas.

We must not, however, think in terms of rapidly raising the tragically low living standards of Asia's masses even to the lowest levels in Europe. That would be impossible. But Asiatic standards are so low, that even pitifully small gains—in our eyes—would be enough to make the Communists' empty boasts look sick.

Any Marshall plan for Asia—not a MacArthur plan, please—would have to start with modest aims and be tightly administered, perhaps as Stassen suggests, "in relation to local provinces and individual projects" rather than through central governments. But even a modest, localized program would be a potent weapon.

In the face of the tremendous economic and technological problems which Asia presents, communism, paralyzed by ideology and overburdened by bureaucracy, is bound to fail. China's Communists, in their so-called land of reforms alone, provide a clear indication of failure to come.

But, in the absence of positive action on our part, Communist propaganda may give the Soviets an unbreakable political grip on Asia's hungry people before communism's failure is plain enough to warn the misled masses.

Seldom have stakes been so large—or required such a relatively small investment.

We Must Not Be Afraid of Change—The Strength of Democracy Is Its Ability To Grow, To Use the New and Reinterpret the Old

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include an article by Raymond B. Fosdick, which appeared in the New York Times Magazine on April 3, 1949.

Mr. Fosdick retired last June after 13 years' service as president and 37 years as trustee of the Rockefeller Foundation.

Raymond Fosdick has said what I have been trying to say for some time now only he has said it much better.

The article follows:

WE MUST NOT BE AFRAID OF CHANGE—THE STRENGTH OF DEMOCRACY IS ITS ABILITY TO GROW, TO USE THE NEW AND REINTERPRET THE OLD

(By Raymond B. Fosdick)

When the last glacier retreated northward from what is now Connecticut, it left behind, as mementoes of its visit, great boulders of rock which are now strewn lavishly across the State. Several of them, as large as a corncrib and many tons in weight, were deposited on my farm, and for 15 years I have watched one of them fight a losing battle with an ash tree. The tree evidently started in a seed lodged in a tiny pocket in the top of the rock. When I first saw it, it was a sturdy sapling that had made for itself a comfortable crevice for its roots. Today its irresistible growth has torn the massive rock into fragments.

This is law of life. The future belongs not to rigid absolutes, whether they are primal rocks or unyielding social arrangements, but to the thing that can grow, whether it is a tree or a democracy.

It is strange that a principle as familiar as this should today need underscoring, but we are living in years of uncertainty and fear, and fear induces a kind of spiritual astigmatism. To be sure, in our generation we have reason for our fears, and every justification to resist the threat that creates them. But I am thinking of fear as an evil in itself and what it does to human emotions and reactions.

For one thing, fear breeds an instinctive hostility to growth, because growth means change, and in anxious hours men tend to cling to the shelter of the present or to put their faith in nostalgia for the past. But history's current is sweeping us into the future and we cannot stand still, nor is there now any place left to go back to. The illusion that security can be found in immobility, or that safety is dependent upon the absence of change, is perhaps the most dangerous form of imbalance which plagues the minds of men.

Nothing is static in this world, least of all our ideas. Values change from age to age and the interpretation of one generation is seldom the interpretation of the next. Social conceptions must constantly be retranslated and re-expressed in contemporary idiom to accord with contemporary conditions. Even our conceptions of freedom and democracy are not static principles. The Declaration of Independence was a broader definition of freedom than that which came out of the

Revolution of 1688, just as 1688 widened the freedom of Magna Carta.

Today the conception of freedom is once again taking on a larger meaning. Our generation is thinking of the threat to freedom which comes from poverty and insecurity, from sickness and the slum, from social and economic conditions in which human beings cannot be free. In many countries, including our own, this new conception of freedom is struggling to make itself articulate, and irresistible change in older points of view is taking place before our eyes.

Democracy is another conception which must also be reinterpreted from generation to generation. It is government by the people and for the people, but its limits were not finally determined by the political concepts of the eighteenth century. Rather it is a growing, dynamic faith, a perpetually evolving adjustment between freedom and justice, between individual rights and the demands of society. This adjustment, however, is never perfectly and finally attained; it remains a problem which mankind must solve again and again. "It is provided in the very essence of things," said Walt Whitman, "that from any fruition of success, no matter what, shall come forth something to make a greater struggle necessary."

Here again we have a familiar concept to which most of us would doubtless subscribe. But it needs to be reemphasized today because our current fear of communism is driving some of us to believe that change is somehow subversive, and that anyone who advocates new ideas is probably a fellow traveler who should be watched. Not only the House Un-American Activities Committee but similar State committees and various self-appointed groups are creating a climate of opinion definitely hostile to those who fail to conform to predetermined standards, and suspicion is thrown on individuals and organizations who dare to think in unorthodox or nonconformist terms.

With the possible exception of John Adams' administration, there is a risk today in being a liberal that has never existed before in the history of this Republic. If you sign a petition to admit colored people to public-housing developments, if you favor fair-employment practices or are concerned about civil liberties, if you fight for the protection of the rights of the foreign-born, if you oppose religious prejudice and Jim Crowism, if you sanction cultural exchange with foreign countries, if you aline yourself with those who are working for more effective labor unions or more adequate medical care, if you take any point of view which involves the implementation of the Declaration of Independence that all men are created equal, you are apt to be suspected in some circles as a knowing participant in the Communist front, or at the very least as a witless dupe of Moscow's hypnotic influences.

There is hardly a progressive organization or undertaking in the country to which the adjective "communistic" has not been applied in the last few years—from the Tennessee Valley Authority and water-power developments generally, all the way to farmers' and consumers' cooperatives and plans for rural electrification. Fingers are even pointed at organizations like the YMCA, the YWCA, and the defunct Epworth League. In many States teachers and college professors have been frightened into sterile silence, and even the pulpit has not been free from fear.

The tragedy of this business is that it plays into the hands of the Communists. It identifies Russia with the process of social change at the same time that it limits us to a bleak and hopeless status quo. It concedes the Soviet claim of concern for the underprivileged while it stigmatizes the achievement and promise of democracy toward this same goal. A prominent doctor, head of a State medical society, recently condemned the idea of the broader distribution of medical care on the grounds that it was being pushed by Soviet agents in this country.

That is the kind of reckless statement which creates an atmosphere favorable to communism. If the idea of making available to all the people of our country the curative techniques of modern medicine is communism, if communism has a patent on the idea, then communism has something for us which we very much want. But it isn't communism. It is democracy. Its roots go back to the Declaration of Independence, long before Karl Marx was born. It is a translation into social terms of a concept that was first conceived as a political idea. It is part of our developing spiritual testament. It is in line with all that is best in our tradition and hope. It is democracy facing the responsibilities of its maturity.

Those frightened people who use the word communism so easily had better reckon with its implications. There are plenty of arguments against communism. It is a facade for a ruthless tyranny. It is a brutal hoax by which millions of confused and hungry people are persuaded or coerced to sign away their freedom in exchange for utopian promises. But to paste a label of communism on the yearnings of men everywhere for a better life, to classify as subversive those goals of equality and human service toward which our democracy is moving, is to concede to the Communists all the best arguments and make a mockery of the faith that sustains us.

It is undoubtedly part of the Communist strategy to frighten us into a position which seems to identify our democracy, not with forward-looking movements related to the hopes of men, but with outmoded patterns of social thinking. If in the eyes of the nations, America could appear as a victim of spiritual paralysis, frozen to the present, deaf to the impact of new ideas of human equality which are sweeping the world, it would be an overriding victory for Soviet policy. That is the picture the Communists are trying to paint of us, and that, unfortunately, is the picture that some thoughtless and panicky people in this country are trying, unwittingly, to help them paint.

I do not underestimate the necessity which we face in times like these of keeping the Communists clear of our Government and rooting out treachery wherever it may be found. Split loyalties or loyalties that respond to strings pulled in Moscow cannot be tolerated in positions of power. We must know who our enemies are. But this is a task requiring consummate judgment and skill. If, in a clumsy attempt to exorcise evil, we proscribe the good as well, the damage will be irreparable. To act as if the term "communism" covers all the plans and dreams of men for making this world an inviting home to live in instead of a place to freeze and fight and starve in is no more intelligent than using a steam shovel to weed a flower garden.

In our concern over what communism may do to democracy we have overlooked the danger of what we ourselves may do to democracy under the stimulus of fear. Fighting fire with fire is an easy but misleading slogan which has betrayed more than one cause in the past. Challenged by authoritarianism, men begin to build an authoritarianism of their own; they tend to take on the mood and techniques of their opponents; they answer heresy-hunting with heresy-hunting; they become like the thing they fight. That is what fear does to people. If the tactics of the Soviets succeed in inducing us to try to stamp out dissent and to measure loyalty by conformity, if they scare us into a denial of our historic goals, then they have maneuvered us into retreating from the field before the battle has even begun.

If democracy means anything at all it means the promise of growth. Democracy is not a finished project; we are engaged in building it. There is no blueprint which covers all the contingencies that may arise, or the new ideas and patterns that may be developed in the future. There is no final and absolute form of democracy which has been handed down from some political Sinai. We have no Karl Marx in our past. Democracy is a method of evolution, a maturing way of living, a conception of human relations rooted in the worth and dignity of the individual and inspired by the developing idea of freedom.

This is what our democracy has always meant. We have given it its pre-eminent place in the world because we have welcomed diversity of opinion, because there has been no fixed creed to which our citizens have had to subscribe, no Siberia for our intellectual and spiritual nonconformists. Our national life has been healthy and vigorous because dissenters have been encouraged to think critically of the political, social, and economic order in which we live.

Indeed, as we look back on our history we realize that the periods when we rose to moral greatness were periods of nonconformity—when Thoreau wrote his essay on civil disobedience; when Seward appealed to the country with his revolutionary thesis: "There is a law higher than the Constitution"; when Theodore Parker from his pulpit in Boston denounced the iniquity of our war on Mexico in words that burned their way into the conscience of the Nation. "If there is any fixed star in our constitutional constellation," said the Supreme Court in the Barnette flag-salute case in 1943, "it is that no official, high or petty, can prescribe what shall be orthodox in politics, nationalism, religion, or other matters of opinion, or force citizens to confess by word or act their faith therein."

It is this kind of tolerance and adaptability that makes the evolving will of the people effective in reaching new definitions of liberty and equality. It is this philosophy of growth that gives us assurance in the present crisis. The only adequate way to answer the challenge of communism is to continue the building of an economic and social system whose concrete results in terms of the welfare of mankind will far outstrip anything that communism can even promise. Democracy thus interpreted as a positive force can create new hopes and new initiatives in human life and can capture the imagination of the world.

Here is a faith worth fighting for. Stalin boasts of his "new order." We have a new order, too, based on the capacity of each generation to experience what Lincoln called "a new birth of freedom." The Communists extol the youth and virility of totalitarianism. In the evolution of democracy we have a world that is perpetually young.

I started by saying that the future belongs to the thing that can grow; a tree can demolish a rock. In spite of the present impetus of its revolutionary program, communism, by encasing itself in an ironclad orthodoxy, is sealing its own ultimate doom. Whether the field is science or economics or literature or art or music, the Kremlin has circumscribed it with an adamantine authoritarianism. The conformist reaction which holds the intellectual and humanistic life of Russia in a viselike grip can end only by strangling the vitality of the system it seeks to preserve.

In such an atmosphere there can be no flowering of the human spirit; it withers and dies from suffocation. The Communists are fighting against the laws of nature. In their fanaticism they have forgotten, if they ever knew, that stagnation and death await ideas as well as social and economic arrangements which have lost their power to grow. They taunt us for being the supporters of a crumbling status quo, but it is they who are looking backward, they who are trying to build

a status quo far more rigid and absolute than anything the world has ever seen. It is they who would put blinders on men and establish boundaries beyond which ideas and dreams shall not be allowed to go.

Four hundred years ago Galileo shook the world with the question: "Who is willing to set limits to the human intellect?" Well, the Communists are not only willing to do it, they are attempting to do it; and in that attempt which flies in the face of history lie the seeds of their own ultimate disintegration.

There is no future for such a system, any more than there is a future for a rock stranded by a glacier. Ultimately the irresistible power of a thing that can grow will shatter it. That is why democracy, rightly interpreted, is the last best hope of earth. It is rooted in the principle of growth; it is adaptable to new concepts of social justice. It is built, not on a fixed creed or on a system of regimented ideas, but on the sure knowledge that frontiers are never stationary, that the thrust of events is steadily forward, that there are no privileged ideas around which magic circles can be drawn to protect them from competition. It is only freemen who dare to think. And it is only through free thought, freely expressed that the soul of a people can be kept alive.

Mississippi Leads in Community Colleges

EXTENSION OF REMARKS
OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. DAGUE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I arise to protest the injustice that has been done the great State of Mississippi by the proponents of Federal aid to education. They have insistently pointed out that the Magnolia State is the most backward of all the States in educational opportunities and I am delighted to be able to call to their attention the article entitled "Colleges for All," which appears in the Pathfinder News magazine for April 6. It would seem from the facts therein set forth that many of those who have been holding Mississippi up as a horrible example should mind their words and incidentally look elsewhere for justification for saddling the Nation with a program of federally subsidized education.

COLLEGES FOR ALL

It is almost an axiom among American educators that Mississippi is at the bottom of the educational ladder. In most categories, it is. But in one vital educational field Mississippi leads the nation.

"Mississippi," says Dr. Jesse Bogue, secretary of the American Association of Junior Colleges, "has the only real State-wide system of community colleges in America."

Some United States educators may rub their eyes in disbelief. But there stands the fact. Only in Mississippi is the State divided into zones, with a community college in each zone.

Belatedly, some wealthier States now are falling into line. New York's Governor Dewey, acting on the recommendations of a commission headed by Owen D. Young, is proposing to the legislature a State-wide system of community colleges. In the Governor's budget is a $2,000,000 item to start the administrative machinery. In Michigan, Pennsylvania, Florida, and Illinois State-wide systems are under way.

California and Texas, however, are nearly in sight of Mississippi's achievement. In public-supported community colleges, in fact, California leads with 62 and Texas is runner-up with 34. But there are still large areas of both States without community colleges.

Counting both public and private institutions, the United States total stands at 651 junior colleges, with more than 500,000 students. Yet as recently as 1931, there were only 436 with only 74,000 students. In sheer growth, United States higher education has seen nothing like it.

What is a community college? Basically, it is the freshman and sophomore years of college—at drastically cut rates.

Tuition is very low, sometimes trifling. In California it is free. Where students live on campus—that is, in dormitories like those at any 4-year college—and eat in a common dining room, the cost of board and room is fantastically cheap. In Mississippi it is about $6.25 a week; total costs do not exceed $225 for the whole college year.

VALUE RECEIVED

Community college graduates make good records. One typical survey made in the South in 1944 disclosed that 46 percent of the number of community college students who transferred to regular 4-year colleges made higher marks than the average for students there already; 42 percent equaled the average; only 12 percent fell below the average.

Basic advantages of community colleges are obvious:

Being free, or costing little, they receive thousands of students who cannot afford the estimated $1,600 a year necessary for all expenses in the "Ivy League" colleges.

They provide both academic and vocational training. In addition, they offer a terminal course—2 years of general, college-level education for those not going on to senior college.

Finally, and most important of all, community colleges are designed to serve their local areas. They keep boys and girls in their native habitat, training them for their adult life within the geographical orbit in which they were born and reared.

Deep in the heart of Mississippi, 16 miles west of Jackson, the State capital, is Hinds Junior College, a typical community college. Organized in 1917 as an agricultural high school, Hinds added the first year of college in 1922. In the same year it dropped the first year of high school.

Roads then were poor. Commuting from any distance was impossible. So dormitories were built. Meals were served in a common dining room. A farm was part of the college; today it includes more than a thousand acres.

In 1926, Hinds dropped the second year of high school, added a second year of college. The student had his choice of a vocational or a general education course. Those taking the vocational course, however, also had to take some academic subjects. No student was allowed to avoid English, history, or civics.

Many new vocational courses have been added. Now they cover barbering, radio, auto mechanics, refrigeration, air conditioning, electricity, woodworking, body and fender repair and machine shop work.

Hinds' president, stocky, genial George McLendon, tries to fit the vocational courses to the needs of the community. Before a student takes up training in barbering, President McLendon consults the CIO and AFL barbers' unions about the need for more barbers. Then he tries to adjust the number of students taking the barbering course to what the trade will absorb.

Only about half Hinds' 500 students are taking vocational courses. The rest are pursuing either the college preparatory or the "terminal" course.

PLOWING SCHOLARS

The low cost of living at Hinds, as at most community colleges, astonishes visitors. Food, for example, averages about 23 cents a meal. The 1,000-acre farm, always producing, helps to explain that. Each student donates 1 day of work a month to the college. Most of this is done on the farm. Tremendous quantities of food are canned.

Not far from the dormitories and recitation halls is the meat-processing plant, with its cold-storage locker. The community has a stake in this. For small fees, farmers and citizens from the whole county store their frozen meat in it. There is a curious story back of this plant. When it was built it was privately owned. But the owners didn't know enough about meat storage to run it successfully. They failed. Similar plants had failed in Mississippi, for lack of technical know-how. President McLendon decided to take it over, teach students these skills. Now it shows a profit.

Hinds' 32 faculty members live on the campus. Their board and room is free, the bulk of their salary clear. Thus, a $3,500 salary at Hinds goes further than $6,000 in Chicago or Washington.

FEE FODDER

Almost a fourth of the students work their way through school. When times are bad, some students bring, as part-payment of their fees, sacks of potatoes, jugs of molasses, hay by the ton. These are credited to their accounts and help to cut down expenses.

There is no mystery about Mississippi's leadership. It grew naturally out of the agricultural high school boarding system. But, as a college system, it might have bogged down but for one man. He is Knox Broom, former State supervisor of public junior colleges. It was the slow-spoken, methodical Broom who defied politicians, aroused citizens to the need of keeping the State's community colleges out of politics, and spaced to prevent overlapping and competing.

Cooperation from Mississippi Governors and Members of Congress in recent years has been 100 percent. Two of Mississippi's present Congressmen, JOHN BELL WILLIAMS and ARTHUR WINSTEAD, are junior college graduates.

Mississippi's Broom puts it this way: "Parents know that boys and girls going away from home often make little progress the first 2 years. Most college freshmen are too young to be away from home. It is difficult for them to orient themselves. The community college is smaller, with less caste. There is more direct contact between students and faculty, and between both and parents. Result: a maximum gain at a minimum cost."

Obviously, it takes more than a campus and dormitories and recitation halls to make a college. There are intangible and psychological factors. In most community colleges, for one thing, there is a definite religious atmosphere. Churches border the campus. Lectures on various phases of religion are more widely attended than at the big universities.

ATMOSPHERE

At Hinds, music and theatrical groups are part of the college life. Sports of all kinds are encouraged, particularly football, baseball, and basketball. Most of the college paper, The Hindsonian, is devoted to sports. But it enthusiastically reports classroom techniques as well. When Dean M. F. Herring installed a machine which tested read-

ing ability—a tachistoscope—the student paper challenged students to try it.

The device, bought for remedial reading courses, soon became a center of campus interest. Designed to increase reading speed, it flashes words, sentences, or figures on a screen for a period of time ranging from 1 second to one one-hundredth of a second. What might go unnoticed at a big State university becomes a real educational aid in the more intimate atmosphere of a community college.

To Hinds, as to America's other community colleges, industry and business are turning for workers. The cry is not for men trained in the professions, but for men and women with some college or some semiprofessional training.

In the Nation at large, too, there is growing emphasis on the need for more general education for good citizenship. Last year the President's Commission on Higher Education recommended the universal extension of education 2 years beyond high school. This is precisely the field of the community college.

EVERYMAN'S SHEEPSKIN

Incidentally, the Commission foresees the two added years of schooling as the right of all those who want it, regardless of economic status. In other words, in the Nation as a whole the free public high school eventually may be followed—on a national scale—by the free community college.

Some community colleges are wholly State-financed, others supported entirely by the city, the county, or the district.

Regardless of the method of financing, however, the community college is fast becoming a college for everybody. It is serving a social and economic need the Nation over. In a very real sense it is "the poor man's college." In New York State, Associate Commissioner of Education Cayce Morrison has set the highest goal of all. "We envision," he said, "a community college within 25 miles of every home."

Appreciation for the Merci Train

EXTENSION OF REMARKS

OF

HON. GEORGE H. WILSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. WILSON of Oklahoma. Mr. Speaker, under leave to extend my remarks, I wish to have printed in the RECORD Senate Concurrent Resolution 11 of the Oklahoma Legislature as adopted by the Oklahoma Senate on March 3, 1949, and by the House of Representatives of Oklahoma on March 8, 1949. I think this resolution is highly appropriate and I join wholeheartedly in concurring in the sentiment expressed therein.

A resolution of appreciation to the people of the Republic of France for their kindly expression of friendship as exemplified by the sending to the citizens of Oklahoma the Merci Car

Whereas the French Merci Car transmitted to Oklahoma by the people of France as a token of appreciation of the gifts of wheat by the farmers and other good citizens of Oklahoma has been received with appropriate ceremony at the Capitol Building in Oklahoma City, February 18, 1949; and

Whereas we find in this exhibit remarkable tokens of sacrifice and love of the French people toward the citizens of Oklahoma: Now, therefore, be it

Resolved by the Senate of the State of Oklahoma (the house of representatives concurring therein), That we express to the French people the gratitude and genuine friendship which Oklahomans have, and will continue to have through all the years, for the people of France, and here record an ardent hope that the faithful and unbroken friendship which has been maintained from the days of the American Revolution to this hour will be continued; be it further

Resolved, That a true copy of this resolution be sent by the Secretary of the Senate to the French Ambassador in Washington, D. C., for transmittal to the French Government; a copy be sent to the President of the Senate of the United States; a copy be sent to the Speaker of the House of Representatives, and a copy to each Member of the Oklahoma delegation in Congress.

Two Editorials on CVA

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. MITCHELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two editorials from the Prosser Record-Bulletin, of Prosser, Wash., relative to the CVA, discussing some of the objections which have been made to it:

UNAPPRECIATIVE

Last week, over at Seattle, was held a meeting of the so-called Northwest Power Development Association, organized for the purpose of opposing the establishment of a CVA.

Prominent on the program was a Gen. Thomas M. Robbins, retired, who came up all the way from Portland to urge that the present agencies be continued. Of course he meant the Army engineers.

Now we have no criticism of the efficiency of the Army engineers nor of the two or three thousand civilian engineers they employ to do the bulk of their work. Our criticism is rather one of technique.

The record is illuminating.

For perhaps a hundred years the Army engineers have been trying to harness the lower Mississippi but, repeatedly, floods have devastated vast areas in that part of the valley. If anything, the floods are getting worse.

Contrast to this the work of the TVA engineers in the Tennessee Valley. In a period of 10 years they tamed both the Tennessee and the Cumberland Rivers, two of the worst troublemakers in America. They were forever going on the rampage and for the simple reason that their sources lie in regions having an annual rainfall of up to 80 inches. Those rivers were tearing the guts out of those valleys, leaving nothing but eroded soil and ruined hopes behind. But all of this has been changed. It is even asserted that the control of these rivers lowers the floodtide on the lower Mississippi a substantial number of inches.

In other words, due to the work of the TVA engineers, the Army engineers do not have to run so often from floods on the Mississippi, nor do they have to run so far nor so fast.

Really, General, you boys ought to be more appreciative.

A TERRIBLE RESPONSIBILITY

In Tuesday's issue of the Yakima Republic appears an interesting editorial under the caption "The CVA stumped." On the whole the editorial supports the formation of such an agency in a fair and unemotional manner pointing out that proponents of the CVA have execellent arguments in behalf of this administrative reform.

What seems to bother the Republic especially is the fear that the long and beneficial experience and contribution of the existing Federal agencies is to be set aside.

There is merit in this question but not so serious as to stump anybody.

We do not know how many private engineers the Department of the Interior employs, temporarily, when it tackles an especially important job, but Harold Ickes, former Secretary of the Interior, states in a recent article that the Army has about 400 engineers engaged in development work but that it employs from 2,500 to 3,000 private engineers to do the bulk of the engineering.

Evidently there is an enormous personnel of private engineers who are employed by these agencies. The skills and experience these men possess need not and should not be lost. Were a CVA administration established every one of these trained experts could start working for the new agency with a knowledge that at long last their dreams would come true instead of remaining indefinitely upon their drawing boards. In addition, such a law should provide that a leave of absence from all other Federal agencies could be granted these experienced Federal experts to shift over temporarily to the CVA.

But this is not all. A CVA law should require that other agencies turn over to the CVA all surveys, maps, drawings, studies, and estimates that have previously been made. We have in mind especially the Army 308 report and the Department of the Interior report of 400 pages issued a year ago.

These reports represent separate surveys and studies. Since they largely duplicate each other they also represent a waste running into millions of dollars. To fail to use these surveys would be inexcusable and indefensible.

An opportunity of limitless magnitude presents itself to the people of the Northwest. Never before in history has a Congress led by the President been in such a favorable mood to engage in the development of the entire Columbia watershed. Yet in a large measure it is entirely possible that the people in this area will get to squabbling and defeat it. In fact they are disputing the issue today.

A terrible responsibility rests upon the opponents of a CVA. The leaders in the Northwest, especially the newspapers, should ponder long and hard as to whether they want to go down in history as among the saboteurs of the greatest opportunity that ever has, or ever will, knock at our door.

Veterans' Hospital at West Haven, Conn.

EXTENSION OF REMARKS

OF

HON. CHASE GOING WOODHOUSE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mrs. WOODHOUSE. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert herewith a resolution

of the General Assembly of the State of Connecticut:

STATE OF CONNECTICUT.

Resolved by this assembly—

Whereas the State of Connecticut has about 275,000 veterans of both world wars; and

Whereas the veterans of the State of Connecticut are provided with only one United States veterans' hospital with a bed capacity of 352, and there are 333 Connecticut veterans of all wars now hospitalized in State tubercular and mental institutions and over 400 Connecticut veterans hospitalized in the United States veterans' hospital for neuropsychiatrics at Northampton, Mass.; and

Whereas the Hoover Commission, which veterans is a primary responsibility of the Federal Government, and the facilities presently existing within the State of Connecticut are obviously inadequate; and

Whereas the Hoover Commission, which has made a survey of this area, has found that a real necessity exists for another veterans' hospital, and the need for such a hospital is getting greater day by day; and

Whereas the families of veterans presently hospitalized outside the State of Connecticut are being put to great financial and loss-of-time hardship due to their having to travel many miles to visit their war injured or wounded: Now, therefore, be it

Resolved, That the Senate of the General Assembly of Connecticut, the house of representatives concurring therein, do urge and recommend that the President of the United States, the Administrator of Veterans, the Senators and Congressmen from Connecticut and the chairmen of the House and Senate Military Affairs Committees exert their individual and combined efforts to effectuate the immediate opening of the veterans' hospital in West Haven, Conn.

Given under my hand and the seal of the State, this 17th day of March, in the year of our Lord 1949.

CHESTER BOWLES,
Governor.
WINIFRED MCDONALD,
Secretary.

Have We a Reserve Shelf of Public Works?

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, April 8 (legislative day of Friday, March 18), 1949

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the thoughtful address on the subject Have We a Reserve Shelf of Public Works? delivered March 10, 1949, in Chicago, by Maj. Gen. Philip B. Fleming, Administrator of the Federal Works Agency, together with a brief foreword of my own.

There being no objection, the foreword and address were ordered to be printed in the RECORD, as follows:

FOREWORD BY HON. PAUL H. DOUGLAS, OF ILLINOIS

Maj. Gen. Philip B. Fleming, Administrator of the Federal Works Agency, on March 10 delivered an address before the Chicago Building Congress in which he discussed the need for a reserve shelf of public works.

Nearly every community in the country urgently needs improved and enlarged public facilities for its citizens.

These projects, whose construction has been postponed since the early thirties, first because of financial problems and then because of war, include schools, highways, sewer and water systems, hospitals, and other necessary and worth-while public works.

General Fleming estimated that the accumulated need for public works has reached a figure in excess of $64,000,000,000.

Existing facilities are outgrown and of insufficient capacity to meet immediate requirements. Our schools, for instance, are overcrowded and, in some cases, unsafe. Nearly all rural and urban areas need additional hospitals if the health of the Nation is to be safeguarded and improved.

The question of the right time to swing into a full construction program of public works turns on the interpretation of economic and social factors. Among these are employment, cost and availablity of materials, need for stabilizing the construction industry, and the prior call of other types of construction, such as housing, upon labor, materials, and finances.

Whatever yardstick is used in determining the best time to start actual construction in any given case, the need for advance planning is clear. No part of such a construction program can be carried out in an efficient and orderly manner unless the local communities have selected their sites and prepared their plans in advance.

The need for Federal loans to stimulate advance planning has been demonstrated by experience.

General Fleming's presentation of the facts, and conclusions based on these facts, merits wide consideration.

HAVE WE A RESERVE SHELF OF PUBLIC WORKS?

(By Maj. Gen. Philip B. Fleming, Administrator, Federal Works Agency)

There is no need to remind this audience that the topic which I have chosen raises the $64,000,000,000 question. We all know that the accumulated need for public works has reached a figure well in excess of $64,000,000,000. Some estimates put the need for State and local public works at $100,000,000,000—excluding Federal projects, which would add to the total of needs.

When figures of this magnitude are set against last year's volume of public construction—$4,000,000,000—they would seem to indicate an enormous reserve, a backlog of needs that could hardly be met within the next 25 years. The need is real enough, in fact it is urgent in many communities. We need schools, highways, hospitals, conservation projects, sewer and water lines and a long list of other public works.

These needs have been accumulating and growing for nearly two decades. You will remember that this type of public construction was largely postponed throughout the war years to divert men and materials to the war effort; it was postponed again following VJ-day to direct men and materials to the construction of housing for returned veterans, and to provide the means to construct added industrial facilities.

This prolonged postponement, plus increases in population and sizable migrations, created the present need for public construction. That much is clear. Whether you accept the figure of $100,000,000,000 or a lower estimate, no one will deny that the backlog of legitimate, worth-while public works is huge.

But this obvious fact does not prove that needs can be translated into construction or that we have an adequate reserve shelf of public works. Existing needs cannot be translated into plans or projects by wishes. Nor does such a huge reservoir of public construction needs enable us to gage the adequacy of our present shelf of public works.

Before passing judgment, pro or con, let us try to set up a more definite frame of reference, with some bench marks we can all agree upon.

For example, when I speak of a reserve shelf of public works, I mean construction projects for which blueprints have been completed. The best estimates which I have seen total some $4,500,000,000 for local, State, and Federal projects. According to estimates made by the Federal Works Agency, that total includes about one billion in State projects blueprinted under the advance-planning program made possible by title V of the War Mobilization and Reconversion Act of 1944. As you know, title V permitted the FWA to advance $56,000,000 to State and local governments in the form of repayable loans to help these agencies prepare blueprints of worthwhile public works.

We estimate that planning carried on by States and cities without Federal assistance has added another $600,000,000 to the list of blueprinted public works. Completed blueprints for highways amount to almost $900,000,000 and bring the total State-local reserve shelf to approximately $2,500,000,000.

It is very difficult to estimate the value of blueprints completed for direct Federal civil construction, because of the nature of the work. The Bureau of the Budget estimates that expenditures for direct Federal civil construction between July 1, 1949, and June 30, 1950, may reach $2,000,000,000. While these projects are not necessarily fully blueprinted at this time, it may be claimed that lack of present plans would not interfere with the orderly construction of these projects.

On that assumption let us add the Budget Bureau's estimate to our State-local shelf, making a grand total of $4,500,000,000.

Measured against the existing need for public works that shelf looks pitifully small. The Nation could spend twice that sum on school construction or on sewers and waterworks without fully meeting our needs in either category. It would require about $8,500,000,000 to construct the hospitals we need.

Of course, none of these demands can or will be met in a single year, but they do represent goals well worth planning for.

I would like to enlarge a bit on the need for more school facilities. During the period from 1930 to 1940 the volume of school-building construction averaged less than three-fourths of the volume during the previous decade. From 1940 on, the average annual rate of public-school construction was about one-fourth the average yearly volume during the twenties.

At the same time the annual birth rate in this country climbed from a prewar average of less than 2,500,000 to an all-time high of 3,900,000 in 1947.

Our already inadequate school plant faces a period of fearful overcrowding in the years ahead.

Another way to judge the adequacy of our current reserve shelf of public works is to relate it to over-all construction prospects. The total value of new construction estimated for 1949 is $18,250,000,000—thirteen and one-quarter billions for private construction and five billions for public works. Thus the volume of projects available in the reserve is 10 percent less than the expected 1949 public construction volume.

Perhaps that sounds like a relatively small gap. So it is—provided that our economy continues to operate at current levels. I am not going to indulge in any crystal gazing, but I do want to remind you that the volume of private construction can decline very sharply and rapidly in a period of recession.

If the volume of private construction anticipated for this year were cut in half—it has fallen much more than that in previous slumps—we would need $11,600,000,000 of public construction to maintain construction employment on an even keel. Our present reserve of public works would bridge little more than one-third of that gap.

Every construction man knows that it may take from 6 months to 2 years to bring proposals for public works to the point where construction can begin. To translate a rec-

ognized need for schools and other structures into on-the-site employment is a slow process. The last depression taught us that without adequate planning it took many months to put even a handful of men to work on useful public projects.

As matters stand today we simply are not ready with plans which could both stabilize the construction cycle and help to bolster the business cycle. In general, the States and municipalities are not ready and the Federal Government is not ready.

There is at present no concerted program of advance planning of Federal projects for use as a reserve. Congress is now considering legislation which would enable the Federal Works Agency, through the Public Buildings Administration, to purchase sites for future Federal buildings and to blueprint structures to be erected on these sites. No immediate construction is contemplated and the sum proposed, $40,000,000, while a step in the right direction, will provide plans for only $450,000,000 of construction at current prices.

No doubt a good many of you are saying to yourselves "but what about the vast river basin programs and other large-scale Government undertakings." You may even have read recent discussions of these construction trends in many magazines and newspapers.

Let me quote some of these paragraphs:

"The United States Government is going easy on construction in the year beginning June 30. It will not even make a start on a backlog of $27,000,000,000 worth of work being piled up by Federal agencies.

"The Federal budget, released recently, shows that the Government has $12,800,000,000 worth of projects, already authorized in general or specifically by Congress, on which it will not start work until after June 30, 1950.

"Another $14,000,000,000 worth of work includes projects like the St. Lawrence seaway, which have been proposed but not yet authorized." * * *

Remarks like these tend to create the impression that there are vast sums ready to go into immediate construction. But actually, there is as yet no large reserve of work fully planned. No doubt the big over-all figures are more impressive and newsworthy then the smaller totals of work blueprinted—this very contrast deserves a note of warning.

We should remember too that there is a very real distinction between the amount of money which Congress may authorize and the sums which are appropriated for construction year by year.

I am very much in favor of these long-range programs, they are essential conservation projects, but I think it would be a grave error to assume that they constitute an adequate shelf of public works. Generally speaking, they will take many years to complete and usually are not located near centers of population—where unemployment strikes hardest. Because they are long-drawn-out, these projects offer far less employment at any given stage than the dollar value of the program might lead one to expect.

This is especially true of work involving power plants and power transmission lines and distribution systems—according to studies of PWA projects, direct labor costs were less than 20 percent on such construction.

For all of these reasons I think it is essential to have a much larger reserve of State and local public works than we now have. Moreover, I think such a reserve should include a large proportion of buildings, blueprinted and ready for contract letting. This type of construction can go forward on innumerable sites simultaneously and can provide the largest and best balanced volume of employment to replace a falling off in private building.

Surely we cannot afford to neglect this broad sector of the construction front. It is the construction of buildings, plus highways and sewer and water projects, rather than the huge long-range Federal projects, that afford the quickest, most effective and broadest means of construction reemployment.

Moreover, this widespread construction would set in motion long-range forces to combat recession. A demand for construction materials creates jobs in mines and forests, in factories and transportation. And this added spending power will be felt in manufacturing and retail establishments throughout the economy. Thus public works can even help to stimulate reemployment in circles entirely outside the construction and building-materials industries.

Quite apart from the possible need for public works to stabilize the construction cycle and to help bolster the business cycle, we need more advance planning merely to assure the wise selection and orderly flow of public construction. The range of needs is so great that careful selection and timing are imperative.

So, no matter what yardstick we use, or how we approach the problem, it is obvious that we need a much bigger shelf of State and local public works, blueprinted and ready for the contractor.

In my estimation, the soundest and most rapid way to build up a more adequate reserve of public works would be to reinstitute the advance-planning program. As you know, the funds provided by the program which ended on June 30, 1947, stimulated the design of projects all over the country. It was justly hailed as the most progressive step we have taken toward orderly planning of public construction.

The program was administered by the Bureau of Community Facilities, a constituent of the Federal Works Agency. In the State of Illinois, BCF approved 414 projects with an estimated total cost of about $236,000,000. More than $3,345,000 of Federal funds were loaned to plan and blueprint this construction.

Here are a few typical examples. There was an advance of $2,450 to Salem to plan a $479,000 electric-distribution system. Pontiac received $3,000 to plan sewer, water, and sanitation facilities costing $368,000; an advance of $2,655 to plan some $91,000 worth of needed educational facilities; an advance of $5,150 to Aleco covered plans for hospital and health facilities costing $320,000.

The list could be extended indefinitely and would include communities from coast to coast.

By all means let us reinstate that program immediately. With a real reserve shelf of worth-while public projects that can be started at a given signal we will indeed have a powerful lever ready at hand—a lever that cannot contribute to inflation. The very existence of this reserve would engender confidence in our economy, for our business community would know that a vast program of public works could be launched whenever the pace of industry faltered.

There is, of course, no reason why the Federal Government should not be equally farsighted. We are not, at this time, embarking on a large program of new public buildings. But the fact remains that we have not built since 1939. Meanwhile, the population has risen at an increasing rate, there have been large migrations to new areas, new urban sections have been developed, and our economy is operating at levels far above those of 1939. Many public services are not efficiently housed. Moreover, in order to transact business at all, the Government has been forced to rent considerable space.

Surely this is the time to secure sites and prepare designs for tomorrow's Federal buildings.

Here in Chicago you are building and rebuilding a great dynamic city. You have plans and projects designed to make this the finest commercial city in the world. In achieving this purpose you also will create the finest city in which to work and live.

That, fundamentally, is the purpose of all advance planning. We build to meet human needs and these needs often have their counterpart in many unsolved problems of business and industry.

I am not in any way attempting to forecast the future trend of business. I am not asking that any large-scale program of public works be started at this time. I do think that the wise use of public works could help us steer a course between inflation and deflation—if we had a large shelf of fully planned public works, and if the need should arise. No one expects to meet with an accident because he takes out accident insurance.

I wish I could say that we do have a large and adequate shelf of construction blueprints. At the risk of repetition I want to say again that large estimates of needs for public works can provide a bulwark only if blueprints are complete and ready.

Only a sound, forward-looking public-construction policy can help us meet the future with confidence. The keystone is a sound policy to blueprint in advance an adequate reserve of public works.

March 18, 1949

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, April 8 (legislative day of Friday, March 18), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the RECORD an address entitled "March 18, 1949," which was broadcast by me over radio station KSL on April 6, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MARCH 18, 1949

March 18, 1949, marks for me one of the great days in my senatorial experience. On this day we were able to report out of the Committee on Labor and Public Welfare to the Senate Calendar the Federal aid-to-education bill, known as the Thomas-Taft bill, and the child-health bill. After making these two reports I went to the Senate floor and the calendar was called to consider what is technically termed, "unobjected to bills." All bills on the calendar are read off in rapid succession. They are passed if there is no objection. But if one single Senator objects to a bill, that bill goes over to another day. On this calendar was my bill providing for the creation of the National Science Foundation. The clerk called the bill. Vice President BARKLEY asked if there was any objection to present consideration. There was no objection. When the time came for its passage Vice President BARKLEY ruled without objection the bill passed. That was a once-in-a-lifetime experience.

If these bills become law, in a generation America will be a different country. The education bill will make us a literate nation. The child-health bill will bring about youthful health corrections which will make us a healthy people. The science foundation bill will put our country on the scientific alert as strong and as great in results in peacetime as our scientific work was in wartime. Each measure is constructive and points toward the building of citizenship. The cost of the three measures will be about one-fifteenth of the amount spent on European aid this year.

This is the fourteenth year my name has been on the Federal-aid-to-education bill.

We have reported that bill to the Senate three times and it passed once in the 14 years. The House has never acted. The objections to the bill have always been technical objections based upon a rule of law. The bill was killed in the Senate once by an amendment which was craftily put in order to wean away supporters. The amendment struck at the segregated schools of the South.

In our committee talks this session one of the opponents of the bill, not a real opponent of Federal aid, but a man who wants to narrow the scope of Federal aid suggested an amendment which brought up a point which is old and fallacious—that is that the Federal Government shall help only those States that need help. The assumption being that some States are richer than others and that the Federal Government should help only the States which have not the wealth to help themselves. The Senator's amendment hit at a provision in the bill which provides that the Federal Government shall give $5 to every student registered in our public schools. The point he made was that the rich States did not need the $5 and it would be better to give more to the poorer States. President Roosevelt advanced the same argument. He pointed out that his State of New York was very rich and did not need Federal support. I replied, "Of course New York does not need Federal support, but New York is not taking care of the education of its citizens because New York has thousands of illiterates and we need to overcome illiteracy in the United States. This time, again, we had an answer for our Senator. I asked Senator TAFT, since the suggestion came from a Republican Senator, if he would answer for us. Now comes an interesting story about Utah. I knew Senator TAFT had these statistics because I had seen them, and I suggested that he read one of his letters. It was a communication telling of the school which our Army maintains in Germany to teach our soldiers how to read and write. The statistics in the letter showed that, with the exception of Utah and Vermont, there were American soldier boys from every State in the Union called to the Army school in Germany to learn to read and write. When the various Senators learned of the number of boys from their own States who were in the Army in Germany who could not read and write there were no arguments advanced against the Federal aid-to-education bill in committee, and we reported it out unanimously.

Two world wars and the administration of a selective service act in each of them has taught us more conclusively than anything else that our country's outstanding need is education and an equalization of educational opportunities. The selective service system of raising an army and navy has been spoken of as the democratic way in that every young man becomes equal to the call with all others. That is all right in theory, but in fact it has not borne out because certain standards were set up before persons became eligible to call. Because of these standards, taking the Nation as a whole, 5 out of every 10 men called were rejected for some cause or another, sometimes for health, but more often than anything else for an inability to read or write. At the first of the Second World War no illiterate was accepted. This cut into the list of persons called so strongly in some States that protests were made and the Army had to accept some men who could not read and write. These persons had to be put in Army schools at a tremendous cost to the Government compared with the cost of ordinary fourth- and fifth-grade education. Our statistics show that in those States like Utah and the other intermountain States where public education has been in existence even longer than statehood, 7 out of every 10 boys called under the Selective Service Act were accepted. That proves that education benefits health and aids in the development of the boy. But in those States where educational standards are not good only 3 out of every 10 boys called were accepted. See what this does to the people of the State which neglects universal education. The trained boys have to bear a greater proportion of the liability to serve. Under the peacetime draft that is going to be the same. The knowledge of this has brought about almost universal support for the equalization theories in the Federal aid to education bill.

The reason for the child-health measure is simple. Our American Constitution provides for the separation of church and state. Most of the State constitutions and State laws provide that public money shall not be used for nonpublic schools. In general, that is interpreted that public money shall not be used for church schools because most nonpublic schools in America are church-sponsored schools. More and more the line which marks the division between the private and the public school is being made thinner—that is made thinner by an interpretation of what constitutes aid to schools. If a State allows State-owned textbooks to be used in private schools on the theory that every boy and girl should be treated the same, is that an aid to a private school? Shall the busses which carry boys and girls to public schools pick up boys and girls going to private schools? Now the Federal Government has aided private-school education indirectly in various ways by giving what constitutes a scholarship to the individual student and letting him go to school wherever he chooses. That is the theory of my soldier-education bill. Veterans of the last war are going to schools of their own choice and many of them are in private schools. Nearly everyone says that the health of a boy and girl is vital to the whole Nation regardless of where he or she goes to school. In many States the State provides for physical examinations and nurses' aid for the pupils and it is narrowly interpreted that that activity is not aiding the school as such but it is an activity which the Government gives directly to the pupil and that pupils no matter where they go to school are entitled to this health aid. It therefore seemed reasonable and wise to the committee to lift the health provisions out of the education bill and separate the two. That has been done at least to the satisfaction of every member of the committee so that the two bills will go to the calendar together and be acted upon as closely as they can together. This action constitutes a highly constructive compromise which should command universal support.

As I said before, each measure is constructive and points toward the building of citizenship. Men's political thinking habits have caused them to think first, and without objection, of defensive measures. These defensive measures, generally, have been for the purpose of building and creating power for destruction. Men have thought less of what should be our first line of defense—the building of a strong and enlightened citizenry.

American Contributions to European Aid

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, April 8 (legislative day of Friday, March 18), 1949

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "ECA Is Building Formidable Competitors," from the Bedford Daily Times-Mail, of Bedford, Ind.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ECA IS BUILDING FORMIDABLE COMPETITORS

The United States through the European Recovery Plan is now in the position of a business firm giving away its money to build up a vigorous competitor. The money sent abroad has been of invaluable assistance in rebuilding European economy, but it has also been a means of establishing peacetime competition, which has already pinched the export trade of our country.

The last report of the United Nations Economic Department shows that economic recovery has been nearly twice as fast following the second World War as it was following the first. In the autumn of 1948 world production was 32 percent higher than 1937 and 11 percent higher than 1947.

Most of this gain has been accomplished at the expense of the United States, which furnished the money and a good share of the technical advice which is fast making Europe self-supporting.

British exports in 1948 climbed to $6,600,000,000, four times the 1945 mark and the highest figure ever attained. During the year Britain sold nearly 300,000 motor vehicles abroad; 35,000 of them coming to the United States. During the same period this country sold only 430,000 vehicles overseas. It is true that the British austerity program and the idea of manufacturing for export was a very important factor in British sales; nevertheless, the British auto maker, with 10 percent of the American production, sold 40 percent of the total export business.

In the field of textile manufactures Britain's sales eclipsed American sales almost 50 percent—$1,300,000,000 against $800,000,000. Americans have long prided themselves as manufacturers of machinery and machine tools, yet in 1948 Britain sold for export $1,016,000,000 while the American makers sold only $1,670,000,000.

Since 1946 there has been a distinct drop in American exports, accompanied by a rise in the exports of other nations. In 1947 this country exported to Argentina, Brazil, and Uruguay seven times as much as did Britain; but by the end of 1948 the South American nations were buying virtually the same amount of goods from both countries. In Argentine sales Britain led the United States by a substantial margin.

In the prewar years two of the toughest competitors for world trade were Germany and Japan. These defeated nations were almost entirely out of the market from 1945 to 1947, but in 1948 they started a come-back which is making itself felt all over the world.

"Made in Japan" and "Made in Germany" were very familiar marks throughout the world prior to 1939. Those same marks are showing up on store counters again. Japan gained almost a monopoly in the field of low priced vases. Christmas tree ornaments, cheap toys; and was a very important factor in such fields as electric light bulbs, rayon, and cotton textiles. Western Germany is again pushing the market in dyestuffs, chemicals, and cutlery, fields in which it has been dominant for nearly 50 years.

The military governments of Japan and Germany have been carrying out a policy of making both regions self-sufficient since the close of the war on both fronts. The American taxpayer has sent billions of dollars to those areas to accomplish this self-sufficiency; but the same taxpayer now finds he has erected competition to himself, which is being felt especially in South America and Asia.

This matter of rebuilding the world is a many-sided problem. From a military standpoint, it is certainly beneficial to us to have a strong western Europe and a stable

Japan, as these areas would necessarily be the bases for armed action against Russia, should the much-discussed war ever come. From an economic standpoint, however, the situation is quite different. The reforms, socialized medicine, and nationalization of industry in Britain have been possible only through American aid. In fact, all recovery in Europe and Japan has been American financed.

It would seem time to revise our thinking on European aid. For 2 years foodstuffs were the chief item of purchase by Europe; now the purchases are machinery and tools. Europe likes aid, just as does any other recipient. Perhaps aid is not necessary in such staggering quantities. A careful appraisal of all factors, military, and economic, should precede any further grants to our possible and potential allies. The American taxpayer is worth some consideration, too.

Address of Charles Smith, of Canadian, Okla.

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. ALBERT. Mr. Speaker, the Oklahoma congressional delegation had the honor yesterday of being host to a group of prize-winning champions sponsored by the Oklahoma Farmers Union, and including Oklahoma boys and girls who have made outstanding records in 4–H Club work and in activities of Future Farmers of America. I was delighted indeed that among these young champions was a boy from my own congressional district, Mr. Charles Smith, of Canadian, Okla. I have the honor of inserting in the RECORD an address delivered by this 4–H champion to the Oklahoma congressional delegation in a meeting in the capitol on April 6, 1949. The address follows:

Mr. Chairman, representatives of the Farmer's Union, distinguished guests, ladies and gentlemen, I am deeply indebted to the Farmer's Union for granting me the opportunity of representing the Third Congressional District of Oklahoma in presenting a talk on my organization: the 4–H Club, and the part it can play toward family type farming with home ownership as our goal.

I am also indebted to the Honorable Congressman CARL ALBERT for recommending me to this appointment also Mr. Gen Stipe, our State representative.

The 4–H Club, and the part it can play toward family type farming with home ownership as our goal. As you all know, no active 4-H Club member can vote because we are too young, we can support no lobbyist, because we don't pay dues. The 4–H has done very well without this. We have forced recognition by our achievements, that is: we have always been recognized, but not always fully recognized, as an important farm organization. Because of this fact, I believe that we need a parent organization such as the Farmers Union, to back us.

I want to quote our 4–H citizenship pledge: "We individually and collectively pledge our efforts from day to day to fight for the ideals of this Nation.

"We will never allow tyranny and injustice to become enthroned in this, our country, through indifference to our duties as citizens.

"We will strive for intellectual honesty and exercise it through our power of franchise. We will obey the laws of our land and endeavor increasingly to quicken the sense of public duty among our fellow men.

"We will strive for individual improvement and for social betterment. We will devote our talents to the enrichment of our homes and our communities in relation to their material, social, and spiritual needs.

"We will endeavor to transmit this Nation to posterity not merely as we found it, but freer, happier, and more beautiful than it was transmitted to us."

You can easily see from this, that the 4–H Club endeavors to make good citizens of its members.

You might say, that it is a very nice pledge, but do you carry it out?

Let me explain what the 4–H Club has done and is doing, and then draw your own conclusions.

4–H Club work for rural boys and girls is a part of the National Agricultural Extension system which reaches every State in the United States, Puerto Rico, and the Territories of Alaska and Hawaii. It is also being developed in many other countries.

In Oklahoma there are 61,773 Club members and they have completed 200,808 projects during the last year. 4–H work is organized on a community basis. Boys and girls meet together in regular 4–H Club meetings and jointly plan and conduct their work; in fact there are 52 clubs in our county alone.

There is a project for every boy and girl, whatever they are interested in, from leadership, arts and crafts, to livestock, forestry and crops.

The significant feature of 4–H Club work is that club members "Learn to do by doing." They are supervised by the county extension agent and they learn many things while they are young that otherwise they would have to learn when they were older in the university of hard knocks. 4–H Club work becomes part of the lives of rural young people while their minds are still plastic; gives them guidance when they need it; teaches them some of the inspiring things in agriculture and home life and gives them a vision of its possibilities as a life work.

4–H Club work demonstrates the best practices in agriculture and home economics to the communities and counties by means of original projects carried on by the members, by their exhibits, fairs, and public demonstrations. Also, 4–H projects are lifting, or helping to lift the mortgages on farms all over America, and that is an end in itself.

4–H Club work develops rural leadership, community pride and spirit. It builds young men and women who know how to conduct meetings, organize community projects, and who are trained to conserve the soil, judge livestock, and products of the farm and home, and to use the electrical power furnished by rural electrification. It emphasizes the home and brings parents and children increasingly together in a common interest.

4–H Club work develops self-reliance, ambition, and aggressiveness. It applies business methods to farming and promotes industry and thrift.

It fosters individual ownership, a love of nature, and of the open country. Through competition it brings out the best efforts and thought, and gives rural boys and girls an opportunity to earn money and acquire property.

4–H Club work shows boys and girls how to do the wholesome, helpful things and to play the game fairly.

Above all, it develops the highest type of manhood, womanhood, and American citizenship. It develops the farm's best crop, its boys and girls into the men and women of tomorrow. In fact I can find no record where any active 4–H member has ever been in any State institution.

The 4–H Club generally works through the local school and too often it is not given much time. With this handicap the 4–H has done an excellent job, but with more time and help from the teachers and the school we could do even more. We of the 4–H Club heartily endorse the bill offering half-pay to any teacher, who will lead a 4–H Club. This will force each school, which accepts it, to give the 4–H Club full recognition and a time to hold meetings. It will cause the leader to give more time and thought to the 4–H.

I leave with the question: Is the 4–H Club worth it?

Thank you.

Tributes to Hon. Arthur Capper

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. HOPE. Mr. Speaker, on January 3, 1949, Arthur Capper retired from the United States Senate after 30 years of distinguished service in that body, a period of service equalled by no other Kansan and by few in the history of our Republic. In addition, he served the State of Kansas most acceptably as its Governor for the 4 years immediately preceding his election to the Senate.

But Senator Capper's 34 years in public office is only a part of his public service. For many years prior to his election as Governor in 1914 Arthur Capper had been a leading citizen of our State, the publisher of great and influential newspaper and of farm publications with a national circulation and millions of readers. He was known for his philanthropy as exemplified in the Capper Crippled Children Foundation and the Capper Boys and Girls Clubs which antedated our splendid 4–H Clubs of today.

Senator Capper's career in and out of Congress has meant much to the State and Nation. He has been an inspiration to the youth of our State. Credit is due to him more than any other person for the fact that politics in Kansas throughout the years has been clean. His whole career has been an exemplification of public service on the highest possible plane.

Arthur Capper will be remembered long in Kansas and in the Nation as a constructive statesman. Some of the most important legislation of the last 30 years bears his name. He will be remembered as an outstanding Governor. But above and beyond that, he will be remembered by thousands and thousands of friends of high and low station for his kindly and helpful spirit. As one of these thousands, I am deeply grateful to Arthur Capper for many personal kindnesses. I shall never forget them.

On January 8, shortly before Senator Capper's return to Kansas, the Kansas delegation in Congress attended a breakfast in his honor. At that time all of the Members of the delegation in the House and Senate expressed their appreciation of Senator Capper's distinguished service and wished for him many years of

health and happiness as Kansas' first citizen.

Under leave to extend my remarks in the RECORD, I include herewith copies of the tributes which were paid to Senator Capper at this breakfast:

Senator REED. I have known Arthur Capper a long time. Politically, my first contact with him was when he was a candidate for election by the legislature for the office of State printer. That was around 1899.

He was one of the leading Bull Moosers in Kansas. He and his publications, especially the Topeka Capital, were very effective in the issues of that period. Others who helped with their newspapers were Henry J. Allen, of the Ottawa Herald, and later the Wichita Beacon; William Allen White, of the Emporia Gazette; and Victor Murdock, of the Wichita Eagle. I was still in the postal service, but my newspaper, the Parsons Sun, cooperated with the others.

Senator Capper was the Republican nominee for Governor in 1912. On the face of the returns he was defeated by the Democratic candidate, George Hodges, of Olathe, by 29 votes. Although urged by many to ask for a recount, Arthur Capper refused.

He was again the Republican nominee for Governor in 1914 and was elected by a large majority. He was reelected in 1916 at a time when the Democratic candidate for President carried Kansas.

He was nominated and elected to the United States Senate in 1918. He ran in the ablest field of candidates ever involved in a single campaign. His competitors were former Governor Stubbs, former Senator Bristow, and former Member of Congress Charles F. Scott, of Iola.

His record of 4 years as Governor and 30 years in the Senate is the outstanding career of any public man ever serving the State of Kansas. It will probably stand as the record for the next 100 years.

The strongest characteristics of Senator Capper are his kindliness and his friendliness. In the whole history of Kansas, there is no man who has commanded the respect and affection of the people of Kansas for so long a consecutive period as Arthur Capper. His service to the farmers of Kansas and to the United States has been given suitable recognition by Nation-wide farm organizations. Our best wishes for his health and happiness go with him through the years yet to come. We wish for him the best that is possible.

Senator SCHOEPPEL. I am glad to be at this breakfast with you, to honor our distinguished senior Senator from Kansas who is returning to his home in Topeka after a long and distinguished career, not only in the United States Senate but in our home State of Kansas.

I appreciate the opportunity of paying my respects to a man who is revered and respected for having given the major portion of his life to rendering a fine public service.

I am coming to the United States Senate as his successor and I recognize that he is leaving an awfully big pair of shoes for me to step into. He leaves an enviable record, not only for me but for any man serving in the United States Senate, to follow; and I hope that I can live up to it, to a degree at least, as creditably, as conscientiously, and as constructively as he has done. His record and his life will be an inspiration for me to emulate in the discharge of my responsibilities here.

As he returns to our home State I wish him Godspeed, and a happy and contented life.

Representative REES. Senator Capper leaves the Congress with a great record of 30 years' service—a record of which he or anyone else may well be proud. He has rendered outstanding service to the great State of Kansas as well as to the Nation.

Senator Capper has always been alert to the views and wishes of his constituents. No request has been too large or too trivial but that it received the attention to which it was entitled.

Many of the measures approved by Congress and enacted into law for the benefit of agriculture during the years of his service were sponsored by Senator Capper.

Senator Capper's activities on behalf of the boys and girls of his home State are well known.

Senator Capper was always considerate of his colleagues in the House of Representatives from his State of Kansas. His advice and his assistance were always at the disposal of his colleagues from Kansas. I want to acknowledge a debt of personal gratitude by reason of the kind treatment and the help I have received from Senator Capper during the time I have served as a Member of the House of Representatives.

Senator Capper has an interesting personality. During the long years of service he acquired a warm friendship among the Members of the Senate and the House. It is an enviable sort of friendship, in that Senator Capper had no enemies on either end of the Capitol or on either side of the aisle. He carries no grudges and respects everyone for his honesty and integrity.

Few men in public life have such great sense of justice as that of Senator Capper. He leaves an indelible imprint upon the records of the Congress and upon the history of this country that contributes to the betterment of our country and of mankind.

Mr. SCRIVNER. Senator Capper, I feel that CLIFF HOPE has pointed out that the one great characteristic that has endeared you to so many. It is your spirit of kindly helpfulness.

I remember quite distinctly when I came here 5 years ago how we met, how you put your arms across my shoulder and told me to let you know if there was any way you or your office could help.

The Capitol will never be quite the same without you. We'll miss your pleasant, gracious smile—your helping hand, your kind heart. And, as you go back to Topeka you'll leave a spot here no one can ever fill. And though you are there at home, you'll also be occupying a deep and a warm spot in our hearts and memories—pleasant memories of a great man, a great Kansan, a great public servant who has and deserves the good will of the State and the Nation.

Good luck and best wishes.

Representative COLE. The career of Senator Capper is to me a symbol of service. His public life has been dedicated to serve the people of his State and of his country. The underprivileged, the weak, the crippled, the little people have been recipients of his special interest and attention.

He is noted for his able advocacy of agriculture and concern with foreign affairs. But his true character shines in the symbol of service. His unobtrusive, yet persistent and even stubborn demands that the people be heard and their claims be given fair consideration have endeared him to the people of Kansas and the Nation.

Instead of inquiring about your health, the Senator asks, "What can I do for you?" No mere formal greeting, it is an expression of a fundamental and deep-seated desire to help his fellow man.

Kansas and America are proud of their distinguished son. He leaves the Halls of Congress with our best wishes, highest esteem and affection.

Representative MEYER. I am very happy to join with my congressional colleagues in paying tribute to our distinguished and beloved Senator Capper. Anything I might say on this occasion, no matter how strong my expressions might be, would be an understatement of the regard and affection we entertain for him.

I do want to say to you, Senator, in a very personal way, that I shall always cherish the many evidences that I have had of your fine friendship, and I shall always have before me as a beacon light the precepts of your long, honorable, and distinguished record in the service of our State and our Nation.

I extend to you, sir, a warm handclasp of good will, coupled with the earnest hope that, in your return to private life, there will be many years of rich contentment before you.

Representative SMITH. Arthur Capper—the most famous name in Kansas today. He is probably known by more people in his native State than any other living Kansan. For the last 40 years of Kansas history he has been an outstanding citizen. Today he is the patriarch of all Kansas, a man who made an outstanding success in the field of journalism, then 30 years in the United States Senate where he so distinguished himself as to be an outstanding Member.

Arthur Capper always knew what the people in Kansas were thinking. He wanted to interpret their thinking to the country at large. He was able to do this because he was a native Kansan of pioneer days. So it was easy for him to understand the forces that make public opinion in Kansas.

Kansas has lost an able representative in the Senate. The country at large has lost a great humanitarian. Arthur Capper will always be exalted in the eyes of the people of Kansas.

This quotation from the Bible typifies Arthur Capper: "Whosoever shall exalt himself shall be abased; and he that shall humble himself shall be exalted."

Socialized Medicine in Great Britain

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, April 8 (legislative day of Friday, March 18), 1949

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A British Doctor Discusses Socialized Medicine," from the Bedford Daily Times-Mail, of Bedford, Ind.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BRITISH DOCTOR DISCUSSES SOCIALIZED MEDICINE

Recently a member of the staff of the Culver Hospital in Crawfordsville, Ind., wrote to a British physician inquiring about effects of the National Health Service (NHS) which has been in operation in Britain since July 5. The reply has particular interest in this country now in view of the proposal of President Truman to enact a somewhat similar program in the United States. Excerpts from the letter follow:

"In point of fact the ordinary working-class patient is less well off than he was be-

fore the scheme started. You will appreciate that the NHS has brought no more doctors, no more nurses, no more hospital beds, and indeed, no more facilities of any kind into service with the result that there are now infinitely more people competing for the same amount of facilities because people who formerly paid for their attention now seek it under the scheme.

"The ordinary family doctor has queues outside what you call his office—most of the people in the queue are either wanting some sort of form signed or else they are coming with some very trivial ailment with which they would formerly have dealt quite effectively with themselves—for example, Junior with a sniveling cold in the head. A proportion of the people in the queue will, however, have some genuine, and perhaps serious, complaint but the doctor will find it difficult or impossible to give the necessary time to this patient and there is, of course, a grave danger that in the rush he may miss things.

"Dentistry has developed into an absolute racket. It has been said we have become a nation of weeping and wailing and national teeth.

"As is inevitable under any socialist scheme, there is no reward for skill, energy, and enterprise—payment is on a flat rate and the dullard and the laggard get the same scale or remuneration as the prodigy. The general practitioners are already worked to death and they have not so far had any epidemic to deal with—the Lord only knows what will happen if and when, for instance, a severe influenza epidemic comes along. My general practitioner friends are now, without exception, unhappy men—pride in their job is waning and, most significant sign of all, I know of none who are bringing up their sons to follow in father's footsteps, as happened so very often in the past.

"The result of this will be, I am sure, that there will be an entirely different type of man going in for medicine. Our future doctors will be small-minded little men with civil-service mentalities and their main concern will be keeping on the right side of their administration superiors, the correct filling of forms, watching the clock, and passing the buck.

"Hospital facilities have been depleted by the fact that there are more people sharing the same sized cake.

"Any statements you may have heard that there has been a change of attitude toward the NHS by the medical profession of this country are deliberate falsehoods, and have probably been issued by the propaganda departments of your left-wing organizations.

"H. A. H. HARRIS, F. R. C. S.

"LONDON, ENGLAND."

Proposed Changes in the Social Security Act

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. PATTERSON. Mr. Speaker, the importance of the social-security program to our citizens cannot be overemphasized. This matter concerns all of us, as old age brings with it the fear of financial insecurity. I believe that the American people are not so desirous of cradle-to-the-grave security as they are for adequate coverage and benefits to the elderly and to survivors of employed beneficiaries which will allow the maintenance of the necessities of life.

H. R. 2893, while not perfect in its provisions, does seek to apply the promises in the platforms of both the Republican and Democrat parties as expressed at the national conventions last summer.

The newspapers in the Fifth Congressional District of Connecticut have cooperated with me in publishing a questionnaire I developed to sound out the sentiment of my constituents on this legislation. The results are being received daily and I hope, in the near future, to make them public.

The American Federation of Labor Weekly News Service, in the issue of April 5, contains the following explanation which partially describes contemplated changes in the present act:

HIGHER RETIREMENT AND SURVIVORS' BENEFITS

Monthly benefits would be raised to take account of the increase in wage scales and living costs, through changes in the benefit formula and in the wage base used in the computation.

The average monthly wage would be based on the 5 consecutive years of highest earnings and would therefore reflect earnings in a worker's most productive years. Earnings up to $4,800 a year (now only $3,000) would be counted.

Under the new formula, the basic benefit amounts to 50 percent of the first $75 of the average wage (instead of 40 percent of the first $50) plus 15 percent of the remainder up to a total credited amount of $400 (instead of 10 percent up to a total of $250). To this basic amount, are applied factors which differentiate between workers with steady coverage and those who qualify on the basis of in-and-out coverage, and which produce higher benefits for long-term contributors.

The minimum primary benefit for an individual is raised from $10 to $25 and the dollar maximum is increased from $85 to $150. The bill would also increase the proportion of the primary benefit which is payable to survivor children and to the aged parents of a deceased worker, and would remove the maximum which now holds family benefits to not more than twice the primary benefit.

The amount which a beneficiary may earn in a month and still draw benefits is raised from $14.99 to $50.

Benefits for persons already on the rolls would be raised to a level which reflects these liberalizations and takes account of the upward trend of wages since the enactment of the original program.

ADDITIONAL TYPES OF BENEFITS

The proposed program provides comprehensive protection against the risks of sickness and extended disability. Benefits, comparable to those for old-age retirement, would be payable to disabled workers and their families when the insured individual is unable to engage in any substantially gainful work. Weekly benefits to compensate the loss of wages during the short spells of sickness and during the early stages of extended disability are provided if the worker is unable to perform his most recent, customary, or reasonably similar job; weekly maternity benefits are also provided. Medical, surgical, training, and other rehabilitation services are to be provided to persons eligible for disability benefits. (Self-employed persons and Federal civilian employees would not be covered for sickness insurance, nor would this type of benefit be payable to members of the armed forces while they are in service.)

Weekly disability benefit amounts for a worker without dependents approximate 50 percent of his weekly wage. There is a minimum of $8 and a maximum of $30. Benefits are increased if he has dependents. The maximum weekly benefit for a worker with three dependents and at the highest wage level on which benefits are computed is $45. The maximum duration is 26 weeks.

Other new benefits are those payable at age 65 to the disabled husband of a woman primary beneficiary and to the disabled widower of a woman who was insured when she died. Provision is made for continuing the payment of a disabled child's benefit after treatment of age 18.

Under the revised provisions a lump-sum death benefit would be provided whether or not monthly benefits are payable in the month of the worker's death.

Illustrative monthly benefits under present law and under provisions of H. R. 2893 [1]

RETIREMENT BENEFITS FOR AGE (AND FOR EXTENDED DISABILITY UNDER THE BILL)

Average monthly wage	Insured person		Insured person and wife		Insured person, wife, and 1 child		Insured person, wife, and 2 children	
	Present	Proposed	Present	Proposed	Present	Proposed	Present	Proposed
$100	$27.50	$45.40	$41.25	$68.10	$55.00	$80.00	$55.00	$80.00
$200	38.50	61.90	57.75	92.90	77.00	123.90	77.00	150.00
$300 [2]	44.00	78.40	66.00	117.60	85.00	150.00	85.00	150.00
$400 [2]	44.00	84.90	66.00	142.40	85.00	150.00	85.00	150.00

MONTHLY SURVIVOR BENEFITS

Average monthly wage	Widow		Widow and 1 child		Widow and 2 children		Widow and 3 children	
	Present	Proposed	Present	Proposed	Present	Proposed	Present	Proposed
$100	$20.63	$34.10	$34.38	$68.20	$48.13	$80.00	$55.00	$80.00
$200	28.88	46.50	48.13	93.00	67.38	123.90	77.00	150.00
$300 [2]	33.00	58.80	55.00	117.60	77.00	150.00	85.00	150.00
$400 [2]	33.00	71.20	55.00	142.40	77.00	150.00	85.00	150.00

[1] Assuming 10 years of coverage in an elapsed period of 10 years. No allowance is made for the fact that the average monthly wage, as defined in the bill, would ordinarily be higher than under the present act. The fact that a woman worker or the wife of a retired worker would be eligible for benefits at 60 rather than 65 as at present is in most cases equivalent to a further increase in benefit amounts.

[2] Maximum average monthly wage used in computing benefits under present law is $250.

Yalta and the Communists' Objective

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, the crime that was committed at Yalta has a direct connection with the objectives of the Communist Party, and goes back to September 1, 1928. I am inserting as part of my remarks a memo addressed to all Members of the Eighty-first Congress by Alfred Kohlberg, of New York City. It is illuminating and Mr. Kohlberg raises some very interesting questions:

To the Members of the Eighty-first Congress:

Gentlemen, the New York Times, February 20, 1949, said of Yalta: "The talk was of peace for 50 years. None of the Yalta negotiators could have believed that the cold war would be on in 3 years."

John Foster Dulles said, in Colliers, March 12, 1949: "It was like a nightmare when, at the end of the most awful of all wars, we suddenly awoke to learn that a great partner in victory was actively plotting against the freedoms that we thought we had been fighting for together."

On April 4, 1945, I sent each Member of Congress a copy of the enclosed dream of Earl Browder, written in January 1945, the month before Yalta. Each March since then I have duplicated it to each Member of the House and Senate.

Earl Browder's dream is based mainly on two official Comintern documents, both unanimously adopted by the Sixth World Congress of the Communist International. Both were adopted the same day, September 1, 1928. The Library of Congress has both available for you.

Neither Mr. Dulles, nor any of the other great statesmen who represented us at Yalta had ever read these documents. For that reason, they have nightmares now, instead of prophetic dreams at the right time.

This administration scuttled the working United Nations (which was formed by the Declaration of Washington, January 1, 1942, with its operating Joint Chiefs of Staff, minus Russia), in favor of a new United Nations, still-born via the veto, and with an abortive Chiefs of Staff, including Russia.

Having replaced strength with weakness it has produced one improvised cure-all after another, each guaranteed to prevent world war III. In chronological order, these were UNRRA; Bretton Woods; the UN; Potsdam; the British loan of $3,750,000,000; post-UNRRA; the Italian, Rumanian, Bulgarian peace treaties; the Truman doctrine; the Marshall plan; and now, the Atlantic Pact.

Each had its uses, but meantime Americans may properly ask:

1. Who ordered the destruction of untold billions worth of airplanes, tanks, antitank guns, artillery, antiaircraft guns and ammunition in Europe after the war? Was it done deliberately to leave western Europe militarily naked before the Russian bear?

2. Who ordered destruction and/or dumping in the Pacific lagoons of $17,000,000,000 of ammunition? And is it true that it is now being salvaged for scrap?

3. Who ordered destruction of more than $1,000,000,000 of arms, ammunition, and airplanes in India after the war? Was it to keep China from being properly armed?

4. Who ordered destructions of surrendered German and Japanese arms for which China had asked?

Is it not the same administration and same State Department that now want billions to replace in Europe the very arms they ordered destroyed there in 1945–46?

And is it not the same State Department that now does not want to arm Nationalist China, but advises that we let the Red dust settle in China and all east Asia in the hope that Mao Tse-tung will turn out to be a Chinese Tito?

Unless the National Government of China is a much stronger reed than our State Department believes, will not all east Asia be Communist long before 1951, the year Browder's dream calls for Soviet conquest of western Europe and Britain? That would be 1 year before completion of the Marshall plan or the arming of the Atlantic allies, and a year after Pacific Fleet Admiral Ramsey foresees our withdrawal from Asiatic waters.

Secretary of State Acheson and White House Secretary for Foreign Affairs Niles and other makers of our bipartisan no-foreign policy (to quote Alf Landon) brag that they have never read the Program of the Communist International or the Resolutions on the Colonies and Semi-Colonies—the two documents referred to above. No wonder we have gone from the exultation of VE- and VJ-day to the confusions of today, and seem headed for the defeats of 1951 and the conquest of 1963 predicted in Earl Browder's dream.

Just to be fair, I must also ask: Where are the Republican leaders who read these two documents, knew what was coming, and spoke up?

Very truly yours,

ALFRED KOHLBERG.

Comparison of Potential Voters and Actual Votes Cast in 1944 and 1948

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES
Friday, April 8 (legislative day of Friday, March 18), 1949

Mr. BREWSTER. Mr. President, I have had prepared a tabulation of the potential voters and a comparison made with the number of votes cast in 1944 and 1948. Opposite this is shown the percentage voting in both years, followed by the number who did not vote.

An examination of these figures reveals many interesting facts, but the most important is the number of people who were eligible in November 1948, but did not vote. No doubt there are as many reasons for that as there are individuals. Whatever the reasons may be, the American people should be aroused to the seriousness of the situation, for if this apathy continues, it might well be the underlying cause that could destroy our representative form of government.

I particularly call attention to column 3 and ask the Senate to note the decreased percentage of those voting in most States in the last election.

The figures in column 1 show an increase of 13,400,000 potential voters; but in spite of this 13,400,000 increase, there were less than 1,000,000 additional votes in 1948 than in 1944.

The figures are, to me, most astounding, for they show that 45,000,000 persons out of approximately 93,000,000 eligibles did not vote. I think it is a reflection upon everyone in political life that we have so utterly failed to capture the imagination of the American people. Accordingly, I have had this tabulation prepared. I am not even blaming the political machines, because I think in the first instance bringing home to the people of the country the profound issues with which we are faced is the responsibility of those of us who are in public life. Of course, whatever reflection this situation may involve upon our respective political machines can be determined.

I point out, in contrast, that while our people were casting slightly more than 50 percent of the potential vote in this country, Italy, which we have thought was not quite so familiar with the meaning of democracy, in its great election last spring cast 89 percent of its potential total vote. That is certainly a tribute to the interest which has been aroused in Italy.

So, Mr. President, I ask unanimous consent that this tabulation may be printed in the Appendix of the RECORD.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

ESTIMATED CIVILIAN POPULATION OF VOTING AGE AND VOTE CAST FOR PRESIDENT, 1944 AND 1948

NOTE.—Voting age for the purpose of this table means all those 21 years and over (except Georgia where the voting age is 18), and it includes about 2,000,000 aliens (estimate by Census Bureau), and also undetermined number of persons in the District of Columbia who do not have voting residence in any State. It excludes, however, members of the armed forces both here and abroad.

EXPLANATION

Opposite the name of your State you will find—

1. The first column marked "Potential voting population" means those 21 years of age and over for 1948 and 1944. By subtracting we arrive at the population increase between 1944 and 1948.

2. The figures in the second column, "Total vote cast," are for all candidates. By subtracting we arrive at the increased or decreased number of votes cast in 1948. In most States the number of people voting was greater in 1948 than in 1944.

3. The third column marked "Percentage voting" is the percentage of potential voting population as listed in the first column. The percentage shows a decrease for 1948 in all States except Arizona, Nevada, and the Southern States. (This is the important column—it is the percentages that count.)

4. In the fourth column, the figures given are for the number of eligibles not voting.

	Potential voting population	Total vote cast	Percentage voting	Not voting
United States:				
1948	93,704,000	48,833,680	52.0	44,870,320
1944	80,298,000	47,976,263	59.7	32,321,737

ECA—What We Can Really Afford

EXTENSION OF REMARKS
OF
HON. HERBERT A. MEYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. MEYER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a radio address entitled "ECA—What We Can Really Afford" made by me over five stations in my district:

Greetings to my friends in Kansas. I am happy to be starting this series of radio talks because it gives me an additional means of talking over Washington events with you.

The spending spree is still going on. The Senate has about finished debate on the Economic Cooperation Administration—commonly called the ECA and, in spite of a vigorous fight by some Republicans who want to know where the money is coming from to pay all the bills, ECA was voted the full amount of over $5,000,000,000 for the coming year. The cry is that we must support the bipartisan foreign policy. I believe that we should present a united front in foreign policy but I do not believe that we should vote billions of dollars out of your

pockets and mine without knowing something about how that money is to be spent. Foreign policy is not a sacred cow like those of India. It must and should be a policy which is thoroughly debated and studied from all angles.

This Marshall plan or ECA, according to Administrator Paul G. Hoffman, is costing every man, woman, and child in the United States $35 apiece. And Mr. Hoffman states that we are not going to get any of it back. That cost is for the first year only. For a family of man and wife and one child, this is more than $100, and I think we should look into this spending, for it is going to cost us a great deal more before we are through with it. The administration says we can't cut any of the appropriations or we will destroy the whole program. Well, let's look into that statement a little more closely.

It's true, no doubt, that ECA made it possible for the European people to get back on their feet. It fed them and gave them tools to work with. When people are fed and when they have work to do that earns them money, they are not so interested in communism. If ECA funds were used to feed hungry people to the extent of our ability to do so, and if money were given or loaned them so that they are able to rehabilitate themselves industrially, I'd say that was a fine thing. But it goes much further than that. We are giving them our precious raw materials, which they, in turn, can fabricate and turn over to Russia and her satellite countries. The administration, on one hand, is fighting communism through ECA and the Atlantic Pact, and, on the other hand, providing some of the very sinews of war by not having a checkrein on where that aid is going.

Several weeks ago the British representative at the United Nations stated that England had now recovered the use of her prewar economic legs and would be able to go forward with the expansion of her home plans. Everybody knows that England has a totally socialistic form of government and has nationalized everything from the coal and transportation industries to banks. She is now in the process of nationalizing the strongest industry she has—the steel industry. Even the London Economist, one of England's big weekly magazines, states that the nationalizing of the steel industry is a political commitment and not an economic necessity.

And so our ECA or Marshall-plan money, which all of us pay out in the form of taxes, is to be used to further social experimentation in England. This statement created such a furor that the British Ambassador and the Prime Minister of Great Britain immediately issued statements saying that it wasn't so—that recovery was based on further ECA money. The wires got crossed somewhere. Well, what are the true facts? Just last week the British treasury announced that Great Britain ended its fiscal year of 1948 with a surplus of over $3,000,000,000. On the same day that that announcement appeared, the president of the Board of Trade in England announced in the House of Commons that Britain is loaning Russia $36,000,000 to buy supplies from them. And some of the items might be used in the making of war goods. These items England is exporting to Russia and loaning her the money with which to buy them include graphite, mica, various other minerals, precision machinery, industrial diamonds, some scientific apparatus, various chemicals, and other war potentials.

Can we really afford to pay over $35 a year for every man, woman, and child so that another country can have a budget surplus and loan money to Russia to pay for goods that might be turned against us?

Like Calvin Coolidge's preacher who was "agin" sin, I'm "agin" giving ECA a blank check with no questions asked. I want to know what is being done with our money. Since the President has stated that unless taxes are raised we face a budget deficit here while England, only one of the countries to whom we are giving money and goods, not only boasts of a surplus but is loaning money to Russia, I want to see why we can't shave at least a little of that cost.

All of you know when you paid your income taxes on March 15 that you had a tax reduction. A Republican Congress gave you that tax reduction, predicated on the fact that Government expenditures could and should be reduced. And yet today, President Truman is still insisting that taxes must be raised this year by $4,000,000,000. ECA is going to cost us over 5 billion this year—with no questions asked and no strings attached if the present administration has its way.

None of you can pay your bills and keep going financially if you constantly overspend your income. The same thing is true of the Government of the United States. The only way to get out of debt is to begin to cut expenditures and live within our income. If we do not make some judicious cuts in ECA spending, how in heaven's name can we begin to cut anywhere?

Recently a delegation of the Verdigris River Flood Control Association journeyed to Washington and appeared with me before the Committee on Appropriations to urge an appropriation of $1,000,000 to start construction of the Toronto Dam and Reservoir, so imperatively needed because of the devastating floods we experience each year right here at home. The committee gave us an attentive hearing but turned down our request and others of like nature in other parts of the country. The committee also cut the President's budget requests for rivers and harbors and flood control by 15 percent, stating that its desire was to appropriate the minimum amount required to carry forward any program which should be provided for, and that it expected the Department of the Army to use every device at its disposal to insure the lowest possible expenditure of the taxpayers' funds. The 15-percent cut was made because of greater available materials, increased production, and reductions in material costs. This was the policy announced by the Committee with respect to projects within our own country, and yet when we come to spending in foreign countries, the administration insists we can't apply to ECA this downward trend in costs.

If our help to Europe is in such a precarious condition after spending over $5,000,000,000 during the last year, that a 10 percent cut, for instance, would destroy the whole program, then we have thrown that money away and ECA head, Paul G. Hoffman, is right when he says we won't get a cent of it back. But it isn't only money that's involved. It is our real substance such as food, minerals, oil and other commodities which, if kept at home, would have lowered our own cost of living. This fact is admitted by the former Secretary of Commerce and present European head of ECA, Averell Harriman.

There are no people more generous than the American people, including the folks in our great State of Kansas. But there is not only a bottom to the barrel but also a ridiculous and dangerous situation when we send materials and money that are, in turn, exported to countries with whom we refuse to do business. It just doesn't make sense.

I'd like for once to have some nation to whom we have given so generously to say "I still need a little help but I don't need so much this time. You can cut down a little on this loan." Friendship that is bought is not genuine. And if our aid, so generously given by every citizen of this country, means so little that the slightest curtailment would throw all of Europe into the arms of Russia, then I say we had better keep that money and use it to build the strongest Army, Navy and Air Force in the world.

But I do not believe this. I contend that we can give adequate aid and still cut some of the cost. The time has come, however, when we have to ask ourselves—how much can we afford to do without bankrupting ourselves? How much can we really afford to spend internationally and nationally without a back-breaking tax burden?

Every head of a household goes over his income and his needs and then asks himself—"Can I afford to buy this or that." In government we must ask ourselves the same question. We've just got to get off this spending spree. A financially weakened or unsound United States is what our potential enemies are praying for. I say we can afford to give real aid and help. But we cannot afford to give to help those who openly state that they are against our way of life. And we cannot afford to give to those nations whose recovery is assured and place the burden of taxes and debt on our own people.

What do you think about this? Do you agree with me? I'd like your thoughts on this and the other perplexing problems that confront us here in Washington.

I want to say I have enjoyed this opportunity of talking to you and am looking forward to visiting with you next week. Until then, thanks for listening and good luck, all.

Basing-Point Change Will Have Permanent Effect, Federal Trade Commission Asserts—Commission Fears Legal Status of Price Differential Actions During Proposed Moratorium—Statement of Robert B. Dawkins, Associate General Counsel, Before Subcommittee of the Senate Judiciary Committee, Thursday, March 31, 1949

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. PATMAN. Mr. Speaker, Mr. Robert B. Dawkins, associate general counsel for the Federal Trade Commission, testified before a subcommittee of the Senate Judiciary Committee in charge of S. 1008, the moratorium bill, on March 31, 1949. Mr. Dawkins expressed the opposition of the Federal Trade Commission to the passage of moratorium legislation. Mr. Dawkins' statement clearly indicated that the proposed legislation did not settle any of the existing controversial issues nor did not modify or clarify existing antitrust laws.

Mr. Dawkins unequivocally stated that—

The Commission does not believe that enactment of the proposed legislation is necessary or desirable. Insofar as it may affect existing law, it is obviously intended to be and acts only as a suspension, but it is almost certain to create new doubts as to the legal status of the practices which the Congress finds necessary to safeguard with a moratorium. The issues which have been most frequently cited as causes of uncertainty are involved in the Rigid Steel Conduit case. This case will be argued today before the Supreme Court and it appears likely that it will be decided in the near future, perhaps a few weeks. The decision should establish with certainty what the law now is upon the

points involved. After this decision, no doubt Congress will be in a position to determine whether any permanent change in existing law should be made as a result thereof.

Pointing out that the proposed moratorium is likely to increase any confusion which now exists, Mr. Dawkins further stated:

One of the most important points of uncertainty in the bill is in the provision for a moratorium applicable to the use of a delivered price system by an individual seller. Contrary to the implications of this provision, there has been no holding or decision by the Commission that delivered prices are unlawful per se, and as the Commission has publicly stated, there is no basis in the law for such a decision.

Speaking of the decision against the Standard Oil Co. of Indiana a week or so ago in the Court of Appeals for the Seventh Judicial Circuit, upholding a cease-and-desist order of the Federal Trade Commission which prohibited the Standard company from engaging in certain unfair methods of competition and monopolistic practices, Mr. Dawkins said:

If the decision is not reviewed by the Supreme Court, or if reviewed and affirmed, the effect of the moratorium would be to change the law for 2 years rather than merely to clarify it.

Thus, it may be unqualifiedly asserted that no useful or good purpose is served by the passage of moratorium legislation which affects the antitrust laws, but rather the progress of a half-century is destroyed by hurried congressional action. The rigid-steel conduit case was argued before the Supreme Court the week of March 28; therefore, the issues which Mr. Dawkins cites as the most frequent causes of uncertainty have come to rest, and will undoubtedly soon be resolved. Mr. Dawkins' statement in its entirety follows:

REPORT OF THE FEDERAL TRADE COMMISSION ON S. 1008, PRESENTED BY ROBERT B. DAWKINS, ASSOCIATE GENERAL COUNSEL, FEDERAL TRADE COMMISSION, BEFORE A SUBCOMMITTEE OF THE SENATE JUDICIARY COMMITTEE

Mr. Chairman and gentlemen, my name is Robert B. Dawkins. My employment is associate general counsel of the Federal Trade Commission. I am appearing here pursuant to the request made by the Commission to your committee. May I say first that the Commission appreciates the opportunity afforded to have its views concerning S. 1008 presented before your committee. It should also be said that the views are those of the Commission, with one member, Commissioner Mason, dissenting.

The proposed legislation under consideration by your committee contains a general declaration of policy which would have permanent effect. This becomes of importance, as will later appear, in connection with certain language used in stating what it has not been the intent of Congress to do. The general declaration is followed by specific provision for a 2-year moratorium respecting the application of the Federal Trade Commission Act and the Clayton Act to the use of a delivered-price system by an individual seller and to the absorption of freight in good faith by an individual seller to meet competition.

The Commission feels that the adoption of the moratorium proposed is likely to increase any confusion which now exists as to the meaning of the Federal Trade Commission and Clayton Acts. An important reason for this is that a Congressional declaration designating certain practices which are to be exempt from the law for a specified period necessarily implies that these practices might otherwise be unlawful. Should the moratorium expire without amendment of the statutes covered by it, this implication might easily become the basis for further uncertainties arising from the questions of what becomes unlawful as a result of the lapse of the moratorium. Yet the practices to which the moratorium is directed are, for the most part, innocent practices that have not been challenged by the Commission and about the legality of which no reasonable basis for doubt exists. Insofar as the moratorium is applicable to certain other practices the scope of its application is not entirely clear or certain.

BASING-POINT MORATORIUM OPEN INVITATION FOR CONSPIRACY

One of the most important points of uncertainty in the bill is in the provision for a moratorium applicable to the use of a delivered-price system by an individual seller. Contrary to the implications of this provision, there has been no holding or decision by the Commission that delivered prices are unlawful per se, and as the Commission has publicly stated, there is no basis in the law for such a decision. Numbers of decisions of the Commission in Clayton Act matters are in fact based upon discriminations between delivered prices. Under the Federal Trade Commission Act, controversy has centered upon the question of how far each of a group of sellers can engage in practices parallel to those of other members of the group with the knowledge that all members of the group are acting in the same way and in contemplation of the fact that price competition will thereby be suppressed or eliminated. This problem arose from the second count of the complaint in the Rigid Steel Conduit case. On February 11, 1949, Commissioner Davis, with the concurrence of Commissioners Ayres and Ferguson, stated to the Subcommittee on Trade Policies of the Senate Committee on Interstate and Foreign Commerce that in the Commission's view the Conduit case is simply a proceeding against a conspiracy situation. In public discussions some persons have argued that the Commission's position in that case applies to other than conspiracy situations. The Commission has publicly stated that the position taken in the Conduit case is applicable only in conspiracy situations. So far as the Commission is aware, no one has offered any basis for a belief that the mere use of a delivered price system by an individual seller without any concert of action with others is at stake in that case. In any event, however, the proposal to authorize individual use of a delivered-price system does not touch the major question in that case.

The proposed legislation does not definitely settle any of the controversial issues which exist about the application of the Clayton Act to delivered-price systems. An unlawful price discrimination may exist in the difference between delivered prices at different delivery points such as may appear, for example, when a buyer in one locality is charged phantom freight not exacted from his competitors elsewhere, and this may be sufficient to seriously endanger his ability effectively to compete. The same may be true of differences in zone or sectional delivered prices. So far as the Commission is aware, no one has challenged the propriety of a proceeding against such forms of price discrimination, yet the legal status of such price differentials during the proposed moratorium would be uncertain. If the authorization to use a delivered-price system should be interpreted as a sanction for any price discriminations that might exist between delivered prices, the Commission would be prevented from challenging this or any other form of discriminations in price so long as the seller took the precaution of selling on a delivered basis. If the bill were not so interpreted, the Commission would remain free to proceed against any unlawful discriminations as readily as before, and this part of the proposed moratorium would have no effect upon the application of the Clayton Act. Whether or not the language of the bill is intended to grant immunity not only to the use of delivered prices but also to discriminations that may appear among delivered prices is not clear. In this way it would introduce new and important uncertainties into the enforcement of the Clayton Act.

MORATORIUM DOES NOT CLARIFY BUT CHANGES ANTITRUST LAWS

The other practice which is given the benefit of the moratorium is absorption of freight by an individual seller to meet competition. The declaration of policy in the first section of the bill supports this type of activity when carried on in good faith and, although section 2 of the bill does not include the phrase "in good faith," it will be assumed for the purpose of the present comment that the moratorium is only intended to be applicable where the practice is characterized by good faith. On this assumption the moratorium would not in any way modify or clarify the application of the Federal Trade Commission Act, for where there is a price conspiracy and where the members of a group knowingly engage in a practice designed to eliminate price competition, good faith is necessarily absent. In price discrimination cases under the Clayton Act the Commission believes that the present law makes good faith in meeting competition less than an absolute defense in those relatively rare cases in which the statutory injury to competition appears in spite of the fact that the seller's discrimination consisted merely in meeting competition. In its recent decision in the Standard Oil case the United States Circuit Court of Appeals for the Seventh Circuit sustained this view of the law. It is not now known what action will be taken, but presumably a review of this decision by the Supreme Court will be sought. If the decision is not reviewed by the Supreme Court, or if reviewed and affirmed, the effect of the moratorium would be to change the law for 2 years rather than merely to clarify it. The Commission has publicly indicated that it would see no objection to a permanent change in existing law that would make the meeting of an equally low price of a competitor in good faith a full defense in price discrimination cases. However, injury to competition seldom arises from a mere meeting of the equally low price of a competitor in good faith, and therefore the Commission believes the issue to be relatively narrow and not of sufficient importance to require emergency action. There is also the further consideration that should the case be reviewed and reversed by the Supreme Court, there would then be no occasion for such legislation.

BASING-POINT MORATORIUM UNNECESSARY AND UNDESIRABLE

The Commission does not believe that enactment of the proposed legislation is necessary or desirable. Insofar as it may affect existing law, it is obviously intended to be and acts only as a suspension, but it is almost certain to create new doubts as to the legal status of the practices which the Congress finds necessary to safeguard with a moratorium. The issues which have been most frequently cited as causes of uncertainty are involved in the Rigid Steel Conduit case. This case will be argued today before the Supreme Court and it appears likely that it will be decided in the near future, perhaps a few weeks. The decision should establish with certainty what the law now is upon the points involved. After this decision no doubt Congress will be in a position to determine whether any permanent change in

existing law should be made as a result thereof.

In the event, however, that your committee should decide to adopt the general principles of the proposed legislation, it is believed that it would wish to avoid, so far as possible, creating any new uncertainties or changing the law in respects other than those explicitly spelled out. The bill presumably was not intended to weaken the antimonopoly laws, but there is some incidental language in it that might have this effect. The Commission would, therefore, like to suggest for the consideration of your committee certain changes in the language of the bill.

In line 8 on the first page, insert the words "or discriminatory" after the word "monopolistic." Presumably the declaration of policy contained in this section of the bill is intended to embrace the present policy of section 2 of the Clayton Act, which condemns discriminatory pricing practices when they injure competition. It is not certain that the phrase "monopolistic practices in restraint of trade" will be understood to include this aspect of congressional policy.

In lines 1 and 2 on page 2 of the bill and in lines 12 and 13 on the same page, substitute the phrase "quote and sell at delivered prices" for the phrase "use delivered price systems." It is possible that the latter phrase, now contained in the bill, might be interpreted not merely as an authorization to sell at delivered prices but also as an authorization to maintain differences in delivered prices, no matter how injuriously discriminatory these differences might be. It is also possible that the word "systems" might be interpreted as an echo of the word "systematic," which the Commission and the courts have employed in cases involving conspiratorial use of the basing-point system, and if so the explicit authorization to use delivered-price systems might be interpreted as a limitation upon the policy against conspiracies. The substitute language here proposed is intended to make clear that quotation and sale at delivered prices is not in itself subject to attack; and at the same time is intended to avoid impairing the prohibition of conspiracies and to leave any discriminations which might arise in the delivered prices to be considered on their merits in the light of the applicable law and of the other provisions of the present bill.

In line 2 on page 2 and in line 13 on the same page, substitute the phrase "an equally low price of a competitor" for the word "competition." The present statute as to price discrimination uses the phrase "to meet an equally low price of a competitor." Use of different language in the bill invites claims that the Congress intends to change the concept of meeting competition, whereas, if the Commission understands the bill correctly, such a change is not a part of the purpose. Moreover, the change in language would raise questions about the validity of precedents established under the present law. There is also the consideration that meeting competition lacks the objective certainty of the phrase "meeting the equally low price of a competitor," and thus tends to introduce subjective tests of an uncertain character.

In lines 4, 5, and 6 of page 2 eliminate the words "and not through any combination or conspiracy in violation of the Sherman Act as amended." The declaration of policy already contains, in lines 7 to 10 of the first page, a condemnation of combinations and conspiracies, so that the repetition of the thought is not necessary. Moreover, by specifically invoking the Sherman Act, the bill might be held to imply that there can be no violation of the Federal Trade Commission Act except in conduct which would violate the Sherman Act; and, if so, the effect would be to cast doubt upon the validity of precedents in cases under the Federal Trade Commission Act and to indicate that the jurisdiction of the Federal Trade Commission is narrower than the Congress intended, and than the courts have repeatedly held it to be.

In line 13 on page 2 insert the phrase "in good faith" immediately before the phrase "in any and all markets." The same phrase was used in line 4 on the same page, and its omission in line 13 was presumably inadvertent. Unless it is included, there is danger that the bill might be so interpreted as to authorize a large enterprise to engage in price discrimination designed to destroy its small competitors for a monopolistic purpose, so long as the discrimination takes the form of a meeting of competition.

Change the period at the end of section 3 to a comma, and add the words "or the enforcement of any order which was entered on or before that date." In seeking to preserve the validity of cases now pending in the Federal courts, the bill presumably intended to preserve also the validity of the orders of the Commission where these orders were not appealed or where they were affirmed upon appeal. Though the Commission does not believe that any of its orders contravene the principles set forth in the bill, it suggests the desirability of avoiding a flood of requests or motions that orders be modified because of the bill and also the desirability of avoiding a debate about the significance of the bill in each enforcement proceeding having to do with delivered-price systems.

The North Atlantic Pact

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. HAND. Mr. Speaker, at a time when the thoughts of America are focused on the North Atlantic Pact, and when we are all concerned with whether it is indeed a move toward safety, peace, and security, or a gamble inviting war, it is good to see a very clear analysis of its significance in the Vineland (N. J.) Times Journal. Mr. Max Leuchter, the editor of this newspaper, does not deceive himself about the pact. He recognizes its merits, but he also recognizes it is a confession of the temporary failure of the United Nations. The editorial follows:

THE NORTH ATLANTIC SECURITY PACT

We call them World War I and World War II, but future historians will consider them what they really were: "One war for 'one world'."

If we today consider these two wars in their proper light, we must admit that the tragic loss in lives and treasure, unparalleled in all recorded history, did not result in one world.

The North Atlantic security pact, signed by representatives of the United States and 11 other nations of the Northwest Atlantic, is sufficient proof that all the blood, sweat and tears occasioned by the two past world wars have not been sufficient to weld the peoples of the world into the common cause of international peace, and the settlement of international disputes by amicable means.

The Atlantic Pact is proof in itself that the United Nations while not as feeble and as useless as the defunct League of Nations, has not succeeded in attaining the lofty aims which motivated its organization. The Pact of itself proves that the sword is still mightier than the pen.

The Atlantic Pact provides the basis for an international military force to be utilized when any one of the signatories is threatened or made the subject of an attack by an aggressor. It provides the teeth that should properly have been an integral part of the Charter of the United Nations.

"In this pact," said President Truman, "we hope to create a shield against aggression and the fear of aggression—a bulwark which will permit us to get on with the real business of government and society, the business of achieving a fuller and happier life for our citizens."

The pact is more properly a weapon than a shield. If it is ratified by the United States Senate later in the year, it will serve notice to Soviet Russia and the Communist-dominated governments of eastern Europe that this is no walkie-talkie alliance with vetoes puncturing all forward movement, but that it is a power-packed steel-fisted machine of war. Lacking approval of the Senate, the pact would have no more effect than a busheiful of other "defensive" pacts.

The North Atlantic security pact is the visible evidence of how, thus far, the United Nations has failed to bind the East and the West into Wendell Willkie's One World. It is visible evidence of Rudyard Kipling's sour contemplation: "East is east and west is west and ne'er the twain shall meet."

The western nations consider the Atlantic Pact as a barrier against aggression. The Soviet Government considers it as "an instrument of aggression." On the latter charge, President Truman said: "We have no purpose of aggression against others. To suggest to the contrary is to slander our institutions and defame our ideals and our aspirations."

Russia can only blame itself for this new development. That country has persistently and consistently, by the use of the veto power in the United Nations Security Council, by nonparticipation in the international, economic, and cultural organizations set up within the United Nations, and by its organized method of creating chaos in every part of the world, prevented world-wide progress and rehabilitation and world peace other than on Communist terms.

There are many high-minded people in many nations who believe that constitutional government can live in "one world" with Red fascism. In their zeal for an end to war, they close their eyes to the fact that communism depends on physical force to maintain its position.

If the North Atlantic security pact is ratified by the Senate, we will then be back to where we started, except that this time the aggressor nation or nations will not find themselves in as favorable a military position as was the case of the Axis Powers in the past two world wars. Only the knowledge that a quick conquest cannot be attempted may bring about world peace based on reason and conciliation.

MAX LEUCHTER.

Excessive Cost of National Health Service in England

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, we have heard and read a great deal about the advantages of a socialized health program. As a part of my remarks, I am including a statement from a London magazine which indicates that

the socialized Government of England has a bear by the tail and does not know what to do with it:

EXCESS OF COST OF NATIONAL HEALTH SERVICE OVER ESTIMATE

All the undertakings of the Socialist Government show one thing with melancholy monotony—increased cost. The official figures, just issued, for the National Health Service are no exception. The cost of doctors is $118,000,000, an excess of $9,200,000 over the estimate. The cost of dentists is $82,800,000, an increase of $54,600,000. The cost of pharmacists is $70,860,000, an increase of $20,000,000 over the estimate. The cost of opticians is $57,800,000, an excess of $15,000,000 over the estimate. A large part of this vast expenditure is wasted, as is so characteristic of Socialist finance.

Cleveland Quick To Recognize Reality

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mrs. BOLTON of Ohio. Mr. Speaker, under the unanimous consent granted me, I make available to the House membership editorials from the Cleveland Plain Dealer and the Cleveland Press, as follows:

[From the Cleveland Plain Dealer of April 6, 1949]

COMMUNIST FRONT IN CHINA

Those Americans who have been deluding themselves with the belief that the Chinese Communists were somehow different from the Russian Communists, that they were merely advocates of land reform and had no interest in promoting a world revolution, have had a rude awakening.

For the Chinese Communists have joined the other Communist Parties throughout the world in proclaiming that in the event of another war they would fight on the side of Russia "to defeat the aggressors, overthrow the entire imperialist system and realize the liberation of all mankind and permanent peace."

This manifesto, like the other issued by the Communist Parties in the United States, England, France, and Italy, to name a few, was inspired by the North Atlantic Pact. The Communists are trying to convince the people in the countries they dominate that the pact is aimed at provoking a war against the Soviet Union. The fact is, of course, that the Soviet Union has nothing to fear from the pact unless it is planning an aggressive war against one or more of the 12 nations which signed it, in which case the power of all 12 signatories would be arrayed against the aggressor.

The manifesto of the Chinese Communists puts the stamp of complete bankruptcy on the policy, or lack of policy, the United States has pursued in China since the end of the war. A major policy of the Roosevelt administration, one which brought on the war with Japan, was our refusal to abandon China to Japanese domination. At great cost we saved China from Japan, only to make it possible for another foreign power to move in.

The campaign to discredit the Nationalist Government of Chiang Kai-shek, to bring about the suspension of American aid to China and to attempt to compel Chiang to form a coalition government with the Communists was one of the greatest victories ever won by the Communist propaganda. It resulted in delivering a large part of China into the hands of the Communists.

If the maintenance of a free China was one of our major war aims, as we proclaimed it to be, then we have in fact lost the war in the Pacific so far as that objective is concerned.

In a pathetic finale to the Chinese debacle, Congress has extended until February 15, 1950, the authority of the administration to spend $54,000,000, which had been previously appropriated, to aid Nationalist China. This is a futile gesture, which does little more than to express the dissatisfaction of Congress over the administration's failure in China.

[From the Cleveland Press of April 6, 1949]

CHINA'S MARSHAL LI IS FELLOW-TRAVELING, FAST

China's Communists and fellow agrarian travelers have proclaimed that the North Atlantic Pact is aimed at provoking a new world war, and they warn that in such event they'll fight beside "China's ally, the Soviet Union."

There is nothing surprising in that—it's the familiar patter of Soviet stooges the world over—but it is interesting to note the No. 2 man on the list of names supporting the statement. First, of course, is Mao Tse-tung, Communist chief in China. Then comes Marshal Li Chi-sen.

It was a significant honor for Li, and he'll be worth watching. Marshal Li is a former South China war lord who broke with Chiang Kai-shek in 1947 and lived unobtrusively in Hong Kong until a mystery ship—some say it was Russian—called for him last New Year's and smuggled him off to North China, where he was warmly welcomed by the Communists.

Though Li contends he is not a Communist, he has attempted to become a rallying figure for China's anti-Nationalist group and he aspires to the presidency of the Communist-proposed "coalition" government. As Scripps-Howard writer Clyde Farnsworth has pointed out, the Communists have good reason for starting with a coalition facade. They are in great need of technicians and administrators, who might be more readily attracted into a coalition government rather than a straight Red regime. Also, a coalition government is more likely to gain recognition of other nations.

Marshal Li is traveling fast with the Reds. They may have a job for him. Already he has qualified as an able Charlie McCarthy.

Letter of State Advisory Committee of the Farmers Home Administration

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include a letter from John R. Holland, chairman of the State advisory committee of Iowa for the Farmers Home Administration, in which he sets forth the achievements of this organization. A careful reading of this letter and an examination of the figures contained therein will convince Members of Congress that this organization has made a remarkable record and the actual achievements are amazing.

I believe it can be said that no Government department or bureau has done so much with so little, and I am happy to bring this report to the attention of my colleagues in Congress.

MILTON, IOWA, *April 6, 1949.*

Hon. KARL M. LECOMPTE,
House of Representatives,
Washington, D. C.

DEAR MR. LECOMPTE: On Friday, March 25, the State advisory committee of the Farmers Home Administration held a regular meeting at our State office in Des Moines and as chairman, I was instructed by the committee to give you what might be called a progress report on the activity of the agency.

First you probably would be interested in the committee membership itself. There are nine on the committee and they are appointed annually by the Administrator of the Farmers Home Administration. Will list them alphabetically:

N. P. Black, Des Moines, State superintendent of banking.

Mrs. Edith A. Chester, Clarksville, Butler County, farmer's wife.

John R. Holland, Milton, Van Buren County, farmer.

H. H. Kildee, Ames, dean agriculture division, Iowa State College.

Frank A. Lauters, LeMars, Plymouth County, farmer.

Harold E. McCord, Denison, Crawford County, business.[1]

J. S. Russell, Des Moines, farm editor, Des Moines Register and Tribune.

Richard L. Stephens, Crawfordsville, Washington County, farmer.

Donald C. Travis, Winterset, Madison County, farmer.

In Iowa two types of loans can be made, farm-ownership and operating loans. Farm-ownership loans are for the purchase of family-type farms with loan limits set for each county in the State by the Secretary of Agriculture. These limits vary from $9,500 in the poorer land counties to $21,000 in the counties with the best land in the State. Loans up to $12,000 are approved by the State director and loans above that figure must have the approval of the Administrator. Only four such loans have been submitted to Washington.

Since the beginning of this program in 1938, 1,048 loans have been made and 50 percent have been repaid in full without a cent of loss to the Government. These loans now bear 4 percent interest and are for a 40-year period with the provision that the borrower must refinance with other credit institutions when eligible and at not to exceed 5 percent interest. Normally this will be when the borrower has about a 35-percent equity in the farm.

Last year Congress appropriated $15,000,000 for loans of this kind of which Iowa's share was $557,125. Seventy percent of these funds were earmarked for veterans and 30 percent for nonveterans.

In addition to these loans from appropriated funds the FHA Act provides for the making of insured farm-ownership loans

[1] Actively interested in farm veterans and town and country cooperation.

All farmer members either are or have been members of their respective county FHA committees and are thus very familiar with the operations of the program as it affects farm families.

As you know, the Farmers Home Administration is the successor agency to the Farm Security Administration and the Emergency Crop and Feed Loan Section of the Farm Credit Administration, the consolidation having taken effect in late 1946. Also that FHA is authorized to make loans only to those farm families that cannot get their credit needs from any other source.

with the same terms and conditions except that instead of the Government advancing 100 percent of the investment cost, the borrower must advance 10 percent and the balance is secured from a lender with the Government fully insuring the mortgage. The interest rate to the lender is 3 percent with 1 percent going to the Government.

While the insured mortgage program does permit the making of many loans through the use of local credit, yet Iowa's share of the $15,000,000 is insufficient to meet the demand of veterans and others who do not have the 10-percent down payment, in addition to their operating capital.

For operating loans FHA in Iowa has what the committee feels to be a very commendable record, considering the type of risk that is taken. Of the $31,600,000 loaned since the program started back in 1935, approximately $27,000,000 in principal has already been collected plus over $3,700,000 in interest. It is our feeling from an examination of the records that, if the program closed its books today and liquidated the indebtedness, the Government would not only get back as many dollars as it advanced, but in addition right close to 4 percent interest on the money.

Operating loans are made on a 5-year basis and at 5 percent interest. One percent of the interest collected has just about absorbed the losses that have occurred. Slightly over 28,000 farm families have been assisted since this program started in 1935 and while there have been some failures, thousands of these borrowers have gone on to become successful tenants and owners and are today an asset to their communities.

It is the feeling of the entire State committee that the guidance of the county FHA supervisor that follows each loan plus the active interest of the county committee of three farmers has had much to do with the success of this work. Particularly since the close of the war we have not been able to meet the demand for operating loans. The State director advised the committee that the funds for this fiscal year were exhausted during February and that there were 1,168 applications on hand at the close of February, of which 528 were veterans.

During this fiscal year we have been able to make only 448 new operating loans. The applicants that the county committee have approved but for which there were no funds have had to do one of the following: (1) give up their leases and go into other work; (2) operate without adequate livestock, machinery, fertilizer, etc.; (3) get what credit they could from high-interest loan companies; (4) get what credit they could on short-term notes that would not permit a properly planned farming program.

Unless one is close to the situation, it is difficult to realize the degree to which operating credit has tightened up. FHA has the best of relations with local banks and production credit associations, but their regulations and concern over future economic developments will not permit them to extend the needed credit. In fact, a high percentage of the applicants that come to our offices are referred to us by banks and production credit associations.

The budget calls for the same appropriations for 1950 as for 1949—$75,000,000. Iowa's share of this amount will probably be about the same as last year, $1,400,000. Because of the large carry-over of approved applications, a high percentage of this amount will have been committed by July 1 with only a very small amount left for new applications after July 1.

Just about 60 percent of the funds this year for new loans were used for veterans of World War II.

With the guidance of the county supervisor and county committee, it is our feeling that the borrowers are not only becoming better farmers but are making a real contribution to soil conservation. You will be interested, I believe, in a few figures that the committee received for 1948.

	Farm-ownership borrowers	Operating-loan borrowers
Number linear feet terraces built	159,994	173,527
Number linear feet grassed waterways constructed	141,029	367,658
Acres of row crops contoured	6,608	19,284
Total acres crops on contour	10,826	25,934
Number acres limed	4,389	25,033
Number acres drained	1,039	5,682
Percent crop acres in legumes	22.46	16.57

I am informed that this is the first time a general report of this kind has been sent to you, but it seems logical to me that you would be interested in the work of one of the agencies that is trying to fill a need that is not covered by any other State or Federal group and that is not in competition with anyone. It is for this last reason, I feel sure, that we have the wholehearted cooperation of other lending groups.

You are accustomed to weighing the needs for hundreds of appropriations. FHA appropriations, administered as they have been in Iowa, make useful, happy, conservative farm owners and operators out of harassed, hopeless, near-public charges; they give the borrowers a real interest in their communities and their Nation; and best of all, they restore to discouraged men and women their own self-respect. You can guess at the effect of all this on their children.

I doubt if any other appropriation that has come before you has bought so much for so little, especially when you realize the money appropriated for loans is being returned to the Government with interest.

Sincerely yours,

JOHN R. HOLLAND,
Chairman, State Advisory Committee.

The Economic Situation

REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, we have important news out of Hartford, Conn. I am quoting from an excerpt of a radio program from News of the World, by Morgan Beatty. Mr. Beatty says as follows:

And here in Hartford, the capital of Connecticut, is a Governor, a solid Truman supporter, who feels the time is coming for a different outlook from economic windows.

Gov. Chester Bowles is the man, and he's the one American who is preeminently associated with Government controls, because he was the energetic head of OPA and the center of most of its purple controversies.

Governor Bowles told News of the World today that, from the point of view of Connecticut, unemployment is increasing.

And he concludes by saying:

And this man says, "I am learning in elected public office the facts of political life. The so-called liberal likes to solve problems with long, eloquent, and articulate memoranda. I can tell anybody from where I sit in Hartford that you can't solve problems with memoranda."

The complete excerpt is as follows:

And here in Hartford, the capital of Connecticut, is a governor, a solid Truman supporter, who feels the time is coming for a different outlook from economic windows.

Gov. Chester Bowles is the man. And he's the one American who is preeminently associated with Government controls because he was the energetic head of OPA and the center of most of its purple controversies.

Governor Bowles told News of the World today that from the point of view of Connecticut, unemployment is increasing.

There are 90,000 unemployed in a total work force of nearly a million. The Governor says there's been a recession in the three spending-money pools that make for good times. Government has not yet resumed spending on public works in the wake of the war. The private business establishment has been building steadily to replace worn-out equipment and plants. But that spending is tapering off now and consumer spending is dropping.

Therefore, says the Governor of Connecticut, there is no point now in higher taxes from where he sits and there is no need now for stand-by controls.

Here's his idea of the way to get things going:

1. Business corporations should sharpen their pencils and call a few vice presidents back from Florida and put them to work. And he means that advice not critically but merely in passing to note that the economic picture is changing and it requires a coats-off, back-to-work movement at the top.

2. He proposes the States start public works to replace worn-out capital equipment such as schools, roads, hospitals, and so on. That should come before people start beating a path to the doors of Congress in Washington.

And this man (many have called him a spending liberal on the wild side) says "I am learning in elected public office the facts of political life. The so-called liberal likes to solve problems with long, eloquent, and articulate memoranda. I can tell anybody from where I sit in Hartford that you can't solve problems with memoranda. The job is to put teeth into projects and whip down the vast power of confusion in politics."

The American Farm Bureau Federation

EXTENSION OF REMARKS
OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, April 8 (legislative day of Friday, March 18), 1949

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Bow to the Bureau," published in the Omaha (Nebr.) Evening World-Herald of April 5, 1949. The editorial makes some observations relative to several paragraphs of an editorial in the American Farm Bureau Federation's publication the Nation's Agriculture.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A BOW TO THE BUREAU

From time to time this newspaper has expressed an unflattering opinion of pressure groups. Most of them can't see beyond the ends of their noses. Representing various trades or interests or ideologies, they turn on heat and twist arms to gain legislation which will directly help their members—usually at the public expense.

But there are exceptions. One of them, to which today we bow from the hips, is the American Farm Bureau Federation.

It is one of the three or four leading farm organizations. It operates a lobby in Washington. Since Harry Truman's strong showing in the farm country was largely responsible for his election, the lobbies of the farm organizations are in a strong position. It is a common saying that farmers "can get just about what they want" in Washington.

If the Farm Bureau were as short-sighted as many other trade associations it would be whooping and hollering for 100-percent parity. It would be demanding that the Government use its Treasury to guarantee high prices.

But the Farm Bureau isn't doing anything of the kind. In a recent editorial in its publication, the Nation's Agriculture, it expresses a point of view so civilized, so statesmanlike, that we think it deserves general reading.

These paragraphs give the essence of the Farm Bureau's attitude:

"The American Farm Bureau Federation is unchanged in its support of full parity-support prices. It means the opportunity for farmers to earn, in as free an economy as possible, as good a living as anyone else.

"We do not believe that this objective can be obtained by a Government guaranty. We do not believe that rigid price support at 90 percent of parity or at 100 percent of parity, or at any other level can assure equality for agriculture.

"In our opinion, full parity can be obtained by farmers only when they are allowed to do most of their own planning, to take advantage of market conditions as they see them, to shift production to commodities most in demand and best suited to their individual farming opportunities.

"For example, consumers want more meat and livestock products. The market for grain is shrinking. The logical course is to feed more grain to livestock. Our price-support programs should be designed to permit and encourage such shifts in operations. They should not establish rigid support levels which tempt farmers to go on trying to market or store more grain than is needed while consumers fail to get as much meat or dairy products as they are willing to buy.

"Reasonable and realistic support prices, which take account of supply and demand, and which permit farmers to adjust production in line with consumer needs, are justified. To avoid economic disaster, they are at times imperative.

"But we cannot look to Government as the final arbiter of farm prices. We do not wish to exchange freedom of choice for a guaranteed price. Farmers are, we think, capable of exercising sufficient business judgment to make their own production decisions in line with demand.

"The Government support price should not be the price we expect to live on. It is not, and should not be, the farmer's chief incentive."

For those sentiments we give three rousing cheers.

It is true, we think, that in the partially managed American economy the farmers need some economic protection. Industry has it through tariff laws and tight trade associations. Labor has it through unions and labor laws. Agriculture, as the third mighty leg of the economy, should be equal in strength to the other two.

But those self-styled friends of the farmer who advocate support prices at 100 percent or 90 percent of parity actually are proposing that the farmer be placed completely under the control of the bureaucracy, and that he surrender his American independence.

The Farm Bureau contends that the better way, the more thoroughly American way, is to give the new system of flexible support prices a fair trial. This system promises to give farmers a reasonable protection, and at the same time it encourages the individual farmer to produce the things the consumers want to buy. In advocating that plan the bureau is speaking the language of old-fashioned Americanism.

Basing-Point Change Opposed by Strong Small-Business Organization—Spokesman Advocates Compliance With the Full Provisions of Antitrust Laws—Statement Before Senate Judiciary Subcommittee Opposes Antitrust Moratorium

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. PATMAN. Mr. Speaker, Mr. George J. Burger, vice president in charge of the Washington, D. C., office of the National Federation of Small Business, Inc., before the Committee on the Judiciary of the United States Senate on March 30, 1949, strongly advocated the sound principle of an all-out vigorous antitrust enforcement program rather than a weakening of our antitrust laws by way of legislative repudiation.

Mr. Burger stated unequivocally that the position of the Federation today is no different than it has been upon the occasion of previous appearances before congressional committees and that—

We have been consistent in our efforts to protect small business and the free-enterprise system and we in the federation do not come to our conclusions because we have been guided by legal authorities, or that we are what might be called "professionals" in trade-association activities, but our conclusions in our statements are brought about by a commonly used phrase, "the proof of the pudding is in the eating." In other words, we have gone through the mill of experience in owning and operating our own independent businesses and we realize from bitter and costly experience the total disregard by certain big industries in compliance with the full provisions of the antitrust laws, and by some manner or means they are able to evade the full provisions of the laws.

Stating that these may be strong words, but nevertheless supporting the correct view with regard to the dangers inherent to small business by weakening the antitrust laws and denying the need for clarifying legislation, Mr. Burger further stated that—

It is our opinion that all the high Court did was to outlaw an organized system. Nothing beyond that, and it appears to us that members of that industry (cement), or allied industries desire the system carried on to protect the concentration or monopoly.

Mr. Burger has long been in the forefront of the battle to nurture and preserve the Nation's small-business institutions. He speaks with authority and I commend his statement to all who are interested in the economic security of this Nation. The basing-point system, which has been used for more than a half century to strangle free competition and to destroy small business, should be permanently rejected, for as a punitive pricing instrument it has no equal.

Mr. Burger's full statement follows:

STATEMENT OF GEORGE J. BURGER, VICE PRESIDENT IN CHARGE, WASHINGTON OFFICE, NATIONAL FEDERATION OF SMALL BUSINESS, BEFORE THE COMMITTEE ON THE JUDICIARY, UNITED STATES SENATE

I am George J. Burger, vice president in charge of the Washington, D. C., office of the National Federation of Small Business, Inc., 714 Bond Building, Washington, D. C.

The National Federation of Small Business, Inc., is an organization composed of, and representative of, small independent businessmen and professional men over the Nation. It is the largest independent business organization, in point of numbers of individual actively supporting members, of any business organization in the United States.

I wish to take this time to thank the chairman, Senator MCCARRAN, for affording me the privilege of appearing before the committee and giving our views in opposition to the adoption of S. 1008, solely due to the resulting disastrous effect it would have on the morale of Nation's small business, who, at the moment, are crying from the housetops for a more vigorous enforcement of the antitrust laws.

This statement is confirmed by a mailing of approximately 100,000 copies of excerpts from the CONGRESSIONAL RECORD of December 31, 1948, covering the extension of remarks by the Honorable JOSEPH P. O'HARA, in which he stated, and I quote: "I am sure that the statement of Mr. George J. Burger, of the National Federation of Small Business, before the subcommittee of the House Small Business Committee To Investigate Monopolistic Practices, on November 17, 1948, will be of great interest to the membership of the House in considering the problems of that great segment of our economy known as small business, and under leave to extend my remarks in the RECORD, I wish to submit the following." The complete statement made by me is then inserted in the RECORD.

FEDERATION OPPOSES MORATORIUM—ANTITRUST VIOLATIONS NOW PREVALENT

As we believed the statement contained invaluable information which would be of great service to small business of this Nation, the same was sent to small business institutions in every State of the Union. The reaction to this excerpt was simply startling to the executive offices of the federation. By that I mean the way letters poured in to us, and the way they are continuing to pour in right up to this very moment, all highly commendatory, and more important, laying before us factual evidence of a startling nature with reference to the rampant violations or disregard of antitrust laws in most of our industries throughout the Nation. This, then, in behalf of the people we represent, members and nonmembers, but all small independent business, is the reason for our position in opposing S. 1008 or any other proposal which would weaken or nullify anti-trust-law enforcement.

I was accorded the honor of appearing for the federation and speaking before the platform committees of both the Republican and Democratic National Committees in convention. To the credit of both committees they accorded me special and sincere attention, and I particularly noted the deep interest of the members of the committees to the federation's main and principal proposal, not alone to protect small independent business of this Nation, but also our

free-enterprise system, calling for an all-out vigorous anti-trust-enforcement program, and more important, that increased adequate appropriations be granted for the enforcement of the laws. In my appearance before one of these platform committees, which I do not care to identify, I was more closely questioned on the subject matter of antitrust than on any other recommendation of the federation before that committee. I felt convinced because of that questioning that the members of that committee were cognizant that a serious situation was prevailing in the entire free-enterprise system, and that this would be recognized in their platform planks as an aid to small business.

The outcome was that the Republican National Committee pledged themselves to:

1. Aggressive antitrust action.

The Democrats pledged themselves to:

1. Intensive enforcement of antitrust laws, with adequate appropriations.

2. Strengthening of existing antitrust laws where gaps exist.

3. A positive program to promote competitive business, independent trade.

FEDERATION CONSISTENT IN STAND AGAINST BASING-POINT SYSTEM

The position of the federation today is no different than it was in its appearance before the Joint Committee on the Economic Report on July 14, 1947. Therefore, you will admit, Mr. Chairman, that we have been consistent in our efforts to protect small business and the free-enterprise system and we in the federation do not come to our conclusions because we have been guided by legal authorities, or that we are what might be called professionals in trade-association activities, but our conclusions in our statements are brought about by a commonly used phrase, "the proof of the pudding is in the eating." In other words, we have gone through the mill of experience in owning and operating our own independent businesses and we realize from bitter and costly experience the total disregard by certain big industries in compliance with the full provisions of the antitrust laws, and by some manner or means they are able to evade the full provisions of the laws.

ENFORCEMENT NEEDED—NOT LIP SERVICE OR BASING-POINT HOLIDAY

These may be strong words, but it is far better to have, for the record, something to sustain this correct view from those in the seats of the mighty in the Government who have been charged with the enforcement of the laws, and who, for a decade or more, have studied the whole over-all law-enforcement program of the Government. I refer to the startling statement made by the then Assistant Attorney General in charge of antitrust before the Senate Civil Service Committee in February 1947 when he said in substance, that for 35 years or more the administrations had merely given lip service to the enforcement of antitrust laws. A year or so later, then as a private citizen, in his appearance before the House Small Business Committee, Monopoly Subcommittee, on being questioned by members of the committee, he stated that the laws never had a chance to function.

Is it any wonder that the field representatives of the National Federation of Small Business in their daily contacts with small business throughout the Nation, and also that I, in my own private business in an industry which has been plagued for many years with antitrust violations, get the same expression from small business "The Government won't do anything," and again, "The big fellow in industry can get away with it."

It was shortly after the United States Supreme Court rendered its decision on the system used in the cement industry, early in the spring of 1948, that a subcommittee of the Committee of Interstate and Foreign Commerce started to function and explore the whole situation. I refer to S. Res. 241, Eightieth Congress, second session. To the credit of that committee it will be found that some of the most outstanding men in industry were brought in to that committee in an honorary advisory way to explore the proposition. Extensive public hearings were held on the subject matter. In fact, the recently released printed report of the committee covers 1,401 printed pages.

I was accorded the privilege of appearing before the subcommittee in behalf of the federation, and in my many years of experience before congressional committees, I have never had more exceptional privileges extended to me than I had in my appearance before that committee. To their credit a sincere and sympathetic attitude was held by the members of the committee. I would gather that the opposition of the national federation as expressed to the committee was near sound and we had built our case for no need to suspend the Court's decision condemning a system.

PRACTICAL EXPERIENCE DEMANDS OPPOSITION TO LEGISLATIVE CLARIFICATION

I said that we speak from practical experience and not as members of the legal profession and we hold to the premise that any individual manufacturer in his national sales policy, and this policy being of his own making, can sell f. o. b. the plant or f. o. b. destination, and there is no law in he land that we know of that will prohibit any such individually announced action by any producer. So, why should there be any need for any clarification? You and I know, Mr. Chairman, that big industry of this Nation is fortified with the most competent legal authorities that can guide them in their policies, wholly in keeping within the law. In this respect I was very much interested in a statement made by Mr. Paul F. Myers, of Washington, D. C., whom I believe is classed as an antitrust law specialist, and he is reported as being counsel for the National Food Brokers Association. I quote from his remarks made in Chicago, March 21, 1949, as reported in the New York Times. The press story states: "Mr. Myers told the food brokers it is his own personal opinion that the Supreme Court's decisions leave manufacturers free to adopt f. o. b. pricing, uniform delivered pricing, basing-point pricing, and total or partial absorption of transportation pricing, provided at all times there is not present in any of the plans or policies devices to injure or to destroy competition." Bear in mind, Mr. Chairman, he is a specialist in law, and I am not a lawyer.

ABOLITION OF BASING POINT BOON TO FREE ENTERPRISE AND SMALL BUSINESS

An Associated Press story of March 11 quotes the Interstate and Foreign Commerce Subcommittee as stating in their report "In the long run, required f. o. b. selling will probably result in a decentralization of industry which will tend to make most regions of the country self-sufficient." If the decision of the Court on the system used in the industry charged with the offense would bring about decentralization, this no doubt, would be a great boon for the free-competitive-enterprise system and for small business of this Nation.

Recent reports of the findings in congressional small-business committees will show the recommendations for decentralization and breaking up of entrenched concentration.

We were amazed to read in the subcommittee's report that the military security of the Nation might be seriously affected by the enforcement of the full provisions of the Court's decision on the respective industry. We have heard that opinion rendered before by the military services in the early days of the war. I mean when our Nation officially went into the war, when at that time a proposal was made to use only 3,500 tons of rubber to keep the essential automotive transportation in use during the war and the military forces frowned and condemned the proposal as it would affect the military security. Small-business leaders held otherwise and proved their case without a question of doubt. So we in small business see no serious results accruing to the military forces of our Nation with the ever increasing enforcement of antitrust laws.

The position of the federation in its testimony before the Subcommittee on Interstate and Foreign Commerce in the Senate on December 6, 1948, was no different than it would be today, and I respectfully refer you to that testimony which appears in the committee print, and note the close questioning by members of the committee on the testimony during my appearance.

The National Federation of Small Business is fighting to keep government out of business for the good of our economy, and slowly but surely if big, concentrated industries are not aware of their shortcomings it can only result in socialization of those industries. Believe me, Mr. Chairman, God forbid that this would ever take place. I have heard the above statement made repeatedly, not by New Dealers or Old Dealers, but by career men in the Government, who value our Government's future more than they do personal success. They themselves are fearful of this trend.

Shortly before we entered World War II, I was reliably informed by a factor in a particular industry with which I am well acquainted, in which industry concentration or control is in the hands of about four, that he was told by a high official of that industry, "Maybe if we make conditions within the industry bad enough, the Government will take us over."

BASING-POINT SYSTEM DESIRED ONLY BY MONOPOLISTS

It is our opinion that all the High Court did was to outlaw an organized system. Nothing beyond that; and it appears to us that members of that industry or allied industries desire the system carried on to protect the concentration or monopoly. What they apparently are attempting to do is to get Government sanction, and the danger of this to themselves and to the free-enterprise system and the people we represent—small independent business—is ably stated in an editorial entitled "Government and Monopoly," appearing in the Wall Street Journal, March 7, 1949, and the editorial states, in part: "The truth about monopoly is that it can exist only by the positive connivance of the Government or by the failure of the Government to do its duty."

We ask the committee to report "No" on S. 1008, solely for the good of our free-enterprise system and for the good of the industries affected by the Court's decision, whether they know it or not, and at the same time, if and when the House acts on the companion bill, H. R. 2222, we request that they, too, vote "No." Any other action by the Congress will be a complete repudiation of their party pledges as made to small business of this Nation is the last Presidential election.

Disabled Veteran's Claim of Charles D. Willis

EXTENSION OF REMARKS

OF

HON. WINGATE H. LUCAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. LUCAS. Mr. Speaker, some weeks ago a young friend of mine, Charles Del-

bert Willis, of Fort Worth, Tex., wrote a story for Collier's magazine which described his difficulties with the Veterans' Administration in securing rights which he was entitled to under our veterans' laws. Mr. Willis is one of the great heroes of this last war, and has suffered the loss of one leg and his other is almost completely paralyzed. After his article appeared in Collier's, the Veterans' Administration attempted to answer his charges and Nation-wide publicity was given the VA release. I think it only fair that Members of Congress read the rebuttal of Mr. Willis and I am inserting it in the RECORD for that purpose.

HARVARD UNIVERSITY,
COUNSELOR FOR VETERANS,
Cambridge, Mass., November 18, 1948.

Mr. J. E. LOGGINS,
Chief, Claims Division,
Veterans' Administration,
Washington, D. C.

DEAR MR. LOGGINS: This has to do with Mr. Charles D. Willis, C–4,114,838, a disabled veteran now enrolled in Harvard University.

I wish to thank you for your letter of November 15, 1948. You will be interested to note that yours is the first answer we have received to a series of letters and telegrams to the Washington VA from Mr. Willis and from this office, dating back to September 20. We have gained an altogether unhappy impression of the Washington VA.

I think that Mr. Willis is entitled at this late date to more direct action and certainly more specific information than is embodied in your general assurance that appropriate action will be taken. Mr. Willis urgently needs to know, and soon, what specifically is the state of your processing of his Public Law 16 case and when he can expect it to be cleared. More than that, he needs to have somebody in Washington wake up and shove those papers along.

We are excited and angry about this case because it appears to us that the VA is guilty of unforgivable indifference, bungling, and discourtesy in its dealings with Mr. Willis. Mr. Willis is a double-amputee veteran, just out from 3½ years hospitalization, a man with a wife and three children to support. If ever a man deserved prompt attention and support from the VA it is he. In order to avoid just the complications and delays which have now snarled his case, he was put through advisement and guidance for Public Law 16 benefits last June, and was assured by the responsible training officer, a Mr. Smirsna, attached to Walter Reed Hospital, that his papers were in order and would move along expeditiously to Boston. Well, here it is November 18, 6 weeks after the opening of the university, and 4 months after the VA started the paper work toward Mr. Willis' "rehab" training, and after a series of telegrams and letters dating back to September 20, he now finds himself assured that, sometime, appropriate action will be taken.

If the VA cannot become interested in expediting papers and showing minimal courtesy out of consideration for the needs of a double-amputee veteran, then I recommend strongly that it do so out of concern for its own public relations. As I have informed you in previous correspondence, but without underlining, Mr. Willis is attending Harvard as one of a group of 15 outstanding newspapermen from all parts of the country. I need not tell you that these reporters and editors find the Willis case a most interesting case study of the working of the VA as it affects the seriously disabled men.

Since early October this office has been holding the fort for the VA in this case, telling people to cool off and give the VA time to work the complex thing out. We regard this ordinarily as our proper function. But the accumulated discourtesies and delay of the Washington office have persuaded us that this case is in fact being hacked, at the expense of a most seriously disabled veteran. The last person to see me about the Willis case was asking: "How many legs does a guy have to lose to rate an answer out of the VA?" It is a fair question.

I realize full well that there is probably more to the complexity of this case than meets the eye, that the VA has its own problems of technicality which must be met in orderly fashion, and that this may appear too intemperate a letter to address to a new man who has just entered on the case and who has after all done us the favor of a courteous letter. Still, I think it only fair to acquaint you personally with the explosive power of this case. The VA cannot very well escape the charge that here is a double-amputee who was set up in June, who entered training under firm assurance from VA officials that all was arranged, who finds now that the arrangements were in fact loused up, who has run out of money to support his wife and children and who cannot get so much as a letter from the VA after 8 weeks of trying. I believe this adds up to a monstrous bust by the VA and see no reason why I should try to gloss it with pretty language.

Yours very truly,

JOHN U. MONRO,
Counselor for Veterans.

HARVARD UNIVERSITY,
NIEMAN FOUNDATION FOR JOURNALISM,
Cambridge, Mass., April 5, 1949.

Hon. WINGATE LUCAS,
House of Representatives,
Washington, D. C.

DEAR MR. LUCAS: In a 15-page publicity release, the Veterans' Administration has attempted to explain the many delays and needless red tape in my case which I had related in a Collier's article titled "Are You Happy, Son?"

Since the VA gave this statement Nation-wide distribution in all media, as well as giving it to a number of the Members of Congress, I should like an opportunity to defend myself against some of the innuendoes and inferences in this release. Since I have no publicity machine at my disposal to answer the charges made against me, I am requesting that this reply be published in the CONGRESSIONAL RECORD.

While aiming at me personally, the VA did not attempt to contradict my essential facts. I have the records, Harvard University has the records, the Boston Artificial Limb Co. has the records, and the VA, which should have all of the records, admits that it has lost an important part of my file.

The principal contention in the Collier's article was that it took the VA 10 months to get me properly set up for educational rehabilitation, 6 months to straighten out my disability compensation, and 5 months to deliver a new artificial leg. Reaction of the VA to the story was to send a squad of men scurrying around to check the records. After many man-hours of investigation, the result was this lengthy news release. Enclosed is my statement pointing out the principal errors in the VA statement.

Sincerely yours,

DELBERT WILLIS.

HARVARD UNIVERSITY,
April 4, 1949.

STUDY OF THE VETERANS' ADMINISTRATION PRESS RELEASE OF MARCH 28, 1949, WHICH COMMENTS UPON THE ARTICLE "ARE YOU HAPPY, SON?" BY DELBERT WILLIS, IN COLLIER'S FOR MARCH 26

I. GENERAL

(a) General conclusion: In its opening summary the VA states that I had a legitimate complaint about the handling of my education, but that my dealings with the VA in connection with securing compensation and an artificial leg have been properly handled.

Comment: This is the VA's general conclusion—that two-thirds of my complaint was completely unjustified, not to say false. The record simply does not warrant this complacent conclusion.

(b) Clinical routine: The VA explains at the outset that in any clinic situation the doctors and visiting celebrities must discuss the details of the case before them. In concluding these remarks the VA states that many of the questions and much of the conversation quoted by Mr. Willis was for the benefit of these visitors and not because the members of the clinic are utterly stupid.

Comment: I have spent 3½ years in Army hospitals, and am entirely familiar with the nature of clinical discussions. The questions at the Boston clinic seemed to me unusually irrelevant, unnecessary, and embarrassing. The clinic machinery, with all of its long-winded and pointless questions, was obviously responsible for a considerable amount of the delay in getting me the new leg I needed so badly.

If the VA thinks it necessary and desirable to ask embarrassing questions for the benefit of visitors and to ignore the resulting long delays, then perhaps it is time to reexamine the whole concept of clinics centering on disabled veterans. In view of the new release it is a fair question whether the Government is running such clinics to benefit the veterans or the visiting celebrities.

II. FINANCES

(a) Borrowed money: The VA concerns itself twice in this section with the fact that I had to borrow money to keep going at Harvard during the months the VA was hunting around for my papers. In its first reference the VA says: "The writer refers to having to borrow money from fellow students who were more fortunate and were receiving checks while he had none." In the second reference the VA states: "Mr. Willis did not mention in his article the names of the friends from whom he borrowed money. If they were veterans it is doubtful that any of them were being paid at a higher rate than Mr. Willis himself."

Comment: All this is sheer guesswork and embroidery by the VA. I did not say anywhere in my article where I borrowed the money, and the fact is I did not borrow from fellow students. Since the VA considers this proper grounds for jesting, I will say that the money was loaned to me by Harvard University through friends in its veterans' office.

(b) Regular checks: The VA says that I was discharged from Walter Reed Hospital on September 16; that the first check was mailed to me on October 25; and that from that day on there has not been a month that at least one check was not mailed to Mr. Willis by the VA.

Comment: The implication is that the VA was prompt in starting its subsistence payments. However, the checks for October and November were checks for Army retirement pay which various officials of the VA advised me not to cash. They warned that if I should cash these checks I would thereby commit myself to the retirement pay plan and cut myself off from the possibility of receiving the more generous pension and subsistence benefits of the VA plan for amputees. The record shows that this matter was not settled until November 23 when I brought the problem to the Harvard veterans' office and asked that they please get me an authoritative answer whether I should use this Government money or not. The Harvard office telephoned the claims division of the VA in Washington, and, after some discussion of the matter, was assured that no jeopardy would be attached to my pension claim if I cashed the retirement checks.

All during these months while the VA was struggling with the red tape and trying to get me paid, I had to be concerned about the problem of supporting a wife and three children back home in Fort Worth, Tex. You may be sure I needed all the money I could get and would not have hesitated a second in cashing the retirement checks except for the firm advice of responsible VA officials.

(c) Big pension: The VA says that the checks sent to me up to this time have totaled $2,003.13, and the article makes several references to the size of my pensions, pointing out that it is higher than most veterans are receiving.

Comment: Unfortunately this is true. But this is a pension for 100-percent disability, plus a statutory award for the loss of two limbs, and it was the intent of Congress that veterans disabled like me should be given just compensation. Yet the author of this VA release points to my high pension in an effort to discredit my complaint against the delays of the VA systems.

I will add that three-fourths of the funds paid to me by the VA came after I had written the Colliers article last January, and that my disability pension was not adjusted and brought up to date finally until March 18, some 6 months after I was discharged from the Army.

III. EDUCATION

(a) No loss of time: The VA finds satisfaction that its admitted mishandling of the educational dealings did not result in the loss of any education opportunities to Mr. Willis.

Comment: That is correct, thanks to Harvard for carrying me on the cuff and for loaning me money to support my family in Texas. Full settlement for my VA education benefits was not made until after March 4, 10 months after my original application for the benefits, at Walter Reed Hospital last June.

(b) Nieman fellowship: The VA article is vague about the Nieman fellowship and by the order of its wording implies that the Nieman fellowship, if not actually a government grant, at least was awarded to me after, and because of, the VA's process of advisement and guidance.

Comment: The Nieman fellowship is a grant awarded entirely by Harvard University, and I was awarded the Nieman fellowship by Harvard two months before going through advisement and guidance with the VA.

(c) Cash award: The VA speaks of the cash award which goes with this fellowship.

Comment: The only cash award attached to my Nieman fellowship was a small stipend intended to supplement the pension and subsistence payments due me.

(d) Harvard office: The VA says that on September 21, 1948, I visited the Veteran's Counsel Office at Harvard University and states that this is not a Veterans' Administration office but is operated under contract with the Veterans' Administration, with employees assigned to the office from Harvard, Tufts, and Boston College. The contract for its operation is with Tufts College although it is located on Harvard University property.

Comment: The confusion here is complete. The office I visited on September 21, and the office which fronted for me through scores of phone calls, telegrams, and letters seeking to unsnarl the red-tape entanglement, was the Counsellor for Veterans Office of Harvard University, which is responsible for the management of affairs for better than 7,000 veterans at Harvard and has dealt with the VA daily for 4 years. However, in its release the VA has managed completely to confuse this Harvard office with the VA Advisement and Guidance Center which is indeed operated under contract by Tufts, but which I did not visit until January.

(e) Criticism of Boston VA: The VA goes on to say: "On December 17, the Boston Office advised Mr. Willis to file a duplicate application for advisement for the purpose of scheduling another test. The record contains no explanation of why the duplicate advisement records which were sent to Boston by Walter Reed on November 9 could not be used in qualifying the veteran. However, he was ordered for new advisement."

Comment: The fact is that Boston VA on December 17 received part of my folder but there were no advisement records there at all. Therefore, in desperation, the Boston VA decided to put me through advisement and guidance again, thus getting control of the case locally and enabling Boston to start setting me up for regular payments. The alternative for Boston was to wait around some more months while Washington searched, for the missing papers. Under all the circumstances Harvard considered that Boston had made an entirely intelligent suggestion. Central Office does not think so highly of the idea, but it should be clear by now that Central Office is not always right.

(f) Christmas in Texas: The VA makes two references to my Christmas trip to my home in Fort Worth, the inference being, I suppose, that if I had only stayed in Cambridge, the VA would have straightened out my problem more quickly.

Comment: I offer no apology for borrowing funds to spend my first Christmas since 1941 with my wife and three daughters. The war and my hospital siege had separated us for seven Christmases, and I was letting nothing stand in my way. My Christmas trip to Texas did not slow up the VA processing of my case in any way. While in Texas I corresponded regularly with the Harvard veterans' office regarding the new advisement and guidance, and even signed and forwarded the necessary applications for it. When I returned to Cambridge the Harvard office telephoned the guidance center, and the officials there said that they were not quite ready to give me a hearing. The advisement finally was held on January 13.

(g) Retroactive payments: The VA article makes some point of the fact that after the advisement in January the VA decided that they could make subsistence payments retroactive to the date I entered school, September 27.

Comment: This was done only after repeated appeals had been made to the VA. It was at first maintained that the payments could not be retroactive under any circumstances. Then the decision was changed to make the payment retroactive to November, when the Washington claims board first ruled on my disability rating. If Boston VA officials had followed the Washington ruling, I would still be seeking back payments for educational benefits.

IV. PROSTHESIS

(a) Date of application for leg: Throughout this section the VA concentrates on technicalities about the dating of my request for a new artificial leg, claiming that I did not actually report to the VA until October 14 and that I did not technically apply for a new leg until December 10.

Comment: My artificial leg broke down on October 5. On October 6 I visited the VA prosthetic-limb office of the Boston VA to see about it. I am able to verify this date exactly, because I was given transportation to the VA limb office by the Cambridge Red Cross, which made a record of the trip. I have no doubt that I was in the prosthetic-limb office again on October 14, when they said I was. I was trying to get a good artificial leg, and found that I had to spend a good deal of time humping around the 10-mile triangle from Harvard to the VA office to the leg factories.

(b) Bombastic statement: The VA has produced an artificial limb expert who declares that my description of the break-down of my leg is a glaring bombastic statement. Mr. Ferris, whose company manufactured my artificial leg that went to pieces, says that this statement casts some doubt as to the veracity of knowledge on my part of the way such a leg breaks down.

Comment: He didn't question the fact that the leg broke down. It was my description of the disintegration that upset him. I said the hip joint "exploded like a hand grenade—springs, nuts, and bolts shot all over the place." Maybe I shouldn't have said that. Maybe a figure of speech is illegal.

(c) Another date mixup: In the concluding paragraphs of the release, the VA states that I was authorized to be measured for a leg on January 21 and that I was thereupon measured for it on January 11.

Comment: This revelation of the state of the VA records and the care with which this release was prepared needs no further discussion from me.

(d) Contract: One obstacle in getting me a leg, says the VA release was the fact that the contract between the VA and Boston Artificial Limb Co. had expired and consequently no order could be drawn up until a new contract was signed. That was the reason for the delay from January 11, when I appeared before the prosthetic clinic, to January 21, when I was authorized to purchase a leg from Boston Limb Co.

Comment: If the VA will recheck its own records, I'm sure it will find that the 1949 contract with Boston Limb Co. was signed on December 22, to go into effect on December 28—2 weeks before the VA informed me that it was confounded by contract trouble. Administrative delays in communication (red tape to most of us) prevented the prosthetic section from knowing that the 1949 contract was in effect.

(e) Christmas vacation: The VA takes another jibe at my Christmas vacation with the inference had I remained in Cambridge the leg might have been delivered sooner.

Comment: It was necessary for me to appear before the prosthetic clinic before the VA would consent to my getting the leg. Only one clinic was held in January—January 11—so it would have been impossible for me to have secured approval prior to that date, even if I had remained in Cambridge all of the time.

(f) Final delivery: The VA says the leg was delivered on March 18, 67 days after I visited the clinic.

Comment: Just to set the record right, the leg was not delivered to me until March 21, 165 days after I first went to see them for help with my artificial leg held together with rubber bands.

CHARLES DELBERT WILLIS.

Truman Wrong 32 Times, Right But Once, in His Veto of Taft-Hartley Act

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. GWINN. Mr. Speaker, Mr. Phelps Adams, chief of the New York Sun's Washington Bureau, is distinguished for careful reporting and research.

He was recently elected president of the Gridiron Club by his fellow craftsmen. For 20 years he has been a careful student of labor legislation.

I have requested permission to make a part of the CONGRESSIONAL RECORD his noteworthy study on the working of the Taft-Hartley law.

He has found 32 of the objections and prophecies by the President to support his veto of the Taft-Hartley law wrong. But one is found right. His findings and statistics are carefully documented.

His study appeared in 18 special feature articles in the New York Sun from February 7 to March 2, 1949, as follows:

TRUMAN NO LABOR PROPHET

(By Phelps Adams)

NO. 1

WASHINGTON, February 7.—When President Truman vetoed the Taft-Hartley law in the early days of that Eightieth Congress, he climbed far out on the long limb of prophecy and took a dim view of the future.

He predicted that the law would increase strikes, weaken unions, clutter the Federal courts, generate jurisdictional disputes, impede industrial production, and place an impossible burden on the National Labor Relations Board.

He insisted that it would prove useless in combating national emergency strikes; that it would increase interference by Government in the affairs of its citizens; hamper the work of conciliation and mediation, encourage Communist disorders, and endanger the very structure of American democracy itself.

But President Truman was a poor prophet.

Today the law has been in full operation for more than 17 months and it is possible to contrast these gloomy forebodings with the actual results as they have been recorded officially by his administrative agencies in Washington. It is possible in fact to show exactly what has really happened to labor, to industry, and to the Nation since that law went into effect.

The evidence is all to be found in the records of the CIO, the AFL, the United States Department of Labor, the NLRB, the Federal Mediation and Conciliation Service, the Federal Reserve Board, and the congressional "watchdog" committee set up under the terms of the Taft-Hartley law itself to study and report on the actual operation of the new statute.

Administration leaders in Congress now are using their newly won majority powers to prevent the House and Senate Labor Committees from spreading this evidence upon the public record where it might injure their chances of passing Mr. Truman's bill to repeal the Taft-Hartley law; but it will be fully presented to the readers of the Sun in the succeeding articles of this series.

Those articles will discuss point by point the 33 major objections and prophecies advanced by the President in his veto message. They will show that in 1 instance he was completely and undeniably right; and that in 32 others he was not.

NO. 2

The bill would substantially increase strikes

WASHINGTON, February 8.—President Truman, in his veto message, declared that the Taft-Hartley law would "substantially increase strikes." He prophesied that it would "encourage distrust, suspicion and arbitrary attitudes," and that "employers and workers would find new barriers to understanding."

But President Truman was wrong.

The Bureau of Labor Statistics, in the United States Department of Labor, keeps an accurate check each month on the number of strikes occurring, the number of workers directly affected, and the number of man-days of idleness which result. Its records for the first 16 months under the Taft-Hartley law and for the last 16 months under the old Wagner Act provide the following amazing contrast which tells the story conclusively:

Period	Number of strikes	Number of workers affected	Man-days of idleness
16 Wagner Act months	6,300	4,785,000	83,725,000
16 Taft-Hartley months	3,925	2,143,000	39,060,000
Reduction under Taft-Hartley law	2,375	2,642,000	44,665,000
Percentage reduction	38	55	53

This means that in every single working day of the year for the last 16 months—

There have been six fewer new strikes than there were each day under the Wagner Act;

Forty thousand fewer workers have walked off the job and started trudging weary, payless picket lines; and

Nearly 179,000 men who were on strike every day under the Wagner Act were on the job every day under the Taft-Hartley law, producing the goods that Americans need and want, and wiping out the shortages on which inflation breeds.

Under this law labor has enjoyed more uninterrupted job security and has pocketed nearly half a billion dollars in wages that it formerly lost through strikes; industry has enjoyed steadier production in ever-increasing volume, and consumers have begun to enjoy surcease from constantly mounting prices.

The facts therefore do not support Mr. Truman's alarmist prophecy. Neither do they support his demand for Taft-Hartley repeal.

NO. 3

More about strikes

WASHINGTON, February 9.—In his veto message President Truman warned that the Taft-Hartley law would operate in four specific respects to increase, rather than decrease, strikes.

1. He said that since unions would be requested to live up to the letter of the contracts they signed, they would be discouraged from putting no-strike clauses in their bargaining agreements. But the United States Department of Labor, after studying the contracts which are filed with it, reports that the number of no-strike clauses is steadily increasing, and that approximately half of all the labor contracts in its possession now contain such clauses.

2. He said that because unions are now required to file burdensome reports in order to qualify for protection under the National Labor Relations Board, they would resort to strikes instead. But the NLRB reports that it knows of no case where a union which had filed the required non-Communist affidavit was ever disqualified by reason of its failure to file any other report required under the Taft-Hartley law.

3. He said unions would be forced to call jurisdictional strikes in order to get them before the NLRB for settlement. But the Department of Labor reports that the number of jurisdictional strikes has declined sharply under the Taft-Hartley Act. In 1946, under the Wagner Act, they averaged more than four per month. In 1947, while the new law was being put into operation, they rose to more than five per month. In 1948—the first full year under Taft-Hartley—they dropped to three per month.

4. He said that unions of supervisors and foremen, deprived of NLRB protection, would be forced to strike to gain their economic ends. The Department of Labor has no specific break-down on foremen's strikes, but concedes that there were very few under the Taft-Hartley law.

This congressional watchdog committee reported, moreover, that the Foreman's Association of America was on strike against the Ford Motor Co. at the time the Taft-Hartley law was passed. Within a few days the strike collapsed, the men returned to their jobs, and the company went to work to devise a plan to insure the fact that the salaries of its foremen are equal to, or better than, those paid anywhere else in the area. The committee concluded:

"Not only has the exclusion of supervisory employees from the benefits of the act failed to produce the work stoppages predicted by opponents of the provision, but it has served to promote the establishment by employers of plans creating many new benefits for supervisory employees."

So it appears that President Truman was wrong again.

And again, and again, and again.

NO. 4

The bill would weaken unions

WASHINGTON, February 10.—One of President Truman's chief fears, back in June 1947, was that the Taft-Hartley law would weaken unions and he stressed the point frequently in his veto message. But the official records of Government agencies and of the unions themselves, show that neither the membership nor the economic power of organized labor has waned under the new law.

The Congress of Industrial Organizations reports that its membership declined sharply during the postwar reconversion period (under the Wagner Act); that it has been climbing steadily since; and that last year (under the Taft-Hartley law) it not only recouped its losses but reached a new all-time peak.

That the American Federation of Labor did not fare equally well was due to John L. Lewis rather than to Taft and Hartley. "Disaffiliating" last year, Lewis pulled his 600,000 members out of the A. F. of L. and set up shop again as an independent union. Exclusive of the miners, however, the A. F. of L. had 6,977,716 members when the Taft-Hartley law went into effect in 1947. One year later it had 7,220,530 members—a gain of nearly a quarter-million.

The congressional watchdog committee reports that independent unions scored similar gains, and that the only notable losses of membership occurred in unions whose officers refused to sign non-Communist affidavits, and whose members turned to other unions, not Communist-dominated.

The most conclusive test of organized labor's strength or weakness, however, is: Were unions able to keep wages abreast of mounting living costs? The records of the Department of Labor answer that question as follows:

In the final 16 months under the Wagner Act, average hourly earnings in industry rose 18.4 percent, while the cost-of-living index rose 20.8 percent. So the purchasing power of an hour's work fell slightly and labor lost ground.

In the first 16 months under the Taft-Hartley law, earnings rose 12 percent and living costs went up only 8.2 percent. So labor was able to recover all it had lost in the closing months of the Wagner Act—and more.

Today the average American workman with the proceeds of 1 hour's labor can buy more goods than he ever could at any previous time in history.

Clearly, then, President Truman's fears on this score were groundless.

NO. 5

Collective bargaining elections

WASHINGTON, February 11.—Because of the impressive gains made by organized labor under the Taft-Hartley law—both in membership and in the purchasing power of wages—administration forces have been

hard pressed to prove their primary contention: namely, that the law has weakened unions.

Early this week, however, the National Labor Relations Board—one of the principal centers of opposition to the Taft-Hartley law—made a good stab at it in a press release announcing the transmission of its annual report to Congress.

The release declared that under the new law, labor unions had won only 72½ percent of the collective-bargaining elections conducted by the Board, whereas, during the entire 12 years under the Wagner Act, they had won an average of 81.4 percent of such elections.

Here, then, was the first concrete evidence that the Taft-Hartley law had damaged the organizing powers and prestige of unions—or so it seemed, at least.

But what the NLRB release omitted to note was a sentence in the annual report itself, which pointed out that the percentage of collective-bargaining elections won by unions had been declining steadily since 1943 under the Wagner Act. The true facts, as supplied to the Sun by the NLRB today, show an interesting trend that neither the release nor the annual report revealed. Here is the Board's own record for the last 4 years:

Fiscal year ending June 30	Percentage won by unions	Declined since previous year
Under the Wagner Act:		*Percent*
1945	82.9	1.6
1946	79.5	3.4
1947	75.1	4.4
Under Taft-Hartley law: 1948	72.5	2.6

So it develops that the percentage of union victories declined far more rapidly in the closing years of the Wagner Act than it did in the first year of the Taft-Hartley law. Moreover it will be noted that union losses under the Wagner Act were heavier each year than they were the year before; but that this trend was reversed under the new law.

NO. 6

Union security will be largely canceled

WASHINGTON, February 14.—"While seeming to preserve the right to agree to the union shop, the Taft-Hartley law would place such a multitude of obstacles in the way of such agreement that union security and responsibility would be largely canceled."

So said President Truman in his veto message.

But he was wrong again. The Department of Labor reveals that of all the contracts filed with it, one out of every three contains a union-shop provision, and the number is increasing steadily. The National Labor Relations Board at the same time reports that it has held 30,508 union-shop elections under the law and that the unions have won 97½ percent of these tests. But in the 776 cases where the workers themselves did not want a union shop the law protected them.

The President complained further that even where the employer and the entire union wanted a union shop, it could not be granted without an election. The NLRB says, however, that where both parties are willing, the necessary election can be held within 3 days, so no serious delay results.

Mr. Truman also warned that the "featherbedding provisions" of the new law could be used to prohibit agreement on "safety provisions, rest-period rules, and many other legitimate practices"; but the NLRB concedes that it knows of not one single case where the featherbedding provisions have been so used. Only two featherbedding cases have come before the Board at all, it says.

Then, too, President Truman declared: "The bill would limit the freedom of employers and employees to establish and maintain welfare funds." But apparently it has not interfered at all. The Department of Labor reports that the number of workers covered by such welfare funds has more than doubled under the Taft-Hartley law, and that today one contract out of every eight contains provisions of this kind.

And, as for the President's fears that "union responsibility" would suffer under the act, it is evident that they were illusory. The congressional watchdog committee finds that the number of man-days of idleness resulting from wildcat strikes in the plants of the Ford Motor Co. declined 90 percent during the first 8 months of last year.

So it is difficult to see wherein either union security or union responsibility has been canceled by the Taft-Hartley law.

NO. 7

Cluttering the courts

WASHINGTON, February 15.—President Truman protested strenuously against a provision in the Taft-Hartley law which declared that unions could sue or be sued in the Federal courts for violations of contracts or for damages resulting from illegal jurisdictional strikes and boycotts.

In his veto message, he said that the bill "would invite unions to sue employers in the courts regarding the thousands of minor grievances which arise every day over the interpretation of bargaining agreements." He also declared that "it would give employers the means to engage in endless litigation, draining the energy and resources of unions in court actions, even though the particular charges were groundless."

Conceivably this could have happened. Actually it never did.

The Congressional watchdog committee, after surveying the records of all the Federal courts, reports the true facts as follows:

Although there are more than 100,000 labor contracts in force under the Taft-Hartley law, there have been only 57 damage suits filed in the Federal courts. Instead of taking thousands of minor grievances to law, unions have filed only 19 such actions against employers, and an individual employee has filed 1. Employers, instead of resorting to endless litigation, have brought 37 suits against unions.

Twenty-one of these cases were dismissed by agreement between the parties, and nine others were dismissed by the court. In one, an arbitrator's decision was set aside, and in another the union obtained an injunction against the employer. The remaining cases are still pending; but in not one instance has either party received as much as 1 cent in damages from the other.

This means that in 99$^{94}/_{100}$ percent of all the bargaining agreements now in effect the obligations and contractual responsibilities of both parties have been discharged in a mutually satisfactory manner without resort to the courts. The watchdog committee concludes:

"The committee believes that the suits reported to date show that neither party desires to recover money damages from the other, but that the very presence of this remedy has encouraged employers and unions alike to act with the deeper sense of responsibility."

And in support of this conclusion the committee cites the sharp decline in the number of wildcat strikes since the Taft-Hartley law became operative.

NO. 8

Injunctions

WASHINGTON, February 16.—While denying any individual the right to obtain an injunction against a union in a labor dispute, the Taft-Hartley law decrees that in certain, clearly specified cases, the Government may apply to the courts for such relief. In his veto message President Truman denounced this provision bitterly as a "backward step toward the old abuses of the labor injunction."

Spurred by these dire forecasts of disaster, the congressional watchdog committee has made a thorough study of every injunction proceeding that has been undertaken under the new law. The facts, therefore, are a matter of official record.

They show that out of nearly 4,000 strikes occurring since the law became effective, exactly 43 injunctions have been sought and only 24 granted. Here is the detailed analysis:

One section of the law permits the National Labor Relations Board to seek injunctions against either unions or employers where certain unfair labor practices are charged. Under heavy pressure from both unions and employers to do so, it has refused in all but six cases. Of the six restraining orders it has asked under this section of the law, two were against employers; four against unions. Three injunctions were granted, one denied, and two disposed of by agreement between the contending parties.

Another section of the law requires the NLRB to seek injunctions where illegal secondary boycotts are in progress. In all, the Board has received 342 cases in which such boycotts were complained of, but, after sifting the charges carefully, it has sought injunctions in only 31 instances. Restraining orders were granted in 15, denied in 4, are still pending in 5, while 7 were disposed of by agreement between the parties.

A third section of the law authorizes the use of injunctions in national emergency strikes which threaten the public welfare, health, or safety on a Nation-wide scale. Under this provision President Truman himself has six times ordered the Attorney General to seek injunctions against a labor organization, and in each instance the restraining order has been granted.

So it appears that in only six-tenths of 1 percent of all the strikes occurring under the Taft-Hartley law has injunctive relief been granted by the courts. Clearly, therefore, it cannot be said truthfully that the Taft-Hartley Act has turned the clock back to the days of government by injunction.

NO. 9

The bill would impede production

WASHINGTON, February 17.—Among other iniquities of the Taft-Hartley law cited in President Truman's veto message was the possibility that it would impede industrial production.

"The bill," he said, "would invite frequent disruption of continuous plant production by opening up immense possibilities for many more elections and adding new types of elections. This would harass employers in their production efforts."

It didn't, however. Although thousands of elections have been held to determine the wishes of the workers, in matters of organization and union security, industrial output has risen steadily. The Federal Reserve Board index shows that the physical volume of production increased 9.1 percent during the 16 months of Taft-Hartley operation, but only 7 percent in the 16 months immediately preceding passage of the new law.

Another major complaint which President Truman stressed repeatedly in his veto message was that the new law would inject the Government into private economic affairs on an unprecedented scale and conflict with important principles of our democratic society.

"It would be," he warned solemnly, "a dangerous stride in the direction of a totally managed economy."

But the records of administrative agencies reveal that Government interference has declined—not increased—under the Taft-Hartley Act, unless it can be said that the holding of an election in which workers themselves

have the right to settle their own affairs democratically can be called interference.

Apart from union-shop elections the National Labor Relations Board has received almost exactly the same number of cases under the new law that it did in the corresponding period under the Wagner Act; while the number of cases on the docket of the Mediation and Conciliation Service has declined 26 percent.

On this point the administration has been embarrassed by an apparent cross-up in its signals. NLRB Chairman Paul Herzog, an administration stalwart and a foe of the Taft-Hartley law, recently appeared before the Senate Labor Committee to support President Truman's demand for repeal.

But while Mr. Truman was complaining that the Taft-Hartley law was a stride toward totalitarianism, Mr. Herzog testified that the President's new bill repealing the Taft-Hartley law was designed to reestablish and augment Federal authority.

NO. 10

"I conclude that this bill is unworkable"

WASHINGTON, February 18.—"I have concluded," said President Truman in his Taft-Hartley veto, "that this bill would prove to be unworkable." He predicted that the National Labor Relations Board, with many new duties assigned to it, would be "hobbled at every turn." Three of the provisions from which he anticipated the greatest trouble were these:

1. Splitting the Board into two separate agencies, with the Board itself acting in a judicial capacity, while the general counsel acts as investigator and prosecutor. The President prophesied that this would lead to conflict within the agency, and it might have done so had not the Board and the general counsel drawn up an agreement specifically outlining the duties and prerogatives of each. But they did draw up such an agreement, and the conflict which the President anticipated has not developed.

2. Requiring the Board to settle jurisdictional disputes over work tasks. "This single duty," said Mr. Truman, "might require a major portion of the Board's time." But this duty has taken virtually none of the Board's time. Under pressure of the Taft-Hartley law, labor and management have worked out procedures for the amicable settlement of such controversies, and only two jurisdictional disputes are before the Board.

3. Giving employers the right of "free speech" in discussing labor problems with their workers, so long as no threat of reprisal, or force, or promise of benefit is contained in their remarks. The President protested that since other sections of the law would make it an unfair labor practice "to induce or encourage" certain types of strikes and boycotts, the free-speech provision would make it impossible for the Board to assemble the necessary evidence.

The Board, however, has apparently encountered no difficulty at all in this respect. When its chairman, Paul Herzog, appeared before the Senate Labor Committee recently, he advocated the repeal of virtually all of the provisions of the Taft-Hartley law, but said he saw no reason why the free-speech section and a few others should not be permitted to remain in force.

Even William Green, president of the American Federation of Labor, announced last week that he had "no objection" to the free-speech guaranties now in the law.

NO. 11

A 5-year backlog of election cases

WASHINGTON, February 21.—President Truman's conclusion that the Taft-Hartley law would prove unworkable was based primarily upon his prophecy that it would put an impossible burden of election cases upon the National Labor Relations Board. Complaining that the Board had experienced great difficulty in conducting the number of elections required under the old Wagenr Act, he pointed out that the new law would greatly multiply this load.

Specifically, he said it would "impose upon the Board a 5-year backlog of election cases, if it handled them at its present rate."

But although the Taft-Hartley law has required the Board to hold more than 30,000 union-shop authorization elections, no such backlog as the President gloomily foresaw has developed.

On December 31 of last year—after the Taft-Hartley law had been in operation for 16 months—the Board had only 3,386 election cases pending and since it has actually conducted more than 5,000 elections in a single month, the present backlog could apparently be disposed of in about 3 weeks, instead of taking the predicted 5 years.

More than half of these pending elections, moreover, are of the collective-bargaining variety, and would have had to be held under the terms of the old Wagner Act in any event. Only 1,440 of them are union-shop elections required exclusively by the Taft-Hartley law, and their number is declining steadily. Last May the Board was confronted by three times as many union-shop elections and still had no practical difficulty in disposing of them.

As for the other types of cases handled by the Board—cases which do not involve the holding of an election—the passing of the Wagner Act on July 1, 1947, found 2,443 of these awaiting Board action. Sixteen months later this number had risen to 2,701—an increase of only 258; but studies of the Board's dockets reveal that some 500 of these present cases originated under the Wagner Act and are still unsettled.

It seems clear, therefore, that the Taft-Hartley law has not imposed any unbearable burden upon the facilities of the NLRB and that the great rush of election cases immediately following passage of the law has subsided, leaving relatively clear sailing ahead.

So here again Mr. Truman guessed wrong.

NO. 12

The President was right

WASHINGTON, February 22.—Throughout his veto message, President Truman complained repeatedly about the number of worker-elections which the Taft-Hartley law requires. Both the Wagner Act and the new law decreed that workers should have the right to choose, in a Government-sponsored election, the particular union which they wished to have represent them as their bargaining agent. In addition, however, the Taft-Hartley law declared that workers should also have the right to decide at the ballot box whether or not they wanted a union shop, whether they wished to decertify the union they had previously authorized as their bargaining agent, and whether—in a national emergency strike—they wished to accept the employer's last offer of settlement.

Of all the objections which the President raised to these and other provisions of the new law, one alone was valid in the light of actual experience to date. He said that the last offer elections would prove useless, and that the workers would always uphold their union leadership by rejecting the employer's final proposal.

That has been true. In the half-dozen such elections which have been held under the national emergency sections of the law, the workers have always refused to accept the employer's offer of settlement.

In many cases the unions have ordered their men not to vote in such an election, and in one case not one single valid ballot was cast. In disputes like the maritime strike, moreover, where union members are scattered all over the world, the holding of such an election has presented tremendous problems.

Then, too, in one instance, the employer came through with a better offer after he had officially posted his formal last offer; so that by the time the election was held the men were confronted by a question that was no longer an issue.

Recognizing the validity of the President's complaint on this score, the congressional watchdog committee has already recommended that this provision be stricken from the law—not on the ground that it has damaged anyone; but merely because it has proved a waste of effort.

Meanwhile, chalk up one hit—and one only—on Mr. Truman's box score.

NO. 13

National emergency strikes

WASHINGTON, February 23.—The Taft-Hartley law established an elaborate mechanism for dealing with national emergency strikes through the fact-finding boards and injunctions, but President Truman wanted no part of it. In his veto message he said:

"I cannot conceive that this procedure would aid in the settlement of disputes."

But it did. Mr. Truman has invoked part or all of this mechanism in seven cases during the last year, with varying degrees of success. Here is the record:

1. Atomic-energy workers at Oak Ridge voted to strike. The President prevented the strike by obtaining an 80-day injunction. No agreement was reached during this period, and the injunction was lifted. Two days later the dispute was settled. No strike ever occurred.

2. Meat packers struck in a wage dispute. The President appointed a board of inquiry, but did not seek an injunction. The strike ran its course, and the workers finally went back at the employer's terms.

3. Coal miners walked out last spring, and for 9 days defied the injunction ordering them back to work. The dispute was then settled, and the union was found guilty of criminal contempt, and was fined. This is the only occasion upon which an injunction under this section of the law was disobeyed.

4. A second coal strike occurred in the captive mines later, and the Government applied for an injunction; but, even before the court could act, an agreement was reached.

5. Telephone workers threatened to strike over new contract negotiations. The President appointed a board of inquiry, and the threat faded at once. Negotiations were resumed and agreement was reached 4 weeks later, without further action by the board, and without an injunction.

6. Maritime strikes loomed on the east coast, west coast, and the Great Lakes. Three injunctions were obtained at Mr. Truman's direction. Before they expired agreements had been reached with the east coast and Great Lakes workers. On the west coast no settlement was obtained before the injunction was lifted, and a strike of several months' duration followed.

7. An injunction was obtained to prevent a strike of longshoremen on the east coast last August. Before it expired agreement was reached by the employers and a union negotiating committee, but the restraining order was lifted before the settlement was ratified by the workers. Sporadic strikes developed and became general under union leadership. The stoppage lasted several weeks.

In a majority of the cases, therefore, the procedure prevented, or ended, dangerous work interruptions; in two it merely delayed them.

NO. 14

The Conciliation Service

WASHINGTON, February 24.—Believing that the Federal Conciliation Service would operate more effectively if it were freed of any taint of bias on either side, Congress, when

it wrote the Taft-Hartley law, removed this agency from the Department of Labor and set it up as an independent establishment beholden to no one.

President Truman, in his veto message, protested vigorously. He denied that any improvement in the service would result, and declared that the agency would be deprived of factual research activities of other branches of the Department of Labor.

But once again it appears that the President was wrong. The record shows that the new service has operated more effectively than the old one in a number of respects:

First, it is one of the few Government agencies in Washington that has been able to cut down on personnel. In 1946 the old service had 488 employees. This year the new service will have 388—a reduction of more than 20 percent.

Second, the congressional watchdog committee has been unable to discover a single complaint of bias voiced either by management or by labor against the new agency.

Finally, the percentage of strikes occurring in cases handled by the new service is substantially lower than it was under the old service, as the following table shows:

	Number of cases closed	Percentage of strikes	
Fiscal year ending June 30—			
1946	16,434	20	Old service.
1947	14,422	21	
1948	10,627	18	New service.
1949 (first half)	7,734	12	

So the fact is that the Conciliation Service, as an independent agency, has operated more economically, more impartially, and more successfully than it did under the Wagner Act, when it was a mere adjunct of the Department of Labor.

NO. 15

The non-Communist affidavit

WASHINGTON, February 25.—In his veto message, President Truman stoutly condemned a provision of the Taft-Hartley law decreeing that union officers must sign a "non-Communist affidavit" before the union itself can qualify for the protection of the National Labor Relations Board.

"The only result of this provision," said Mr. Truman, "would be confusion and disorder, which is exactly the result the Communists desire." Basing this prediction upon the assumption that Communist-led unions—deprived of the NLRB's facilities—would have to win their objectives by strikes, he concluded that "it would increase, rather than decrease, the disruptive effects of Communists in our labor movement."

Of course, it has not. The sharp decline in the number and intensity of strikes has already been reported in an earlier article in this series, and Communist leaders have come under vigorous attack from the rank and file within their own unions. The congressional watchdog committee reports:

1. An overwhelming majority of unions has complied readily with this provision. Included are 95 of the A. F. of L.'s 105 internationals, 31 of the CIO's 39 national and international unions, and 50 unaffiliated independents.

2. One large international has adopted a constitutional amendment requiring its officers to sign the non-Communist oath, and in a number of cases union officers refusing to sign have been defeated for reelection.

3. Unions whose officers have complied have enjoyed "marked success" in supplanting noncomplying unions in NLRB collective-bargaining elections.

4. The Atomic Energy Commission has moved to bar two noncomplying unions from its laboratories. It has directed the General Electric Co. not to recognize the United Electrical Workers, CIO, as the bargaining representative of its employees at the New Knolls Atomic Power Laboratory at Schenectady; and it has ordered the University of Chicago not to recognize the United Public Workers of America, CIO, at the Argonne National Laboratory at Chicago.

So the indisputable fact is that the non-Communist affidavit provisions of the law have helped both labor and the Government to protect themselves against Communist activity.

NO. 16

Miscellaneous objections

WASHINGTON, February 28.—In addition to the prophecies already discussed, President Truman expressed numerous miscellaneous objections to the Taft-Hartley law, which are susceptible neither of proof nor contradiction. He insisted that the law would make it easier for employers to discriminate against union members, and that management could force a collective-bargaining election at a moment strategically disadvantageous to the union.

Perhaps. All that can be said is that there is no evidence on the records available here to show that the new law has encouraged such practices.

He complained that penalties against unions for violation of the law were more rigorous than those against employers, and cited, specifically, the section requiring that existing labor agreements be kept in force for 60 days, without strike or lock-out, pending negotiation of a new agreement. Strikers violating the law, he pointed out, could be discharged summarily, but in case of a lock-out, the employer could be forced only to restore the previous conditions of employment.

That objection, of course, is entirely academic. The Department of Labor, after searching its records, reports that it can find no case in which a lock-out ever occurred during this 60-day negotiation period. In fact, among the thousands of work stoppages that occur each year, it would be difficult to find a single bona fide lock-out of any kind. The lock-out is no longer a factor in labor-management relations.

Next, the President protested against the Taft-Hartley provision outlawing political expenditures either by labor unions or corporations. He said "it would prevent a union newspaper from commenting favorably or unfavorably upon candidates or issues in national elections." The Supreme Court itself disproved that statement, however, by ruling that the law placed no such prohibition on union newspapers.

Finally, he criticized severely a section of the law declaring "that State laws prohibiting the union shop should take precedence over the Federal statute which permits the union shop."

"This," he said, "is a complete forsaking of a long-established constitutional principle."

But again the Supreme Court disagreed, and in a recent decision upheld the constitutionality of such State laws.

NO. 17

Unfair labor practices

WASHINGTON, March 1.—Throughout his Taft-Hartley veto the general theme of President Truman's complaint was that the bill would give employers an overpowering strength in their dealings with unions.

The old Wagner Act, it will be recalled, did just the reverse. It set forth a list of things which it said employers would not be allowed to do, an it called these unfair labor practices. It contained no corresponding list of things which unions should not be permitted to do.

The Taft-Hartley law retained in its entirety the list of unfair labor practices contained in the Wagner Act, but in an effort to restore a balance of power between labor and management, it included an additional list of practices to which unions were not allowed to resort.

Thus employers were given the right to go before the National Labor Relations Board with complaints against unions; just as unions continued to enjoy the right to bring to the Board their complaints against employers.

Now, if the new law had succeeded in achieving a perfect balance of power between labor and management, it might be expected that the number of cases brought to the Board by employers would be approximately equal to the number brought by unions; and if the law were as one-sided as President Truman and other critics insist it is, it would be assumed that the cases brought by employers would vastly outnumber those brought by unions.

The record of the NLRB tells it own story:

In the first 15 months under the Taft-Hartley law, 5,324 unfair-labor-practice cases were brought to the Board. Of these, 4,136—or nearly 80 percent—were instituted by unions against employers. Unions and individual workers filed 528 of the remaining cases against other unions; and employers brought only 660—or about 13 percent of the total—against unions.

"Clearly," concludes the congressional "watchdog" committee, after analyzing this record, "the majority of the Board's time will continue to be spent in preventing employer unfair labor practices."

NO. 18

A clear threat to our democratic society

WASHINGTON, March 2.—As a peroration to his veto message President Truman bundled all his objections to the Taft-Hartley law into one smashing, "superdooper" prophecy of doom.

"The most fundamental test which I have applied to this bill is whether it would strengthen or weaken American democracy in the present critical hour," he said. "I have concluded that the bill is a clear threat to the successful working of our democratic society."

Particularizing, he said it would weaken our trade-union movement, thus destroying a strong bulwark against totalitarianism; it would weaken the national economy, and would go far toward destroying our national unity.

But nowhere in the records of any official agency in Washington is there to be found any evidence that America's democratic society has been weakened under the Taft-Hartley law. On the contrary that enfeebled society has managed to devote billions of dollars to the job of strengthening the less democratic societies of other nations. Here, in quick summary, are the facts:

Instead of being weakened, labor unions are stronger than ever before in their history. They have more members. They have more union-shop agreements. They are more largely covered by welfare funds. They have scored tremendous economic gains and strengthened their ranks against Communists.

The national economy has reached a new all-time peak with the highest national income in the history of this or any other nation, the highest wages ever paid, the greatest purchasing power, and the highest standard of living. Since the law went into effect employment has reached a fantastic new high and production has zoomed upward. Critical wartime shortages are disappearing and inflation apparently has been licked.

Instead of being destroyed, national unity has been strengthened materially by a sharp decline in hate-breeding industrial disputes. Work stoppages have decreased enormously, the number of strikers has dropped off mark-

edly, and 45,000,000 man-days of labor that were lost through strikes in the closing months of the Wagner era have been saved in the Taft-Hartley period.

In short, not one of the major disasters which President Truman prophesied has materialized, and, in view of the actual results of 16 months' experience under the Taft-Hartley Act, it is difficult to believe that his veto message was intended to apply to that measure at all.

It would be far more reasonable to suppose that he was talking about S. O. B.—Some other bill.

The Charitable Organizations of the Nation Should Not Be Taken Over by the Social Security Agency

EXTENSION OF REMARKS
OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. JENKINS. Mr. Speaker, the words "social security" have come to mean much to the American people. Until a few years ago these words had no special connotation. These words also mean much to industry and to the employers of the country. They are also important words to the Federal Government and to the governments of the several States, because of the tremendous amount of money that has been required to make these words effective under the law.

More than 50,000,000 of our people are now included in one or the other of the several categories of the social-security laws. If the administration's proposed legislation which is now being considered by the Ways and Means Committee was to be enacted it would take in 23,000,000 more. This would be more than one-half of the population of the Nation.

If this group should ever be of one accord with reference to some national political or social question and would raise its voice in unison in a demand on the Government, it would be a mighty crescendo which would surely be heard by those in power whose power depended upon the turn of general elections.

There is little wonder, therefore, that the Ways and Means Committee has been sitting nearly every day for the past 6 weeks, hearing testimony of the groups who are interested in the social-security laws and in any amendments that may be offered to these laws.

This great committee surely appreciates the importance of this subject and the grave responsibility of bringing to this House changes designed to strengthen this program.

I do not presume to speak for the Ways and Means Committee or for any member of the committee except myself. I volunteer these few statements because I feel the importance of the changes which the Federal Security Agency is proposing to make in these laws.

If the Congress should follow all the recommendations made by the Social Security Branch of the Federal Security Agency, as set forth in H. R. 2892 and H. R. 2893, plus other proposals which will be offered, such as national prepaid insurance, we will be on the broad, straight highway that leads directly to the welfare state. This highway is not provided with any turn-outs. Once on it, our future will be dangerously uncertain. From the welfare state to the socialist state is only a short distance.

The first social-security laws were passed in 1935, and at that time many people thought that this was the most important and the most far-reaching domestic or social legislation ever passed by any Congress. At that time fear was expressed in many quarters that we were adopting a principle that was inherently socialistic and that a tremendous bureaucracy would be the inevitable outgrowth of this principle. The fear as to the bureaucracy has been fully justified. If the administration's measures now before the committee are all passed, the fear as to the socialistic tendencies will be fully justified.

The first social-security legislation was presented to the Congress by Franklin Delano Roosevelt as a piece of "must" legislation, to be passed immediately. The Ways and Means Committee of the House refused to heed the Great Voice, and took its own time to work out this important task. The committee worked for 9 weeks and prepared its own bill. That bill was passed by the House after nearly 2 weeks of debate and consideration. The first bill passed by the House did not contain title 10, which provides relief for the blind. Title 10 was offered as an amendment in the House by me, and although it received enthusiastic support, it failed to be adopted by a few votes. The Senate adopted title 10 in about the same language as I had offered it, and it became a part of the law.

The first social-security bill provided for assistance to several categories. These categories have become well defined now, and are about as follows:

1. Grants to States for old-age assistance.
2. Grants for aid for dependent children.
3. Grants for maternal and child welfare.
4. Grants for aid to the blind.
5. Federal old-age insurance benefits.
6. Federal and State program for unemployment compensation.

In 1939 the social-security laws were amended somewhat. The principal amendments were provisions for survivor benefits and increases in the benefits formula.

As I have already stated, when the social-security laws were first passed and the Social Security Board set up much fear was expressed that this legislation had inherent in it great potentialities of usurpation of power. This was the Federal Government's first venture into "give me" legislation. The real purpose of this legislation was a worthy one, but, as I have already stated, it had in it the germ of socialism.

That there was justification for the fears of the people with reference to the administration of this legislation was soon established, because the Social Security Board began to assume power and authority that was greatly beyond its jurisdiction. I wish to cite two instances of the unreasonable arrogation of power by the Board:

First. The Social Security Board about 10 years ago improperly injected itself into the administration of the old-age-pension laws in the State of Ohio, for no other reason than that the Governor of Ohio, who was a Democrat, had crossed swords with Harry Hopkins, who was then the great money dispenser for the Government. Each took to the newspapers with scathing personal accusations. At that time I was inclined to believe the accusations made by both of them, but since both of them have since died, it would probably be more polite for me to leave them alone in their glory. At any rate, Ohio was arrogantly and unlawfully deprived of $1,338,000. This amount, with interest, is still owing to Ohio. That the Social Security Board was wrong in its action is proved conclusively because when I introduced a bill in Congress providing that Ohio should be reimbursed for the loss of this money, that bill passed the House and the Senate by a tremendous vote, but the President, under the influence of the forces which made the unreasonable order, vetoed the bill. The Congress failed to override the veto by only a very close vote. Justice will not be done until the Federal Government pays the State of Ohio the money which was withheld from her by the arrogant and unlawful action of the Social Security Board.

Second. Another case of gross usurpation of power is shown in the conduct of the Social Security Board in placing more than 750,000 persons on the list to receive benefits that were not entitled to be on the list. As a result, most of these received compensation for which they had not paid a penny. It required an act of Congress to compel the Board to desist from its unlawful practices. The money that had been unlawfully paid out has not been returned to the fund from whence it came.

I now proceed to address myself to the two bills which the Ways and Means Committee has been considering for the past few weeks. These two bills are administration bills, prepared by the Federal Security Agency, and were sent up to Congress by the President with a rating of urgent legislation. Again the Ways and Means Committee asserted its independence and refused to do the will of those who would deliver us into what is now frequently spoken of as a welfare state.

H. R. 2892 is a bill which would put practically all public assistance under the control of the Federal Government. Those who foster this bill maintain, in effect, that any individual, regardless of age or condition of health, would be eligible for assistance payments, based solely on need.

This bill, if passed, would discourage all voluntary charity which runs into many millions of dollars and which has characterized the American people and which is one of the evidences of the true greatness of the American people. "Charity suffereth long and is kind." "Charity is not puffed up." Nothing should be done by legislation that would

stifle charity. The Good Book says that "Charity never faileth."

By this bill the Government would force itself into control of the great charity work that has been so wonderfully done by the American churches and by the civic and the fraternal organizations. This Agency would do this on the theory that the Government could do this work more scientifically and efficiently. They give little consideration to the fact of the tremendous financial outlay it would entail.

Mr. Oscar Ewing, the Federal Security Administrator, has indicated that the Government must extend to every individual complete medical care and hospitalization and nursing facilities, without reference to the cost of the specific service.

He would go further, if possible, than Mr. Arthur Altmeyer, the Social Security Commissioner, who recently said:

> Social security, in the most inclusive sense of the term, includes all things necessary to enable the individual citizen of a country to lead a personally satisfying and socially useful life.

In other words, these men apparently are practically committed to a program of Federal assistance that would be sufficient to personally satisfy every individual, so that he could live a social life to his own personal satisfaction. That would cost the Federal Government, conservatively, $25,000,000,000 annually in a few years. While this group favors this extravagant legislation, they do not say anything about the terrific political potentialities inherent in it. This could become the vehicle by which a power-minded Federal administration could perpetuate its hold upon the country. Social insurance would reach into millions of homes with potential benefits which might, under certain conditions, develop political implications. Certainly it invites competition between opposing political parties in making promises to the electorate, and a party in power might attempt to keep itself in power by convincing voters that their social benefits would be endangered by a change in administration. When more than half of our people are in one social operation which depends substantially on the Federal Treasury, their wishes, expressed in consonance, would command political power.

Also, it must not be forgotten that the chief supporters of this legislation are closely related by political consanguinity to Harry Hopkins, whose chief claim to fame was that he was the most profligate spender in the history of the world, and it was he who effectively proved that free distribution of Federal money is the best way to "Elect, elect, elect."

I feel that the hearings now being held by the Ways and Means Committee have completely put to flight these apostles of Government in everything, and that their program for taking full control of all the public assistance of the Nation is doomed to failure. This was one of the boldest attempts toward putting the Government into socialism that I have ever seen. While I think these forces have been stopped, I would have you know that this group has a persistency that nearly surpasses its impertinency, if that is possible. Truly, eternal vigilance is the price of liberty.

Every man is entitled to his rights, but in these stressful days every man is bound to assume and give a complete fulfillment of his entire duty. Rights should be respected. Duty must be done.

I would not have you believe that I am opposed to all amendments to the social-security laws. The contrary is true. I favor wider coverage. I also think that in many instances benefits should be increased, and I also believe that the contribution of the employer and the individual to the old-age and survivors' insurance coverage should be increased now or in the near future so as to insure the solvency of the fund from which the social-security benefits are paid. I think that those groups who are anxious to be included should be given every reasonable consideration, and likewise I believe that the problem of extended coverage of some other groups is not so urgent as to warrant the use of compulsion to drive them into the program.

In the Eightieth Congress the Ways and Means Committee voted out for consideration by the House a bill providing a number of amendments to the social-security laws. The House passed that bill, but the Senate did not have time to consider it. I voted for that bill, and I think it would be well at this time to have that bill reintroduced and reconsidered.

The central philosophy of social security is that it affords an opportunity to individuals to better themselves and to better the condition of their families, and to secure themselves and their families against some of the vicissitudes of life.

Mr. Speaker, work and thrift have done more to make America great than any other policies. Work and thrift should be encouraged. America is still the land of opportunity.

Mr. Speaker, the best social-security system that our country can have would come from a full realization by our people of the great opportunities that our country still offers. We need a resurgence toward the virtues of industry and thrift.

Mr. Speaker, practically all wealth comes from the ground and from the dexterity of the hands of the people and the acumen of the mind of the people. It does not come from the Government.

Why Food-Drug Checks Cannot Be Divided

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. HARRIS. Mr. Speaker, last Monday, April 4, 1949, the Washington Post carried an editorial on the subject Why Food-Drug Checks Cannot Be Divided, written by the Honorable Edward Brown Williams. Mr. Williams is an attorney here in Washington and formerly was assistant general counsel for the Federal Security Agency. He is, therefore, well qualified to write on this subject. He is a native of my district from Arkadelphia, Ark., and it was my happy privilege to have been a classmate of his in Henderson Brown College, of his home city.

I have had occasion to read the article referred to and written by Mr. Williams. It is based on the Hoover Commission recommendation that the functions of the Food and Drug Administration relating to foods be transfered to the Department of Agriculture. It is an excellent discussion on this subject, showing his reasons why such transfer should not be made. I commend it to the attention of the Members of the House and ask unanimous consent to extend the original with my remarks.

WASHINGTON, D. C., *March 30, 1949.*
The EDITOR, WASHINGTON POST,
Washington, D. C.

DEAR SIR: Your editorial, Welfare Reports, of Monday, March 28, takes note of the proposal of the Hoover Commission that the functions of the Food and Drug Administration relating to foods be transferred to the Department of Agriculture, and that those relating to drugs be transferred to the Health Bureau of a proposed new United Medical Administration.

The Commission states that the present separation among several agencies of regulatory authority over food, drugs, and cosmetics "creates great overlap and confuses the public." The matter is one of considerable importance to both the food and drug industries and the public. The Commission's proposal should, therefore, be subjected to the closest scrutiny before a decision is made to carry it into effect.

The Food and Drug Administration, now a constituent unit of the Federal Security Agency, has been at the job of policing interstate shipments of food and drugs since 1906 with conspicuous success. During that period, the advance in standards of food and drug manufacture and processing in the United States has been notably greater than that of any other country in the world. The Administration has, moreover, achieved the highest order of respect among the industries subject to its regulatory jurisdiction. The responsible majority of them regard it as a safeguard for their own high standards and reputations against the marginal violators of the law who, sooner or later, are taken into camp by the Administration and either converted to the faith, or, if they are recalcitrant, are put out of business.

That there is no real justification of either economy or efficiency for disturbing the present successful operation is, I think, demonstrated by the following considerations:

(1) The Commission's proposal would involve the subjection of the policy-making and enforcement function in food-regulatory activities and food standard-making to a producer-minded department rather than, as now, to an agency whose interests are not geared to any one segment of the population.

The aim of the Food, Drug, and Cosmetic Act, as its legislative history amply demonstrates, is the protection of the public interest in the integrity and honest marketing of foods, drugs, and cosmetics. It will certainly be granted that the Department of Agriculture would enforce the food provisions of the law in the consumer interest as that interest appears to it. But the farmer is also a consumer. Can it reasonably be supposed that his interest as a particular class—a minority—would not weigh with some heaviness upon policy-forming personnel who, in effect, represent that interest and that this influence would not make itself felt in regu-

latory matters which concern both industry and the general public?

The Commission's task force on agricultural activities recognized that occasional conflicts arise between consumer and agricultural interests and achieve substantial political significance, but stated that such controversies are, after all, relatively infrequent. The fact is that such controversies underly every contest in the Food and Drug Administration's important food standard hearings where the use of chemical substitutes for natural products is involved, as well as controversies such as those mentioned in the report of the Commission's task force. Similar conflicts arise in connection with the day-to-day prosecution of legal actions against agricultural products. They are likely to come to the attention of the public only in exceptional cases. But this is no measure of the significance to the public of the manner in which they are decided by the Government.

The primary interest of the Department of Agriculture is in the rural-life activities of the country and not in the regulation of commercial practices. The fact that it does exercise regulatory functions in other than its primary field is no valid reason for adding to those functions.

Eight years ago, in recommending to Congress the transfer of the Food and Drug Administration from the Department of Agriculture to the Federal Security Agency, President Roosevelt said that, "The work of the Food and Drug Administration is unrelated to the basic functions of the Department of Agriculture," and expressed the belief that "the opportunity for the Food and Drug Administration to develop along the increasingly constructive lines" lay in the Federal Security Agency. These reasons are as applicable today as they were then.

(2) The proposal would entail the loss of the effective continuity of policy and personnel maintained for many years by the Food and Drug Administration; the loss of the breadth and intensity of experience in the development of scientific techniques which comes from such continuity and from the technical advantages of operating in the three areas of food, drug, and cosmetic regulation rather than in a single one of those areas; and it would result in unnecessary and wasteful duplication by the Department of Agriculture and the new medical agency of headquarters and field administrative, technical, and inspection personnel and laboratory equipment. These are quite obvious disadvantages which promote neither economy, efficiency, or better service to the public.

(3) Adoption of the Commission's proposal would create overlaps and conflicts of jurisdiction more troublesome than those which would be eliminated.

(a) The Food, Drug, and Cosmetic Act contains numerous basic provisions common to food, drug, and cosmetic regulation; for example: the criminal, seizure, and injunction provisions; authority to promulgate exempting regulations as well as regulations establishing affirmative requirements; and certain very basic misbranding and adulteration provisions. It would be intolerable to have two agencies following different enforcement and regulatory policies under the same or substantially identical provisions of the same law.

(b) Carriers and industry would be faced with investigations of their records, plants, and warehouses by two different sets of inspectors instead of one, as now.

(c) Under the law, many articles may be subject to regulations as both foods and drugs, according to the uses to which they are to be put and whether they are listed as drugs in the United States Pharmacopoeia, the National Formulary, or the Homeopathic Pharmacopoeia, the official drug compendia. The United States Pharmacopoeia alone lists as drugs more than 35 common foods.

A manufacturer of vitamin pills who succeeded in clearing his product as a drug with the splinter of the divided Food and Drug Administration enforcing the provisions of law relating to drugs—the medical agency—might, nevertheless, find the product seized and himself prosecuted criminally by the food splinter—the Department of Agriculture—for the violation of identical provisions relating to foods. This is not an unlikely situation. Manufacturers and shippers have suffered similar painful experiences as a result of the present divided jurisdiction of the Federal Trade Commission, which polices advertising of foods and drugs, and the Food and Drug Administration, which regulates labeling of the same articles.

The extreme divergence of opinion as to the disposition of the Food and Drug Administration between the Commission and the three task forces which have considered this problem, and between these task forces themselves, is a significant element of this picture.

Commissioners James K. Pollock and James H. Rowe, Jr., dissented from the Commission's recommendation and have recorded an excellent statement of their reasons. The task force on agricultural activities proposed the shift of all functions of the Food and Drug Administration to the Department of Agriculture; the task force on public welfare said they should all go to the Public Health Service; and the task force on Federal medical services wanted them placed in the public-health division of a proposed national bureau of health. Such unanimity of difference is not conducive to confidence in the Commission's conclusions in this matter.

This impression is underlined by the fact that these conclusions are themselves inconsistent with the Commission's own professed principle of grouping agencies according to major purpose. Elaboration is not required to show that protection of the purse and health of consumers is not the major purpose of the Department of Agriculture and that the projected medical agencies would have little to do with the important nonhealth function of the Food and Drug Administration—the safeguarding of the public's pocketbook.

It seems clear that better reasons must be advanced if the change recommended by the Commission is to be justified on the record. As a matter of fact, the Commission has succeeded only in a penetration of the bare periphery of the food and drug regulatory problem. It has obscured the real issues by the adoption of an oversimplified pattern of functional alinement apparently based on product origin rather than on the purpose and character of the regulatory function itself.

Very truly yours,

EDWARD BROWN WILLIAMS.
Formerly Assistant General Counsel, Federal Security Agency.

The Significance of Army Day 1949

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. SABATH. Mr. Speaker, on April 6, 1949, Americans throughout our Nation observed Army Day to commemorate the huge contributions of our fighting men of this branch of our armed forces who fought in defense of our country. But greater yet is the admiration and veneration we owe to our soldier dead of all wars, who made the supreme sacrifice for God and for country.

Every American today looks with great satisfaction upon the successful operations of our armies completed in the past and present, on behalf of the safety of our established institutions. Our citizen armies coming from all races, creeds, and colors have always filled the breach which the emergencies of unpreparedness and necessity for speedy and efficient action have made necessary. They came from the factories, the offices, and the farms, from the cities and the rural districts. Amenable to instruction and discipline, they fitted into a mold into which only an American can be patterned. For in this mold is honesty and sincerity of purpose, courage and understanding, swiftness and determination in action, and last but not least, a love of peace and distaste for aggression. Once this mold is broken, the greatest attributes of character which must rest in the make-up of a fighting man, quickly disappear. For in time of crisis, it is the infantryman and his coworkers struggling and sloshing through mud and burning sands, wind, rain, and snow, climbing and descending hilltops and mountains, penetrating forests and brush—yes, it is this branch which holds the ground already won or stands immovable as a rock in defense of the terrain either to be held or saved.

If we peer into the history of our small beginnings, we marvel at the greatness which our fighting men have attained.

The Minute Men of '76, after 7 years of discouragement and uphill fighting, established a Nation of freemen and freewomen. We never fail to remind ourselves of the sufferings at Valley Forge, the difficult and courageous Trenton crossing, the slow but skillful retreats of Washington employing fabian tactics of delay. But the indomitable spirit of these irrepressible and stouthearted fighters for liberty and freedom was not to be denied in spite of the hardships these early Americans encountered and so successfully met. It was these men of 1776 who gave full force to the Declaration of Independence and support for the Constitution of the United States.

Reviewing further the meritorious efforts of the infantryman and the other members of his team, we recall the War of 1812 wherein, although they suffered defeat after defeat, nevertheless when the chips were down, they fought and routed a superior host, the pick of the English troops at New Orleans under that distinguished leader, Gen. Andrew Jackson.

History again tells us of the American soldier in action at Palo Alto when, in the Mexican War of 1848, the great military general, Winfield Scott, matched forces with Santa Anna, the Mexican, and inflicted terrific and lasting losses upon the attackers and from this victory came the acquisition of the vast territory of California, Nevada, Utah, Arizona, New Mexico, and part of Colorado.

Today we look back with regret upon the internecine strife which pitted American against American, the men in blue

of the Grand Army of the Republic against the gray of the Confederate forces. Here we find two superior specimens of American manhood battling each other to a standstill, until exhaustion and weakness brought on by reduced manpower and material strength forced upon the South, the surrender at Appomatox. And with this victory was assured the preservation of the Union.

On this day of gratitude and thanks to the men and women of the Army, we recall the brave efforts of the men of '98 who, fighting tropical heat and disease, over difficult terrain vanquished Arsenio Linares at San Juan. And with the vanquishing of the Spaniard, we assumed for the first time our rightful place among the nations of the world—a world power with which to be reckoned.

If the book of history were to be closed with the record established by the Army up to 1898 we would look upon one of lustrious military accomplishment in Army exploit. But the record is not complete, for there followed two magnificent demonstrations of American military prowess never equaled in military annals. On April 6, 1917, 32 years ago today, World War I was upon us. The doughboy of '17 and '18 met the Boche at the height of his fury and full force, traded blow for blow with him at Belleau Wood, at Chateu-Thierry and in the Argonne. How well this American soldier distinguished himself is related in the continuing saga of American superiority under arms; demonstrated when free Americans living under a truly representative Government oppose and conquer representatives of totalitarian forces of self-styled supermen bent on aggression and wanton destruction of life and property.

In passing it may be noted that today only four Members of the House serving on April 6, 1917, are still Members of the House, namely, Mr. DOUGHTON, of North Carolina; our Speaker, Mr. RAYBURN, of Texas; the gentleman from Georgia, Mr. VINSON, and myself.

And now we come to what we hope is the last chapter in world history of destructive acts upon the ideals and peace of mankind. In 1941 we find history repeating itself and again the same forces are pitted against each other with the same causes and effects, the same ideas and same forces arrayed one against the other, and with the same results, the defeat and subjugation of the tyrant, and again the huge destruction of life and treasure. Once again in that conflict the American boy whose branch of service we honor today, barred the path of his cruel adversaries in the far reaches of Europe, Asia, and Africa and slowly but surely reduced them and their braggart leaders to craven and abject hulks of men they always had been, even during their periods of temporary advantage.

And thus it is on this Army Day of 1949 I raise my voice with reverence in praise and admiration of our honored American dead of all wars who have never failed and shall never fail to protect the honor of our flag—who shall in the present and in the future, guarantee our democratic ideals and democratic form of government.

May our gratitude and our fervent prayers bring to them solace and consolation. To them is transmitted the loving memory of a grateful American people for a life ennobled and dedicated to justice, freedom, and democracy.

We the living, ever mindful of their supreme sacrifice, salute American royalty, our heroic war immortals, at the bivouac of the dead on this Army Day, April 6, 1949.

Guaranty Clause of ECA Act

EXTENSION OF REMARKS
OF

HON. ABRAHAM RIBICOFF

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. RIBICOFF. Mr. Speaker, within the next few days the House of Representatives will consider amendments to the ECA Act. The guaranty provisions, as adopted by the House Foreign Affairs Committee, present some of the most important of these changes. I append a communication of Norman M. Littell as it appears in the Washington Post of April 8, 1949, because it presents a clear discussion of the problem:

APRIL 1, 1949.

RISKLESS ENTERPRISE? RECKLESS JOURNALISM (REGARDING THE GUARANTY CLAUSE OF THE ECA ACT)

Your editorial of Friday, March 25, attacking the House Foreign Affairs Committee's amendments to the guaranty clause of the ECA Act commences with a misrepresentation of fact in its very title, "Riskless Enterprise." As a description of the proposed amendments, this irresponsible caption has no basis in fact, and grossly misleads your readers.

In the text, instead of looking at the merits, your writer proceeds to look for creeping things under rocks and characterizes a serious attempt to solve a problem which he does not understand, first as a "trap" into which the Foreign Affairs Committee "fell * * * under the insistent pushing of the American Bar Association and of certain businessmen and bankers," then as "the kind of sham now sanctioned by the Foreign Affairs Committee," and finally as "an unconscionable raid on the Federal Treasury." Members of the Foreign Affairs Committee, most of whom have vastly more training and practical experience in American life than your penman, are dismissed as a group of men who "do not seem to understand what free enterprise means," and the changes they deemed necessary are said to "conflict with the system under which the United States has grown rich and strong."

To anyone acquainted with the exceedingly able and conscientious group of Democrats and Republicans on the House Foreign Affairs Committee, this is an evil reward for their conscientious study of all amendments in long hours, days, and weeks of painstaking work.

To reach a safe vantage point for condemnation, your heady writer also had to sweep aside such trivial and inconsequential minds as three distinguished Members of the United States Senate known for their progressive attitudes, a distinguished authority on international law who is the editor of the Journal of International Law and Washington representative of the Carnegie Endowment for International Peace, all of whom signed the report of the Committee on Foreign Economic Cooperation [1] of the American Bar Association, and others who recommended changes which your editorial condemns. Your editorial assumes that none of these distinguished citizens has any interest in the welfare of our country or any knowledge of the complex legal background of the problem—that is, no knowledge comparable to the ivory-tower reflections of your editorial writer.

What are the dread amendments proposed?

The original guaranty clause provided for a guaranty of convertibility (i. e., from foreign currencies back into dollars) for the principal amount of private investments made in Marshall-plan countries with the approval of the Administrator. The proposed changes would: (1) Extend the guaranty in amount to include interest or profits to the extent found reasonable by the Administrator; (2) extend the guaranty in scope to include certain political risks lying on the level of American foreign policy rather than on the private risk level, e. g., leases caused by seizure, confiscation, revolution, war, or other governmental regulations or decrees which in the Administrator's opinion prevent the further use of the investment for the intended purpose; and (3) reinstate $272,000,000 of the original $300,000,000 guaranty appropriation so it must be used for guaranties instead of being consumed in direct loans to foreign governments as the original funds were, contrary to the intent and instructions of Congress.

Your alarm over these things could stem from a failure to consider the underlying premises which led to the Foreign Affairs Committee proposals. In 1947 this Nation committed itself to a vast program of reconstruction and rehabilitation in western Europe to help our friends stand with us for a free way of life. We have backed that commitment with billions of dollars.

In the system under which the United States has grown rich and strong, standards of living depend on the production of goods. Trade, agriculture, and industry flourish when capital, raw materials, manpower, and production know-how are joined and held together by good business management. Simply stated, that is free enterprise. The alternative, in black and white terms of contemporary history, is the total regimentation of capital and labor by Government bureaucracy.

So when Congress set up this vast program of reconstruction, it could appropriate money and set up a bureaucracy to dole it out (the ECA) and receive it (the OEEC); or it could enlist private resources and American industrial know-how and management. In the emergency, Congress used the former method as a common denominator of administration, authorizing $5,000,000,000 in direct grants and $1,000,000,000 in loans, but it also laid foundations for the latter course in authorizing guaranties up to $300,000,000 for the encouragement * * * of private enterprise to contribute through its initiative and capital in the reconstruction and development of Europe.[2] We set up bureaucracies on both sides of the Atlantic, and they were astonishingly efficient before the real challenge of spending so much money so fast.

Only the guaranty program was a complete failure for reasons reviewed by the Foreign Affairs Committee of the House. The guaranties weren't adequate in amount or in

[1] Members of this committee are Senators Wayne Morse, of Oregon; Estes Kefauver, of Tennessee; John Sparkman, of Alabama; Mr. George A. Finch, editor of the Journal of International Law and representative of the Carnegie Endowment for International Peace in Washington, D. C.; and the writer, who serves as chairman of this committee.

[2] S. Rept. No. 935, 80th Cong., 2d sess., 1948 (p. 53).

scope. And 90 percent of the $300,000,000 was allocated by ECA for loans instead of guaranties (contrary to the intent of Congress). In the words of Mr. Bevin, speaking in Parliament, we Americans proved ourselves to be great free enterprisers at home and great state planners abroad.

When the ECA officials came around to tell Congress what they wanted for next year, their proposal, as adopted in good faith by the Senate Foreign Relations Committee, looked as if the $300,000,000 was to be reestablished for guaranties, but actually it wasn't. Any further guranties were to come out of grant funds. If adopted, this will be absolutely fatal. No participating country will ever approve a single guaranty if it constitutes a deduction from granted funds. If there is any trap in the picture, this is it, for without the Senate committee having fully realized it, the guaranty clause is deftly eased out of the act and complete bureaucratic control maintained over every penny of ECA money.

The Foreign Affairs Committee in the House not only exposed these facts but rewrote the guaranty clause to reinstate and implement the original intent of Congress to induce private enterprise and risk capital to assume part of the load of reconstruction. Under either system we are spending the same American dollars, but in one case it is tax money and in the other it is stockholders' money spent under business management.

We are only talking about $300,000,000 (which will very probably invite into operation partnership capital of about equal proportions abroad) for privately managed projects approved by the Administrator and the participating country as furthering the purposes of the Marshall plan. Your editorial does not state this material fact, but says, "It is idle for advocates of this change to pretend that it would not put an appreciable burden on the Government. Suppose the proposed guaranty had been in effect during the twenties, when American private investors lost hundreds of millions in Latin America, or during the thirties in central Europe. Wouldn't our Government have had to foot the bill for a large part of these losses?"

The superficiality of that statement is breathtaking. We were not engaged in a world struggle to preserve a free way of life in the twenties. We are now. A Marshall plan or an Atlantic Pact were undreamed of then, and we have spent or committed on them vastly more than we dropped in South America in stockholders' money without ever expecting to see it again—all a part of the calculated risk.

The sum we are now discussing is $300,000,000, and the risks embraced in the proposed guaranty amendments are not ordinary business risks, but are extraordinary political risks which no investor would encounter in a similar undertaking in the United States. Such risks are properly the concern of governments and not private investors. They are a part and parcel of our foreign policy already, for every penny of the billions spent on the Marshall plan may become a total loss for one or more of the reasons stated in these amendments, with this vital distinction: The loss of our investment under the Marshall plan will be total and complete if the plan fails in any participating country, but under a guaranty the Government would not sustain a total loss because it takes over currencies, credits, and assets of the guaranteed investor, from which something can surely be salvaged to the Government through diplomatic negotiations or recourse to the International Court.[3]

[3] See sec. 115 of the act, and art. X of the bilateral agreements with each participating country, in regard to espousing claims in the courts on behalf of nationals.

In conclusion,[4] your editorial misses the purpose of guaranties. American industrial production won the war. Even Joe Stalin recognized this in proposing toasts at Tehran to American productive capacity. It could help win the cold war too, and (if extended under President Truman's Point IV) raise living standards all over the world, for what Europe and the so-called backward areas of the world need is goods, goods and more goods. And what we need is goods flowing in a two-way world. No Atlantic Pact can produce goods or create employment at reasonable wages in order to replace despair with the hope and means of a free way of life, but American techniques and know-how of production abroad could do so.

Thus far this unique American contribution to contemporary civilization, the genius for industrial production, has remained meekly chained at home.

The object is to release our productive capacity not for the purpose of exploitation but for greater service, participation and mutual prosperity in industrial enterprise.

NORMAN M. LITTELL.

WASHINGTON, D. C.

[4] I cannot trace out all the errors in your editorial, like the statement that the amendments "would add to the dollar drain on European countries." This is simply untrue. Guaranties are a new source of additional dollar credits.

Socialized Medicine—Russia Under Communism

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. SMITH of Kansas. Mr. Speaker, constantly the big metropolitan press with their highly paid editorial staffs discuss the problems of the day.

I present herewith two editorials from a small-town newspaper that to my mind present the subject matter more forcibly than any of the so-called metropolitan press.

These two articles clearly show that people back home in the rural areas are deeply concerned with this country's problems.

[From the Argonia (Kans.) Journal of February 18, 1949]

UNCLE SAM HAS NO DOCTOR OF MEDICINE DEGREE

Men who like to call themselves liberals have one outstanding trait. They are always kicking and anyone who opposes their wild-eyed schemes is classed as an obstructionist or a conservative. Right at present the victim of this particular brand of so-called liberalism is the medical profession and a drive is being made to make people believe they're being denied medical attention which only the Government can provide.

Doctors have struggled for centuries in laboratories and at bedsides to learn the secrets of keeping the human body alive and healthy. Many dread diseases have been eliminated and the span of life has been doubled in a few decades. Not so very long ago appendicitis was treated with opium pills, poultices, and castor oil. This form of treatment was cheap, but most of the patients died. The diabetic was given codeine and put on a diet. Again the doctor's charges were low, but, as the obituaries read, the patient departed this world. The enormous progress in medical care and the ever-growing complexity of treatment has naturally added to the cost, as does anything which contributes to modern living.

A lot of cockeyed schemers whose blood pressure would have killed them long ago if a few competent physicians had not been at hand are telling the people how neglected they are and that the medical profession has got to do better or Uncle Sam will have to step in and take care of all their needs, from the cradle to the grave, at a cost of six or eight million dollars a year, to be taken out of all pay checks each month.

In the palmy days of the Roman Empire the average lifetime was about 25 years. By 1700 it had risen to 33 years in the most advanced nations. Now it is crowding 70 years, and it has been done by the eternal vigilance of the medical profession, not by socialized medicine. After the shouting has died down and the professional psalm-singers have taken up some other fad, it will still be up to the doctors to keep us healthy, and they won't need some bureaucrat in Washington to tell them how to do it.

Voluntary prepaid medical plans, such as the Blue Cross and other similar organizations, have made it possible for the majority of Americans to anticipate doctor and hospital costs by paying small monthly sums. The small proportion of people who cannot pay anything at all can be cared for without compelling everybody to go into it, whether they need it or not. The country does not want or need a grandiose medical scheme that would cost billions of dollars and subject the doctors to the political whims of some bureau at Washington.

Socialized medicine would do no more than make the Government a bill collector for the doctors, payable in advance, with a part of the money retained for bureaucratic activities. Uncle Sam has no degree in medicine and medical advancement will be achieved in the future by the doctors, as it has since the days of Hippocrates, in spite of those self-styled liberals who are trying to woo votes by making the health of the Nation a political issue.

F. J. C.

[From the Argonia (Kans.) Journal of April 1, 1949]

GOVERNMENT OPPRESSION IS AN OLD STORY

It is claimed by the Communists in Russia, and echoed by their fellow travelers in this country, that some form of communism will eventually prevail throughout the world because it is a young and dynamic doctrine, filled with vitality and promise, which satisfies the higher ambitions of people. On the other hand, these same people argue that capitalistic democracy is old and exhausted, has outlived whatever value it once had, and so is doomed to extinction in the long run. It is to this class that some of our intellectual nuts belong, some of whom are found on college faculties, and who think such ideas show a superior form of intelligence.

This has been stated by totalitarian propagandists and by some misguided people in this country who are continually striving to give the Government more power over the people. But it is a complete perversion of all history. There is nothing basically new in communism, fascism, or other totalitarian doctrines except the name. It is as old as cruelty and oppression. It deals with heretics, with weapons of torture, execution, and banishment. Its labor policy is that of serfdom—every man and every woman is regarded as a slave of the state, to be used as the official ruling class desires. Its economic philosophy is that of an absolute monarchy, when everything was the property of the king and the freedom of opportunity was unknown. Its attitude toward all civil

liberties—freedom of press, of speech, or assembly—is likewise as old as history. Everyone must say and think what they are told, or suffer the consequences.

Are the masses of Russian people any better off under the Soviets than they were under the Romanoffs? Can ruthless dictatorship succeed another by force of arms? The people, in whose name the revolution was effected, are still submerged in an abyss of ignorance, want, fear, and absolute mental and physical regimentation.

Capitalistic democracy, with all its admitted faults, is the only form of government which has proved itself capable of maintaining the freedoms of the people. It is the only form of government in which the people exert complete authority and have the eternal safeguards that make dictatorships impossible. It is the goal toward which nations have strived through long bloody centuries, and for which millions of men have died. The dynamics of the total state are in reality the dynamics of the cruelest form of feudalism.

State Department's Spanish Policy

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. SABATH. Mr. Speaker, under unanimous consent, I include in the RECORD a letter which I received from Mr. Donald J. Lotrich, secretary of the Yugoslav Savings and Loan Association, Chicago. The writer queries whether there is anything we can do to stop our State Department from carrying out their present Fascist policy. The subject matter of this letter is most revealing and worthy of serious thought on the part of each and every Member of Congress.

CHICAGO, ILL., *March 18, 1949.*

Hon. A. J. SABATH,
Member of Congress,
Washington, D. C.

DEAR MR. CONGRESSMAN: I write to you because I know that you are interested in the manner in which our State Department has been handling the situation concerning Spain.

On August 24, I wrote to the State Department about the murder of the group of Spanish miners in the most barbaric way such crimes could possibly be committed. They replied on September 17 that the Department had no available information on the case, but that the Embassy in Madrid had been instructed to ascertain the facts and they would report again.

When on November 23 no further word had been heard, I inquired again. Their December 3 letter explained that the American Embassy made a preliminary inquiry, but that it failed to disclose such an occurrence. The investigation was being continued, however.

I took them to task in my letter of December 9 and again on February 16, 1949, but it looks like to no avail.

Is there anything we can do to stop our State Department from carrying out their present Fascist policy?

Please let me hear from you.

Respectfully yours,

DONALD J. LOTRICH.

Address of Hon. Sam Hobbs, of Alabama

EXTENSION OF REMARKS

OF

HON. GEORGE W. ANDREWS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by my colleague, Hon. SAM HOBBS, before the Canadian Council of Laymen, at Toronto, Canada:

Mr. Chairman. Friends. The honorable gentleman who so graciously strained his conscience in introducing me, made me think of the funeral of a prominent colored citizen down in Alabama. The officiating minister was eulogizing the deceased in glowing terms, describing the perfection of his character as husband, father, neighbor, friend, and churchman, when the widow arose and started toward the coffin. The preacher tearfully remonstrated: "Now, sit down, Sister Brown, I knows you is hurted in your heart, but dis aint de time to view the corpse." But the widow replied: "Maybe not, Reverend, but, 'fore God, I believe you is burying the wrong nigger."

The sole reason that my duty is neglected to accept your gracious invitation and fill this engagement, is the place of world leadership that Canada has attained in the movement toward Protestant unity, and her service through the Canadian Council of Laymen.

Nothing could be more important.

And may I dare anticipate the approval of your noble King, and congratulate your great nation upon the imminence of making your oldest Crown Colony your tenth Province?

My subject poses the most soul-searching query, that must be troubling every thoughtful mind:

Do we stand at Armageddon?

The forces of evil are certainly already massed on that field of battle, and spoiling for the fray. They have swept the world, capturing every stronghold of morality, and winning every pitched battle.

"God's first and holiest school," the home, is losing, if not lost.

Decades ago, when polygamy was the only real threat to the home in the United States, a determined effort was made in our Senate to deny Reed Smoot the seat in that body to which he had been duly elected by Utah. A Senator who favored the denial approached Senator Boise Penrose, seeking to enlist his powerful aid in the fight against seating Senator-elect Smoot. Penrose heard him through, then took his cigar from between his teeth, and said: "You say he is a member of a church that believes in polygamy; but does he practice it?" "Oh, no, he never has," replied the other Senator, "but he's still a Mormon." Knowing his man, Penrose rejoined: "I'd rather sit in the Senate with a polygamist who doesn't polyg, than with a monogamist who doesn't monog." That ended the argument. Smoot was seated. Polygamy is gone, but the more insidious kind, "the serial polygamy" of Hollywood, still flourishes.

Communism has infiltrated our colleges, and even our Government, with its poisonous pedagogism, seeking to destroy both State and God. It is the most dynamic force in our world, preaching the lie that war is inevitable and glorious.

So now the legions of victorious veterans of the Devil, haughtily challenge, like Goliath of Gath.

Can anyone deny that the armies of the Lord are ill-prepared, divided, and hopeless, save for our invincible, omnipotent Leader, whose enlistees fail to comprehend His campaign plan, or for 19 centuries have largely failed to follow?

Some of us are like a colored boy from Alabama. He was in our Nation's Army in World War I, in a service battalion. After the Hindenburg line had been broken and overrun, this battalion was ordered to fall in with fixed bayonets. The officer in charge explained: "Go down into the Hindenburg line, see if any lurking Germans are still there, and, if so, run them out so we can kill them and prevent an attack from our Army's rear. Forward, march. All moved forward except our hero. "You blankety, blank," roared the colonel, "I ought to have you shot for failing to obey orders." Our hero replied: "I'se gwine, Colonel, of course I'se gwine, but there's just one request I'd like to make before I goes." "All right, but be quick about it," snapped the colonel. The soldier said: "If there is any of them gentlemen down there, and if I finds 'em, for God's sake, don't shoot the first man what comes out."

In the February issue of Christian Laymen, the bulletin of a laymen's movement, the first article, by Charles P. Taft, is entitled: "Tame Churches; Tamer Laymen." It is excellent. The great layman who wrote it was critical, but constructive. His basic plea is that as Jesus taught those living in the comparatively primitive economy of His day, bringing every truth home to the heart of the daily life of His hearers, so, now, His truth must be applied to those living in the complex economy of today. He well says:

"Sometimes a layman's choice or decision may affect the living of a lot of little groups under his power and control, like the man whose decision can make a city of 14,000 people into a ghost town. Who challenges him with his responsibility to God in those moments? It can't be somebody in a pulpit who never stood near him before, or had any real understanding of the human and organization problems he faces, even though it may be his own pastor that has talked over his head and around him, but never learned how to make him think and talk for himself about religious principles applied practically."

Many an orthodox and eloquent sermon has been as wide of the mark of practical helpfulness as was the diligent search of the "drunk" in Memphis. He fell in an alleyway one night and heard his watch strike the pavement. He staggered up to the next corner, got down on his hands and knees under the powerful light at the intersection, and began crawling, feeling carefully every inch of the lighted area. A kindly cop guided traffic around him, for some time, then asked: "Lost something, brother?" The drunk replied; "Yesh, sir; I lost my watch. It was my father's watch. I gotta find it." The cop said: "All right, maybe I can help you; where'd you lose it?" The drunk: "Down yonder in that dark alley." The cop: "Then let's go back there and look for it where you lost it." The drunk: "Why, you big, fat fool, can't you see there's a lot more light up here?"

Dr. Elton Trueblood develops the same thesis as that suggested by Mr. Taft, and outlines a plan modeled after the one adopted by the Master. He calls it: "The fellowship of the discerning," and suggests a weekly circle meeting of 12 members, for thought, silent meditation, voluntary prayer, and exchange of ideas, dominated by Jesus. He differentiates the purposes of these groups from others, as follows:

1. From discussion to commitment.
2. From apology to witnessing.
3. From individualism to fellowship.
4. From emptiness to discipline.

He illustrates with this story: A visitor, sitting in the meeting which began with a period of unbroken silence, finally whispered to his host: "When does the service begin?" The answer: "The service begins when the meeting ends."

He believes that such circles will multiply of necessity as the members are impelled to go out into lines of service inspired by the leadership of Christ and the Holy Spirit, and that the new circles would and should center in the occupations of those in the groups that have been served.

The challenge of such thoughts to laymen grows as we contemplate.

Our individual responsibility is impressed upon us as we remember the old story of the conference that preceded the departure of Christ from Heaven for earth on His redemptive mission. The question was asked of Him: "What is your plan?" He explained, of the incarnation, the life, the gathering of the twelve, their fellowship with Him and their training; of His crucifixion, resurrection, and ascension; entrusting the rest to the twelve and to those who should believe their witness, and the working of the leaven; of the omnipresence and leadership of Himself—the risen Lord—and the mission of the Holy Spirit.

"But what if that plan should fail?" came another question. The Master answered:

"There is no other plan."

Except for Jesus it was doomed to fail. He and each of the twelve was a layman. Christ and His 12 friends constituted the first laymen's movement. He alone was brilliant, or constantly strong, and one was a traitor, but according to contemporary enemy testimony, they "turned the world upside down."

The glory and marvel of the miraculous achievement began with the transformation of the eleven and the members of the early church. From weakness they came to sublime strength; from cowardice to witnessing that meant martyrdom.

Who follows in their train?

Jesus told the twelve: "Ye are the salt of the earth; but if the salt have lost its savour wherewith shall it be salted? It is thenceforth good for nothing, but to be cast out, and to be trodden under foot of men."

There are multiplied millions of grains of salt that have lost their savour. They still believe that Paul's answer to the Phillipian jailer—"Believe on the Lord Jesus Christ and thou shalt be saved"—is the all-sufficient answer now, as it was then. The fallacy is plain. It meant much then. It meant the loss of position and livelihood, the scourge, the enmity of the emperor, possibly the torch. Now it means just the reverse. It means gain, not loss, if we stop at simply believing. "The devils believe and tremble." So, fully understood, the plan of salvation meant the same then as now: to take up the cross and follow. There's fighting ahead on every man's path that leads to the goal of the kingdom of God.

We laymen are weak, but our Leader is invincible and omnipotent. With Him we can't lose, but the greatest compliment ever paid mankind is that He has given us an indispensable part in His campaign plan. It is to follow Him, uphold the hands of the clergy, and help make His church militant. He waits on us. Let's fail Him no longer. Victory is sure but the cost is high—loyal service.

"Dreamer of dreams! We take the taunt with gladness,
Knowing that God beyond the years we see,
Hath wrought the things that count with you for madness,
Into the texture of the world to be!"

Excerpts From Debate on Hawaiian Organic Act in Fifty-sixth Congress Shows Statehood Was Envisioned When Hawaii Was Made a Territory

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to call to the attention of Members of the House a series of excerpts from the debate in the first session of the Fifty-sixth Congress—December 4, 1899, to June 7, 1900—on the Hawaiian Organic Act. These are pertinent to the consideration of H. R. 49, to enable Hawaii to become a State, as they show clearly that the authors of the organic act, under which Hawaii became a Territory, envisioned the time when Hawaii would become a State.

The excerpt follows:

MORGAN OF ALABAMA SPEAKS

Mr. Morgan (Senator from Alabama): "I will say, Mr. President, that it has been observed here by a Senator who knows all about Hawaii, who has studied the system very fully, that that is a government which is equal in all respects in its political economy, in the wisdom of all its constitutional and other provisions—and he might have added in the fruits of government—to any State government in the American Union.

"When I went out there under commission from the President, in company with my colleagues, one from the Senate, one from the House of Representatives, and two from Hawaii, after I had studied the system there during that visit and also the year previously, I became satisfied of the perfect truthfulness of the observation that those people had built up a government that was at least equal in all respects to any government in the American Union. My first proposition was that we should recommend that the people of the Hawaiian Islands should hold a convention, adopt a constitution, and apply for admission into the American Union * * * I still adhere to that as the opinion which I think is best entitled to be followed.

"When we got to Hawaii we found a state in full operation; we found a republic there. It had been an independent republic. We found that that republic had been ingrafted upon a monarchy; that it had excluded all of the monarchic features but still retained many of the constitutional features which had been inaugurated there by the monarchs themselves, beginning with Kamehameha I or Kamehameha II and running down through that dynasty. Our duty was dangerous and disagreeable, the difficult duty of tearing down a state government, a perfect system of government, with its constitution and laws, with its supreme court, with 11 volumes of supreme court decisions of a very high grade and character, tearing all that fabric of government down, attended, as it was, with a great many institutions of renown really, such as colleges and hospitals, and the like of that, and substituting for it a territorial government" (p. 1987).

PEOPLE PATRIOTIC

Mr. Morgan: "I am sure, Mr. President, there is not a State in the American Union whose people have shown a higher degree of patriotism than the people of Hawaii have shown" (p. 1989).

VIEW OF TELLER, OF COLORADO

Mr. Teller (Senator from Colorado): "Here is a stable and established community with a government which has existed for more than 50 years. The people have had the privilege of self-government for several years under a Republican administration, and enjoyed a good deal of freedom under a monarchical administration" (p. 2180).

WHAT MORGAN TOLD HAWAIIANS

Mr. Morgan: "I said to the Hawaiians, when I first went there, 'If you want justice in the Government of the United States, stand your ground and apply for admission as a State into the American Union, where your Senators can come upon this floor, and in the other House your Representatives can come and take care of your interests; for if you throw yourself into the hands of a foreigner and that foreigner is influenced in his conduct toward you by prejudice and passion or by the baneful effect of political power bought with money, you will be in a serious condition hereafter, and you will live to lament the fact that ever you consented to become a part of the United States of America.' Mr. President, no warning could have prevented the Hawaiians from coming here. Those people have as assiduously and as continuously celebrated the birthday of American independence for 50 years as we have. They have never allowed a Fourth of July occasion to pass that they did not bring out the banners of the United States and hold their feasts and festivals in honor of our independence" (p. 2194).

TERRITORIAL GOVERNMENT STEP TOWARD STATEHOOD

Mr. Hill (United States Representative from Connecticut): "The American people look upon the authorization and full organization of a Territory as the first step toward statehood. It has always been so construed; it always will be so construed" (p. 3864).

PART AND PARCEL OF THE UNITED STATES

Mr. Thomas (United States Representative from North Carolina): "I believe they (the Hawaiian Islands) are part and parcel of the United States. * * *

"The policy of the Democratic Party has been to acquire all territory for the purpose of making the same States and the inhabitants thereof citizens. * * * and if not to make States or citizens, what does that policy mean except a colonial system such as exists under the English Government today?

"* * * In the language of the report of the Hawaiian Commission: 'The free school, free church, free press, and manhood suffrage have marked their progress. The government of the islands has shown the same progressive development. For 60 years it has been administered under a written constitution. The first constitution was promulgated in 1840.'

"* * * whether it be true, as a general proposition, that trade follows the flag, certainly in relation to Hawaii it seems to be true, and doubtless the annexation of the Hawaiian Islands will in the future be of advantage to the United States, as it already has been, by reason of this extensive trade and the character of the majority of the people" (p. 3717).

MONDELL, OF WYOMING, PRAISES HAWAII

Mr. Mondell (United States Representative from Wyoming): "The Hawaiian has continuously displayed a sincere regard for and attachment to the Government and the people of the United States, while in the breasts of those of our countrymen who made these summer isles their homes there has ever burned the ardent fires of patriotic devotion to their native land, which have been transmitted to their children born and reared there, with scarcely diminished fervor, coupled with an attachment to the isles of their nativity. * * *

"To the men in the island of American birth and American parentage, and not only to them, but to many others, who, through their influences, had learned to value our institutions and look to us for defense and development, the final raising of the Stars and Stripes, never more to be lowered, on August 12, 1898, above the palace of the Kamehameha's, was the consummation of a long, earnest, and unselfish effort to be brought within the protection of the banner of the free, an earnestly longed-for coming home.

"Thanks to a good school system and a laudable ambition to secure an education, illiteracy is rare among them and many members of the race have distinguished themselves in business affairs, statesmanship, and in the professions. Their young men and young women will compare favorably with the young men and young women of any race in ability and aptitude to learn, and of their grace and charm of manner our race may well take lessons. In working out the future destiny of their country they will perform an important and honored part; if I mistake not, a more important part than they performed even under their native monarchy.

"* * * This legislation meets the hopes and expectations, I believe, of those for whom it is to be enacted, and in my opinion is admirably suited for them. They deserve the most generous treatment at our hands, for they became freely, voluntarily, and gladly part of us and our territory. Every American citizen should rejoice that our flag waves over these beautiful islands; that here, at the meeting place of the thronging trade and commerce of the Pacific, where the Orient first meets the Occident, shall be seen of all men an object lesson of that peace, progress, and liberty which ever abides beneath the starry banner of the free" (p. 3722).

A Lawmaker's Opportunity in Conservation

EXTENSION OF REMARKS
OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an address, A Lawmaker's Opportunity in Conservation, delivered by the illustrious State senator, William P. Baskin, of Lee County, S. C., before the Association of South Carolina Coastal Soil-Conservation Districts held in Charleston on March 25, 1949.

This able address is a thought-provoking document and should commend itself to anyone in preserving for future generations the precious heritage of our basic wealth, our soil.

A LAWMAKER'S OPPORTUNITY IN CONSERVATION

Mr. Chairman, members of the Association of South Carolina Coastal Soil-Conservation Districts, and guests:

I appreciate your kind invitation to meet with you here today in historic Charleston and the opportunity to sit in on your discussions of methods and means of assisting the people of coastal Carolina in the conservation of their soil and in the realization of the full extent of their natural resources.

I come from a county which lies on both sides of the dividing line between the rolling hills and the flat lands, and we are interested both in terracing of hill lands and the drainage of flat lands; therefore, I shall today speak generally concerning the entire soil-conservation program.

My friends, this subject of soil conservation is, and for many years has been, very close to my heart for I have come to realize in the years that have passed, the true value of this great work of soil conservation and its very definite influence on the health, well-being, income, and economy of the people of our great State.

Agriculture is truly the life line of America and although we may not like to admit it, the fact remains that the true value of our soil and its productiveness is dependent largely upon the success the individual farmer has obtained in conserving the life-giving plant top soil on our agricultural lands.

We have for generations here in the South, almost without exception, permitted the all-important top soil of our rolling and hilly lands to wash away with the rains which patter on our window panes. We have permitted our valuable and rich bottom and lowlands with their sediment of rich top soil to remain wet, damp, and acid because of faulty or inadequate drainage and in some instances because of our failure to attempt to drain those lands at all.

Years ago, those who owned lands subject to water erosion made no attempt to control the loss of their valuable top soil and those who owned rich bottom and lowlands which were continually wet, damp, and acid simply abandoned them to crop production, but today, thanks to the effort of many public-spirited citizens and many able and far-sighted public officials, our Nation has the Soil-Conservation Service of the United States Department of Agriculture, an agency which devotes all of its time to assisting us in land conservation—thanks also to your own General Assembly of South Carolina for enacting in 1937 and 1938 the now famous soil-conservation-district law under which soil-conservation districts, organized and operated by farmers, have been set up all over our great State, aided by engineering and conservation technicians of the United States Department of Agriculture and supervised by conservation-minded farmers whose main passion has been to aid the landowner and the tenant in increasing and protecting the productive worth of his lands. In addition we have the Extension Service, the Production and Marketing Administration, the former AAA Administration, the vocational-agriculture teachers, the Farmers Home Administration, and the State forestry commission who also cooperate with soil-conservation districts in furthering the conservation of our soil.

That soil-conservation-district law states in section 2 (d) "It is hereby declared to be the policy of the legislature to provide for the conservation of the soil and soil resources of this State, and for the control and prevention of soil erosion, and thereby to preserve natural resources, control floods, prevent impairment of dams and reservoirs, assist in maintaining the navigability of rivers and harbors, preserve wildlife, protect the tax base, protect public lands and protect and promote the health, safety, and general welfare of the people of this State."

Section 2 (c) of that same act provides "That to conserve soil resources and control or prevent soil erosion, it is necessary that land-use practices contributing to soil wastage and soil erosion be discouraged and discontinued, and appropriate soil conserving land-use practices be adopted and carried out." Those statements by our General Assembly of South Carolina are the foundation of our conservation program as far as legislation is concerned.

Since land is the basic bedrock of our agriculture and our civilization, certainly if millions can be spent on scientific research to find better ways of processing and distributing foods and other important studies, we can and should spend reasonable sums for scientific research to find better ways of conserving our soil and increasing its production now and in the future.

Your soil conservation supervisors not only deserve the commendation of the general public for your public spirited efforts, without pay, in aiding the conservation of our soil and the financial improvement of our farmers, but you also must realize that no forward advance in agriculture has ever come about without its share of criticism. In having to accept and even apparently like criticism and the unwarranted attacks by so-called leaders, you are not unlike members of the general assembly. You must remember, however, that almost all of mankind's greatest advances in the field of science, health, and agriculture were violently fought when first proposed. I say to you, therefore, accept the criticism, grit your teeth and intensify your efforts, for you have a highly beneficial program of help for our farmers and as years go by, you will find that our people will increasingly praise you for your honest and far-sighted efforts.

As we increase the productivity of land by terracing, drainage, irrigation, land clearance, flood control, and better methods of land use, we will increase the income of the farmer, give him a better community in which to live, increase the economic level of the people of our State and last but by no means least, we will bring back into the tax base many acres of unused and sometimes absolutely abandoned eroded hills and swamp lands, thus reducing the tax load of our people.

In our work for conservation of the soil by terracing and drainage, we should not forget conservation and land use by irrigation. That is a field which has not been fully explored here in our State, but mark you the time will come when "water rights" will be highly valuable in the production of crops and the full utilization of our soils right here in South Carolina.

We must make every effort to diversify our farming methods. Use our soils to the fullest but still not destroy those soils for future use. They can best be preserved by proper land use, proper terracing, proper irrigation, proper drainage and proper flood control.

The immediate aim and problem of your group, however, is the erection of major outlet drainage in the coastal area of South Carolina, and I would like to comment on that program.

Do you know that a recent survey here in South Carolina reveals that we have 3,500,000 acres of discarded, low, swampy, marshy, and bottom land, which, if properly drained, could be made highly productive and usable for crops or pasture. That 3,500,000 is more than one-half of the present tilled acreage in this State. That new 3,500,000 acres would not be subject to erosion like the sloping land which now constitutes most of the 5,000,000 acres now in cultivation. Your efforts for major outlet drainage, together with the necessary lateral ditches, will greatly increase the taxable wealth of your section and greatly benefit your people, thereby increasing the tax base, making it possible for our State to spend more for schools, roads, and other improvements.

My friends, we must increase the tillable acreage of our land to meet the needs of the rapid increase in our population and the advancement of the living standards of our people. Our present tilled acreage must be worked and guarded so it will produce the greatest for the present and not lose any of its productiveness in the future. In other words, we must use sound land science on all our lands. The problem of major outlet drainage in the coastal areas is no small problem, the surface has just been

scratched—the outlook is good, and I urge you to pursue your work diligently, for by so doing you will be laying the foundation for an achievement that will be of immense value to your section and State.

With this outline of our needs and our possibilities in this great and beneficial program of soil conservation, let us, who are members of the general assembly, ask ourselves this question, What is the legislator's opportunity in soil conservation?

As I view that question I would say:

1. We should immediately undertake the necessary study of the present soil-conservation district law passed in 1937 and 1938 and bring that law up to date so as to make the act broad enough to aid in every possible phase of this work and sufficient to meet the needs of the program and every farmer in our State.

2. We should study the provisions of our State constitution and, if need be, prepare and submit to the people all necessary constitutional amendments to enable the soil-conservation districts of our State to qualify as a public agency, be eligible for and get grants of funds from our State and its subdivisions, and enable the districts to borrow from the State sinking fund commission and other political subdivisions of our State for the purchase of equipment to be used for terracing, clearing land, drainage, and related programs.

In connection with this study, I would like to call your attention to the fact that during the past 3 years, more than one-fourth of the 46 counties in South Carolina have made direct appropriations or loans to their local soil-conservation districts to be used as operating capital or funds with which to purchase drainage and terracing machinery for use by the soil-conservation districts in advancing the drainage and terracing programs for farmers in their respective counties. In addition, a number of counties have actually appropriated county funds for the purchase of drainage and terracing equipment by the counties and then made provisions to rent that equipment to the soil-conservation district of their particular county for use in draining, clearing, and terracing lands of the farmers. Several of the counties have even set up soil conservation and development commissions to supervise the work and the only criticism that I have been able to find of the drainage and terracing program is the apparent failure of some of the soil-conservation districts to distribute their work over their entire district. In some instances, all of the work of the district in the field of drainage has been done in a small section or sections of the district and all of the terracing and land clearing has been done in several small sections of the district. In that connection, I would like to urge the supervisors of the various soil-conservation districts to be sure that their work, both drainage, clearing land, and terracing, is distributed as evenly as possible over the total area of their district, and to both the large and small farmer. That will do more to create greater public interest in the program than almost any other thing that can be done.

3. We should sponsor the establishment of a Department of Research in Soil Conservation manned by sufficient technical help, but directed by real dirt farmers who are soil-conservation minded.

4. We should sponsor the broadening of the soil-conservation program so as to include all farmers, tenants, and landowners, large or small, with all types of soil and who use their lands for crops or timber and who grow vegetables, grains, cottons, tobacco, or use their lands for pasturage or fish production.

5. We should encourage the establishment of the necessary committee composed of technical men, soil-conservation supervisors, legislators, and plain dirt farmers to inspect tried and tested soil-conservation practices in other States with a view of advancing our program of terracing, drainage, irrigation, and proper land use, as fast as possible.

6. We should sponsor the necessary legislation to enable the various State conservation agencies, the forestry commission, the highway commission, the fish and game department, the department of agriculture, State board of health, and Clemson College Extension Service, to enter into valid memorandums of understanding with the Soil Conservation Service to facilitate and encourage conservation not only of land but of game and every other resource of our great State and the protection of the health of our people.

7. We should sponsor the urgent need for ditch maintenance in connection with the drainage problem, for it will be useless to provide adequate drainage and then not require proper maintenance of those drainage ditches.

8. We should immediately sponsor an amendment of our State sinking fund law, so as to enable our State sinking fund commission to make loans to soil-conservation districts for the purchase of needed terracing, land clearing, and drainage machinery and equipment, taking from such districts a lien on the machinery so purchased with suitable provisions for repayment of the loan.

These things are of course not all we can do for we should encourage soil conservation in every way to the end that our State will advance as rapidly as possible. We must educate the people to the needs for all these types of soil conservation, we must obtain concrete data showing the health and financial benefits from terracing, drainage, pasturage, fish production, and other soil conservation practices. We must carry this program to the businessmen as well as the farmers of our State for when sufficient public demand is built up, then your legislators can rapidly expand the program.

Let me on behalf of many farmers, businessmen, legislators, and others whom I have talked with and who understand this program, express our appreciation for your efforts in soil conservation. We appreciate your unselfish work without pay, and in many instances with severe criticism, and we assure you our fullest cooperation.

Agriculture is truly the life line of America, and soil conservation is the best way to make certain that America's agricultural life line will continue productive now and in the future and assure us of an increasing area of tillable and productive lands for our growing population and our need for increased production.

Reduction in Postage on Relief Parcels Sent to Addressees in Countries Which Do Not Participate in the European Recovery Program

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. KEATING. Mr. Speaker, by the terms of the Economic Cooperation Act of 1948 provision is made for reduction in postage on relief parcels sent to addressees in the various countries participating in the European recovery program. By virtue of the authority granted by this legislation, steps have been taken to reduce postal charges on shipments to most of these countries from 14 cents to 6 cents a pound. Any resulting deficit is chargeable to the appropriation made for carrying out the aid program.

Those who wish to send a relief package to relatives or friends in one of the countries excluded from participating in this program are, of course, in no way benefited by this legislation. He or she must still pay 14 cents a pound. Thus, four housewives walk into the post office, each with a package weighing the permissible limit addressed to her sister in Germany, Italy, England, and Poland. The packages all have the same content. Yet three of the women pay $1.32, whereas the one with the package going to Poland pays $3.08. Although there is an understandable reason for this distinction, it is difficult to justify.

I have, therefore, today introduced a bill to reduce by one-half postal rates on any packages sent to addresses in any European country which does not enjoy the benefits of inclusion within the provisions of the European recovery program.

Obviously the countries primarily embodied in such a measure are those east of the iron curtain. The objection may, therefore, be voiced to the legislation that it contemplates assistance to people living in Communist-dominated countries, contrary to the established policy of our Government.

I do not so view it. The primary benefit is to those good loyal American citizens who are the givers, not to the recipients. True, the lowering of the expense in transportation may result in more packages being sent. The primary purpose of such a bill, however, is to assist those who are now so generously trying to relieve hunger and distress in the world, oftentimes at great sacrifice, by sharing with them a portion of the expense to which they are put. At present, frequently the postage charges actually exceed the value of the articles sent.

Furthermore, far from encouraging the spread of totalitarian ideas or aiding the cause of communism, such legislation would, in my judgment, have exactly the opposite effect. We all know that the great majority of those unfortunates whose countries have been overrun by tyrannical aggressors are not at all sympathetic to the objectives or ideals of their masters. They chafe and smart and suffer under a despotic domination to a degree difficult for us to comprehend. They do not want it this way. Yet they are helpless to do other than submit.

Every relief package sent to them by their relatives or loved ones in this country is a harbinger of good will. It is a symbol of American friendship. It is a recognition by the people of a great Christian country that hungry stomachs and cold hands and feet have nothing to do with politics. To facilitate the movement of these relief parcels into these countries is one manner of piercing the iron curtain, not with the sword or the clenched fist but with the outstretched hand of friendship and brotherhood.

Until the rather recent reduction in postal charges, it was time and again

communicated to me by constituents who have relatives and friends in Europe that they often found themselves unable financially to do all they would like to do for their brothers and sisters across the sea because of the exceedingly high postal rates which prevail. To a large extent, this situation, I am happy to say, has been corrected. It still holds true of those who want to send packages to Poland, Lithuania, the Ukraine, and many other areas. For a family of modest income, such as is usually represented by those who are now so generously sharing their bounties, to pay over $3 to send one of these packages represents a great hardship and a definite deterrent from doing all they would like to do.

Favorable action on this legislation would go far toward relieving much hunger and distress suffered by those near and dear to many of our own loyal citizens who would enthusiastically welcome such a measure. It would, however, go much further and deeper than that. It would actually furnish a potent weapon in combating much of the false propaganda directed against this country in the effort to destroy our social, economic, and political system. which alone makes possible such evidences of generosity and good will.

Oleomargarine Tax

EXTENSION OF REMARKS
OF
HON. CHASE GOING WOODHOUSE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, April 1, 1949

Mrs. WOODHOUSE. Mr. Speaker, for many years there has been a Federal tax of 10 cents a pound imposed on colored oleomargarine sold at retail and also a license tax on the manufacturer and on the wholesaler and retailer handling oleomargarine. Now there was no sense in this tax. It should have been repealed long ago. The three oleo bills presented to the House all remove the tax. That is not a question on which there is disagreement. The real fight is on the question of whether or not the Congress should permit oleomargarine to be colored yellow in imitation of butter.

No responsible person questions the value of oleomargarine as a cheap substitute for butter, but likewise, few people do not prefer butter if they can get it at a reasonable price. Oleomargarine in its natural state is a somewhat brownish white. The oleomargarine we see is the finished, bleached product. It can be colored yellow to look exactly like butter. The yellow color adds nothing to its nutritive value or to its taste, but, since people think of butter as the best spread, coloring oleomargarine yellow adds to its selling appeal. The more it looks like butter, the better the price it can command.

So the real question on these bills is not the removal of the tax—practically everyone is for that—but how far should we go in permitting one commodity, oleomargarine, to be treated so that it looks exactly like a more expensive and, from the point of view of the general public, a more desirable product—butter? Would permitting oleomargarine colored yellow to be sold freely be fair to the consumer and to the dairy industry?

My answer is "No." The consumer needs protection. There can be no deception with white oleomargarine, and for cooking purposes few housewives, if any, object to the white color. Also with the new plastic-covered package containing a small bean of yellow coloring imbedded in the center of the stick of oleomargarine, a few seconds manipulation produces a light or dark yellow and without using any dishes or getting your hands sticky. I know from personal experience how quickly this can be done and packaging will replace the old-fashioned way of mixing oleomargarine and the color in a bowl which is such a bother. One argument is that the housewife wants yellow oleomargarine and should have it. I would agree, but would she want any oleomargarine if the price ran up to nearly that of butter? She uses oleomargarine because it is cheaper.

But the chances are if the Poage bill becomes law that all oleomargarine will be colored yellow and that the price will go up. Now let me tell you why this is likely.

There are only 28 manufacturers of oleomargarine and of these, 5 concerns make 65 percent of all the oleomargarine sold in the country. The great soap manufacturers are interested. They are not tied to the use of domestic soybean and cottonseed oil. Lever Bros., for example, has access to various plantations producing coconut, palm, and other oils. Fortune magazine recently had an article on Lever Bros. and on Unilever, Inc., describing the company as one of the world's greatest producers and distributors of materials that go into oleomargarine. For example, it is reported to have 40,000 natives in the Belgian Congo producing palm oil. Lever Bros. recently bought the largest oleomargarine factory in this country and paid $16,000,000 for it. It operates all over the world and has a major influence on the price of fats and oils. The price of oils has dropped in the last few months, but the price of oleomargarine has not followed. There are many other evidences of what approaches a monopoly in the manufacture of oleomargarine.

The oleomargarine campaign has been well backed by many periodicals and the housewife has been told she is being greatly discriminated against because she could not buy yellow oleomargarine. Lever Bros. is reported to have spent $15,000,000 in 1948 on advertising and the oleo industry another $5,000,000. There are indications of a planned and concentrated drive to pass the Poage bill permitting free sale of yellow colored oleomargarine. I had many letters, not from my district but from large cities, each in the same kind of envelope, many obviously addressed by the same hand and the letters all using the same language. Other Members had a similar experience.

The consumer must look ahead. As long as there is white oleomargarine it will be a cheap substitute for butter. As soon as yellow colored oleomargarine is sold without restriction, the price goes up. Even today in Washington white oleo is 22 cents a pound, yellow colored oleomargarine, 43 cents—the difference in price 21 cents—of which only 10 cents covers the tax. The Poage bill is not in the interest of the housewife for eventually it will mean higher prices for what has been a cheaper spread.

Moreover, it is unfair competition to permit the sale of a substitute which looks like butter. It is unfair to the dairy industry. This struggle on colored yellow oleomargarine is part of the struggle between big business, the oleomargarine manufacturers, and small business, the dairy farmers. Oleomargarine is a mass-production product, made as I have said by 28 companies in the United States and really controlled by 5 large companies. Butter comes from 2,500,000 family farms and 40,000 small dairy plants. We cannot afford to hurt the dairy farm. If we do, we hurt the city merchants. Where the dairy farms are doing well, the farm families buy in the city stores.

Now it is true that we make practically no butter in eastern Connecticut. We sell fluid milk. But butter is the balance wheel of the dairy industry and has a determining influence on all other dairy products.

Dairy products compose more than 25 percent of all the food we consume in this country. Some 40 percent of our beef comes from dairy herds. If we permit oleo to wreck the market for butter there will be a decline in the size of our dairy herds. And the result will be less, beef, higher beef prices; less milk, higher milk prices. Personally, I would rather spend a few seconds manipulating the package of white oleomargarine with the little yellow bean in it when I want colored oleomargarine than take the risk of less beef and less milk at higher prices.

Moreover, the dairy industry means more than this price question. The dairy farm is a great asset in soil conservation, and soil conservation is essential if we are to continue to produce the food and other agricultural products which we must have if we are to maintain our standard of living.

The dairymen are not opposed to removing the tax on margarine. They are in favor of the Granger bill which is also supported by several large labor organizations and for which I voted. The Granger bill takes off the tax on oleomargarine and prohibits the shipment of yellow-colored oleomargarine in interstate commerce leaving it to each State to handle the question within its own boundaries. This is exactly the way we have handled so-called filled milk for some years and with fairness to both the consumer and the dairy industry.

The dairymen have not treated the oleomargarine industry badly. Oleomargarine manufacturers have been permitted to imitate the taste of butter by adding diacetyl and to fortify oleomargarine with vitamin A so that it approxi-

mates the nutritional value of butter. They have been allowed to imitate the texture of butter by adding skim milk and there has been no objection brought against their practice of illustrating their advertisements with pictures of pastures and barns which obviously suggest butter. The one thing which the dairymen protest is taking what is really their trademark, the yellow color, which although it varies in intensity with the season of the year, is always the most obvious characteristic of butter.

Even on this point our Connecticut dairymen were willing to go along with the free sale of oleomargaine colored yellow provided the lighter end of the yellow color scale was reserved for butter and oleomargarine limited to the darker range of yellows. This would have been a good solution. The consumer would have had tax-free, yellow colored oleomargarine and would have had at the same time protection against false substitution of oleomargarine for butter, and the dairy industry would likewise have been protected from fraudulent substitution. There was no opportunity to vote for or against this proposal as the bills were reported.

Lever Bros. recognize the sales value in color. Sometime ago they brought suit and got a court decision that they, as makers of Lifebuoy soap, alone could make a cake of health soap colored red. "Yellow" taxicabs have the sole right to paint their cabs yellow. No yellow coloring is permitted in bakery products to suggest that eggs are used in the baking when in fact they have not been.

The Poage bill contains clauses that are supposed to protect the consumer. All packages of oleomargarine must be so labeled and when served in public eating places each serving must be labeled or cut in the shape of a triangle and further, a sign must be displayed or a notice printed on the menu, stating that oleomargarine is served. But the bill provides no penalty for failure to obey these regulations, and the Pure Food and Drug Administration informed the committee that it would cost $5,000,000 a year for an inspector to visit each eating place once in 12 months. The regulations would probably work for packaged oleomargarine sold in retail stores, but the so-called protection to the consumer and to the dairy farmer would mean little so far as the serving in public eating places is concerned.

Also as a practical matter it should be noted that the bill contains a clause that "The act should not abrogate or nullify any statute of any State now in effect or hereinafter enacted." I note that none of the Members in favor of the Poage bill rose to amend this section. It makes the legislation do nothing more than remove the tax in Connecticut and in 17 other States which forbid the sale of yellow colored oleomargarine. It does not give the housewife in these States yellow colored oleomargarine and it does injure the dairy industry throughout the country. The Granger bill should have been passed in fairness to both consumers and dairy farmers.

The Honorable W. Stuart Symington, Air Force Secretary, Praised for Businesslike Methods

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. GRANT. Mr. Speaker, I came upon an editorial, under date of April 6, 1949, written by Mr. Ralph B. Chandler, owner and publisher of the Mobile Register, one of the leading, oldest, and most widely read newspapers published throughout the South. The editorial was occasioned by the visit to Alabama on April 6 of the Honorable W. Stuart Symington, Secretary of the Department of the Air Force, and certainly one of the best beloved and one of the most highly respected officials in our Government.

The editorial requires no explanation.

I do, however, want to point out to this House the sensitivity of the American press and the newspaper editors everywhere, even though they are far removed from Federal activities in the Nation's Capital. There is little that occurs here in Washington of which they are not fully apprised.

I know that every Member is proud of the work that Stuart Symington is doing in building a vital, powerful United States Air Force—and doing it under some business principles with economy, efficiency, and due regard for every taxpayers' dollar entrusted to his spending.

In order that my colleagues may read this short, concise, and pleasing editorial of that great public official, I am asking that unanimous consent be accorded me by this House to extend my remarks and insert same in the CONGRESSIONAL RECORD.

The editorial reads as follows:

AIR FORCE SECRETARY VISITING STATE PRAISED FOR BUSINESSLIKE METHODS

On Alabama's guest list Wednesday is one of the top figures in the National Military Establishment—W. Stuart Symington, Secretary of the Air Force, who is scheduled to deliver an address in Montgomery.

Secretary Symington's visit to Alabama is a reminder of the praise he recently received from Representative FRANK W. BOYKIN, of the First Congressional District, for businesslike administration of the Department of the Air Force.

Congressman BOYKIN's comments appeared in the CONGRESSIONAL RECORD and grew out of the study he made of Mr. Symington's first annual report as Secretary of the Air Force.

He spoke of Secretary Symington as "one of America's young, outstanding businessmen and executives * * * a man of great administrative abilities—a creative builder of business—one whom the Nation is indeed fortunate to have heading the great Department of our Air Force."

Concerning Mr. Symington's "clear, concise, factual report," Mr. BOYKIN said it was "just such a statement as one would expect a modern business executive in private industry to make to the stockholders at the annual meeting of his concern."

Mr. Symington, who had been Assistant Secretary of War for Air since February 1946, was named head of the new Department of the Air Force in September 1947.

Congressman BOYKIN said that in this new position, Mr. Symington "started from scratch to create * * * a modern, streamlined business administration within the structure of the Federal Government."

Efficiency and economy were made administrative, watchwords of the Air Force, said Mr. BOYKIN, citing as an example that "all Air Force procurement has been streamlined and procedures instituted to place the buying process on a modern business basis."

In extending Secretary Symington a cordial welcome to Alabama, we suggest that a good many other Government operations could use more businesslike practices such as Mr. BOYKIN observes in the Department of the Air Force.

Investment Guaranty in European Recovery

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hon. Norman M. Littell from the Washington Post of April 8, 1949:

INVESTMENT GUARANTY IN EUROPEAN RECOVERY

(By Norman M. Littell, former Assistant Attorney General)

Your editorial of March 25 attacking the House Foreign Affairs Committee's amendments to the guaranty clause of the ECA Act commences with a misrepresentation of fact in its very title—"Riskless Enterprise." As a description of the proposed amendments, this irresponsible caption has no basis in fact, and grossly misleads your readers.

What are the dread amendments proposed?

The original guaranty clause provided for a guaranty of convertibility (i. e., from foreign currencies back into dollars) for the principal amount of private investments made in Marshall plan countries with the approval of the Administrator.

The proposed changes would: (1) extend the guaranty in amount to include interest or profits to the extent found reasonable by the Administrator; (2) extend the guaranty in scope to include certain political risks lying on the level of American foreign policy rather than on the private risk level, e. g., losses caused by seizure, confiscation, revolution, war or other governmental regulations or decrees which in the Administrator's opinion prevent the further use of the investment for the intended purpose; and (3) reinstate $272,000,000 of the original $300,000,000 guaranty appropriation so it must be used for guaranties instead of being consumed in direct loans to foreign governments as the original funds were, contrary to the intent and instruction of Congress.

Your alarm over these things could stem from a failure to consider the underlying premises which led to the Foreign Affairs Committee proposals. In 1947 this Nation committed itself to a vast program of reconstruction and rehabilitation in western Europe to help our friends stand with us for a free way of life. We have backed that commitment with billions of dollars.

In the system under which the United States has grown rich and strong, standards of living depend on the production of goods. Trade, agriculture, and industry flourish when capital, raw materials, manpower, and production know-how are joined and held together by good business management. Simply stated, that is free enterprise. The alternative, in black and white terms of contemporary history, is the total regimentation of capital and labor by Government bureaucracy.

So when Congress set up this vast program of reconstruction, it could appropriate money and set up a bureaucracy to dole it out (the EAC) and to receive it (the OEEC); or it could enlist private resources and American industrial know-how and management.

In the emergency, Congress used the former method as a common denominator of administration, authorizing $5,000,000,000 in direct grants and $1,000,000,000 in loans, but it also laid foundations for the latter course in authorizing guaranties up to $300,000,000 for "the encouragement * * * of private enterprise to contribute through its initiative and capital in the reconstruction and development of Europe." We set up bureaucracies on both sides of the Atlantic—and they were astonishingly efficient before the real challenge of spending so much money so fast.

Only the guaranty program was a complete failure for reasons reviewed by the Foreign Affairs Committee of the House. The guaranties weren't adequate in amount or in scope. And 90 percent of the $300,000,000 was allocated by ECA for loans instead of guaranties contrary to the intent of Congress. In the words of Mr. Bevin, speaking in Parliament, we Americans proved ourselves to be great free enterprisers at home and great state planners abroad.

When the ECA officials came around to tell Congress what they wanted for next year, their proposal, as adopted in good faith by the Senate Foreign Relations Committee, looked as if the $300,000,000 was to be reestablished for guaranties, but actually it wasn't. Any further guaranties were to come out of grant funds.

If adopted, this will be absolutely fatal. No participating country will ever approve a single guaranty if it constitutes a deduction from granted funds. If there is any trap in the picture, this is it, for without the Senate committee having fully realized it, the guaranty clause is deftly eased out of the act and complete bureaucratic control maintained over every penny of ECA money.

The Foreign Affairs Committee in the House not only exposed these facts but rewrote the guaranty clause to reinstate and implement the original intent of Congress to induce private enterprise and risk capital to assume part of the load of reconstruction. Under either system we are spending the same American dollars, but in one case it is tax money, and in the other it is stockholders' money spent under business management.

We are only talking about $300,000,000 (which will very probably invite into operation partnership capital of about equal proportions abroad) for privately managed projects approved by the administrator and the participating country as furthering the purposes of the Marshall plan.

Your editorial does not state this material fact, but says, "It is idle for advocates of this change to pretend that it would not put an appreciable burden on the Government. Suppose the proposed guaranty had been in effect during the twenties, when American private investors lost hundreds of millions in Latin America, or during the thirties in central Europe. Wouldn't our Government have had to foot the bill for a large part of these losses?"

The superficiality of that statement is breath taking. We were not engaged in a world struggle to preserve a free way of life in the twenties. We are now. A Marshall plan or an Atlantic Pact was undreamed of then, and we have spent or committed on them vastly more than we dropped in South America in stockholders' money without ever expecting to see it again—all a part of the calculated risk.

The sum we are now discussing is $300,000,000, and the risks embraced in the proposed guaranty amendments are not ordinary business risks, but are extraordinary political risks which no investor would encounter in a similar undertaking in the United States. Such risks are properly the concern of governments and not private investors.

They are a part and parcel of our foreign policy already, for every penny of the billions spent on the Marshall plan may become a total loss for one or more of the reasons stated in these amendments, with this vital distinction: The loss of our investment under the Marshall plan will be total and complete if the plan fails in any participating country, but under a guaranty the Government would not sustain a total loss because it takes over currencies, credits, and assets of the guaranteed investor, from which something can surely be salvaged to the Government through diplomatic negotiations or recourse to the International Court.

Your editorial misses the purpose of guaranties. American industrial production won the war. Even Joe Stalin recognized this in proposing toasts at Tehran to American productive capacity. It could help win the cold war, too, and (if extended under President Truman's point IV) raise living standards all over the world, for what Europe and the so-called backward areas of the world need is goods, goods, and more goods.

And what we need is goods flowing in a two-way world. No Atlantic Pact can produce goods or create employment at reasonable wages in order to replace despair with the hope and means of a free way of life, but American techniques and know-how of production abroad could do so.

Thus far this unique American contribution to contemporary civilization, the genius for industrial production, has remained meekly chained at home.

The object is to release our productive capacity not for the purpose of exploitation but for greater service, participation, and mutual prosperity in industrial enterprise.

Save the Veterans' Hospital Program

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. FULTON. Mr. Speaker, the President has ordered a cut-back of 16,000 hospital beds in the hospital-construction program of the Veterans' Administration. General Gray, the Veterans' Administrator, is necessarily taking steps to carry out a reduction of veterans' hospital beds as a result of the arbitrary slash of the President. I am here today to protest this slash and ask for the reinstatement of the full program. Because of this slash some hospitals will have to be redesigned and others abandoned entirely.

Pennsylvania now has four veterans' hospitals with a total of only 4,608 beds and lags much behind her sister States of New York, Massachusetts, Ohio, and Illinois in adequate veterans' hospital facilities. Under the program originally planned by the Veterans' Administration, Pennsylvania was to have had 4,525 new beds. Under the slash ordered by President Truman, one Pennsylvania hospital is being completely eliminated and the total number of beds in Pennsylvania is to be cut by 1,400. This represents an indefensible cut in the hospital facilities necessary to the proper care of Pennsylvania veterans.

Specifically, the cuts in Pennsylvania are the elimination of 200 general medical beds in a proposed new hospital at Harrisburg, the reduction of the proposed medical hospital at Pittsburgh from 1,200 beds to 750 beds, the reduction of the proposed neuropsychiatric hospital at Pittsburgh from 1,250 beds to 1,000 beds, and the reduction of the proposed medical hospital at Philadelphia from 1,000 beds to 500 beds.

The Veterans' Administration, on January 10, 1949, announced a reduction in the hospital construction program as follows:

Location	Type	Number of beds	Reduction
Altoona	General medical	200	None
Erie	do	200	None
Philadelphia	do	500	500
Pittsburgh	do	750	450
Do	Neuropsychiatric	1,000	250
Wilkes-Barre	General medical	475	None
Harrisburg	do	(1)	200
Total		3,125	1,400

[1] None (canceled).

The original plans called for the construction of 7 new hospitals in Pennsylvania with a total bed capacity of 4,525, located as follows:

Location	Type	Number of beds
Altoona	General medical	200
Erie	do	200
Philadelphia	do	1,000
Pittsburgh	do	1,200
Do	Neuropsychiatric	1,250
Wilkes-Barre	General medical	475
Harrisburg	do	200
Total		4,525

Facilities for mental and nervous diseases in Pennsylvania are so overcrowded that veterans are being confined in our jails until hospital quarters can be found for them. In the veterans' hospital at Aspinwall the facilities for mental patients are not adequate, and this places an unwarranted burden on the Veterans' Administration staff, which is sincerely trying to do a good job of veterans' care.

There are no veterans' facilities in Pennsylvania for the treatment of cancer and virtually none for the treatment of tuberculosis cases. From my own experience with tuberculosis cases among veterans' cases in my district, I know that it is extremely difficult to get them

admitted to a Veterans' Administration facility anywhere.

According to American Legion and Veterans of Foreign Wars officials, approximately 3,000 Pennsylvania veterans are seeking in vain to obtain admission to a veterans' hospital for necessary treatment.

I respectfully urge that the full hospital-construction program for veterans be restored as conditions will become more acute in the months and years to come. We veterans of World War II must see that our older veterans are not forgotten in time of need. This Nation should be forever grateful for the service which they rendered for its protection in time of war.

I urge that the full program of 16,000 beds be restored and that President Truman's cut-back of 1,400 hospital beds in the Pennsylvania program be immediately set aside, since the slash ordered by the President represents an arbitrary action based upon false economy.

Article by George Sokolsky

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an article by Mr. George Sokolsky from the Washington Times-Herald of April 7:

THESE DAYS

(By George Sokolsky)

It is difficult to realize the extent of the American empire. Only a decade ago, most Americans, including the internationalists, regarded this as a non- or even an anti-imperialist country.

The war placed upon our shoulders not only the burdens of debt and taxation but even the weightier burden of supporting and holding an increasing number of areas and functions.

Empire is an expensive operation as the British well know. For instance, it is a question whether India, on balance, was a profit or loss.

The Hoover report on the subject lists obligations as follows:

"Occupied areas—Germany, Austria, Japan, and Korea. European recovery program. Special missions—Greece and Turkey. Trust territories—Carolines, Marshalls, and Marianas. Non-self-governing territories—Guam and Samoa.

"Self-governing Territories—Alaska, Hawaii, Puerto Rico, and the Virgin Islands.

"Office of Foreign Liquidation, American Battle Monuments Commission, Philippine War Damage Commission, Philippine Alien Property Administration."

To these might well have been added China, were it not that Soviet Russia defeated us in that country. Also, we might consider in this connection our responsibilities and obligations under the North Atlantic treaty, th United States being the only nation in the group that can do anything very important about it.

In a word, our empire is one not of benefits but of obligations, not of advantages but of costs.

The administrative pattern of our country makes little or no provision for empire management. Thus, activities concerning these areas and problems fall upon several departments and numerous agencies.

There is no coordination of plan or implementation. The Army goes one way; the Navy another; Interior in all directions and the independent agencies wherever they can. We repeat in our empire the confusions of domestic administration.

The Hoover report proposes that an "administration of overseas affairs" be established which would be charged with all the functions of the administration of empire.

This administration would cooperate with the State Department and the Department of Defense, but would report directly to the President.

It would seem even more advantageous to add a cabinet officer, the secretary of overseas affairs, and to create a career force, perhaps like the British colonial office, to take care of these matters.

For should we go to war again, and not be defeated, we may find even more areas and functions on our hands. Perhaps the Hoover Commission assumes that our empire will be temporary, but I doubt that such good fortune will be ours.

It is doubtful whether any American gazes upon our added responsibilities with any satisfaction. In the first place, this business costs tremendously, between $6,000,000,000 and $7,000,000,000 annually, including ECA and military occupation.

Secondly, it does not seem likely, at this writing, that we shall soon be rid of either the occupied areas or the programs of economic aid. We may get rid of the latter obli- tions as we did in China, by Russian conquest, but that would mean war, for while we lost China willfully through errors of judgment and policy, we are not committing similar errors in Germany, Japan, or Korea.

In fact, the Berlin airlift, as a policy, strengthened our position and therefore our obligations i- Germany and Austria.

The union of Europe, which Winston Churchill is so avidly advocating but concerning which he was silent when regional blocs were proposed by Herbert Hoover and Hugh Gibson in their book, the Problems of L-sting Peace, can only involve a further obligation on our part.

For such an enterprise requires underwriting by a power capable of preventing outside interference while the union is in formation.

It is too often forgotten that Great Britain did not accept the finality of the Revolutionary War until the War of 1812 and that France sent citizen Genet to this country much as Soviet Russia maintains a fifth column in every state in western Europe today.

It all amounts to this then: as long as empire has been thrust upon us, we might as well organize to manage our affairs competently, as the Hoover Commission proposes.

Veterans' Pension Legislation

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. YATES. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I desire to introduce a letter which I received from the department commander of the American Legion, Department of Illinois, on March 28, 1949. On March 24, 1949, I introduced into the RECORD a letter from a member of the Broadview Post of the American Legion, which expressed his views as an individual concerning the pending veterans' pension legislation. Inasmuch as I have been informed that this viewpoint did not represent the official viewpoint of the American Legion, Department of Illinois, and in order to give fair consideration to its viewpoint, I am presenting the letter of Mr. William G. Burns, department commander of the American Legion, Department of Illinois:

THE AMERICAN LEGION,
DEPARTMENT OF ILLINOIS,
Chicago, Ill., March 28, 1949.

Hon. SIDNEY R. YATES,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN YATES: My attention has been called to the fact that you had inserted in the CONGRESSIONAL RECORD a letter and in the column of the Voice of the People in the Daily News which you evidently gave considerable consideration to when the pension was before the Congress. I believe you owe it to the American Legion, department of Illinois, to have inserted in the RECORD my telegram to you indicating the position of the department of Illinois, the American Legion.

The views expressed by our comrade from Broadview were his own views and not the views of Broadview Post, fifth district, first division, department of Illinois, or the national organization. One can always single out someone who differs, in a democratic organization such as ours, on most issues, as we are a cross section of America, but we believe democratic process should follow because of the way we operate in Illinois. The 234 delegates, by which this post was represented, as well as every post in the department, was unanimously for the pension at Miami.

When I write or wire you with the viewpoint of the American Legion, I do not express a personal opinion but I speak with the authority of the 226,181 members that have determined the course of action.

We regret that you have selected this statement for insertion because I can furnish you thousands of letters from posts, individuals, etc., stating the position of the Legion in Illinois.

I am anxious to inform the posts in your district of your opportunity now to consider H. R. 3821 which carries provisions that apparently you support.

The American Legion stood solidly for no amendments because we wanted you to know that that was the strategy of the opponents of the veterans and it has been their strategy over the years.

As department commander of Illinois I ask that you set the record straight by the insertion of my statement to you of our position on the pension legislation which was given to you before your vote was cast.

I sincerely hope and trust that in the opportunity that will be afforded to you to indicate definitely your position that you will support it and our all-out American Legion stand for enactment of H. R. 3821. Of course, it doesn't meet the desires in their entirety in this department, but it will indicate to the veterans that the eighty-first session of the Congress is to preserve the attitude of faithful Congressmen that have granted land grants and pensions from the Revolutionary days through six wars ending with the Spanish veterans of 1898.

Yours very truly,

WM. G. BURNS,
Department Commander.

Text of the North Atlantic Treaty

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. CRAWFORD. Mr. Speaker, since it will be necessary for Congress to take the North Atlantic treaty into consideration in drafting much future legislation I ask that the document be incorporated in the CONGRESSIONAL RECORD at this point.

The treaty text lists as signatories Belgium, Canada, France, Luxemburg, the Netherlands, the United Kingdom, and the United States. Additional nations signing the pact are Portugal, Norway, Iceland, Denmark, and Italy.

NORTH ATLANTIC TREATY

PREAMBLE

The Parties to this Treaty reaffirm their faith in the purposes and principles of the Charter of the United Nations and their desire to live in peace with all peoples and all governments.

They are determined to safeguard the freedom, common heritage and civilization of their peoples, founded on the principles of democracy, individual liberty and the rule of law.

They seek to promote stability and well-being in the North Atlantic area.

They are resolved to unite their efforts for collective defense and for the preservation of peace and security.

They therefore agree to this North Atlantic Treaty:

Article 1

The Parties undertake, as set forth in the Charter of the United Nations, to settle any international disputes in which they may be involved by peaceful means in such a manner that international peace and security, and justice, are not endangered, and to refrain in their international relations from the threat or use of force in any manner inconsistent with the purposes of the United Nations.

Article 2

The Parties will contribute toward the further development of peaceful and friendly international relations by strengthening their free institutions, by bringing about a better understanding of the principles upon which these institutions are founded, and by promoting conditions of stability and well-being. They will seek to eliminate conflict in their international economic policies and will encourage economic collaboration between any or all of them.

Article 3

In order more effectively to achieve the objectives of this Treaty, the Parties, separately and jointly, by means of continuous and effective self-help and mutual aid, will maintain and develop their individual and collective capacity to resist armed attack.

Article 4

The Parties will consult together whenever, in the opinion of any of them, the territorial integrity, political independence or security of any of the Parties is threatened.

Article 5

The Parties agree that an armed attack against one or more of them in Europe or North America shall be considered an attack against them all; and consequently they agree that, if such an armed attack occurs, each of them, in exercise of the right of individual or collective self-defense recognized by Article 51 of the Charter of the United Nations, will assist the Party or Parties so attacked by taking forthwith, individually and in concert with the other Parties, such action as it deems necessary, including the use of armed force, to restore and maintain the security of the North Atlantic area.

Any such armed attack and all measures taken as a result thereof shall immediately be reported to the Security Council. Such measures shall be terminated when the Security Council has taken the measures necessary to restore and maintain international peace and security.

Article 6

For the purpose of Article 5 an armed attack on one or more of the Parties is deemed to include an armed attack on the territory of any of the Parties in Europe or North America, on the Algerian departments of France, on the occupation forces of any Party in Europe, on the islands under the jurisdiction of any Party in the North Atlantic area north of the Tropic of Cancer or on the vessels or aircraft in this area of any of the Parties.

Article 7

This Treaty does not affect, and shall not be interpreted as affecting, in any way the rights and obligations under the Charter of the Parties which are members of the United Nations, or the primary responsibility of the Security Council for the maintenance of international peace and security.

Article 8

Each Party declares that none of the international engagements now in force between it and any other of the Parties or any third state is in conflict with the provisions of this Treaty, and undertakes not to enter into any international engagement in conflict with this Treaty.

Article 9

The Parties hereby establish a council, on which each of them shall be represented, to consider matters concerning the implementation of this Treaty. The council shall be so organized as to be able to meet promptly at any time. The council shall set up such subsidiary bodies as may be necessary; in particular it shall establish immediately a defense committee which shall recommend measures for the implementation of Articles 3 and 5.

Article 10

The Parties may, by unanimous agreement, invite any other European state in a position to further the principles of this Treaty and to contribute to the security of the North Atlantic area to accede to this Treaty. Any state so invited may become a party to the Treaty by depositing its instrument of accession with the Government of the United States of America. The Government of the United States of America will inform each of the Parties of the deposit of each such instrument of accession.

Article 11

This Treaty shall be ratified and its provisions carried out by the Parties in accordance with their respective constitutional processes. The instruments of ratification shall be deposited as soon as possible with the Government of the United States of America, which will notify all the other signatories of each deposit. The Treaty shall enter into force between the states which have ratified it as soon as the ratifications of the majority of the signatories, including the ratifications of Belgium, Canada, France, Luxemburg, the Netherlands, the United Kingdom and the United States, have been deposited and shall come into effect with respect to other states on the date of the deposit of their ratifications.

Article 12

After the Treaty has been in force for ten years, or at any time thereafter, the Parties shall, if any of them so requests, consult together for the purpose of reviewing the Treaty, having regard for the factors then affecting peace and security in the North Atlantic area, including the development of universal as well as regional arrangements under the Charter of the United Nations for the maintenance of international peace and security.

Article 13

After the Treaty has been in force for twenty years, any Party may cease to be a party one year after its notice of denunciation has been given to the Government of the United States of America, which will inform the Governments of the other Parties of the deposit of each notice of denunciation.

Article 14

This Treaty, of which the English and French texts are equally authentic, shall be deposited in the archives of the Government of the United States of America. Duly certified copies thereof will be transmitted by that Government to the Governments of the other signatories.

In witness whereof, the undersigned plenipotentiaries have signed this Treaty.

Done at Washington, the 4th day of April, 1949.

Taft-Hartley Law

EXTENSION OF REMARKS
OF
HON. CHESTER C. GORSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. GORSKI of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

The following resolution is moved by Councilman Joseph J. Carry:

"Whereas there has been enacted by the Eightieth Congress of the United States a labor bill known as the Taft-Hartley law; and

"Whereas since the passage of this law, labor organizations have been oppressed and collective bargaining has been made more difficult to promote the advancement of the American labor movement; and

"Whereas the Taft-Hartley law creates an inferior class of citizens, an inferior category and a debased position politically for the men and women who toil by hand or brain for their daily subsistence; and

"Whereas the Taft-Hartley Act, in its entirety, is an insult to the working people of the United States, a brand upon their integrity and decency, a handicap to all fair-minded employers; and

"Whereas the Taft-Hartley Act invades the constitutional guaranties of free speech, free press and freedom of contract; and

"Whereas the Taft-Hartley Act breathes suspicion and repression in every line and in no instance aids or assists the process of peaceful collective bargaining, and

"Whereas one of the main issues in the last Presidential campaign was the repeal of the Taft-Hartley law and such issue was supported by an overwhelming majority vote for candidates to political office who were on record for the immediate repeal of this vicious and obnoxious law; and

"Whereas the Eighty-first Congress has conducted hearings on a substitute labor bill known as the Thomas bill and such hear-

ings have resulted in needless repetitious testimony, consequently, delaying action on the repeal of this law; and

"Whereas thousands of collective-bargaining contracts, presently expiring and will expire in the very near future, and labor organizations and employers cannot negotiate with any degree of confidence as to the provisions that may be contained in a new labor bill, thus creating an air of uncertainty and endangering harmonious labor relations between labor and management which may result in unavoidable work stoppages; and

"Whereas the citizens of the United States of America have, by their vote last November, delivered a mandate to the new Congress for immediate repeal of the Taft-Hartley law: Therefore be it

"Resolved, That the Town Council of the Town of Lancaster assert its disapproval of the Taft-Hartley law; and be it further

"Resolved, That the Town Council of the Town of Lancaster go on record for the immediate and unqualified repeal of the Taft-Hartley law and that the President of the United States, Harry S. Truman; the majority leaders of the House and the Senate; the Members of Congress from the western New York area; and the United States Senators from New York State be so notified as soon as possible after the passage of this resolution so that they may act accordingly."

Seconded by Councilman Francis J. McDonald.

Councilmen Garry, McDonald, Rybak, and Supervisor Keysa voted aye, and Councilman Rozler voted present.

Supervisor Keysa declared the resolution duly adopted.

Butter

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith an extract from the monthly letter of the Northeast Economic Foundation entitled "Butter." It is well worth the reading by any Member of Congress:

BUTTER

It is doubtful if the American people realize just what they are doing to themselves in the matter of butter. The metropolitan newspapers damn the butter lobby and shout for untaxed margarine as though they were engaged in some kind of a crusade. And so they are, more or less unknowingly—a crusade to degrade the American diet for all time; ably assisted by a margarine lobby that has, at the moment, great political power.

This is no brief for special taxes on margarine. We see no economic reason for taxing cottonseed oil, though the attempt to make it into imitation butter is a fraud, against which consumers once sought to be protected. But in the long run, taxation will not stop the public from mixing sawdust with its cornflakes, if the people prefer it.

The American people for a hundred years have been able to take butter for granted, which is something that only a pioneer people, reveling in the lush resources of a virgin continent, could do. In the long history of civilization, that has never before been possible for any race. Butter has always been a luxury, reserved solely for the rich and fortunate.

No one knows when that original desert nomad, with a skin bag of sheep's milk slung across his jolting camel's back, first discovered, at journey's end, the peculiar conglomerate which we call butter. Men have known about it for at least 4,000 years, but over practically all of that long span they have reserved it for medicinal use, for a beauty aid, for anointment after the bath and other luxury uses. Only in the last century has mankind had enough butter to be able to use it as a real food, and then only in a few countries, and very sparingly.

Butter is, in our time, the world-wide symbol of earth's highest standard of living. Hitler, when he led the German people down the road to war, had to confront them with the grim modern alternative, guns or butter. Throughout the world today, nations are most readily classified in respect to their economic affluence by the tell-tale blessing or absence of butter on their tables. Even the proud British, one of the most truly civilized peoples on earth, have scarcely tasted it for 10 years and just about the first remark of every Englishman visiting our land is, how wonderful to have milk and butter.

Yes, America has had butter—so bountifully that it has graced virtually every man's table here for a hundred years. Four generations have simply taken it as a matter of course.

We still have plenty of milk and butter, thanks to the most efficient dairy industry in the world. Butter is still reasonably cheap, too. The average wage earner here can buy a pound of butter with fewer minutes of his labor than he could 20 years ago.

But now a certain body of consumer sentiment seems to want to turn the clock back permanently toward those cheaper substitutes that less fortunate peoples have always had to use: vegetable oils and by-product greases. Whipped up together we call it margarine.

There is nothing the matter with margarine. It is undoubtedly wholesome enough, as made now, and will supply the human craving for fat in spreads and cookery. But no masquerade that cotton oil and carcass grease can be put through will ever make of them the princely food that is butter.

Cheap imitation butter, a byproduct that can be produced at a fourth the cost of butter—in other words, yellow-colored margarine—thrown into open competition with butter, can have but one effect on the dairy industry and that is to hurt it. To be sure, our dairy industry will not perish because of this competition but it will gradually dwindle to a smaller output. Insofar as margarine displaces it, butter will gradually become scarcer. Fewer and fewer children in average families will know the taste of it. More and more, butter will become a luxury for the well-to-do. In a couple of generations we shall, perhaps, be largely a Nation of oil eaters, like our poorer cousins in the Old World. Perhaps our patriotic slogan, when we tighten belts for the next war, will be "guns or margarine."

The political fight for imitation butter, so far as it is successful, will move us one long turn around that historic cycle which long ago brought the Orient and part of Europe down to the drab level of a subsistence diet. For a century we have enjoyed the abundance from a highly developed animal agriculture, the richest fruits of this most blessed of all lands. We have lived on the fat of the land, and butter typifies it. Butter is part of that food bounty which includes meat, milk, eggs, cheese, and other livestock products—the rich, protective foods that have lifted the American diet up out of that age-old cereal and turnip level of the Old World. These products of animal agriculture are the backbone of the American dinner table, the things that distinguish it.

The descent back toward the cereal and vegetable diet, the loss of those rich animal foods (and once reduced, the animal industry is permanently reduced), is a process that most nations in this day and age would resist to the last ditch. Far older peoples than we would give much to have great livestock industries such as we have, especially the dairy. Those who have been mostly without meats, milk, butter, and eggs are the people who really prize them. Ask the British or German people what they would pay to have butter and eggs once more.

But some American consumers, who over long years have been surfeited to the point of unappreciativeness, seem to regard our incomparable butter industry as a sort of dog in the manger. Some of them seem to have set up dyed cotton or bean oil as a kind of fetish, a cause to champion, a symbol of thwarted privilege.

Well, assume that their cause will triumph; that before the year is out these good folks will be able to spread their bread and shorten their cake with untaxed, ersatz butter. Assume that the deed is done. Then what? Why, then future generations will, perhaps, be able to record that in the year 1949 the American people took steps to rid themselves of one of their most precious foods, to revert to the sardine oils of the poor and backward countries, in short, that they took steps to guide their children's diet once and for all into the torpid orientalism of cheap grease.

All in the name of economic progress.

Why We Behave Like Inhuman Beings

EXTENSION OF REMARKS
OF
HON. ALBERT M. COLE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. COLE of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edward L. Bernays:

WHY WE BEHAVE LIKE INHUMAN BEINGS

(By Edward L. Bernays)

Once upon a time—long, long ago in the fabulous 1920's—a noted American anthropologist, George Amos Dorsey, wrote a best-seller, Why We Behave Like Human Beings.

This appeared in the Coolidge era, when the future looked boundlessly bright and everybody was going to win a prize in the national sweepstakes of plenty. Prosperous, self-confident, hilariously optimistic, the United States was drinking bootleg liquor; dancing the black bottom; reading Hemingway, Cabell, and Gentlemen Prefer Blondes; cheering a young man named Lindbergh, who had just flown solo across the Atlantic; applauding Marco's Millions by Eugene O'Neill; laughing at the satires of Sinclair Lewis and the antics of a new strip-cartoon character, Mickey Mouse.

The old American dream of rags to riches, log cabin to White House, was still going strong. Elbert Hubbard's Message to Garcia still inspired high-school boys with the conviction that, if you let nothing stop you in the competitive obstacle race of our time, you were bound to reach the glittering goal or success. Coué, a smiling Frenchman with a flare for semantics, had persuaded many Americans to recite, "Every day in every way I am growing better and better"; and millions believed this magic incantation would enable them to grab and keep forever the

coveted brass ring as they whirled around on the golden merry-go-round of eternal prosperity. In the Nation-wide quest for fame and fortune just around the corner, thousands probed for the secret of it all in Bruce Barton's The Man Nobody Knows, which portrayed Christ as a supersalesman, town booster, and Rotary Club toastmaster.

America in those days was a world in which success was everybody's almost for the asking. All you had to do was work hard, brush your teeth with the right dentifrice, avoid BO and that nine-letter horror about which your best friends wouldn't tell you. Then you were sure to marry the boss' daughter, get a 20-percent interest in the business, and live happily ever afterward in a land which had never heard of a housing shortage.

This sublime assurance pervaded even the highest levels. Concluding his story of the Rise of American Civilization, the late Charles A. Beard, dean of United States historians, announced in 1927 that this was the dawn of the gods. And from Washington, D. C., there emerged on history's horizon the shining promise of the Kellogg Pact, signed by the many nations which solemnly agreed to outlaw war and establish permanent world-wide peace. In this happy age men appeared to be quite human.

In the fall of 1929, this beautiful dream did a Humpty Dumpty. A historic process we had blandly ignored suddenly caught up with us, and woke us with a violent shock.

World War I had opened an epoch without precedent in history. Now, for over three decades, humanity has been rent asunder by uninterrupted conflict. World-wide war, revolution, and counterrevolution have accompanied global depressions, national uprisings, class conflicts, conspiracies, putsches, underground resistance movements, civil war, dictatorship, fifth columns, show trials, assassinations, suicides, executions, and colonial revolts. Old empires have been destroyed; new nations have been created; republics have sprung up only to vanish under the boots of invading armies or totalitarian regimes.

The dream of universal prosperity, progress, and peace has been pulverized by universal ambition, violence, and fraud. No sooner is one aggressor beaten than another raises his mailed fist. Each war, world-wide or local, is followed by an ambiguous peace haunted by fear of the next war. Once kings battled with each other for the shape of things to come, then nations; now hemispheres and ideologies clash with conflicting promises and the force of modern armaments.

Never before has mankind undergone such vast changes in every aspect of its existence on so world-wide a scale, and the end is not yet in sight.

In the midst of this volcanic eruption of change, men have abandoned the religious and ethical conventions of 40 centuries and have hounded each other to the grave with a ferocity which makes lions and tigers appear like harmless kittens. Large sections of the world have made "man's inhumanity to man" their fanatical creed, and deliberately employed the most bloodthirsty, paranoid cruelty to impose their will upon whole populations. Führers, duces, caudillos, generalissimos, marshals, police states, gestapos, spies, informers, unscrupulous propagandists, and totalitarian courts have played the grim overture to melodramas of history at whose climax appeared the firing squad; the hangman; the masked executioner with his silk hat and broadax; the concentration camp; the factory manned by slave labor; the incinerator where people were burned for their race, religion, or politics; the lamp shade faultlessly fashioned out of human skin.

For all its advanced democratic way of life, America has not wholly escaped the nightmare upheavals of this century. We have known depression, war, strikes, lynching, race riots, religious and racial bigotry, juvenile delinquency, increased divorce rates. And there has been an alarming rise in mental illness, the last desperate refuge of the acutely maladjusted from the tensions, dislocations, and horrors of an age which opened with a pistol shot at Saravejo and ended its first act with the explosion of the atom bomb at Hiroshima.

In the dawn of the modern world Shakespeare could exclaim: "What a piece of work is man! How noble in reason, how infinite in faculty; in form and moving how express and admirable; in action how like an angel; in apprehension how like a god!" Today we are less impressed by man's angelic and divine qualities. Rather, we are overwhelmed by the discovery that millions of people can so easily succumb to mechanized headhunting and cannibalism. And so the current $64 question is not why we behave like human beings, but why we behave like inhuman beings.

Everybody is asking this question, from the man in the street to the most learned scientist, for the events and discoveries of the past four decades have forced us to change our basic viewpoints about ourselves and the world we live in.

The pioneer discoveries of the nineteenth-century science encouraged the belief that man's unbroken progress and freedom lay wholly in mastering the physical world. Every accelerating invention, unloosed by the industrial revolution, seemed to guarantee not only universal well-being, but universal peace. Today, when the physical sciences have perfected aircraft that travel at the speed of sound, and promise to release us from the control of gravitation, the material conquest of nature is at the highest peak in history. Yet the world is aflame with conflict rendered all the more violent and devastating by the inventions of science.

This has altered the emphasis of science itself. It is not surprising that religious conferences, such as those which met recently at Lambeth and Amsterdam, should call for moral regeneration as man's last best hope on earth. Nor is it surprising that a congress of the world's leading psychiatrists, meeting at about the same time in London, should urge the study and control of man's nature, especially his aggressive impulses, as the major solution of the twentieth-century crisis. It is logical, too, that a social scientist like Dr. Hornell Hart, of Duke University, winner of the Edward L. Bernays Atomic Energy Award, for action-related research in the social implications of atomic energy, should propose a Manhattan project of the social sciences as the first step toward grappling realistically with the crisis of which man is the center.

But of late we ave had unexpected news of the man-bites-dog variety. Now it is the physical scientists themselves who have begun to emphasize man, about whom we know so little, rather than nature, which we have mastered so well that it may destroy us unless we learn to master ourselves.

Speaking at this year's convention of the American Association for the Advancement of Science, its president, Dr. Edmund W. Sinnott, of Yale University, said: "Man, not nature, is the great problem today. These vast new powers in the hands of selfish or arrogant men simply increase their power to dominate their fellows." Man wants to be much more than a well-kept beast, Dr. Sinnott said, adding:

"Unless we give him ample opportunity and encouragement to cultivate the higher side of his nature fully and can free him from the restraints of dogma and compulsion, he will never be satisfied, and there will be no real hope for him."

At the same convention, Dr. Roger J. Williams, noted Texas University biochemist, said that while scientists have learned a great deal about the atom of matter, they are still profoundly ignorant about the atom of society, the human individual, a much more explosive force than the atom bomb. "Civilization," Professor Williams said, "is not threatened by atomic bombs and biological warfare today. It is threatened by ourselves. If civilization goes down, man will be his own undoing. The instruments and tools that he uses will not be the source of the trouble."

The key problem of the twentieth century is one of human relations. The continued triumphs of physics, chemistry, and biology are taken for granted. But if we want to know why, in the midst of these triumphs of mind over matter, we continue to behave like inhuman beings and how, in spite of everything, we can learn to behave like human beings, we must turn to the new sciences which have begun their real development only in the past 30 years—anthropology, psychiatry, psychoanalysis, and sociology.

This makes me feel somewhat at home, because my uncle, Sigmund Freud, pointed out long ago that the solution of most of our problems lies in following out scientifically Socrates' famous injunction: Know thyself! Today it is recognized psychiatric treatment for the maladjusted to cure themselves by knowing themselves. Since man as a whole seems to be maladjusted to the new conditions imposed by the twentieth century, this technique is being applied to man as a whole.

In their attempt to discover why we behave as we do, the sciences are probing the nature of man from various angles. Physiologically, the human being is the way his body works; psychologically, the way his mind works; sociologically, the way he functions in groups; biologically, the way he reacts to heredity and environment; pedagogically, the way he is formed by early and adult education; economically, as the beneficiary or the victim of our mass-production system. By exploring these phases of everybody's behavior, we may come up with answers which may explain some mysteries of human nature and conduct. This fundamental knowledge may help us find the way to better social adjustment and happiness.

The various sciences now agree that societies are stable and healthy when individuals obtain the physical, intellectual, emotional, esthetic, moral, and religious satisfactions which their natures require. One of the reasons why we behave like inhuman beings is that so many people throughout the world are frustrated in their basic needs and desires. Severe frustration tends to throw people back to primitive and infantile modes of conduct. It rouses fear, and fear rouses a desire for revenge. Above all, frustrations, in a world raging with conflict, stimulate the aggressive impulses which a satisfying civilization sublimates into constructive channels.

Recently there has been a great deal of discussion among scientists about man's aggressive impulses. Dr. Thomas Nixon Carver, of Harvard, has classified aggressive forms of conduct as destructive, deceptive, and persuasive.

Destructive forms include war, robbery, dueling, murder, and brawling; deceptive forms are thieving, swindling, adulteration of goods, false advertising; persuasive aggression involves political, erotic, commercial, and legal attacks upon others. No matter how we classify it, aggression always seeks to bring injury or death to others; and these days the question, "Why do we behave like inhuman beings?" has become "Why do we behave aggressively?"

The opening in 1914 of this age of blood and blunder came as a terrible shock to a generation which had absorbed only at the top intellectual level the real meaning of Darwin's theory of evolution, and had no

real grasp of historic time. Even today many do not understand the fundamental concept of modern science that human beings are descended from lower forms of animal life; and that, like other animals, we seek to satisfy our desires and defend ourselves against danger.

The basic desires and fears are there, but with the development of civilization, we learn to control them in the interests of group survival. Indeed, civilization begins with man's renunciation and sublimation of jungle impulses. Family and social life are impossible unless men curb their primitive sex and aggressive instincts. Even the most primitive societies prohibit incest, robbery, and murder. When these prohibitions break down, we get anarchy. When they are abandoned by a despotic ruling elite, we get a totalitarian state with the law of jungle imposed on a helpless slave population. On the other hand, when the repression of primitive impulses is carried too far, we get first hypocrisy, then widespread frustration and neurosis. Modern science is looking for the factors in man which can make for balanced individuals and a balanced society which recognizes the force of man's primitive impulses and converts them into a source of creative power; or at least mitigates their destructiveness.

More and more the modern psychiatrist tends to relate the contemporary crisis to our early childhood experience in the family and society. People are not static units. Like everything else in the world, they evolve and change under the pressure of circumstance. As the world makes them, so they make the world. Civilization requires that each of us adjust himself to social living. When faulty upbringing or make-up prevents us from making this necessary adjustment, we behave like inhuman beings.

We do so because even the oldest civilizations on record go back only 6,000 years—a mere drop in the millions of years since man emerged from the unit cell. We were jungle animals far, far longer than we have been civilized men, and the impulses of the jungle animal lie dormant in our being beneath the surface of civilization.

When we come into the world as children, our impulses are those of primitive creatures struggling for survival in the primitive animal world. The psychological problems of childhood revolve around the need for becoming socially adjusted to family, community, country, and world. All education and training—at home, school, and church—is directed toward curbing the primitive impulses, especially those of aggression with which we are born, and redirecting them to social ends.

But those who bring us up, above all, our parents, are not always aware that if their attempts to civilize us are indifferent, ignorant, or brutal, if they fail to take into account the particular needs of our developing personality, we may become frustrated. Creative redirection of the child's primitive impulses is one thing; the suppression which comes from lack of love and understanding quite another. "Flowers that fester are far worse than weeds," Shakespeare observed; and natural impulses which fester through repression may emerge in later life as impotent neurosis or dangerous aggression. If we are brought up as inhuman beings we are likely to become inhuman beings. Nobody is so cruel in adult life as the man who was weaned on cruelty.

It is not only in the family, however, that aggression can be encouraged by aggressive upbringing. Society is that larger family which brings all of us up. Its failure to do so properly can also sour and inflame primitive impulses which ought to be sublimated and redirected constructively. The child who is humiliated on account of his poverty, race, religion, or looks may harbor feelings of vengeance which, in a violent age like ours, are likely to find aggressive outlets.

Man lives not by bread alone, the Bible tells us. The child, father of the man, needs love. He needs to feel that he is accepted and cherished by his family and community. If he is rejected—above all unjustly rejected—the iron enters his soul and he becomes embittered, vindictive, and aggressive.

In this epoch of world-wide dislocation and conflict, frustrated people often take out their aggression in antisocial behavior. They try to soothe their own psychological wounds by wounding others through racial and religious discrimination and persecution of so-called inferior peoples.

Anatole France once said that Napoleon overran the world with blood because he was a failure in his own tent; and modern psychologists have found that the men who murdered millions in concentration camps were seeking scapegoats for the forgotten suffering and frustration of their childhood. The child who is economically and psychologically insecure, who eats his crust of bread in tears and feels that he is rejected and unloved, is likely to develop into the man who seeks a "whipping boy" whom he will force to pay for his early defeats.

Science is giving a great deal of thought to the fact that so many of our modern political sadists, from the most obscure brown shirt to the booming dictator at the top, are psychological cripples devoured by hate and resentment which goes back to early childhood.

Frustration, defeat, suffering, insecurity, and the sense of being one of the insulted and injured, are very dangerous things during times of economic, political, and military insecurity.

It is, we have discovered to our cost, only too easy for the psychological monster with a flair for leadership to promise a heaven of security and victory on earth, and thus rouse primitive impulses of aggression in millions of frustrated people.

A paranoid like Hitler had no trouble inflaming a German people smarting under a lost war and a harsh peace, or to intoxicate them with the promise of world conquest into behaving like inhuman beings on a colossal scale. Here, as everywhere else today, barbarous aggression was mistaken for a short cut to achievement, and destruction as a short cut to a sense of psychological security.

Another reason why we behave like inhuman beings is sociological. We live in a highly competitive society. Our behavior in this society is predicated on jungle rules of survival.

As civilization, morality, and ethics developed in the course of history, men drew up rules of the game which tend to make us behave more like human beings. But modern competitive society is still so relatively new that these rules are not as well defined as they ought to be, and we do not adhere to them as much as we might. The pecuniary values of competitive society make us punish adultery, which affects the happiness of three people, far more harshly than adulteration, which may affect the health of millions.

It is true, as many of our wisest social scientists point out, that environment is a far more powerful factor in shaping our behavior than heredity. For the most part, we are what our surroundings make us. Just as the child in its mother's womb begins as an embryo and passes through the various stages of man's evolution from the unit cell, so each of us has to learn in his own lifetime the entire heritage of the race in our particular civilization. William Graham Sumner—from whom Franklin D. Roosevelt got the phrase "The forgotten man"—calls this heritage our folkways. In essence, this heritage comes to us through our environment. Our folkways are the everyday incidents of our environment which pattern our thoughts and actions.

Some individuals absorb these patterns more quickly and easily than others. Some have little or no capacity to absorb them. These regress easily to the primitive folkways of the jungle which are part of our unconscious heritage.

Another factor in our environment which makes this regression possible is that of the 2,000,000,000 inhabitants of the world, one-half are still illiterate. Unequipped to absorb the gains of civilization, they are responsive not to the wisdom of the ages, but to words, pictures, and actions as these would be interpreted by primitive man. They are easy prey for distortion and superstition. Instead of being guided by knowledge and understanding, they are driven by the most primitive fears and hopes.

According to the 1940 census, the average American adult has had only 8 years of education. He lives in a highly complex world of competitive drives where all sorts of conflicting appeals, representing diverse interests, are made to the public day in and day out.

This leaves the door open for the conscious or unconscious propagation of antisocial, primitive viewpoints. Those who are not educated to resist the onslaught succumb to words and pictures whose explosive meanings stimulate the inhuman behavior which is the stock in trade of bigotry, fanaticism, and the fantasy of world conquest.

To be sure, we have in this country a system of public education which, as the Educational Policies Commission recently put it, should educate men to be free citizens in a free democracy. But there is a great gap between this ideal and the reality around us. The National Education Association and similar groups have shown that many States, cities, counties, and villages lack the physical equipment, the properly trained teachers, and the basic ideas to fit the child for life today and tomorrow.

To climax this serious lag, our educational system does not carry into the schoolroom all that the social sciences have discovered about human nature and conduct. Children are still taught antiquated ideas by antiquated methods. When the adolescent leaves school, he is often ill prepared to meet the complex problems of modern life. In most cases he has been fitted for an entirely different pattern of life, one much closer to the nineteenth than the twentieth century.

This may give him a sense of psychological insecurity. He may feel let down and resentful because those who had charge of his education dropped him into the seething contemporary world unequipped to meet it. If he meets defeat and frustration in his struggle for security or success, he becomes the perfect sucker for the paranoid demagog with his dazzling, unscrupulous promises of revenge, conquest, and plunder that will include all the good and evil things of which the frustrated, anonymous man feels himself deprived.

All these factors which make us behave like inhuman beings are augmented by the great paradox of the twentieth century. We have made fabulous progress in technology without comparable progress in ability to handle human relations.

We can make the atom bomb, but do not know how to control it socially so that it does not annihilate most of mankind.

We can press a button and start a TVA powerhouse, yet cannot prevent race riots caused by ignorance, misunderstanding, and prejudice.

We are so elated over our mastery of the machine that, like the characters in Samuel Butler's satire, we run the danger of ceasing to be men. And though we know perfectly well how fatal another armed conflict may be for the whole of civilization, there has

never been so much talk of war as now, only a few years after two wars to end all war.

That is why all the sciences today, from psychoanalysis to physics, are concerned with the problem of why we behave like inhuman beings. It is symptomatic of these times that the staff of the United Nations has its own psychiatric consultant.

Assuming this post, Dr. Carl F. Sulzberger, of the New York Postgraduate School and Hospital, urged further study of mankind with the hope that someday men will not have to fight an enemy, real or imaginary, to get along in the world.

Psychiatry, he said, is definitely on the way to acquiring an understanding of human behavior that may someday aid in achieving peace. The key to many current problems of human behavior is the study of the child's frustration and disappointments, since "the pattern of anxiety and satisfactions that will later color the whole life is established at an early age."

It is also a sign of the times that Dr. Carl Binger, of Cornell University, addressing the recent International Mental Health Congress in London, urged statesmen and politicians, who would not think of waging war without the help of scientists, to give scientists a hearing on how to prevent wars. Dr. Binger confirmed Freud's thesis that wars result from man's aggressive instincts, and he equated war with ailments having no single cause, but several causes, all contributing to the final catastrophe.

Thus science, with its modern equipment of experiment and method, is seeking to solve the problem of inhuman behavior through greater and greater knowledge of man and the world in which he lives. The key to our liberation from our jungle heritage of force and fraud lies in accelerated self-understanding. The truth shall indeed make us free when we learn, with the same control we exercise over physical nature, that it must now be the truth about ourselves.

Address of Dr. Joseph F. Thorning

EXTENSION OF REMARKS

OF

HON. EARL T. WAGNER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. WAGNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I ask permission to include the address of my friend, Dr. Joseph F. Thorning, one of the principal speakers at the investiture of the Very Reverend Francis X. Talbot, S. J., president of Loyola College, Baltimore, with the insignia of the Order of Isabella the Catholic, with the rank of knight commander:

BALTIMORE, March 31, 1949.—Speaking at investiture ceremonies in honor of the Very Reverend F. X. Talbot, S. J., president of Loyola College and former editor-in-chief of the national weekly, America, Dr. Joseph F. Thorning, associate editor of the Americas and World Affairs, declared that "the insignia of the Order of Isabella the Catholic were being conferred on Father Talbot on the tenth anniversary of the collapse of Soviet-dominated, leftist resistance in Spain as well as upon the tenth anniversary of the full recognition of the present Spanish Government as the de facto and de jure administration of that country by the then President of the United States, the Honorable Franklin D. Roosevelt."

Addressing himself to a number of "misinformed commentators on the tragic events of 1936–39 in Spain and the evolution of public opinion in the United States during the same period with respect to what was happening in the Iberian Peninsula," Dr. Thorning offered evidence to prove that "millions of our non-Catholic fellow citizens, including some prominent members of the Protestant and Jewish clergy, understood that a Soviet-inspired Red reign of terror had taken over the Spanish Republic through the now-familiar device of a coalition government, the same type of regime which brought about the doom of Jan Masaryk and Edouard Benes in Sovietized Czechoslovakia and which led, directly, to the triumph of Soviet imperialism in China.

"Operating under cover of misguided fellow travelers and other secularists of the left, just as occurred last week at the so-called art and culture conference in New York, Generalissimo Josef Stalin made a serious effort to seize the strategic Iberian Peninsula.

It is to the eternal credit of Father Talbot and the millions of enlightened Americans associated with him that both he and they refused to be hoodwinked. As a result, Spain today does not share the totalitarian, Red-Fascist, police-state fate of sovietized Rumania, sovietized Bulgaria, totalitarian Yugoslavia, Soviet Hungary, Soviet-terrorized Poland, and a Kremlin-dominated Far East.

The present state of the world, with its topheavy armaments, overloaded budgets, and general uneasiness, is the direct result of the teamwork of left-wing simpletons and Red agents. Almost every one of the actors in the Soviet-stage-managed Waldorf Astoria spectacle was notorious, from 1936 to 1939, as a bitter opponent of Christian Spain. How many must remember the virulent attacks of the Reverend Guy Emery Shipler upon Msgr. Fulton J. Sheen and myself. How much in keeping with his role it was to find him allied with the enemies of our country in the gigantic Soviet propaganda show in New York City. Mr. George Sokolsky, the nationally respected columnist, did a service to truth and to the national welfare when he published (Mar. 305, 1949) the names of those connected with the alleged Cultural and Scientific Conference for World Peace. Among the leftists, whose names were notorious for their attempt to foist the Soviet-dominated regime of Dr. Juan Negrim upon the American people as a true republic, were the following individuals: Mr. Kenneth Leslie, editor of the Protestant; Mr. Ring Lardner, Jr.; Mr. Howard Fast; Mr. Olin Downes; Mr. John Howard Lawson; Mr. Louis Adamic; Mr. Kyle Chricton; Dr. J. Raymond Walsh; Prof. Clyde R. Miller; Mr. Clifford Odets; Mr. Marc Blitzein; Mr. Paul Draper; Mr. Donald Ogden Stewart; Mr. Dalton Trumbo; Miss Lillian Hellman; Mr. José Ferrer; Mr. Herman Shumlin; Mr. Arthur Gaeth; Mr. A. B. Magil; Mr. Emil Lengyel; Mr. Albert Maltz; Mr. Aaron Copland; Mr. Lester Cole.

"To be sure, there were thousands of United States citizens, not under the thumb of the Kremlin, who sincerely believed that the republican form of government would benefit the people of Spain. They had a right to their opinion. The sad feature of their stand was that most of them never realized that they were just as much pawns and puppets in the Kremlin game as were Jan Masaryk and Edouard Benes. These good people were imposed upon and exploited. They contributed millions of dollars to the Soviet propaganda mills; they attended huge mass meetings where the Kremlin line was carefuly camouflaged under the familiar titles of 'Peace and Democracy,' or the 'Joint Anti-Fascist Committee,' etc. It is no historical accident that many groups, now labeled as subversive by the Department of Justice, had their origin and their sole 'raison d'être' in the Soviet campaign to utilize genuine sentiment in favor of the Spanish Republic for the ulterior purposes of Generalissimo Stalin. In other words, whereas the bellwethers of the flock were Red Nazis, posing as 'republicans' or 'democrats,' the innocent sheep were in the position of dupes preparing their own destruction, as happened in every country now behind the iron curtain. Just as Nikola D. Petkov in Bulgaria and Zoldan Tildy in Hungary, two fellow travelers were stalking horses for the Soviet Union in eastern and central Europe, so our own secularists of the left are doing all in their power, although frequently quite unintentionally, to pave the way for the Soviet seizure of power in the United States of America. International traitors, some conscious and the others, who are far more dangerous, the unconscious, are setting the stage for Soviet world domination. They are feverishly at work in every Republic of the Western Hemisphere, exactly as they have been exposed as an advance guard of the Kremlin in their activities in Canada. There are David Mays and Gerhart Eislers everywhere. Their conspiracy, which cuts across the lines of race, religion, and nationality, derives its real peril from the fatuous, self-appointed delegates of the arts, professions, and sciences of the left. Prof. Harold J. Laski, among others, is wrong: The Soviet menace stems from the extreme left. We who oppose Soviet manuevers and expose Kremlin tactics, are the real liberals, the true progressives, the genuine democrats. Everyone who belives in God, be he Protestant, Jew, or Catholic, is a watchman of freedom in this perilous hour. Fascism and nazism, thanks be to God, have been pretty thoroughly pulverized; Red nazism is the overwhelming grave threat to world democratic unity and world peace. The Soviets, or the collectivizers, are the most active gravediggers of democracy, everywhere. Decent libertarians must stand united for freedom, plenty, and peace."

The Greeks and Their Fight Against Communism

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. SMATHERS. Mr. Speaker, under leave to extend my remarks, I include therewith a very moving and inspirational letter about the fight which the Greeks are waging against godless communism.

Mr. Speaker, the Greek Nation has contributed much to the history of civilization. It has provided the western world with much of its law, literature and culture. It has shown us how to live intelligently and peacefully. Its peoples have mingled with others throughout the world, and wherever they have gone, and into every country they have moved, they have made intelligent, productive citizens. Their actions have earned for them the respect and friendship of all decent peoples.

Today that famous little country is fighting a life and death struggle against aggression, oppression and Communist tyranny. The Greek people are now fighting as their forefathers did, not only for the defense of their homeland but for traditions of independence and democracy. In short, they are now fighting the good fight against a foe dedicated to destroy our western civilization and our way of life. The Greeks are fighting and

dying to uphold the ideals which are near and dear to us.

I was therefore happy and honored to support vigorously President Truman's program of aid to Greece when it was first announced, and without equivocation or qualification. I was happy to support it last year, and I shall consider it an honor to support that program this year to the fullest extent possible.

It seems to me that the time has come in our lives when people everywhere must choose between the two basic philosophies which are in irreconcilable conflict in the world. One says that the state is supreme and should subjugate all human beings and their rights and liberties to it; that is the Communists' position; the other supports the dignity of man, his individual rights and liberties, and says that governments shall exist at the will of the governed—that is the position of the democracies. Greece is today fighting on the side of free democratic governments, for the right of little people in Greece and elsewhere to live under a democratic government of their own choice.

In my opinion there is no easy solution to this problem; there is no cheap compromise with the Communists and despite what the Communists' apologists have long told us, this issue will have to be met directly and forthrightly and there is no sidestepping it.

The people of Greece today are fighting this holy battle. We must in the name of all that we hold dear, assist them and uphold their hand wherever and whenever possible.

The letter follows:

AID GREEKS

To the EDITOR OF THE MIAMI DAILY NEWS:

Fully recognizing your keen interest in arousing America to the real menace of communism, may I call upon you to help the Greek nation which is presently engaged in a death struggle with the forces of communism? The outcome of this battle is of crucial importance to the western democracies and the very principles for which we in America fight.

My intense feeling in this matter results from a recent trip made to Greece when, at General Van Fleet's invitation, I accompanied him on a visit to the fighting fronts. From first-hand observations, I learned Greece is fighting Communists in a full-scale, all-out war which is the most violent and ruthless in her history. True to her traditions, Greece again fights to preserve western democratic civilization. After visiting refugee and children's camps, and talking with prisoners of war, I am absolutely convinced the guerrilla armies composed of die-hard Communists and criminal and lawless elements are intent on destroying everything Greek while they pillage, rape, and plunder. Patriots of the resistance movement left the guerrillas when Greece was liberated and the Communists took over, for they knew the Communist aim is to destroy Greece and make her a Communist satellite by establishing Russian domination of the Mediterranean.

Despite 9 years of invasion, occupation, and bitter privation, the courage and determination of the Greek people is admirable. However, we must encourage them to continue the present struggle just as we have shown wholehearted support by giving them material and financial aid.

SPYROS P. SKOURAS.

NEW YORK.

Federal Building Projects in Massachusetts

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and tables on Federal building projects located in the State of Massachusetts, covered under the provisions of title I, H. R. 3662:

FEDERAL WORKS AGENCY,
PUBLIC BUILDINGS ADMINISTRATION,
Washington, April 6, 1949.

Hon. JOHN W. McCORMACK,
House of Representatives,
Washington, D. C.

DEAR MR. McCORMACK: In compliance with your request of March 29, there is attached herewith a tabulation indicating the Federal building projects located in the State of Massachusetts, covered under the provisions of title 1, H. R. 3662.

This list, submitted pursuant to title 1, includes all communities having annual postal receipts in the amount of $10,000 or more where Federal-owned buildings do not exist. It further includes such projects involving the extension and remodeling or replacement of present Government-owned structures, in order to meet current and future space requirements of Federal establishments throughout the country. I am sure you are aware that a large number of the listed projects, particularly those in the smaller communities, will not under normal circumstances be undertaken for a number of years.

As of this date, a priority list has not been established. However, it is expected that those projects previously authorized under the 1937–38 Public Buildings Act, and now in deferred status, will receive prior consideration in formulating the first construction program. The Massachusetts projects in that particular category are identified by symbol No. 1 preceding the name of the community on the attached list.

Sincerely yours,

H. G. HUNTER,
Acting Commissioner of Public Buildings.

British Health Program

EXTENSION OF REMARKS
OF
HON. WALTER K. GRANGER
OF UTAH
IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. GRANGER. Mr. Speaker, the American Medical Association has been spreading throughout this country by means of its powerful $3,500,000 propaganda machine the story that the British National Health Service is a failure, and a warning to us not to adopt national-health insurance.

Now the AMA has discovered it has a bull by the horns. The British program is developing into a tremendous success and is the most popular thing the British Government has done. Doctors and laymen alike testify for it. The doctors are getting a good living, patients are getting better medical care than ever before, and the national health is expected to show a tremendous improvement.

For an impartial story of the British program, as contrasted with the fictitious tales the AMA has been spreading, I refer Members of Congress to a recent broadcast from London by Frederick B. Opper of the American Broadcasting System, which I ask unanimous consent to include in the RECORD. His story jibes with many others now reaching this country. I wonder if the AMA will continue to tell the American people we should follow the experience of the British. Under unanimous consent, I include in the RECORD a transcript of Mr. Opper's broadcast, as follows:

The American Broadcasting Co. and its affiliated stations now present Foreign Reporter. Each Sunday at this time ABC brings you an authoritative, comprehensive analysis by one of its many foreign correspondents on an important issue of the day. Because of the controversy over Government medical aid now sweeping the United States, ABC has asked Correspondent Frederick B. Opper, to tell us just how medical insurance is working in Great Britain, where it has been in effect for months.

Opper has made a close study of the British medical situation, and now he reports on how socialized medicine has worked out over in the British Isles. Now here is Correspondent Frederick B. Opper in this transcribed report, speaking to you direct from London.

Mr. FREDERICK B. OPPER. A few months ago Britain's Prime Minister, Clement Attlee, found he was having foot trouble, and at the same time he noticed his stomach was also causing him difficulty. So he paid a visit to his doctor and, after an examination, he was sent to a hospital where he spent several weeks, being treated for an infected foot and stomach ulcers. There was nothing significant about the hospital incident, except that Mr. Attlee paid nothing for his examination nor for his basic hospitalization.

Like 93 percent of the people of this country, the British Prime Minister has signed up under the new National Health Service scheme that gives free medical attention to any British citizen, whatever his complaint may be. Actually, the plan goes even further than that. A foreigner here in Britain, an American tourist perhaps, who falls ill with appendicitis, a broken leg, eye strain, can, by applying, receive complete attention without paying a red cent. But, of course, foreigners are only a drop in the bucket, and the plan is aimed at the British people themselves. It means that every person in this country, no matter what his age or his sex, no matter what he does for a living or even whether he works or is unemployed, no matter whether or not he pays insurance, can receive free medical attention if he wants it and if he needs it, from a private doctor or from a hospital. No British subject ever again has to pay a penny for his wig, for his set of false teeth, for an X-ray, for a bottle of medicine, for a pair of eye glasses, it is all free, open to everyone.

This nation-wide health plan, a gigantic scheme that 40,000,000 people already have signed up for, is not of course free any more than a battleship is free, or police protection is free, but no longer does a private citizen pay out of his own pocket for his health every time it is affected, any more than he pays individually for every battleship salvo that is fired, or every time the policeman on the beat arrests a pickpocket.

Health, like other public services, is now paid for in Britain by the Government out of taxes, and only in that sense does the citizen pay. This of course is a tremendous social change, particularly here in Britain where national health has never been an outstanding British characteristic, in fact it only has been since the health bill went into effect last July 5, that people have realized how bad British health actually was.

For only now, for the first time, have many people been able to afford medical attention, people who before would let their teeth decay because they could not afford a dentist, people who only knew that they were having trouble with their chest but who never could afford an X-ray to find out if they were suffering from tuberculosis.

Before this health plan became law, though, a great many millions of wage earners were protected medically to some degree, through deductions from their pay envelopes. But the present scheme is so much more far-reaching both in the number of people who can benefit from it, and from the benefit they are entitled to, that there is very little comparison.

I spoke a moment ago of people who can benefit from this health measure. That is because nobody has to register. It is completely voluntary and if any rugged individualist wants to stay out of the plan he is perfectly free to do so. In fact, as I say, 93 percent of the British people have registered,

but a stubborn or unaware 7 percent still are outside. I've wondered, as perhaps you do, whether the Royal family has come into the scheme, but when I called Buckingham Palace today to find out I could not get any information. I would think it unlikely, though.

Well, you may ask, what about the doctors? Are they also free to come in or stay out independently the same as the patient? The answer is yes.

And according to the latest figures available as of last month, out of 21,000 British doctors, 18,165 are members of the health service, and the remainder have chosen to remain outside it, taking only paying patients. Previously, doctor bills here in Britain were extremely high, especially the specialists, but there were always waiting lists in the consulting rooms of exclusive Harley Street.

Doctors on that famous street used to get their patients from the upper 10 percent of the population; they are now getting only the top 2 or 3 percent, because of course, fewer people are going to private doctors and paying the former fee; when now they can get attention free of charge. Certainly, people who have to count their money are pleased with such a development as the health plan.

But what about the doctor, does he like it? Mrs. Ralph Spunseller, of Canton, Ohio, for instance, wonders whether would-be doctors are discouraged at the development, and how medical-school enrollment has been affected. I am afraid that there aren't any comparative figures available. It is known that a year ago before the system started operating, there were 13,300 men and women studying medicine here in Britain, but since then, no medical-school census has been taken although the ministry of health says that medical schools are crammed to the doors, and that there are long waiting lists. In fact, the Ministry said more people are trying to become doctors now than ever before, although, as I say, they can't produce any definite figures to back up their claim.

Two Californians, Mrs. George Jerome, of Brawley, and George Fulton, of Asalia, apparently have been thinking along the same line too, wondering if perhaps British doctors have lost their incentive now, or whether or not patients complain that they are getting too impersonal, possibly losing the bedside manner common to private practice.

Well, I certainly haven't heard of such complaint myself, and the health ministry, when I asked them about it there, was indignant at the suggestion. In fact, so they said, the doctor-patient relationship in some ways is perhaps better now, for previously many doctors were embarrassed at having to ask fees from people they knew could scarcely afford to pay. Now the money barrier has been removed and, so the Ministry says, the family doctor is still the family doctor.

This view is backed up to a considerable extent by a recent article in Lancet, the well-known medical journal, which said both the doctor and the patient are pleased with what Lancet described, as their new and easier relationship, and, it added, doctors are working wholeheartedly in the new services. I think that it will be a considerable stretching of the truth, however, to say that all British doctors are backing the health plan wholeheartedly. Certainly, before it went into effect, when it was being debated in the House of Commons, and then during the transition period, they opposed it in large numbers. Possibly a majority of them were against it, at least a majority of those vocal in their opinion. Now as I say more than 18,000 out of 21,000 British doctors are taking part.

Not all of the 18,000 though are in favor of the plan. There have been rumors of some of the doctors trying to sabotage it by prescribing the most expensive medicines, for instance, and certainly, many doctors who didn't like the idea were forced to join when they found that patients who formerly paid them private fees were now going to the service doctors free of charge. So, reluctantly, many did join up while still disapproving. However, more doctors have joined up than the Government originally estimated would do so, and among the dentists there is almost a 100-percent score.

And, incidentally, I ought to say that these medical men are paid either flat yearly sums, or if they choose a smaller basic sum, plus a certain amount for each patient, and in a good many cases the doctors are better paid now than they were before, certainly in some of the poorer areas such as the Welsh Valley or the slums of London.

You are probably wondering, though, exactly how this British health plan works. Well, let's suppose John Smith wants to get the free medical benefits he has heard about. He goes to Dr. Jones, a family doctor he has had for years, and says he wants to be put on Dr. Jones' list. If Dr. Jones is not a member of the plan, or if he already has too many patients, Mr. Smith will be helped by the Government to find a doctor, but if Dr. Jones has signed up and has vacancies, Mr. Smith's choice is noted down and he is free to call on the doctor whenever he thinks there is something wrong with him. If Dr. Jones isn't sure of the exact nature of the trouble, he'll send Mr. Smith on to a specialist for consultation and, if necessary, to a hospital for lengthy observation, for an operation perhaps, and convalescence.

All this, of course, is free, and the attention is free for Mrs. Smith who perhaps is expecting another baby, attention that includes doctor's observation and midwife care and if little Johnny Smith breaks his wrist climbing a tree, and goes to the hospital as an out-patient, he, too, is treated free of charge, a question Mrs. Charles Makaldoney of Flossmoor, Ill., has asked about.

And, finally, if little Mary Smith begins to have headaches, she, too, is examined. Possibly her eyes are bad, and she is sent along to an eye specialist, who prescribes glasses. In that case she takes a prescription to an optician who fits her with spectacles, all free of charge.

Well, says John Jacobs, of Chicago, what has been the result of all of this? Has the plan had any noticeable effect on the British health picture, such as mortality rates or man-hours lost through illness?

So far the plan has been operating for only 7 months, and there are no figures that would prove its benefit beyond the fact that in the first 3 months the British infant mortality rate dropped to the lowest point in the country's history. I wouldn't use that one item as proof of anything, though I do agree with the Health Ministry certainly that British health will improve slowly but unquestionably with time.

For one thing, if for no other reason, people are now going to doctors who couldn't afford it before. They are getting medicine and surgical appliances they couldn't previously afford, and they are getting attention earlier in their illnesses than they did before. In time British medicine will be preventive instead of corrective.

Well, you may ask, all this sounds fine, but surely there must be drawbacks. Yes; there are. There are not enough doctors or dentists in Britain, and with more patients than ever before, they are terribly overworked, with the result that patients receive less physical attention at the moment, and the patients have to wait in line for hours, sometimes for weeks and months even, for special care or operations that are not immediately necessary. So many people needed glasses after examination that there is a great shortage of frames, for instance, and many people are abusing the plan, claiming attention for imaginary or trivial complaints just because the service is free.

But that is the crux of the whole matter. It is indeed free to everybody in Great Britain and as such is overwhelmingly the most popular measure in many years.

It is so popular that it is now a political weapon with the present labor government, under whose administration it was passed, claiming sole responsibility. Recently Winston Churchill, leader of the opposition, complained about the cost of the plan, particulary condemning the fact that the Health Ministry seriously underestimated expenditures. In fact, he made a bad political mistake in pressing the matter, because the Health Minister scored a great personal triumph in the House of Commons debate and an important political advantage.

Recently there was an important midterm election campaign in progress in one of the London districts. In many meetings of both parties, I have heard speaker after speaker claim credit for the bill. During the next year, I am sure that attitude won't change a bit, and very probably the national health plan will be the most tedious item in British politics. Certainly, it is here to stay; nobody will be so rash as to advocate its repeal.

There will be changes, of course, as experience picks out flaws, but the principle is now thoroughly established that every British citizen by right shall have free and complete medical attention wherever he or she needs it.

The Electoral College

EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. GOSSETT. Mr. Speaker, I am pleased to report that the Judiciary Committee of the House on yesterday, favorably reported House Joint Resolution 2. This is a resolution to abolish the archaic electoral college and electors and to provide for the election of Presidents and Vice Presidents by a direct vote of the people. The resolution retains the electoral vote of each State but provides that such electoral vote be divided in the exact ratio with the popular vote. The resolution would set up a fair, honest, accurate and democratic method of electing Presidents.

The identical resolution was unanimously reported by House committees in the Seventy-second and Seventy-third Congresses. The same resolution was reported last year by the Judiciary Committee of the House and also by the Judiciary Committee of the Senate.

This proposed amendment is wholly nonpartisan, and has overwhelming support from all sections of our country.

I am inserting herewith a resolution just received from the Public Affairs Luncheon Club, of Dallas, Tex. This club is composed of several hundred of the leading women of the Dallas area:

Be it resolved, That the members of the Public Affairs Luncheon Club in meeting assembled this 28th day of February 1949, do reaffirm our hearty approval of the resolution offered in the Congress of the United

States by Congressman GOSSETT of Texas and Senator LODGE of Massachusetts (known as Senate Joint Resolution No. 2) which proposes that there be submitted for ratification to the legislatures of the several States an amendment to the Constitution of the United States abolishing the electoral college and providing that the electoral vote of each State shall be apportioned among the several parties on the ballot of that State in accordance with the votes polled by those parties in the Presidential elections, as it is the strong conviction of this group that the adoption of such an amendment would greatly strengthen the two-party system upon which the continuance of our democratic government rests and that the adoption of the amendment would also greatly lessen the influence of minority and pressure groups upon our political system and upon the administration of our Government; and be it further

Resolved, That a copy of this resolution be spread upon the minutes of this organization and that copies also be sent to Congressman ED GOSSETT and Senator HENRY CABOT LODGE and to Senators TOM CONNALLY and LYNDON JOHNSON and Congressman J. FRANK WILSON.

Respectfully submitted.

MRS. M. C. TURNER,
Chairman, Resolutions Committee.

Unanimously adopted:

CORINNE NEAL COOK,
President.

PAULINE ADOUE HALL,
Chairman, Legislative Committee.

Bartholomew W. Buckley

EXTENSION OF REMARKS
OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include recent articles from the Ware News and the Worcester (Mass.) Telegram concerning my valued friend, Chief Bartholomew W. Buckley, who has so efficiently headed the police department of Ware, Mass., for the past 40 years.

Chief Buckley has made an outstanding record. For more than 50 years he has been a member of the Ware Police Department. He enjoys the esteem, respect, and affection of his fellow townspeople. Able and energetic, possessed of kindly, humane, and amiable qualities, he has endeared himself to citizens of every class. He is widely known and highly regarded throughout the State for his rectitude, marked ability, courage, conspicuous efficiency, and unfailing courtesy. Police chiefs may come and go, but when the full record is written the name of Chief Buckley must be placed in the topmost rank of merit, achievement, and service.

After long years of tireless and unselfish service he is entitled to rest and relaxation from arduous duties. It is my fervent wish and prayer that he may be spared for many years to come to enjoy the happy retirement which he so richly deserves. It may well be said of him, "Well done, thou good and faithful servant."

[From the Ware River (Mass.) News of April 6, 1949]

"BAT" BUCKLEY TO END POLICE SERVICE JULY 1

Ware will lose an outstanding civil servant July 1, when Bartholomew J. Buckley retires.

His retirement will terminate a public service that began 46 years ago when he was elected a patrolman and 31 years as chief of the Ware Police Department.

Chief Buckley last night notified the board of selectmen of his impending retirement.

"The town has been good to me," he said. "I am announcing my retirement effective July 1 so that the selectmen and the town may have ample time to make a selection of my successor. This is a momentous decision. I have never been without a job since I was 10 years old and I expect to keep busy after I retire."

The retirement of the chief does not come unexpectedly. Though hale and hearty, he is 72 and as a member of the Hampshire County retirement system which Ware joined 2 years ago, his retirement this year would have been automatic. He will receive a pension under the system approximately equal to one-half of his regular salary from the town.

The chief could look back on a memorable life. Born in Ware, the son of James and Johanna (Welch) Buckley, May 30, 1877, Bartholomew Buckley went through the grades in Ware's public schools and at 10 took a job as waterboy at the Hitchcock Building. For a short time he worked in the Otis mills. He can recall earning $3.20 for a 60-hour workweek.

He can recall his years as outstanding athlete and as a member of the famous Ware Young Men's Union basketball team, which he captained and led on a victorious tour. He can remember how his team mates thought he'd make a good patrolman and induced him to run for the office, which in 1903 was elective.

"Bat" won the election and earned for himself a place of highest respect in police circles and of deepest affection among his fellow citizens. His efficiency in office led to his appointment to the office of chief in 1908 after the then chief, Maurice Fitzgerald, was dangerously wounded in a gun battle with a horse thief, and subsequently became sheriff of Hampshire County.

The chief can look back on a multitude of official and unofficial activities which won for him praise for his charities, for his sympathetic understanding of the unfortunate, for his interest in the welfare of boys and girls, and for his efficiency as a law-enforcement officer.

He can take out the gold badge which the merchants of Ware gave him in 1910 in recognition of the high esteem in which he was held. Most striking of his memories is that of the 1938 flood and hurricane, when for 70 hours he became mayor of the town and brought the town through without loss of life.

To quote from an editorial written by John P. Callaghan, former editor of the Daily News, on October 18, 1938, "A leader was needed. A man of courage, of vision, of cool judgment, and of heart. Ware had that man in the person of Chief Buckley, and Ware knew it."

Chief Buckley was one of the organizers and is vice president of the Ware Cooperative Bank; he was one of the organizers of Ware Rotary and is an honorary member of the club. He is a member of the Knights of Columbus and of the International Police Chiefs' Association and the Massachusetts Police Relief Association. He has been a deputy sheriff in Hampshire County for 40 years and will continue.

Twice married, the chief's first wife was Pamilia Girard, of Ware. His second wife is the former Beatrice V. Murray. He has two daughters, Mrs. Leo Dubois and Mrs. Theophile Gervais, and three grandchildren; two brothers, Michael, of Ware, and Timothy, of Hartford, Conn.; and two sisters, both of Springfield, Mrs. John McKenna and Miss Ellen Buckley.

The whole story of Chief Buckley's life may never be set down in black and white. Countless chapters are locked in the hearts and memories of a multitude of friends and beneficiaries.

In discussing the matter following the acceptance of his resignation, the members of the board of selectmen were loud in their acknowledgment of the remarkable work Chief Buckley had accomplished in his nearly half a century of service.

Within a short time the board will contact the Civil Service Commission and request an examination for candidates for the to-be-vacant post, to name his successor.

[From the Worcester (Mass.) Telegram]

POLICE CHIEF FOR 40 YEARS AT WARE TO RETIRE

WARE, Wednesday.—Chief of Police Bartholomew W. Buckley, head of the Ware Police Department for 40 years and a member of the department for 50 years, will retire on July 1.

Chief Buckley conferred with selectmen last night, after which the selectmen announced they accepted, with regret, the chief's decision to give up the post.

BORN IN WARE

Chief Buckley was born here May 30, 1877, and reached the retirement age under the Massachusetts law 2 years ago. He was granted a 2-year extension by State officials. Chief Buckley started his police career at the age of 22, when Maurice Fitzgerald, then chief of the department, was elected Hampshire County sheriff. In 1909 Buckley was named chief and has held the position since that time.

He was appointed a deputy sheriff in 1908 and has served in that capacity since.

EMPLOYED IN MILL

Sometime before entering police work Buckley was employed in a local mill on construction work. Just before entering police department he worked at the former Domestic Bakery.

He was a member of the famed Ware basketball team of 50 years ago.

Chief Buckley served as head of the Camp Cook Club, a well-known headquarters for sportsmen from all parts of the State, for almost 40 years.

The incident which made Chief Buckley best known throughout New England was his single-handed capture of Clyde Taylor, a horse thief and desperado, in a barn at Ellington, Conn., 40 years ago.

Taylor stole a horse and vehicle at the J. H. Gilbert place here and was trailed by the chief and Connecticut officers to the lonely Ellington hideout. When Taylor refused to surrender, Chief Buckley improvised a shield of wooden planks and went into the building alone. Taylor, although armed, surrendered without firing a shot.

WELL KNOWN IN EAST

Chief Buckley has a wide reputation for efficient police work and is well known in police circles throughout the East.

He is a vice president of Ware Co-operative Bank, a member of the bank investment committee, a member of the Springfield Elks, Ware Knights of Columbus, Massachusetts Police Chiefs Association, and other organizations affiliated with his work as deputy sheriff and police chief.

He is married and has two daughters.

He has no definite plans for the future.

The selectmen made no comment as to his successor.

The Putnam Phalanx

EXTENSION OF REMARKS
OF
HON. ABRAHAM RIBICOFF
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. RIBICOFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following resolution adopted by the General Assembly of the State of Connecticut, concerning the Putnam Phalanx:

Resolution Concerning the Putnam Phalanx

Whereas it has come to the attention of the general assembly that the Putnam Phalanx is planning a trip to England, France, and Belgium in the fall of this year, in the course of which visits will be made to many places of historic interest to the people of this State and of other countries; and

Whereas this good-will tour will be the occasion for the confirmation of international friendship and mutual understanding: Be it

Resolved by this assembly, That the greetings of the general assembly are hereby extended to Col. Sam E. Dockrell, commanding officer of the Putnam Phalanx, and to the entire membership of that historic organization, with the best wishes of each member of this assembly and of the people of the State for a happy and successful trip; and that we request the Putnam Phalanx to extend to the government and citizens of the countries visited our most friendly greetings and heartiest good wishes; and be it further

Resolved, That the clerks of the house and the senate cause a copy of this resolution to be sent to Colonel Dockrell.

Changes in Procurement Policies

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. ANDERSON of California. Mr. Speaker, because of the general interest in the procurement policies of the National Military Establishment I am taking the liberty of enclosing herewith a self-explanatory communication from the Assistant Secretary of the Army. I am sure that my colleagues and their constituents will find this to be of interest:

APRIL 1, 1949.

HON. JACK Z. ANDERSON,
House of Representatives.

DEAR MR. ANDERSON: I wish to refer to your letter to the Honorable Kenneth C. Royall, Secretary of the Army, of March 4, 1949, and to the subsequent discussion with you by my executive, Col. G. K. Heiss, on March 17, with regard to procurement of 500,000 trunk lockers by the Department of the Army.

Procurement of these lockers has been thoroughly investigated, and it was determined that procurement, f. o. b. origin in this instance, was not the most economical to the Government. In order to afford all qualified manufacturers or vendors, irrespective of geographical locations, an equal opportunity to participate in Department of the Army procurements and at the same time assure the maximum of economy in the expenditure of Government funds, I have directed the following procedure be followed by the procuring agencies of the Army in procurement of all supplies:

"(1) Where the destination is known at the time of issuing invitations for bids, supplies will be purchased f. o. b. destination, except where it can be demonstrated that financial savings to the Government will result from an f. o. b. origin purchase.

"(2) Where the final, ultimate, or in transit destination has not been definitely established at the time of issuing invitations for bids, destination points will be selected based upon the best available information as to distribution. The invitations for bids will specify that the award will be made on an f. o. b. origin basis but will designate the selected destination. In making the award f. o. b. origin, transportation costs between the source of supply and the designated destination point or points will be considered in determining the lowest estimated cost to the Government. Invitations should make this point clear."

I believe this action will avoid a recurrence of the difficulties we experienced in the procurement of the trunk lockers and that it will prove to be of real benefit to the commercial suppliers of the Army in future procurement of all our supplies.

I appreciate your interest in this matter, and I am returning the letter you received from Mr. Charles Bruno.

Sincerely,

GORDON GRAY,
The Assistant Secretary of the Army.

Foreign Traders Make Worthy Pledge

EXTENSION OF REMARKS
OF
HON. LEONARD IRVING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. IRVING. Mr. Speaker, during some reading the other day my attention was called to two great paragraphs of the final declaration of the Thirty-fifth National Foreign Trade Convention held in New York early last November.

Because I feel those paragraphs sum up so well the innermost feelings of the leaders in foreign trade in the United States, I have asked and obtained permission of the House to extend my remarks at this point. The paragraphs are short, so I hope each of the Members of Congress and others who read the RECORD will take time to read them. They are:

The American system of private enterprise has been proved by experience. It has produced for our people the highest standard of living in all recorded history. Our system is designed to produce and distribute wealth, and its success in achieving this aim is demonstrable by the record. This is in sharp contrast to Marxism, which claims to distribute wealth, but succeeds only in distributing poverty. The system of free, private, competitive enterprise is man's best and only hope to keep alive his age-old dream of a world where he can enjoy with them the good things which their combined labors have produced.

We who represent American private enterprise in the fields of foreign trade and investment do not know what the immediate future may hold for us and our country. We earnestly hope and pray that our Nation can remain at peace with all the world; but whatever comes, we shall not shrink from our task. We shall be ready, as always, to make whatever temporary adjustments are necessary to meet our country's need; but we shall ever keep alive in our hearts our faith in ourselves, in our country, and in the system which has made our Nation great.

All in British Health Plan Are Opposed to Per-Visit Pay-Off—British Public Asks 8,000,000 Pairs of Free Eyeglasses

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. MULTER. Mr. Speaker, on April 7 I placed in the RECORD the eleventh twelfth and thirteenth of a series of articles appearing in the Brooklyn Eagle describing the British health plan. The following, which appeared in the Eagle on April 1 and April 3, are the fourteenth and concluding articles:

ALL IN BRITISH HEALTH PLAN ARE OPPOSED TO PER-VISIT PAY-OFF—SAD EXPERIENCE IN MANCHESTER IS REMEMBERED

(By E. J. Delaney)

(Fourteenth in a series)

LONDON, April 1.—Minister of Health Aneurin Bevan and the doctors and dentists of England are in entire accord on one point in the national health-service arrangements. It is that a nation that pays its professional men on a per-visit basis under a public health plan will be sorry. It will have difficulty finding enough money to pay off.

Whenever it is mentioned everybody smiles and remarks: "New Zealand tried that and went broke."

One man, just retiring after a life-long career associated with pharmaceutical companies and associations tells a different story. He remembers when it was tried right in England, in Manchester, and he was in the middle of the crash that came.

ON VOLUNTARY BASIS

A voluntary association was organized to provide its members with medical care from general practitioners and a prescription service. The cost was estimated and rates for membership assessed on that basis. Thus was formed a fund to carry the work for a year.

The physicians declined a capitation arrangement, insisted on per-visit payments and got them. Going fees were agreed on for the pharmacists.

The physicians knew that only a limited amount was available and some of them started rushing around making all the visits possible. They proved they made them by writing a prescription every time.

BANKRUPTCY SETS IN

Before the year was up the fund was bankrupt and both physicians and druggists were unable to collect their bills. The druggists blamed the doctors, raised a fuss and collected thousands of pounds from the medical men, but in the end received only 60 percent of their money.

Starting with the next year, the doctors asked for a capitation system. Ever since then—it was 30 years ago—the per-visit payment plan never has been mentioned in England. Not seriously, anyway.

One question is not discussed out loud in connection with health plans, but is mentioned softly sometimes. Nobody wants to be quoted. It's the question whether doctors report and pay income taxes on all their earnings and whether a national health plan, with all their checks coming from the government, deprives them of the chance to beat the internal-revenue man for a few bucks.

SMILING HESITATION

After a smile and hesitation it usually is remarked that all professional men and most small-business men have a great opportunity to come out of the income-tax struggle a little better off than big companies and those who are on salaries.

How much it is done nobody knows, and if doctors and dentists do so, they are not the only ones. But a health plan under which they work for the government does upset that deal.

One physician here remarked that if a doctor now will have to pay taxes on all his income because the government will know just how much he gets, he will not have any uncollectible bills any more, he will not have a lot of bad accounts on his books, so that ought to be a good balance.

More seriously, it is believed here that the government is so efficient in tracing incomes that most professional men have come mighty close to sending in their full shares of the taxes. One might get away with something, but never very much. It definitely is not a factor in the opposition of British physicians and dentists to the National Health Service, responsible members of the profession say.

BRITISH PUBLIC ASKS 8,000,000 PAIRS OF FREE EYEGLASSES—HEALTH PLAN WIPING OUT NORMAL SALES

(By E. J. Delaney)

(Last in a series)

LONDON, April 3.—Prior to National Health Service the total capacity of England to produce spectacles (glasses to you) was 4,500,000 pairs a year. Now the people are asking for 8,000,000 pairs, for free, each year, and the eye specialists, optometrists and opticians do not hope to come close to meeting the demand for months, or a year, or more.

From 4 weeks to 3 months are required to secure glasses after one gets the urge to seek some help for the eyesight. First a visit must be made to the general practitioner. He is supposed to find out whether there is any general health condition that is affecting the sight, and, if he can't find anything wrong, to pass out a paper which authorizes an appointment with an eye man chosen by the patient.

There is a wait of a few weeks for the eye tests. Then, a need for glasses being detected, permission for their issuance must be secured from a regional committee. That board sends a notice to an optician telling him he can make the glasses for the person. The committee is buried with work, too, and may take a week to clear the way. Then the glasses can be made. Since permission almost always is granted, the optician often makes the glasses and holds them pending arrival of the approval message.

The optician is paid $6.32 a pair for turning out the specs and he is allowed to give the customer a choice of 10 different colors or shapes of frames. There are nine more, but the customer would have to pay a little himself to get those.

THIRTY PERCENT RECEIVE TWO PAIRS

Ninety percent of those who apply for glasses need them and 30 percent of those given approval receive two pairs. It is found that some people want an eye examination just because it is free and not on the ground they are having any trouble. Nineteen percent are wearing glasses for which they never were examined, and 47 percent of those already wearing glasses haven't been examined recently, their last tests having been 4 to 10 years ago. Just over 16 percent never wore glasses before. One big chain store system here has been selling 2,000,000 pairs of glasses every year.

The opticians have been getting a thick slice of the big health melon. In a city of 120,000, opticians not long ago were averaging $1,440 a month gross income from the health plan. Their private business practically has ceased; it is down below 4 percent of prehealth service times. The optician makes little profit on the nine kinds of frames not within the plan because nearly everybody takes the free frames.

DOCTORS DEMAND RISE IN FEES

Many of the physicians of England say they are underpaid for the heavy load they are being asked to carry under the National Health Service and they are asking for an increase in fees from 35 to 60 percent. Minister of Health Bevan declines to discuss the subject while it is under negotiation, yet it can be sensed that the doctors will not be successful.

The Minister appears to have decided that the physicians in the populous areas are doing quite well and that more mileage allowances and other subsidies will assist those in the rural districts. The issue will reach a climax soon.

At the present time the doctor receives $3.60 per patient per year, regardless of the number he has. The medical negotiating committee is seeking $6 per patient for the first thousand patients; $4.40 each for the second thousand, and $3 each for all over 3,000.

A doctor with 1,500 on his list now is paid $5,400 and the new rates would give him $8,200. Another with 2,000 patients would go from $7,200 to $10,400. An office with 2,300 patients, considered the ideal number, now is paid $8,280 and would be improved to $11,300. Those with the maximum, 4,000, collect $14,400 and would be upped to $16,000.

HOSPITALS CUT 10 PERCENT

The Conservative Party is attacking the cost of the health service and the Labor Government clearly is trying to find ways to cut it down. Hospitals are being slashed 10 percent in the new budget and they do not know how they are going to comply without closing some wards. Such big increases for the physicians would make economies difficult. Nearly everybody expects the health service bill to the national treasury to be much more before it will be less.

The Health Ministry has announced the total for the health service from the treasury will be $913,698,400 for the next year. During the last year $120,000,000 was taken from the social-security funds and transferred to the health service account, and to what extent that will be done again this year is not disclosed. However, the estimated cost in the Health Ministry budget for the fiscal year ending March 31, 1950, has been set at $1,038,910,400.

Farm Credit

EXTENSION OF REMARKS

OF

HON. HENRY O. TALLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. TALLE. Mr. Speaker, since the outbreak of World War I the Congress has paid increasing attention to the credit needs of farmers. In 1916 Federal land-bank loans were initiated, and only 2 years later emergency crop and seed loans were authorized.

Under the emergency crop-and-seed loan program some 4,000,000 loans, aggregating approximately $500,000,000, were made—of which amount more than 82 percent has been repaid.

During the period from 1935 to 1946 the Resettlement Administration and its successor, the Farm Security Administration, made rural rehabilitation loans to about a million farmers, in an amount exceeding a billion dollars. Almost 90 percent of the matured principal of these loans has been repaid, plus more than $100,000,000 in interest.

In 1946, Mr. Speaker, the Farmers Home Administration was created to take over the emergency crop and seed loan program and the rural rehabilitation program and to develop other areas of farm credit. This new agency makes the following types of loans:

First. Operating loans, which are made to farmers—either owners or tenants—for the purchase of livestock, equipment, seed, feed, fertilizer, supplies, and other farm necessities.

Second. Farm ownership loans, which enable tenants to purchase family-type farms.

Third. Insured mortgage loans, under which program the Farmers Home Administration insures real-estate loans made by banks, insurance companies, or other private lenders, not to exceed 90 percent of the borrowers' investment.

Fourth. Water facility loans, which loans enable western farmers and ranchers to build and improve wells, ponds, windmills, and small irrigation systems.

In all of these programs, applications from veterans receive preferential consideration.

It should be emphasized that the Farmers Home Administration provides credit to farmers who cannot get the credit they need from other sources. Each loan is made through a county office, subject to approval and review by a local committee of three persons, two of whom must be farmers.

The Farmers Home Administration is doing a first-rate job—especially in promoting owner operation of farms. Moreover, the American taxpayer is receiving good returns on his investment in the American farmer.

Mr. Speaker, in order that my colleagues from other States may have an opportunity to appraise the progress of these farm-credit programs in the Corn Belt, I include with my remarks a report on Farmers Home Administration activities in Iowa which I just received from Mr. John R. Holland, a dirt farmer from Van Buren County, who is chairman of the FHA State advisory committee for Iowa:

MILTON, IOWA, *April 6, 1949.*

Hon. HENRY O. TALLE,
House of Representatives,
Washington, D. C.

DEAR MR. TALLE: On Friday, March 25, the State Advisory Committee of the Farmers Home Administration held a regular meeting at our State office in Des Moines and as chairman, I was instructed by the committee to give you what might be called a progress report on the activity of the agency.

First you probably would be interested in the committee membership itself. There are nine on the committee and they are appointed annually by the Administrator of the Farmers Home Administration. Will list them alphabetically:

N. P. Black, Des Moines, State superintendent of banking.

Mrs. Edith A. Chester, Clarksville, Butler County, farmer's wife.

John R. Holland, Milton, Van Buren County, farmer.

H. H. Kildee, Ames, dean, Agriculture Division, Iowa State College.

Frank A. Lauters, LeMars, Plymouth County, farmer.

Harold E. McCord, Denison, Crawford County, business (actively interested in farm veterans and town and country cooperation).

J. S. Russell, Des Moines, farm editor, Des Moines Register & Tribune.

Richard L. Stephens, Crawfordsville, Washington County, farmer.

Donald C. Travis, Winterset, Madison County, farmer.

All farmer members either are or have been members of their respective county FHA committees and are thus very familiar with the operations of the program as it affects farm families.

As you know, the Farmers Home Administration is the successor agency to the Farm Security Administration and the Emergency Crop and Feed Loan Section of the Farm Credit Administration, the consolidation having taken effect in late 1946. Also that FHA is authorized to make loans only to those farm families that cannot get their credit needs from any other source.

In Iowa two types of loans can be made, farm ownership and operating loans. Farm ownership loans are for the purchase of family type farms with loan limits set for each county in the State by the Secretary of Agriculture. These limits vary from $9,500 in the poorer land counties to $21,000 in the counties with the best land in the State. Loans up to $12,000 are approved by the State director and loans above that figure must have the approval of the Administrator. Only four such loans have been submitted to Washington.

Since the beginning of this program in 1938, 1,048 loans have been made and 50 percent have been repaid in full without a cent of loss to the Government. These loans now bear 4 percent interest and are for a 40-year period with the provision that the borrower must refinance with other credit institutions when eligible and at not to exceed 5 percent interest. Normally this will be when the borrower has about a 35 percent equity in the farm.

Last year Congress appropriated $15,000,000 for loans of this kind, of which Iowa's share was $557,125. Seventy percent of these funds were earmarked for veterans and 30 percent for nonveterans.

In addition to these loans from appropriated funds the FHA Act provides for the making of insured farm ownership loans with the same terms and conditions except that instead of the Government advancing 100 percent of the investment cost, the borrower must advance 10 percent and the balance is secured from a lender with the Government fully insuring the mortgage. The interest rate to the lender is 3 percent with 1 percent going to the Government.

While the insured mortgage program does permit the making of many loans through the use of local credit, yet Iowa's share of the $15,000,000 is insufficient to meet the demand of veterans and others who do not have the 10 percent down payment, in addition to their operating capital.

For operating loans, FHA in Iowa has what the committees feels to be a very commendable record, considering the type of risk that is taken. Of the $31,600,000 loaned since the program started back in 1935, approximately $27,000,000 in principal has already been collected, plus over $3,700,000 in interest. It is our feeling from an examination of the records that, if the program closed its books today and liquidated the indebtedness, the Government would not only get back as many dollars as it advanced, but in addition right close to 4 percent interest on the money.

Operating loans are made on a 5-year basis and at 5 percent interest. One percent of the interest collected has just about absorbed the losses that have occurred. Slightly over 28,000 farm families have been assisted since this program started in 1935, and while there have been some failures, thousands of these borrowers have gone on to become successful tenants and owners and are today an asset to their communities.

It is the feeling of the entire State committee that the guidance of the county FHA supervisor that follows each loan plus the active interest of the county committee of three farmers has had much to do with the success of this work. Particularly since the close of the war we have not been able to meet the demand for operating loans. The State director advised the committee that the funds for this fiscal year were exhausted during February and that there were 1,168 applications on hand at the close of February, of which 528 were veterans.

During this fiscal year we have been able to make only 448 new operating loans. The applicants that the county committee have approved but for which there were no funds have had to do one of the following: (1) give up their leases and go into other work, (2) operate without adequate livestock, machinery, fertilizer, etc., (3) get what credit they could from high-interest loan companies, (4) get what credit they could on short-term notes that would not permit a properly planned farming program.

Unless one is close to the situation, it is difficult to realize the degree to which operation has tightened up. FHA has the best of relations with local banks and production credit associations but their regulations and concern over future economic developments will not permit them to extend the needed credit. In fact a high percentage of the applicants that come to our offices are referred to us by banks and PCA's.

The budget calls for the same appropriations for 1950 as for 1949—$75,000,000. Iowa's share of this amount will probably be about the same as last year, $1,400,000. Because of the large carry-over of approved applications, a high percentage of this amount will have been committed by July 1 with only a very small amount left for new applicants after July 1.

Just about 60 percent of the funds this year for new loans were used for veterans of World War II.

With the guidance of the county supervisor and county committee, it is our feeling that the borrowers are not only becoming better farmers but are making a real contribution to soil conservation. You will be interested, I believe, in a few figures that the committee received for 1948.

	Farm-ownership borrowers	Operating-loan borrowers
Number linear feet terraces built	159,994	173,527
Number linear feet grassed waterways constructed	141,029	367,658
Acres of row crops contoured	6,608	19,284
Total acres crops on contour	10,826	25,934
Number acres limed	4,389	25,033
Number acres drained	1,039	5,682
Percent crop acres in legumes	22.46	16.57

I am informed that this is the first time a general report of this kind has been sent to you, but it seems logical to me that you would be interested in the work of one of the agencies that is trying to fill a need that is not covered by any other State or Federal group and that is not in competition with anyone. It is for this last reason, I feel sure, that we have the whole-hearted cooperation of other lending groups.

You are accustomed to weighing the needs for hundreds of appropriations. FHA appropriations, administered as they have been in Iowa, make useful, happy conservative farm owners and operators out of harassed, hopeless, near-public charges; they give the borrowers a real interest in their communities and their Nation; and best of all, they restore to discouraged men and women their own self-respect. You can guess at the effect of all this on their children.

I doubt if any other appropriation that has come before you has bought so much for so little, especially when you realize the money appropriated for loans is being returned to the Government with interest.

Sincerely yours,

JOHN R. HOLLAND,
Chairman, State Advisory Committee.

Why Cannot the Republican Party Learn Anything Any More?

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. O'SULLIVAN. Mr. Speaker, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD a few comments of mine, together with certain introductory matter which precedes an editorial published in the Omaha World-Herald under the date of March 30, 1949, and I also wish to offer for publication in the RECORD the editorial itself.

Many Democrats in the Congress have viewed with alarm and sadness the doings of their congressional brothers who claim to be affiliated with that great political party which in the fruitful days of yore were so wont to point with pride at its accomplishments instead of moaning regretfully, and which so truly scorned to be known as political "needlers," political scarers, political "talker-downers," political faultfinders, political egotists, and political frustraters.

I make bold to say that as one listens to, and views fairly either of the two branches of the great United States Congress in action, he sometimes wonders where the Republican Party acquired its strange un-American technique in its efforts to scare, delay, and prolong the passage of legislation, and then the next day, week, or month, cry out scornfully that the Eighty-first Congress has done nothing, although months have passed.

Out of curiosity some months ago I read several articles about the pattern followed by Communists in the United States at meetings of labor unions when officers are to be elected or other important decisions are to be made by the membership.

Strange and startling as it may seem, in my opinion, the majority of the Republicans in Congress seem to have read or dreamed these same articles and adopted in part some of this sinful Red technique and I feel sure that it was so done, unwittingly.

Many of the northern Republicans, in my opinion, on certain very important matters have joined hands with a group of reactionary Democrats. It is an old saying that politics makes strange bedfellows, and this statement if brought up to date would read "nonconstructive politics makes strange associations and voting blocs." Those who seem to desire civil-rights slavery walk the same political ways and vote the same way as those who seem to desire some form of industrial slavery. They both perch themselves ghoullike, for the ravens' feast, upon the dying carcass of the Taft-Hartley and antiminimum wage monsters. Whether or not the anti-civil-rights monster will find these groups again cheek to jowl also remains to be seen, but if verbal chaff, like other chaff, tells which way the wind blows it is a pretty good guess that this unholy coalition will carry on their much publicized unity and their cohesive, unholy brotherhood.

The Republican Party is too grand and too great a party to stoop so low, and I, as a Democrat, grieve exceedingly with the few, fine, constructive, forward-looking, and patriotic acting Republicans in this Congress.

When will Republican reason which seems to have fled to brutish beast and filthy fowl return to its ancient citadel? Why cannot these men, referred to by Republican National Committeeman HUGH D. SCOTT, JR., at the last chilly Omaha policy meeting of the party, as the better people with the better minds, use their social standing and their brains for worthier purposes? If they do not do so the observation of the Omaha bartender made at the Fontanelle Hotel, where the Republican parley was held, that he had seen better heads than the parleyers possessed, on nickel beers, a truism instead of a cruelly witty wisecrack.

Our Republic cannot long endure without two strong political parties with vision and patriotic purpose—real American purpose. On every hand and in every hamlet throughout the land the cries go up "What has happened to the Republican Party? Why has it gone berserk? Why does it drag itself about in this day of manliness as a fat, purposeless fear-spreading eunuch? Why has it turned its political face against constructive progress and toward frustration and destructiveness and erroneous cries of 'The wolf is coming?'"

As I write these lines here in the House of Representatives this afternoon and hear the fear-generating and other arguments in the well of the House as made by the Republican Members, I wonder why it is necessary to say that the United Nations and other efforts in the cause of peace are doomed to failure and to play politics here while the second deficiency appropriation bill is up for passage? Why is it necessary to say we are on our way to national bankruptcy, and why is it necessary to try to prove that the Eightieth Congress was so wonderful when the people have disgustingly decided that question in the last election to the exact contrary? Why all of these loud bickerings by Republican members of the committee about this bill and its specific appropriations when the committee reported it out for passage with no minority report? Why do they attempt to prune items in the bill on the claim that they want to save the taxpayers some money when in the closing days of the Eightieth Congress some of these same men helped to double the appropriation for the structures they had designed previously for Governor Dewey's inauguration ceremonies—the "Curly Brooks stadium"? Why was not their economy endeavors functioning then?

We must all unselfishly help the Republican Party restore itself to reason and to decency and to return itself to the ways of Lincoln and Theodore Roosevelt. The Republican Party must once again become a builder, instead of a frustrater, a scarer, and an underminer.

It should have a definite policy of its own instead of being a coalition party or a me-too party or scare-the-tar-out-of-them party.

The Omaha World-Herald in the editorial, "God hates a coward," endeavored to, and did, point out the way, but all to no avail. Why does not this party composed of the claimed better people and better minds, try to make a better record and a better Republican Party for the sake of this great Republic and its future?

For the purpose of being helpful only, I now wish to put into the RECORD another editorial from the Omaha World-Herald which is as follows, and I hope that it is read by Republican Congressmen and acted upon with profit by their hitherto great party and themselves:

[From the Omaha (Nebr.) Evening World-Herald of March 30, 1949]

TO THE COUNTERATTACK

Nebraska's Republican State Central Committee has asked the national committee to call a representative meeting to form a statement of Republican principles.

That, we think, is a good, solid idea. All Americans, including the men and women who make up political parties, ought to stop occasionally and take stock of their convictions.

But if this proposed Republican gathering confines itself merely to stating its creed, it won't have much original work to do. The things the party believes in, or says it believes in, have been expressed many times in America's past, perhaps more eloquently than the present leaders of the party could express them. The Declaration of Independence, the Constitution, the Farewell Address, the Gettysburg Address—those and many more immortal documents say all that need be said.

But saying is one thing and doing is another.

It is in the field of doing that the Republican Party, and particularly the Republican leadership, and most particularly the Republican Congress, need to examine their souls.

S. E. Torgeson, president of the Nebraska Republican Founders Day, put it in a nutshell when he told the central committee:

"I can tell you what's the matter with the Republican Party in Nebraska. It doesn't have any guts."

Dwight Griswold, the former Republican governor, went on from there. "I read the 'God Hates a Coward' editorial in the World-Herald," he said, "and now I am rather ashamed to read where our three Congressmen from Nebraska voted for the veterans' pension plan."

The votes of those three Congressmen, and many other Republican Congressmen of greater national celebrity, is a scandal which the Republican Party will be a long time living down.

The issue on that bill was naked politics, nothing more.

Congressman RANKIN introduced his fantastic pension bill in frank retaliation for a slap given him by the Democratic leadership in Congress. He was trying to put the President and the Eighty-first Congress on a spot.

The peanut leadership on the Republican side saw a chance to play politics. By supporting the Rankin bill it could please a few bosses of veterans organizations, and thereby, it hoped, bring in some votes for 1950. And at the same time if the bill passed both Houses of Congress, President Truman would have to veto it, thereby alienating the veterans and widening the split in his party.

A slick trick, three of Nebraska's Representatives * * * went for it. But not they alone. On decisive tests * * * the minority leader, the man who sought the Republican nomination for President last year, also voted with Congressman RANKIN. So did * * * the floor leader of the Eightieth Congress. So did * * * the the party whip.

They proved that on the slightest pretext they could rise above principle.

That is the Republican leadership, 1949 style, not only in Nebraska but at the high level where principles, theoretically, are translated into action.

What the Republican Party needs is to develop some leaders with guts. As a me-too party and a we-could-do-it-better party it has no excuse for existence. If it is going to try to get back in power by fishing for minority votes it might as well let the New Dealers take over. They are better at it.

The Republican Party, if it is to survive usefully, should make itself the American Party. It should defend resolutely the liberties of the people and with the fury of outraged patriotism launch a new fight against advancing, seemingly irresistible State socialism.

"My center gives way," said Foch at the Marne, "my right recedes, the situation is excellent; I shall attack."

The American right has receded too far before the aggressive enemy of the left. Now if ever is the time for the counterattack. It can be ordered only by a brave and rededicated Republican Party—a party which from top to bottom has purged itself of the psychology of abject retreat.

Cotton for Spain

EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. GOSSETT. Mr. Speaker, many of us feel that our attitude toward Spain should have a careful reexamination. Many of us feel that we can and should trade with Spain to the mutual benefit of both countries. In this connection, I wish to insert a resolution adopted by the

annual convention of the Texas Cotton Association:

RESOLUTION ADOPTED AT THE THIRTY-EIGHTH ANNUAL CONVENTION OF THE MEMBERS OF THE TEXAS COTTON ASSOCIATION HELD IN GALVESTON, TEX., ON MARCH 25–26, 1949

Resolved, That this association urge the Congress of the United States to enact legislation authorizing the Export-Import Bank of Washington to establish short-term credits for Spain to finance the procurement of United States cotton. In past years about two-thirds of cotton Spain purchased was of United States growth, and we feel that the American farmer is rightfully entitled to that market. Now as a result of a serious drought in Spain and other unusual economic circumstances current dollar balances are too low to permit the purchase of United States cotton. The shortage of cotton is forcing mills to curtail production to only a few days a week, causing a serious situation in the country. In view of the impending surplus of cotton in this country, the need for stimulating consumption in Spain and throughout the world, and particularly the need for restoring normal commercial relations with Spain, we believe such credits are justified. In view of the resources of the country, we feel such a credit would be economically sound.

Attest:

L. T. MURRAY,
Executive Vice President and Treasurer, Texas Cotton Association, Waco, Tex.

Corona Naval Hospital, Riverside County, Calif.

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. SCUDDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Assembly Joint Resolution 25

Joint resolution relative to memorializing and petitioning the Congress of the United States to enact the necessary legislation to make the Corona Naval Hospital in Riverside County, Calif., available to the Veterans' Administration

Whereas the present and potential need for veterans' hospitalization facilities in this area is great and said need is further increased by the realization that the tremendous influx of people to California has included and will include many veterans; and

Whereas the Corona Naval Hospital has cared for up to 4,000 patients at times during the war and has a permanent capacity of 1,400 beds, and has for a number of months cared for less than 500 patients, and the balance of the beds have laid idle; and

Whereas the Los Angeles City Council, the Riverside County Board of Supervisors, the American Legion, the Veterans of Foreign Wars, the Disabled American Veterans, and many other civic and veterans' organizations have long supported such action: Therefore be it

Resolved by the Assembly and Senate of the State of California (jointly), That the Congress of the United States is hereby memorialized to take effective steps immediately to make the Corona Naval Hospital available to the Veterans' Administration, in order that full use of this fine facility can be made, to the end that all beds, other than those needed at the present time by the Navy, can be used for the treatment of veterans; and

Resolved, That the chief clerk of the assembly transmit copies of this resolution to each Senator and Representative from California in the Congress of the United States.

Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. VELDE. Mr. Speaker, under unanimous consent to extend my regards in the RECORD and include a portion of a letter which I received from a union laboring man in my district. This part of his letter exhibits a great deal of thought on the part of the writer on this very important legislation which is coming before the House in the very near future. Many similar letters have been received from working men, some of whom have been good labor union members for years, and shows that this is representative of the sentiments expressed by many of these writers.

The letter follows:

Now about domestic policies. The Taft-Hartley law, in my opinion, is about as important as any. I am a member of the International Chemical Workers, A. F. of L., and I am not following what they preach to us, and yelling against the T-H law. I believe it is a good law; far better than the old Wagner Act. I believe in freedom of speech, as long as that freedom is not abused, and I believe that the employer has some rights. This the Wagner Act denied in many cases. I believe that the employer has a right to talk against the union, but not to abuse it, and the union has the same right against the employer. In fact, I believe the individual worker has that same right if he wants to use it. I also believe in the right of the Government to enjoin unions against striking if it interferes with the general welfare. In fact, I don't believe in strikes. I have yet to see any strike where anyone gained anything. I believe in collective bargaining, and I believe in arbitration in all cases. I have yet to see the employer who would not be fair if the unions were fair. I believe the non-Communist affidavit provision should be enforced, not only on union officers, but that it should be required of every voter in the United States. I believe Communists are troublemakers in any free country in the world, and that membership in their party is very close to actual treason. I work at Commercial Solvents Corp., of Peoria, and I know positively that we would not be working now if it were not for the Taft-Hartley Act. Last summer we had a strike there that lasted over five months. The strike was a "wildcat," called by the United Mine Workers, district 50. When we started our present union, in order to get back to work, the UMW union could not get on the election ballot because their officers had not signed the non-Communist affidavit. Our present union can call no strike in that way. We must have the consent of the international, and that can only be had when negotiations have absolutely failed. If we had not gotten in there, we would still be outside the gate, and the strike would still be going on. Therefore I give the T-H Act credit for putting us back to work. There may be some mistakes in the law, but it is so much better than the preceding one that there is no comparison.

Power and Policy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. MULTER. Mr. Speaker, from time to time during the sessions of the Eightieth Congress I called the attention of my colleagues to the fact that Soviet communistic espousal of the cause of the state of Israel, and the pro-Jewish attitude occasionally adopted by Soviet Russia were merely temporary changes of policy pursued solely for expediency and that they did not represent the permanent Soviet communistic policy which was always anti-Semitic and anti-Zionist. Since then I have had occasion to point to the indications that the temporary expedients were being abandoned with a reversion to form by leaders who are adept at creating chaos and causing confusion. Following are two items which appeared in the New York Post of April 6 which vividly establish the accuracy of my predictions:

SOVIET ANTI-SEMITIC

(By Frank Kingdon)

The more anti-Semitism changes, the more it is the same thing.

Soviet anti-Semitism says the Jews are bourgeois and servants of the imperialist West.

Capitalistic anti-Semitism says the Jews are Communists, mouthpieces of the Soviet fifth column.

Indiscriminate demogoguery says the Jews are international bankers, weaving the web of financial mastery of the world.

When Thomas Carlyle wanted to give his opposition to Disraeli wings, he spoke of him as "the Hebrew conjurer."

We need dip no further for illustration. The facts are all too clear. The only point in dredging this sewer again is that its fumes have risen foully once more in Russia. Anti-Jewish utterances mark the latest sign of the end of whatever idealism may once have brightened Soviet thought.

Apologists for communism have hitherto been able to crush any argument for a parallel between it and nazism by saying that communism had no trace of racial discrimination in it. In communism as a historical theory there is no such trace. In Stalinism, as a political practice, it has cropped out. Why?

The answer, I think, is clear. Stalinism is intensely nationalistic. It has made communism and Russianism synonymous. In the name of Russianism it has lately cracked down on its creative artists of all kinds, forcing them to cast their works into the mold of its own brand of nationalism. It still had to find some explanation of why its artists and writers had to be disciplined. It had to find a scapegoat to explain their heresy. It followed an old line to make the Jew the scapegoat.

Jews, they said, corrupted genius. How familiar it sounds. The nationalism of this accusation is plain in the phrases of denunciation used. The Jews are homeless cosmopolitans and passportless wanderers. The Russia of the Czars turned the discontent of the masses against the Jews with this technique. The Russia of Stalin follows suit.

Once established, this scapegoat and other familiar practices follow. A spark is laid to the train of prejudice by playing up a change of name. B. Yakloveff is really Holtzman; Alexander Isbakh is Izak Bachrach; Yasny is Finkelstein. Stalin and Rankin find themselves partners in this device. Then on the hapless heads of Jewish creators are piled the heady charges of decadence and corrupt sophistication.

If any hopeful liberal still nurtured the hope that some good thing might come out of Moscow this should end the illusion. If any honest Marxian still thought Russia truly socialistic this should strip him of that fancy. Stalinism as now enforced in the Soviet Union is totalitarian nationalism displaying its true nature in the unmistakable symptom of anti-Semitism.

There is no assurance of the good life for any where there is not that assurance for all regardless of whatever differences may appear among them.

Marcella says: There are no aliens in the democracy of talent.

KREMLIN ECHOES HITLER: "ISRAEL NO FRIEND OF OURS"

(By George Fielding Eliot)

Once more the handwriting appears on the wall—the ancient, terrible wall, stained with Jewish blood through the centuries.

Once more the Jews of eastern Europe, the Jews of Rumania and Hungary and Russia, are in deadly peril.

Not long ago this column called attention to the outpourings of Radio Bucharest, ordering the immediate stamping out of "Zionist nationalism" and placing the responsibility for the leadership of the Jewish communities of Rumania in the hands of a selected group of Jewish Communists. I suggested then that such orders do not originate in Rumania, but with Rumania's masters in the Kremlin.

I wish I had made that warning stronger. It was, alas, only too well justified.

Consider the evidence now available, the evidence which marks the recurrence of that dreadful danger in which the Jewish populations of eastern Europe have always lived, that danger which so many wishful thinkers have supposed to be at an end because the Soviet Union once took a line against anti-Semitism.

1. As reported by Edward Weintal, Newsweek's talented diplomatic correspondent, "a drive to eliminate Jewish intellectuals from cultural life is now under way in the Soviet Union." For the first time, the Jewish names of individuals who have adopted Russian names are being published in the Soviet press. Jewish writers and scientists are being referred to as "homeless cosmopolitans." That means that they are no longer considered Soviet citizens, but are persons outside the law, persons who, according to Andrei Vishinsky in "The Law of the Soviet State," have no rights which the law is bound to respect. "Exalting the Hebrew religion" and "propagating Zionism" are among the crimes charged against Soviet Jews. Newsweek "hesitates to believe" that this widespread campaign of attack against Jews, against the Jewish Church, and the ideals of Zionism, "is deliberately designed to arouse latent anti-Semitism." This reporter is not so optimistic.

2. Look what has just happened right here in New York. The Morning Freiheit, the Communist Yiddish newspaper, has shifted its line. It is now suddenly anti-Zionist. Israel is being transformed, says Freiheit's Moshe Katz, formerly an ardent Zionist, into "a bastion of Jewish reaction and a prop of Anglo-American imperialism." There could be no clearer evidence that the word has come down the line from above. The men in the Kremlin have decided that Israel will be no friend of theirs. They are against Israel and against that Zionism which makes Israel possible.

You have now only to recall the constant attacks of Hitler against the international Jew and the bloody consequences of those attacks when delivered to a prejudiced people, to understand what is happening now and worse, what may happen in the future in the lands where Jews live under Soviet control. What will happen in the Soviet Union itself we can only guess, we will not know about anything that happens there which the Kremlin does not want us to know.

But this much is clear. The immediate and terribly urgent problem before the Jewish communities of the free world, before the new state of Israel and all those who have been Israel's friends is to save the 600,000 Jews of Rumania and Hungary.

This will not be easy. It is a task in large part for the governments of the free countries. In attempting it—and the American and British Governments have made a beginning by their sharp warnings to the Rumanian and Hungarian Governments about details of civil and religious rights—the earnest help of all men and women of good will must be enlisted. The blind and stupid support of the Soviet Union by many American Jews who could see only that Russia voted for partition must come to an end. The men in the Kremlin are no friends of freedom—any kind of freedom—religious or otherwise. They are no friends of any state based on the principle of individual liberties—whether its capital is Washington or Tel Aviv.

I wish I had said this bluntly long before. I'm saying it now—I hope before it is too late.

Andrew Jackson—Son of Destiny

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Harry H. Schlacht from the San Francisco Examiner of March 15, 1949:

ANDREW JACKSON—SON OF DESTINY

(By Harry H. Schlacht)

From the plough to the Presidency.

Once in a lifetime, the grim sisters who weave the warp of our existence, run through a thread of brilliance, the colors of which cause it to stand apart though it is buried among thousands of others. Such a thread was Andrew Jackson.

Today we commemorate the one hundred and eighty-second anniversary of his birth. Today we salute the warrior, statesman, and patriot. Today we honor the seventh President of the United States. He was a son of destiny.

In the story of his life—as "Old Hickory" wrote it for himself—there is no single line that we would cancel; there is is no single word that we would erase.

On the remote frontiers of South Carolina, on the forest-clad banks of the Catawba River, in the region where the settlers were just beginning to cluster, Andrew Jackson first saw the light of day. There his infancy sported in the ancient wilderness. There his mind mused to freedom under its influence. He was born of Irish parents. He was fatherless at birth.

He was a British prisoner of war in the Revolution at the age of 13.

In what age did Jackson live? Where in the records of history is to be found an era in which the human race made mightier movements—an era in which occurred the formation and dissolution of European governments, and of the triumph of the American system?

His life is full of instruction. His life sprang from the dark valley of obscurity—like the peak of his favorite Alleghenies—rough, rugged, and sublime—piercing every cloud—till its summits bathed in the sunlight of heaven.

Washington was the father of his country. Jefferson was the philosopher of democracy. Jackson was its defender.

He did not create democracy. But he did arouse people to the reassertion of their rights. He did not set up our Government of, by, and for the people. But he did force the Government to respond to the will of the people.

No man has ever evinced so much knowledge of American ideas. No man has ever expressed them with such dauntless intrepidity. No man has ever executed them with such immovable will. No man has ever been so nobly and enthusiastically sustained.

He was the great warrior in the Battle of New Orleans. He is in a class by himself in the history of Presidents.

Andrew Jackson was not schooled in military strategy, yet he was a great general. He was not schooled in public service, yet he was a great statesman. He was great in peace. He was great in war.

He led our people to a victory that literally preserved free and popular government for our posterity. He felt that this Nation under God must be protected not only from foreign foes, but from foes within our borders. His patriotism knew no bounds but his country. His hope, his joy, and his ambition—all centered in its perpetuity and prosperity.

Directly across from the White House in Washington—stands a statue of Andrew Jackson—and on the pedestal is written the deathless phrase: "Our Federal Union: It must be preserved."

Andrew Jackson was a man of superb courage.

He did not indulge in the defeatist policy of surrendering vital principles upon which our Government rests. He held fast to the true American dream which has made America the greatest Nation on earth.

Let us all speak of his virtues. Let us all speak of his greatness. Let us all grow wiser and better by the salutary lessons his life inculcates.

Affection has no greater theme, and wisdom has no nobler counsel than the living actions of our sainted sires. History is the mirror of the past. It is the guide of the present. It is the beacon of the future.

May the poorest lad in our blessed land learn from the career of Andrew Jackson that poverty is no bar to the triumph of the free spirit. The avenues of the citadel of our strength and the posts of honor are open to universal competition. The freedom of our country calls to highest honors her children—from the workshop, from the city, and from the farm.

The ranks of American eminence have come from the humblest origin. Long will Andrew Jackson's memory be cherished by humanity.

His cenotaph is the love of his countrymen. His monument is the holy reverence in the hearts of our people. Let us all serve our country as he served it. Let us all serve our God as he served Him.

In life his career has been like the blaze of the sun in the fierceness of its noonday glory. In death he was as lovely as the

mildest sunset of a summer's evening, when the sun descends in cloudless, tranquil beauty.

Andrew Jackson died as he had lived—a Christian. And his last words were: "God and my country."

National Theater

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. JAVITS. Mr. Speaker, House Joint Resolution 104, providing for the convening of an assembly to develop plans for a national theater, opera, and ballet, is gathering support from all over the Nation. Appended below is a resolution adopted by the American Legion's theatrical post in New York City endorsing its objectives:

RESOLUTION UNANIMOUSLY APPROVED AND ADOPTED BY THE CAPTAIN CHARLES B. DILLINGHAM POST, NO. 1605, AT ITS REGULAR CONVENED MEETING ON MARCH 7, 1949

Whereas the Captain Charles B. Dillingham Post, No. 1605, is a theatrical post consisting entirely of veterans connected with the theatrical field; and

Whereas there are two theatrical posts in New York County, namely, the Captain Charles B. Dillingham Post, No. 1605, and the NVA Post, No. 690, having in excess of 600 members; and

Whereas there are about 28 theatrical posts throughout the country having a membership of over 40,000 veterans; and

Whereas the theater and its members have done and still are doing splendid morale work for the armed services and the disabled veterans in hospitals without any compensation whatsoever; and

Whereas the rendering of services toward the improvement of morale of not only the armed services but to the disabled veterans is as essential as the food and medical attention they receive; and

Whereas such beneficial work as has been rendered by the theater and its members has been conducted on a more or less haphazard basis due to the lack of a coordinated organization; and

Whereas it is to the best interest of the armed services and the disabled veterans that a national theater group be established so that not only they but all America as well can participate and receive the benefits of the education and morale-building values which stem from the theater; and

Whereas practically every theatrical organization in this country is in favor of the establishment of a national theatrical group; and

Whereas veterans of World Wars I and II will be largely and gainfully employed in this project: Now therefore

Resolved, That the United States Government be urged to sponsor, establish, and finance a national theatrical group; further

Resolved, That should this resolution be adopted by the New York County organization of the American Legion that the same be forwarded through channels to the Department of New York and the national body.

Dated March 7, 1949.

HARRY WEBER,
Commander.
GENEVIEVE P. LILLIOTT,
Adjutant.

Lands of the Crescent

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. MULTER. Mr. Speaker, almost a year ago, May 10, 1948, to be exact, I outlined to the House my ideas about an MERP, that is a Middle East rehabilitation plan. I am happy to note that since that time many other persons have urged the same plan. I am certain that that plan is encompassed as a part of the much broader world-wide plan of our President looking toward world economic progress. The following editorial, which appeared in the New York Post on April 6, 1949, reiterates very forcefully much that has already been said on the subject. I commend it to the attention of my colleagues:

LANDS OF THE CRESCENT

Many Americans were relieved when it became evident that General Zayim had seized control of the Syrian Government not to draw his scimitar against peace negotiations with Israel, but rather to fight Syria's near-surrender to internal economic chaos.

But the Zayim coup emphasizes that the Middle East will continue to be a sick area, plagued by chronic uprisings and spans of sullen, revolt-breeding silence until the Arabian people have been rescued from serfdom and poverty in the feudal lands.

President Truman's "bold new program" to work through the United Nations to prime the industrial development of backward areas will probably lift many Arabs from the edge of starvation.

Yet the Truman-UN program cannot effectively raise the middle East's over-all living standard unless it is accompanied by basic econmic reforms within the Arab states.

The Middle East's almost unbelievable poverty is frequently blamed on "Arab nationalism," the fanatical insistence of robed sheiks on spending endless treasure and manpower to war against any semblance of alien domination.

The very phrase, Arab nationalism, conjures up compelling visions of T. E. Lawrence fighting beside fierce desert warriors to gain their freedom from Turkish and other tyrannies.

But the truth is that "Arab nationism" is not so much the cause of current middle eastern misery as it is the excuse employed by feudal Arabian lords to divert the people's attention from necessary social and economic changes.

For instance, by warring against the "infidel" Israeli, the Arab League was, in part, attempting to make its subjects forget their rising resentment against a new imperialism which genuinely threatens the Middle East—the arrangement under which a handful of Arab monarchs secure their power by accepting fabulous payments in return for permitting western companies to exploit the area's rich oil resources.

A basic need in the Arab states is a tax program which will tap the wealth of the haughty agricultural magnates, making it possible for the Arab governments to extend social, welfare, and educational services to the people.

But the popular demand for tax reform is muted because most Arabs are illiterate and many are even inarticulate. Their leaders are inspired youths who boast a thin veneer of western "culture" and are sneeringly labeled "radicals" by the ruling caste.

And as long as the cynical Arab potentates can incite the people to pitch their tents against some new, perhaps imagined threat to "Arab nationalism," reforms will be delayed.

The Truman-UN program may undertake such projects in the Middle East as the Jordan Valley Authority which would restore the ancient fruitfulness of Palestine; the Iraq irrigation project suggested by Herbert Hoover, opening the land to another million settlers; and a multinational authority in the Euphrates Valley, providing six middle eastern States with power, navigation, irrigation and flood control.

These and other projects could begin to give the Arabian people the fertile farms, the water, the power they need to turn their arid desert from a breeding ground of international tensions into a productive and peaceful land.

But the Truman-UN program will serve solely as a transfusion which momentarily delays a fatal middle eastern sickness, unless the Arabian governments, themselves, resolve that their oil-earned wealth shall be spent on the people who hold first title to the land's resources—the hungry and oppressed Arabian citizens.

East-West Trade

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 8, 1949

Mr. JAVITS. Mr. Speaker, in preparation for the impending debate on the authorization of appropriation for continuing the European recovery program for the 3 months from April 1 to June 30, 1949, and for the fiscal year 1949–50, there is appended hereto an article showing the care with which the desire of the Congress is being met in connection with east-west European trade. Such trade is, we all know, very important to western Europe's recovery, but Congress specified in the original ECA it should not impinge on strategic considerations. The article appended below shows the care with which ERP nations are trying to follow the policy established by the Congress on this point:

BRITAIN TO TIGHTEN CONTROL OVER EASTWARD EXPORTS

(By John Allan May, staff correspondent of the Christian Science Monitor)

LONDON, April 2, 1949.—Britain will greatly tighten its control over the exports of possible war potential to eastern Europe as of April 8.

Almost every type of machine tool, a wide range of chemicals, and many items of scientific apparatus are included on the new schedule of goods needing export licenses thereafter if eastward bound.

This British action may be seen as the first fruit of a high-powered United States drive to get a unified, agreed policy on east-west trade to cover the whole of western Europe.

Difficult but friendly negotiations are now in progress on this subject between the Economic Cooperation Administration and nations cooperating in the European recovery

program. Some of these nations are not yet convinced such security trade barriers really will do the job intended.

NEW ATTEMPT

Running parallel to these licensing talks is a new attempt, through the United Nations Economic Commission for Europe in Geneva, to draw up a detailed schedule of machinery and equipment which can be exported safely from the west to the east and of raw materials which can be sent from the east to the west.

Reports are current in Europe that the United States is trying to impose in full its own particular system of export licensing on all of western Europe. This has been categorically denied to me by the highest authority in Paris.

What the United States is trying to do is to get a general agreement on a complete ban of exports to the east of a small number of items on the restricted list of goods obviously of primarily military use.

What is wanted thereafter is an understanding that the countries will not allow the export of other goods if a reasonable man would conclude from the known facts that in any particular case they were likely to be put to military instead of civil use.

GENERAL ACCEPTANCE

Britain's extension of its own export-licensing controls signifies its general acceptance of this point of view.

Export items now listed are not banned altogether. But the evidence of probable end-use can be sifted in the case of each particular sale.

The new list is a wide one. Harold Wilson, president of the board of trade, told the House of Commons it would be extended still further if such a course seemed necessary in the interests of British security.

The list includes graphite and all graphite compounds, diamond-tipped tools, metals like titanium, high-speed compressors, rust-resisting cocks and valves, mine-sweeping equipment, electronic computors, and many chemicals and pieces of scientific apparatus.

Graphite has important uses in nuclear research and the production of atomic weapons.

POTENTIAL WAR USE

Most of the chemicals specified are potential raw materials for modern types of explosives, smoke bombs, and rocket propellants.

High-speed compressors of the type of the schedule are used in wind tunnels for the development of aircraft with speeds at or above sound. Diamond-tipped tools are essential to any modern war industry. There is no suitable substitute for the hardness of diamond when making metal tools that later make weapons.

But, of course, almost all goods specified have even wider uses for peaceful purposes and are part and parcel of the industrial equipment which Britain and other countries are anxious to sell Russia and its satellites in exchange for food and fodder.

ECA is having a hard time to persuade some European countries that an export-licensing system can be made to work, since any goods actually banned can form only a very small proportion of the total goods moving in trade. Otherwise the policy would defeat Europe's declared intention and need of expanding its eastern trade.

EASTWARD EXPORTS

Under the Marshall plan, for instance, Benelux expects to increase its eastward exports to more than three times the prewar value. Britain hopes to expand from $170,000,000 worth last year to $365,000,000 in 1952 and nearly 20 percent of Austria's exports is planned eastward.

Is it really worth banning what can only be a token trickle of goods in days when everything from food to silk is a war potential in some way or another?

The United States answers such questions with a firm "Yes." ECA is replying most strongly that while general trade has to be encouraged, it would be a mistake for every nation not to do whatever it can to protect its own security.

Today's news shows Britain for one has come a long way round to the United States view.

Purchase Under ECA Act of Grains Milled in the United States

EXTENSION OF REMARKS
OF
HON. LEONARD IRVING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Saturday, April 9, 1949

Mr. IRVING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and statement:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 23, 1949.

MY DEAR COLLEAGUES: The attached statement and telegram from the American Federation of Grain Millers describe the necessity for continuation of the provision of the ECA Act that 25 percent of the grains purchased for shipment abroad must be milled in the United States.

It appears unwise to me to seek to help others without regard to the interests of our own people.

Sincerely yours,

LEONARD IRVING.

STATEMENT OF AMERICAN FEDERATION OF GRAIN MILLERS

The American Federation of Grain Millers represents approximately 50,000 members in the flour-milling industry throughout the United States.

Your attention is called to the problem of the Foreign Relief Act which requires 25 percent of the wheat going to Europe to be ground into flour before leaving this country. We understand that a move is on foot to change the act so as to allow all the wheat to leave this country without being processed. This would add to the misery of those employed in the flour-milling industry throughout the United States. They are already working short hours and their take-home pay has been greatly reduced through a decrease in the demand for flour.

We ask your fullest cooperation in helping to retain the act as it was which required 25 percent of the wheat to be ground in the United States. We cannot be too insistent in reminding you that it is a serious problem with us and we will greatly appreciate your cooperation in retaining the 25 percent as it now is.

Thanking you for your cooperation, we remain,

Respectfully yours,

J. A. LEVERIDGE,
General Vice President.

KANSAS CITY, MO., *February 21, 1949.*

Congressman LEONARD IRVING:

Supplementing Mr. Leveridge's letter to you since October 1948, 22 mills have been shut down, representing a capital investment of $15,000,000 and 1,200 of our people have been permanently laid off. We have 6,500 people temporarily laid off because of slack business in the mills that are still operating, but at a reduced capacity. We have 21,000 members who have had their workweek reduced from a 6-day week to a 4- and 4½-day week because of slack business. Should this trend continue it will be only a matter of months until approximately 40 percent of the milling capacity in this country will be shut down. Last week the mills here in Kansas City reduced 67 percent of capacity, which is the lowest percent of capacity run since 1940. Three mills within 200 miles of Kansas City have been permanently shut down in last 30 days. If we fail to retain the present provision of the law which required 25-percent grind of wheat into flour, several thousand more of our members will be laid off. We authorize printing of this for distribution.

R. H. MCCLAIN,
Vice President, American Federation of Grain Millers International Union.

Old Shell Game in New Hands

REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Saturday, April 9, 1949

Mr. SHAFER. Mr. Speaker, the widely heralded "new" farm program unveiled by Secretary of Agriculture Charles F. Brannan is nothing in the world but the old shell game brought up to date to fool the American people.

There are, of course, some differences between the old shell racket and the "new" farm program. In the old shell racket a person could play or not play, according to whether he wished to do so or not. But in this new racket developed by the smart boys in the Department of Agriculture every American taxpayer would have to pay, whether he played or not.

Also, a customer, or sucker, in the old shell game had one chance in three of winning something, even if it was a worthless blanket bought at wholesale for 98 cents and touted by the side-show barker as being worth $25. In this Brannan farm program none of us has any chance of winning, unless we consider the bureaucrats who will handle the huge shuffling of tax money here and there as a result of this new racket.

The Fair Dealers would have us believe that everyone will benefit from this "new" farm program. Actually, everyone would have to pay for it—and pay more for it than they would have to pay otherwise.

If you can remember how difficult it was to find the pea under the shell in the old shell game, you will understand why the administration has made this "new" farm program elaborate so as to attempt to deceive the people. It is this way only so that the people will think they are not losing their dollars in taxes, although demonstrably they are doing so.

Under this program the farmer is guaranteed a certain cash price. If the commodity is not sold for that certain price,

he can get the difference from Uncle Sam. The consumer, on the other hand, gets the lower price. Where, then, does Uncle Sam get the money to pay the farmer and to subsidize the consumer? Why, from the so-called bottomless Federal Treasury. This money comes from taxes.

So the "new" program proves to be nothing but another way of milking the taxpayer for the benefit of the Fair Deal politicians. They will have a good reason to raise taxes, to increase Federal spending, to increase the number of Federal employees, and to keep themselves in power forever and ever, amen.

If the people are going to fall for rackets like this one, I do not see why they do not demand that the Federal Government pay all their grocery bill instead of just part of it. And, instead of having the farmer collect a part of his money from Uncle Sam, why not have him collect all of it from an all-wise, all-powerful Federal bureaucracy? It would be far more logical and efficient to adopt socialism in toto rather than to follow a slow, gradual course of strangling our free economic society.

I have put my references to this "new" program in quotation marks for a good reason. There is nothing new about it in the least. It was practiced during World War II in this country. We called it a program of consumer subsidies then and that is what it is now. The British put it into effect during the war and kept it going until they switched over entirely to a socialized economy. It is the first step—and a long step—toward a collectivized economy. The farmers fought the consumer subsidy a few years ago tooth and nail. I wonder if, in the intervening years, they have been drugged and beguiled by the New Dealers and the Fair Dealers into taking this bitter pill under another name.

The farmers and consumers should know that when the Federal Government gets into this racket, it will raise the ultimate cost of food by raising taxes for all. This will be necessary because when the Federal Government handles money, it always sticks on, through necessity, a huge service charge. A gigantic new bureaucracy, staffed by thousands of persons and costing millions of dollars annually, will be required to administer this flamboyant program. Not a single one of the accountants, administrators, clerks, typists, checkers, sleuths, investigators, or information men to be employed in this new agency would add one iota of production to our farm program, or one new idea to lower the cost of distribution. He or she would simply be an extra knot on the log of Government bureaucracy, adding to the burden of the log but contributing nothing in return.

Mr. Speaker, I call on my Republican colleagues to help counter this bold, pernicious, bald-faced attempt to buy millions of votes with public money by calling this proposal what it is in every speech, every letter, and every statement issued during the coming months. We may not be able to defeat this program, but we can awaken a few more Americans to the perilous courses on which the Fair Deal has launched our ship of state.

Socialism—American Variety

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, April 9, 1949

Mr. GWINN. Mr. Speaker, what ails America?

Why do more and more of our citizens feel helpless and inadequate to take care of themselves in the midst of the greatest production of income we have ever known?

While acting as a political body like a good Samaritan making gifts to socialist governments abroad have we caught their socialism ourselves? Are we, too, washing our hands of personal responsibility to take care of ourselves and to do right voluntarily toward each other without compulsion? Or are we giving way to the compulsion, the management and control, the false promises of our own compulsory statism?

Let us avoid wishful thinking. Let us examine the recorded facts.

WHAT OUR GOVERNMENT TAKES FROM US

We know that our American Government has, in recent years, changed its character. It has become an overwhelming and omnipresent machine of controls and compulsions. It manages our money, credit, farming, rents and housing, foreign trade, social security, production, and education. This Federal Government management and control of us costs us about $50,000,000,000 a year out of our total income of about $200,000,000,000.

The Federal, State, and local governments combined take one-third of everything we produce. That means that, as a people, we work for ourselves only 2 out of every 3 days. With a 40-hour work-week, we have less than 27 hours, or about 3⅓ days per week to produce our food, clothing, and shelter, and to maintain our health and education. It cannot be done. So, as a consequence, the people cry out in increasing millions for the Government to do for them what they are incapable of doing for themselves in 3⅓ days' work per week. The only cure that Government proposes is that of extending Government management, increasing taxes, and thus reducing even further the number of days in which the people can work for themselves in the management of themselves, their property, and their happiness. Such methods can only lead to scarcity and general poverty, as in Russia.

WHEN IS A COUNTRY SOCIALIST?

Many enlightened scholars have expressed doubt as to whether any government can take more than 2 days in 10 from the people, or 20 percent of the nation's income, and still leave a people able to take care of themselves. Above that level, Socialist management becomes inevitable. We must remember that as recently as 1930, London and Paris managed only 21 percent of their national economy; Berlin managed 22 percent and brought on national socialism 3 years later. Moscow, after 13 years of socialism, managed only 29 percent of the Russian economy. Can we be excused, if we fail too to take to heart these facts and govern ourselves accordingly?

The present impact of this concentration of power in our Government is crushing the people now. Do you realize that we pay out more to Washington annually than we do to all of our 6,000,000 farmers for the food we eat? We pay in taxes 2½ times more to Washington to manage us than we pay in net income to all American corporations for all of their manufacturing, transporting, and other services to us.

NUMBER OF AMERICANS MANAGED BY GOVERNMENT

Government already owns one-fourth of all the land in the continental United States. It has also become the biggest employer in the world. It now has more than 2,000,000 civilian employees. They receive a cold half billion dollars per month, and they with their wives, parents, relatives, and dependents are naturally interested in seeing the pay-roll receipts continued by keeping one and the same party in power. Since by conservative estimate each Government employee guides or controls at least four votes, our citizens fight for freedom against a monstrous Central Government having 8,000,000 voters with a direct monetary interest in keeping one party continually entrenched in power.

This is not the whole story. Many, many more million citizens have become dependent upon payments, benefits, subsidies, and hand-outs. Already one out of every six adult Americans receives checks regularly from Washington. A United Press dispatch sets the figure at 15,830,899. If each check went to a different family, it would mean that 42.7 percent of our families now balance their budgets with money from Washington. Each year our tax burdens increase. Each year others join the ever increasing ranks of the 15,830,899 who are directly dependent on Washington's management of their lives in whole or part.

THE FIRST MARXIST CONCEPT ADOPTED

The measures Marx outlined in the manifesto include abolition of private property, a heavy progressive income tax, centralization of credit in the hands of the Central Government, extension of government ownership and production, and national control of the education of all children. Socialists the world over have acted in strict accordance with this 1848 dictum of Marx that "Political power is merely the organized power of one class for oppressing another." Who can deny that we have followed and are now following these very precepts here in America?

The first and most important of these Marxist precepts came with your constitutional amendment of 1913, giving the Federal Government the right to tax individual incomes. Few persons then thought that it would become a transmission belt for the heavy progressive or graduated income tax, prescribed by Marx. Congress debated then in terms of a 1 or 2 percent tax at most. A

10-percent tax was considered preposterous. Yet we have had taxes which exceeded 90 percent and Washington today commonly takes more than three-quarters of the earnings of some of our most inventive and creative citizens. All of us are now liquidated to the extent of 33⅓ percent of all of our annual income in taxes which are added to the price of everything we buy from houses to bread. For example, gasoline enters into every item of living costs. Without excise taxes, gasoline would sell, generally, for 14 cents a gallon; without income taxes, for much less than 14 cents. Taxes make living costs so high, especially to the low-income group, that they cannot manage for themselves. Think of it, free Americans clamor for the socialist state, begging it for shelter, food, health and education. We too have our cynical Goebbels who knows that if you tax and tax, spend and spend, you can vote and vote the people into socialism anywhere in the world. They can be fooled into making little resistance to taxes if you begin by feeding them the delusion that the rich pay them. It is always the people who pay and carry the burdens.

THE SECOND MARXIST CONCEPT

Washington took the second Marxist step in a big stride when it destroyed, or reduced by 41 percent, all of our national monetary values in 1933. It went off the gold standard. By that act it robbed everyone of 41 percent of his or her savings up to that time. It started to enrich others by printing paper money and issuing it in exchange for nothing of value. All of our people's savings were liquidated just as all socialist governments in Europe liquidated the property of their people. Thus 41 percent of the peoples' capacity to take care of themselves was destroyed by the Government forcibly taking away 41 percent of the value of their money and locking up all gold in the vaults at Fort Knox. Several millions of us became at once absolutely dependent on Washington.

THE THIRD MARXIST CONCEPT

This became manifest first of all among the old people when Washington adopted the third Marxist pattern some years later. It compelled the people to pay to the Government their future savings for old-age and survivors' pensions. There are now already 2,471,000 people receiving old-age or survivors' social-security benefits. They have actually become the wards of Washington and with 45,000,000 others who are, in this year of 1949, being compelled to pay the Government most of their savings in taxes must depend on Government for the management of all or a goodly part of their economic life.

Over a period of 12 or 14 years the unsuspecting citizens have paid their good dollars to Washington. The Government promised to reinvest for the security of all. It would be a Fair Deal. Instead of conserving and investing the people's savings, however, the Federal Government has spent and wasted nearly every dime of it on socialist experiments. It has dropped I O U's in the till—like any other embezzler—to take the place of the billions spent. The general taxpayers are further defrauded and liquidated by being compelled now to pay taxes to make good the Government's embezzlement. The original savings funds are gone, and, therefore, constitute no security to the old people.

Besides all this the old people, once promised security, are getting paid in the Government-inflated dollars worth only 50 percent of the good dollars paid in. The old and the sick are being exploited. They are desolate, hungry, and on the relief rolls, robbed and liquidated among the first even in America as was the case in every socialist state abroad.

So 41 percent of the people's savings up to 1934 have been liquidated. The old people's savings have been wasted. The savings of everybody else since 1934 have been cut in half by inflation and on top of this criminal mismanagement everybody is forced to pay out a third of his income in taxes.

MORAL CONFIDENCE GONE—MARXISM CONTINUED

In such a demoralized state of law and public morals private lenders will not give loans and private citizens will hesitate to borrow. So the Government walks into the vacuum created by it and starts doing business. By the end of 1947, Washington had made $10,109,000,000 in loans, one-fourth of all the loans our 15,000 private banks made. Washington furnished 70 percent of all the money that has gone into new housing since the war, because private lenders have come to have so little faith in the integrity of our Government that they refused to lend for private building. They could not invest with confidence in the future, not knowing what the Government would do on rent control or Government housing. This is what happens when, to use the exact words of Marx and Lenin, "centralization of credit in the hands of the state" takes place.

Private trade and investment in every socialist nation are at a standstill for the same reason that free investment in housing and new business enterprises is stopped here. A moral collapse of the Government, causing the individual to lose faith in what his Government will do, breeds modern socialism everywhere. Since a socialist government breeds and lives without any moral base, what is right and wrong is simply determined by an army of arbitrary commissars whose fanaticism is hardly subject to review. We are experiencing that situation now in agriculture, in export licenses, loans by Government, awarding of contracts to favorites, administration of rents to benefit tenants, allocation of space in Government houses to those who are faithful to the party, and so forth. Individual management and responsibility are drying up everywhere. They must of necessity cease. There is no 50–50, no, not even a 10–90 arrangement possible between socialism and freedom. One or the other must perish utterly. One is wrong and destroys confidence. The other is right and inspires confidence, invention, and production. One is compulsion, the other freedom.

SOCIALISM DEFINED

It is possible that most Americans have never stopped to define socialism. If we do not know what socialism is, how can we know when we have it? Socialism simply stated is Government ownership or Government management of the Nation's economy and the denial by the Government of the right and the capacity of individuals to manage themselves and their property. Socialists, fellow travelers, and Communists always move toward compulsion and violence and away from freedom. Socialism is directly opposed to American constitutional freedom.

SOCIALISM AT WORK IN HOUSING BRINGS SCARCITY

The field of housing illustrates what is happening to morals and confidence under compulsion in a most dramatic fashion: Washington already is the landlord of some 557,000 American families. Allowing four persons to a family, we have 2,300,000 people who are beholden to our Central Government for living space. As in Europe, the ruling party sees to it that the voting booths are placed conveniently in the basements of such Government socialized housing. Alas, we have witnessed how American voters living in socialized housing projects cast a 90-percent vote, or more, in favor of the controlling party that builds the houses.

We used to laugh when we heard about 80- or 90-percent voting in Fascist Italy for Mussolini, in Nazi Germany for Hitler, and in Communist Russia for Stalin. Now it is becoming an American pattern for the big-city vote to swing elections for the party that controls rents, builds houses, and, thereby, owns the votes of the favored tenants. We, too, allocate living space NKVD American plan in exchange for loyalty to the party and the votes that keep the political party in power.

For all this building, the Government induces big lenders to invest in the certificates of participation by exempting them from Federal income taxes. It compels the municipalities to exempt the housing projects from local taxes for schools, streets, police, and other services. It then rents the Government apartments at about one-half price and charges the bill to the general taxpayers. Since the individual investor has no such power over other people's money, he cannot compete in any field that the Government enters.

Thus, Government housing kills confidence, moral sense, and all possibility of equal opportunity, equality of taxation, and justice before the law. The individual quits cold. The story of house building in France is told by Bertrand de Jouvenel in No Vacancies. When the protection of property rights was abandoned, the Government simply expropriated and divided up what houses there were. New building has ceased for 33 years. Cannot we learn either from our own experience or from that of Europe? Must we, as a nation, land in the prison house of Marxism?

RENTAL HOUSING DRIES UP

The general taxpayers are further liquidated. About 8,000,000 property owners, having saved over the generations of free American enterprise $67,000,000,000 and invested it in 17,600,000 rental

dwellings, are now forced by our Socialist-dominated Government to sell these dwellings at less than 60 percent of their values and quit business. Thus rental housing dries up just like the supply of shoes, shirts, dresses, and all sorts of foods dried up before OPA was repealed. Socialism never increases the supply of wanted goods. It always reduces the available supply.

In 1948, the "for sale" dwellings were three and four times greater than in 1940. In August 1940, the New York Times advertised 6,322 houses, apartments, and apartment buildings for sale. In August 1948, it carried 23,036. The Chicago Tribune shot advertisements for sale of housing from 11,303 to 32,045; Los Angeles, from 18,930 to 78,925 for the same period. This fantastic increase in the number of houses, apartments, and apartment buildings offered for sale is found in every big city. We had, according to the Census Bureau, over 4,000,000 more dwelling units in 1948 than we had in 1940, but we had more than 2,000,000 less for rent than we had in 1940.

SOCIALIZED MEDICINE

Our Socialists propose to continue the march down the road to Marxist serfdom by bribing our doctors to socialize health and medicine from Washington just as the British Marxist Government has done. The procedures are almost identical. Seven hundred and fifty thousand doctors, nurses, and hospital personnel would enter our Government employment and cease the free practice of medicine. Washington would guide and control it all, drying up the voluntary source of skill, mercy, health, and hospitalization. Multiply 750,000 by 4 and you get another group who will vote according to the promises of appropriations for their particular benefit. The less fit will grab $8,000 a year in Government salary just as they grabbed 2,000 pounds a year in England.

There will be no more need to excel in skill and devotion to patients; there will be no more competitive effort for public favor. Payments by Government will be for quantity, not quality, of service. Yet, as a doctor in Nashville said recently, "Socialism is the syphilis of medicine. It is easy to take but rots the body to death." Government medicine is sterile. It never invents or discovers new cures. It can but appropriate and try to take by force what the individual alone can give as a voluntary free servant of the people. He alone can have the heart of sacrifice and devotion and love of service. Without freedom in medicine, the art of healing itself disappears.

MINIMUM WAGES AND HOURS

The very devil himself devises humanitarian slogans, we must admit, such as the minimum-wage law, for example. In this manner, the Socialists hope to fool the people into thinking that goodness will come faster by compulsion of the Government than by the community spirit of freemen. All Socialist compulsions are made to sound humanitarian. Its practical purpose, however, is always the same, viz: to rob or exploit one group to benefit another that has more votes. The Lesinski bill now before Congress proposes to make all employers engaged in interstate commerce pay the apprentice, the slow worker, the handicapped, the aged, the part-time worker, even the baby sitter, at least 75 cents an hour for 40 hours a week and $1.12½ for overtime.

This demagoguery disregards whether anybody can or will pay that or whether the worker can produce such value. The right to work itself is denied if the worker cannot induce somebody to pay the legal rate; otherwise, he must go on relief. He dare not take even 73 cents an hour. The bill in effect is a compulsory unemployment bill. It is planned economy. It is socialism in any country, including America.

FEDERAL CONTROL OF EDUCATION

In planning a Marxist America, our Government Socialists do not overlook the teachers and school personnel of America. There are a million of them. It is proposed to offer hundreds of millions of dollars for their allegiance to the party that makes the appropriation. If education is socialized by appropriations, influence, supervision, or control, then national elections shall go to the party promising to make the highest appropriations. With the control of the minds of our children centered in Washington, the last act in the tragedy of lost freedom will be over. God must be thrown out of education. Instead, the goodness of the pagan state will be taught in exchange for the favors it bestows. Private education in free schools ceases for sheer lack of funds.

SOCIALISM—AMERICAN VARIETY LIKE ALL OTHER SOCIALISM

The American people have deceived themselves far too long into thinking of our variety of socialism, just because it is ours, as being different from the Marxist slave state throughout the rest of the world. The fact is that our present Government trend is identical in principle to other central governments which manage their people and their people's property. But for its slower and more hesitant tempo, it is like the English nationalization and the French Popular Front. We simply have socialism, American variety, stealing from some citizens and corrupting the rest of the citizens with the proceeds derived from the first group. We are at about the halfway stop on the road to total socialism such as Italian fascism, German nazism, and Soviet communism. The Western Powers are not yet as rough and tough and cruel in the administration of the same socialism, viz: we do not yet torture or murder.

Thank God, here and there throughout our land there is a growing anxiety about the survival of our constitutional Government and a new appreciation of it that comes only from a real danger of losing it.

Our acceptance of socialism may have been caused, so far, by ignorance and unwitting apathy. This does not change the awful fact that the Socialist cancer has already spread widely in our political body. The only cure is a rebirth of the free spirit of men and women. It is like the free elements of light, heat, rain, and soil. Freedom is explosive energy, much more explosive than atomic energy. It is the precious possession of our American society. It must be our first concern, for on it society is wholly dependent for the very pressing essentials of food, shelter, and the opportunity for the good life. This question is that practical. Yet this creative and explosive substance that we call the free mind and spirit is so delicate that it cannot be managed, controlled, or made the subject of compulsion by other mere men. Under compulsion it dries up, and scarcity, even famine, follows. It has been so in the history of man since the beginning of time.

Our forefathers knew this. So they made the whole concern of our Constitution that of maintaining, protecting and extolling the life, liberty, property and pursuit of happiness of individuals. That was the central function of our Government, which was instituted in the very beginning, for that purpose. History proved them right: The American way became a gospel to the peoples of all the earth for a hundred years.

THE CHALLENGE

Shall we extend further our brief interlude of American liberty, suspended as it has been between ages of darkness gone by and the age of darkness that threatens to follow us all?

That is the challenge of our moral decision. We dare not drift into the darkness of the Marxist atheist state god, his commissars and his tyranny. Instead, we must man the political trenches and the platforms which are the election districts throughout the land. In each district we must have captains of 10 and their auxiliary forces. Already our enemies are organized in the field literally with their captains of 10 in every industrial area. Just now they are winning the battle through lack of opposition.

We can win the freedom battle decisively. Vast unused forces and manpower wait to be enlisted and organized. There are 3,500,000 little-business men. There are 7,000,000 little-property owners being hurt and liquidated. There are farmers and laborers hurt by monopolistic pressures and restrictions. They want freedom and the right to work for themselves. There are millions of retailers, wholesalers, commission men, doctors, nurses, druggists, teachers, and preachers, all ready to fight for liberty again, if led by men who have convictions that burn in their hearts for the right as against the wrong. Liberty waits once more for volunteers like you, serving as the volunteer leaders and organizers of an American-freedom movement. Then socialism, even our own variety, shall be utterly destroyed, every root and branch of it. At the same time the victory over world sovietism will be won in this battle now drawn up right here on our own American soil. God give us strength to win that battle.

The Indians Have a Champion

EXTENSION OF REMARKS
OF
HON. CLINTON D. McKINNON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, April 9, 1949

Mr. McKINNON. Mr. Speaker, anyone who has taken the trouble to study our Indian problem can rightfully be disturbed at the failure of the Indian Commission to adequately discharge its responsibilities.

Congress should awake to its duties and take appropriate action in behalf of our American Indians. Their needs and problems are plain to everyone except, apparently, the Congress of the United States.

While we fail to take appropriate action to guarantee the Indians their rights, it is encouraging to note that among the many people who want us to act is a group of small but alert boys in faraway La Jolla, Calif.

Under their leader, Katherine Boole Legge, den 3 of pack 4 of the Cub Scouts, has been studying the problems of the Navajo Indians. When they found out the plight of these people, they wanted to do something about it. First, they collected their own books and sent them to the Indian children in one of the hospitals. Then, they wanted to do something more fundamental and decided to appeal to Congress.

This week I received a letter from each member of the den. The following nine letters serve notice that our younger citizens expect action from us. I hope we do not disillusion them, nor the thousands of Indians who need our action so desperately.

CUB SCOUTS, DEN 3, PACK 4,
La Jolla, Calif.

DEAR MR. MCKINNON: Our Cub Scouts' den is studying about the Navajo Indians, and I think that they need more money and more schooling.

Please, will you ask the Congress for more money?

Love,
FOREST MCEVEN.

Our Cub Scouts' den is studying about the Navajo Indians, and we think that they should have more schooling. And I'm sure they would appreciate it if you would ask Congress to do something about it.

Yours truly,
BILL CORBIN.

P. S.—Please excuse my messy writing.

I am a boy from den 3, pack 4, in La Jolla, Calif. My address is 482 Palomar, and our den is studying about the Navajos and we heard about them and we ask Congress to please send them some money.

Thank you.
GORDON LEGGE.

Den 3, our cub den, is studying about the Navajo Indians, and we have heard about these poor Indians. We heard about the help that these Indians need, so we are writing to you to ask you to help them by giving them more money, food, and more schools; so I'm asking you to ask your Congress to help them by giving them all the things that I've asked for. I would appreciate it if you would do this for me and for all the boys in our den and in our pack.

Cordially yours,
MICHAEL DIFFENDERFER.

Den 3 has been thinking about the Navajo Indians. We thought that you could help the Navajos by asking Congress to give money for food, clothes, and schools. And would you send me a letter and tell me if they did anything to help the Navajos?

RICHARD DAVID COUTTS.

DEAR MR. MCKINNON: The cubs of den 3 heard about the help that the Navajos need, so we are asking for you to try to send more money for schools and food. We hope you can help. We hope you can help by asking Congress to help them. We will appreciate all you have done for us.

Sincerely yours,
HAROLD DEACON,
Den Chief.

P. S.—If you write to us, mail the letter to 525 Westbourne Street, La Jolla, Calif.

Thank you.

DEAR MR. MCKINNON: Den 3 heard about the Navajo Indians and about their needs for help for food, money, and schools. You can help by asking Congress to give the things I have suggested.

Yours truly,
JON SWINNEY.

DEAR MR. MCKINNON: I am studying Navajo Indians, and I think you should give the Navajo Indians more schools.

BOBBY GROVES.

DEAR MR. MCKINNON: Our Cub Scouts' den is studying about the Navajo Indians, and I don't think it is fair for us that we have schools and they don't. Please see Congress to do something about it.

PETER BURNELL.

I'm studying the Navajo Indians, and I don't think it's fair to give us schools and don't give the Navajo any schooling. Please ask the Eighty-first Congress to give money to educate.

Yours truly,
BILL KEMP.

Denazification and War Criminals

EXTENSION OF REMARKS
OF
HON. CHRISTOPHER C. McGRATH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, April 9, 1949

Mr. McGRATH. Mr. Speaker, on February 28, 1949, the executive committee of the American Jewish Congress adopted a resolution with regard to denazification and war criminals. I call the attention of the House to the resolution, which is as follows:

The executive committee of the American Jewish Congress meeting on February 28, 1949—

Recalling its resolutions of November 29, 1948, with regard to the problems of denazification and the punishment of war criminals, in which the American Jewish Congress expressed its grave concern over the emergence of anti-Semitic and pro-Fascist movements and trends in Germany and over the suspension of the trials of war criminals and the commutation of the sentences of many of those found guilty;

Notes that since the date there has been fresh and additional evidence of the failure of the denazification program as reflected in the continued growth of these anti-Semitic and nationalist trends;

Expresses its grave alarm over the threat to world peace which these developments constitute;

Therefore calls on the Senate of the United States to conduct a public investigation into the implementation of the denazification program and the intensification of anti-Semitic and antidemocratic trends in the American zone of Germany and that an opportunity be given to recognize public organizations to present their evidence and recommendations;

Urges the World Jewish Congress to take appropriate action toward the organization of similar investigations in other zones of Germany;

Directs the officers of the American Jewish Congress to organize a campaign of public information and action to acquaint American public opinion with the situation.

Amendment of Economic Cooperation Act of 1948

EXTENSION OF REMARKS
OF
HON. LEONARD IRVING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Saturday, April 9, 1949

Mr. IRVING. Mr. Speaker, the amendment I intend to submit at the proper time appears to me to be so advisable because of purely simple and sound reasons that I was somewhat amazed when I heard the Committee on Foreign Affairs of this House had complied with the requests of the ECA Administrator, Mr. Hoffman, and the Secretary of Agriculture, Mr. Brannan, that the provision for milling 25 percent of the grains shipped abroad be stricken from the act.

The amendment to H. R. 3748, a bill to amend the Economic Cooperation Act of 1948 is as follows:

Strike the following words after "SEC. 7." on lines 5 and 6 of page 7: "(a) Section 112 (c) of such act is hereby repealed."

The Committee on Foreign Affairs of the Senate has recognized the need for continuance of this provision for the benefit of not only American trade and workers but because it actually felt there were just reasons why its retention would help the entire program. The action of our own committee, taken in face of conflicting testimony given it, indicates that the committee members themselves were somewhat undecided as to what was the right thing to do. The questions asked by the committee members of the witnesses and the weakness of its own committee report clearly indicate lack of full consideration and indecision about the matter.

While some administration spokesmen contended that to ship wheat entirely instead of 75 percent wheat and 25 percent flour would cost the Government $8,000,000 more, there was direct testimony from one of the leading wheat millers in the country, who spoke for his industry, to the effect that the Government would actually save money by shipping 25 percent of the wheat in the form of flour. In addition, he pointed out that the millfeeds, a byproduct of the flour milling, were seriously needed in the United States by farmers who today have on their places the largest numbers of livestock in the country's history.

There are indications, substantiated by facts, that by milling at least 25 percent of the wheat into flour in this country, our own economy will be benefited along with the extensions of benefits to the countries now receiving Marshall-plan aid. In the first place, substantial proofs have been presented that the Government would actually save money by milling the flour here. Furthermore, the costs of shipping would be less as would be the costs of handling in the Marshall-plan countries where wheat would have to be unloaded, moved to flour mills away from port areas, and then still have to be transported to the actual consumers. With transportation facilities in those countries already taxed to capacity because of the job of reconstruction, we should not add this burden, particularly when our own Government could save money without impairment of the basic premise of this act—to assist in the economic recovery of those nations friendly to the United States.

It appears to me that there is such a tremendous propaganda value to having flour delivered in bags marked as coming from the United States that this argument alone should outbalance any argument against shipping flour. Wheat would lose its identity whereas the bagged flour, with clear-cut markings on each bag, would not.

The Communists, ever seeking propaganda footholds, would, without question, seize upon this omission as a means for charging that the wheat being shipped to mills was coming from countries behind the iron curtain or elsewhere than from the United States, the real benefactor. It would be an effective propaganda, too, because who would know otherwise.

Pamphlets and radio talks to counteract such an untrue propaganda barrage could never be as effective as the sight of an American bag of flour, labeled as coming from the United States. Remember this operation will not be like the Friendship Train which everybody in Europe knew came from the United States because of the goodness of the American people.

Ladies and gentlemen, I implore you to sincerely consider my position in this matter because I truly feel that the best interests of our country will be served by retention of the present provisions of the present legislation.

Long Live Free Greece

EXTENSION OF REMARKS
OF
HON. CHRISTOPHER C. McGRATH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, April 9, 1949

Mr. McGRATH. Mr. Speaker, in the March 25 issue of the New York Journal-American there appeared a very interesting editorial entitled "Long Live Free Greece." This editorial was written in commemoration of the one hundred and twenty-eighth anniversary of Greek independence and is as follows:

LONG LIVE FREE GREECE

(By Harry H. Schlacht)

Today marks the one hundred and twenty-eighth anniversary of Greek independence.

Today marks the day when Bishop Germanos proclaimed freedom at Patras. Today marks the day when the Greek flag of liberation was unfurled.

What liberty-loving heart does not throb, what liberty-loving bosom does not swell, at the thought of Greek independence?

We hail her unconquerable soul which has ever been the proud possession of the Greek people. We salute with joy "not the glory that was Greece" but the glory that is Greece.

The history of Hellas is the history of the world.

No tyrant has ever been able to crush her. No tyrant ever will.

The torch of democracy was first lighted in Athens.

The Greek people have demonstrated in the most terrible of all wars that they still possess the flame which made their ancestors transcendent examples of what the human spirit can achieve.

They have emerged triumphant through every test of fire and sword. They showed the world that as they had taught other peoples how to live, so would they demonstrate their willingness to die while defending their liberty. No prophet is needed to predict that the people of Greece will continue to exemplify the noblest attributes of man.

Greece stands resolute as the pillar of civilization.

Her past is unrivaled in intellectual richness. Her past is assayed with the meaning of truth, justice, and beauty. Her past is studded with every form of human achievement. Her past is kindled with the eternal love of liberty.

Liberty is an Hellenic quality.

The historical annals reveal that the spirit of democracy found its full fruition and development in ancient Greece.

Its grandeur in every domain of human endeavor has never been excelled. Its poised brow, like that of her Olympian god, was ranked high above the contending forces that surged below. Its spirit of freedom, its love of music and arts, all of the finer impulses of the heart and mind, flourished and blossomed with such rich fertility during the golden age of Pericles that they have never been surpassed in history.

Greece has been a brilliant light throughout the centuries, casting its illuminating rays upon the nations of the world.

Her gallant leaders, true to the traditions of Thermopylae, Marathon, and Salamis, chose the path of honor in the last world conflict.

Despots have attempted to subdue and crush her valiant spirit with hunger, exposure, and death. But her unshakable will to live as a free nation has remained ever constant and steadfast through all her tribulations.

Nor have the Greeks ever surrendered or compromised their lifelong convictions and ideals.

For they have manifested, in blood and suffering, the invincible spirit of their martyred heroes who fought and died for liberty.

From the lamps of Acropolis, from the tragedies of Euripides, from the songs of Maenander, from the poems of Palamis, from the thought of Aristotle, from the science of Archimedes, the light of liberty will never be extinguished.

Spring has come to the golden land of Hellas, spring with all its natural freshness and exuberance.

The warm breezes play gently over her pastoral Arcadia. The red poppies of Attica bloom beneath gray-green olive trees. The branches in the Thessalonian orchards are now heavy with buds. The season brings the joy of Greek music, songs, and folk dances.

On her face is the smile of liberation. It is radiant with freedom. It is softened by sorrow. It is sweetened by sacrifice.

Greece will rise again to greater heights of splendor. She will live again in the fullness of her ancient glory and valor. For the luster of her historic fame can never be dimmed.

O, Greece, for you—your long and glorious line of statesmen, philosophers, scholars, poets, and artists must be singing a heavenly chorus of hallelujahs.

Here's to the land of Hellas: One nation, one language, one history, one greatness. May your country ever be worthy champions of justice and liberty.

Greece lives again.

Zeto 'e Helles—Long live free Greece.

Proposed Postal Rates a Threat to Weekly Newspapers

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. MACK of Washington. Mr. Speaker, the weekly press of America, since the very beginning of the Republic, has been our greatest defender of individual freedom and democracy.

Our Nation today has more than 10,500 of these weekly newspapers. Nearly all of these weekly newspapers are individually owned. Nearly all of them are individually edited. The editorial opinions these weekly newspapers express are almost as divergent as the number of the 10,500 men and women who edit them. The very expression of such a divergence of opinion is not only healthy and desirable, but also necessary, in a country where laws are the product of open debate and discussion and not the dictatorial edicts of one man or a small clique of men.

It is an adage, as true as it is old, that he who would destroy liberty first controls, muzzles, or suspends a free press.

WEEKLY PRESS IN DANGER

There are now pending in the House and Senate of the United States bills which, if enacted in their present form, would greatly weaken most of the 10,500 weekly newspapers of this country and bring financial difficulties to many of them

The bills to which I refer are those which would increase the second-class postage mailing rates on weekly newspapers by 600 percent this year and 900 percent next year.

Under these bills, which I understand are sponsored by the Post Office Department, the present postal rates on weekly newspapers delivered by mail to citizens in the towns of publication would be increased from the present rate of 1 cent a pound to 4 cents. This is a fourfold increase, an increase of 400 percent.

But this is not all. If a weekly newspaper devotes as much as 50 percent of its columns to advertising, the rates, under the proposed bills, would be 50 percent higher than 4 cents, or be 6 cents a pound.

Few weekly newspapers, due to present-day high wages, high cost of materials, and high taxes, can survive unless more than 50 percent of their columns are filled with advertising. This means, therefore, to all intents and purposes, that the postage rates on weekly newspapers, which now are 1 cent a pound for home-town delivery, will be raised, if these bills are enacted, to at least 6 cents a pound. Furthermore these bills would raise these rates another 50 percent next year.

The administration has complained very bitterly about some manufacturers and producers having raised prices too much. I can think of no business, however, which has imposed a 600- to 900-percent increase in its prices, such as the post office now desires to do on second-class mail.

If the electric companies were to increase their rates to users by 600 percent, to six times what these rates now are, I imagine most people would discontinue using electric lights and go back to the candle, the oil lamp, or some other way of providing light for their homes. Is not very much the same thing likely to happen with newspapers if the Post Office Department, as it seems to desire, imposes a sixfold—600 percent—increase in postal rates?

NOT GOOD BUSINESS

Suppose this 600-percent increase in postal rates on weekly newspapers is imposed, what will the weekly newspaper publishers do?

Many of them certainly will put on carrier boys to make town deliveries. That will be cheaper than paying the post office the new and much higher postal rate.

If the newspaper in a little town of [illegible] to 5,000 does that, will the post [illegible] move into any smaller building? [illegible] use fewer mail carriers? Will [illegible] less lights or consume less heat? [illegible] think so. The expense of operating the small post office will be just [illegible] as it is now. The increased rate will merely have driven away some of its customers and lost it some of the revenue it is now receiving. That will not help [illegible] the post-office budget.

[illegible] AND ACCOUNTING

The Post Office Department, at my request, has supplied me with a report which shows that the United States post-office service last year handled 6,206,890,360 pieces of second-class mail, and that this mail weighed 2,107,309,398 pounds, or an average of 5.36 ounces to the piece."

Note these figures. They are not round figures. They are not estimates. They are exact figures, down to the very last decimal. If these figures are correct they could have been obtained in only one way, by a piece-by-piece count of that mail and by a sack-by-sack weighing of it. Think of the enormous number of workers that were required to count more than 6,000,000,000 pieces of mail. Think of the enormous number of man-hours of work required to weigh more than 2,000,000,000 pounds of mail. Why, 2,000,000,000 pounds is 1,000,000 tons. It would require a train of 25,000 railroad mail cars to hold that much mail. If there was some simpler and less expensive way of figuring the quantities and cost of handling such mail, the cost of handling it might be much less than it is.

The Post Office Department says its average cost of handling a second-class piece of mail is 3.22 cents per piece. After post-office accountants have gone to all of the expense of figuring in detail this cost, can anyone say the figure is correct? I doubt it.

In most small towns the cost of maintaining the post office with lights, heat, and janitor service would be just the same whether these newspapers were handled in the post office or not. There would be just as many carriers.

On the rural routes the carrier would drive in the same car over the same number of miles whether he carried the newspapers or not. He might have to make a few extra stops because of the newspaper mail. What does it cost to carry these newspapers? It is almost impossible to say.

CONCLUSION

I am not saying there should be no increase in second-class postal rates. I am saying that the proposal to raise these rates by 600 percent this year and 900 percent next year to the weekly newspapers is unrealistic and unreasonable. If punitive rates of this kind are imposed, many of the Nation's 10,500 weekly newspapers will be driven out of business.

A free people must be an informed people and the weekly newspapers help to keep them informed.

The Government itself needs these weekly newspapers. During the war years these newspapers donated many millions of dollars of free advertising space to such Government campaigns as war bond sales, the planting of victory gardens, and the collection of scrap metal and waste paper. These campaigns never would have been the success they were had it not been for the free advertising space donated to the Government by the weekly newspapers of the Nation.

High labor costs, high taxes, and higher costs for materials, all have made it increasingly difficult for the average small weekly newspaper to keep its income sufficiently high to meet its increased costs.

The costs of labor and materials for weekly papers have risen sharply, but rarely as much as 200 percent. The postal bills under consideration propose to raise postage costs to weekly newspapers by 600 percent. Even in these days of inflation that is simply too much and, if imposed, I am sure will be the last straw that will break the back of many small weekly newspaper publishing businesses.

Under leave to extend my remarks, I include a short statement which I have prepared and sent to weekly newspaper publishers of my State to provide them with details on how the unrealistic and unreasonable increases in weekly newspaper postal rates, contained in present bills, would affect them. The statement follows:

The seriousness of the threat to weekly newspaper publishers of the proposed postal increase rates is indicated by the following statement on your postage rates now and what they would be under the departmental proposal.

	Now	Proposed
City delivery within county	1 cent per pound.	4 cents per pound.
Rural delivery within county	Free	1 cent per pound.

If publication is mailed outside county, new zone rates will apply. The new out-of-county zone rates will average about twice as high as you now pay.

Furthermore, all the above raises are the minimum. If your paper carries 25 to 50 percent advertising, your rate will be raised 25 percent above the new rates listed above.

If it carries 50 to 75 percent advertising, your rate will be 50 percent above the above new rates.

If it carries more than 75 percent advertising, rates will be 75 percent above the new rates.

If more than one-half of your issues in any year carry more than 75 percent advertising, your second-class mail privilege shall be revoked.

Furthermore these bills propose to increase the above rates another 50 percent next year.

These figures would seem to indicate that if this bill passes, your postage rates will be increased at least 500 percent, probably 700 percent.

No such drastic boost in rates in my opinion is justified and might prove ruinous, particularly to weekly newspapers.

What do you think?

Obviously, such rates will force weekly publishers to abandon mail delivery in their own cities and go to carrier boys for that probably would be cheaper.

Will be glad to have your views.

Aid to China

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Saturday, April 9, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mark Sullivan, from the Washington Post of April 9, 1949:

AID TO CHINA

(By Mark Sullivan)

RESPONSIBILITY FOR NATIONALIST PLIGHT

China—that is, China as a concern to us, as a major factor in our resistance to com-

munism—refuses to be ignored or forgotten. At the very moment when we were exulting over the Atlantic Pact, and assuming we had secured defense against communism on the European front, we were reminded of China by Winston Churchill. He had to remind us; he was giving an over-all picture of the world as it is:

"Are we winning the cold war? This cannot be decided by looking at Europe alone. We must also look to Asia. The worst disaster since our victory has been the collapse of China under Communist attack and intrigue."

Within 2 days after Churchill reminded us, concrete proposals for help to China were made by two important sources—former Gov. Harold Stassen, of Minnesota, now president of the University of Pennsylvania, and an exceptionally able young Senator, WILLIAM F. KNOWLAND, of California. Their proposals reflected a deep concern about China, felt strongly and somberly in informed areas of thought.

Both Senator KNOWLAND'S proposal and Governor Stassen's have to do with making American funds available to the part of China not yet overrun by the Communists. Both take the China situation as it exists today—they must, of course, and every present proposal about China must. But if we are limited in what we can concretely do in the present stage, our thought about China should take in the whole scope—how the present situation arose, the obligation we are under to China, as well as the urgency of helping China in our own interest.

About this, although thoughtful leaders know it well, there is on the part of the public widespread incompleteness of understanding. Some of this is due to preoccupation with the swift and compelling urgency of other events. The administration, intent upon Europe, takes about China an attitude expressed as waiting until the dust settles.

Some of the incompleteness of understanding is due to reticence about discussion of foreign policy voluntarily practiced by leaders of both parties during the presidential campaign, though this is now relaxing as respects China. Governor Dewey, in his Lincoln Day speech, charged the fall of China to the Truman administration, saying: "It was this present national administration which supinely sat by and allowed it to happen."

But our relation to the fall of China is not adequately described by the words "allowed it to happen." Our part in the fall is not a mere failure to give help, nor is it confined to the period of the Truman administration. The beginning of our relation to the fall of China was a step we took before the Truman administration, while the war was still on; and the nature of that step by us was such as to make us, in large part, responsible for the fall of China to communism.

At Yalta in February 1945 President Roosevelt conferred with Marshall Stalin about Russia entering the war against Japan. (Russia had so far been only in the war against Germany.) Stalin demanded a price—that at the conclusion of the war Russia be given territory then a part of China, other territory that had been taken from China by Japan, and control of railroads and other strategic advantages at the expense of China.

To these demands Roosevelt assented, in agreements secret at the time. The status thus created was shocking. China had been with us from the beginning of the war, but now was sacrificed as the price of getting Russia to join.

There was worse, Stalin made a demand, and Roosevelt agreed to it, expressed in these words: "It is understood that the agreement * * * referred to above will require concurrence of Generalissimo Chiang Kai-shek. The President will take measures * * * to establish this concurrence on advice from Marshal Stalin." Chiang Kai-shek must agree to concessions at the expense of China, must do it and like it.

The territory and other advantages thus acquired by Russia composed leverage and impetus for the Communist drive into China that is now at the point of success. There was another step, this during the Truman administration. In 1946 we suspended for 18 months the shipment of arms to the Chiang Kai-shek government which we had been carrying on since the beginning of the war against Japan. The blow to the Chiang Kai-shek government was more than military. Communist propaganda was able to make it appear as if Chiang Kai-shek's resistance to the Communists did not have support by the United States.

Retention of Excessive Profits Has Become One of Our Greatest Economic Evils—More Such Profits Should Be Paid Out, and Under Section 102 of Internal Revenue Code Such Payments Can Be Enforced—Also Possible for Stockholders To Take Definite Action and Hold Directors Personally Liable—Stockholder Becoming Forgotten Man

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, April 9, 1949

Mr. PATMAN. Mr. Speaker, in 1946 corporate profits amounted to $12,840,000,000 after all Federal and State income taxes; instead of the customary two-thirds being paid to the stockholders, only $5,605,000,000 were paid.

In 1947 such corporate earnings were $18,075,000,000, with payments to stockholders of $6,808,000,000.

In 1948 such profits amounted to $21,000,000,000, with payments to stockholders of $7,300,000,000.

If the stockholders had been paid in dividends at least two-thirds of these earnings for these years, as customary before World War II, and as contemplated by law, the stockholders would have received $15,000,000,000 more than they were actually paid in dividends. The corporations would have been able still to retain more than $17,000,000,000, in addition to their allowances for wear and tear, depletion and obsolescence.

Under section 102 of the Bureau of Internal Revenue Code it is contemplated at 70 percent of the earnings of corporations be paid to stockholders. Under this law, $36,340,500,000 would have been paid to the stockholders these 3 years instead of $19,713,000,000, which they actually received, and the corporations would still retain $15,574,500,000 in addition to allowances.

COSTLESS CAPITAL

In a hearing before the Joint Committee on the Economic Report the following testimony by a witness is typical of the testimony introduced by all the witnesses from large corporations on this point:

American industry is depending primarily upon its own resources—profits and reserves for depreciation largely—to finance its purchases of new plant and equipment. This is only partly a matter of choice. Many of the companies surveyed would like to get outside funds, particularly by selling common stock, but many of them cannot do it except on financial terms that they consider disastrous to their business.

Now, the following is the testimony of a very prominent businessman:

A substantial part of the working capital and capital for expansion is obtained from retained earnings, because such funds are most readily available when needed and are the cheapest for the country.

Business Week, January 22, 1949, in a report to executives on capital spending plans for the 5 years 1949–53, states that industry is prepared to spend a total of $55,000,000,000 in the next 5 years. The astounding disclosure is that three out of every four plan to get almost all of their capital for expansion from profits and reserve, and that only 9 percent plan to sell stock. Such a policy as this is dangerous and could be devastating to our private-enterprise system.

DEATHBLOW TO SMALL BUSINESS

If corporations are compelled to pay out their earnings to the stockholders, the stockholders will have money to invest is small businesses of their own, or other businesses, big or little. The capital market has been dried up by the policy of these large concerns getting their costless capital from the consumers in the form of profits. A continuation of this policy will result in a deathblow to small businesses and a stopgap for the private-enterprise system.

INITIATIVE CRUSHED

Such a policy gives existing corporations not only a great advantage, but practically a monopoly. If they continue to retain billions of dollars a year for expansion of their businesses, including the acquisition of competing businesses and the purchase and entering of nonrelated businesses, it will not be long until a few concerns, controlled by a few men, will control the corporate wealth of the Nation, thereby crushing personal initiative and private enterprise.

UNITED STATES ACTION AGAINST DIRECTORS UNDER SECTION 102, INTERNAL REVENUE CODE

In the case of Trico Products Corporation against McGowan, Collector Internal Revenue, in district court, western district New York, July 3, 1946, recorded in 67 Federal Supplement, page 311, the court discusses reasonable needs of a business, and in order to avoid surtax on account of accumulation of profits there must be substantial proof of a specific plan, objective, or continuance, which in the exercise of good business judgment demands the accumulation of the earnings and profits in a reasonable and reasonably definite amount.

WHAT IS REASONABLE JUDICIAL QUESTION

It was decided in this case that the plaintiff's undistributed earnings or profits for certain years had been permitted to accumulate beyond the reasonable needs of business. This case also says that the intent to prevent surtax on shareholders need not be the sole or

dominant intent in permitting the accumulation. Clearly the question of what is reasonable is a judicial question.

PENALTY ASSESSED AND DIRECTORS LIABLE

The corporation was compelled to pay approximately $2,000,000 penalty because of the action of the directors in retaining in the corporate funds too much of the earnings. Later the stockholders in the State of New York filed suit against the directors for negligently causing the corporation to pay the penalty.

Although the case was not actually tried on its merits, it was settled by stipulation of settlement which was approved December 23, 1947, in the Supreme Court of the State of New York. Under the settlement the defendants paid to Trico Products Corp. $2,390,000.

The following excerpts are from report No. 1, page 9009, in the New York Corporation Law Reports, New Court Decisions, February 26, 1948, concerning this case:

The defendants named hereinafter agree to pay to Trico the amounts set opposite their respective names in full settlement and satisfaction of the claims asserted against each and all of the defendants named in the complaint in Mahler action No. 1:

John R. Oishei	$135,000
Peter C. Cornell	212,500
Stevenson H. Evans	92,500
Trico Securities Corp	1,950,000
Total	2,390,000

The aforesaid payments to the extent of 80 percent shall be paid in satisfaction of the claim in Mahler action No. 1, as supplemented, for damages alleged to have been sustained by the corporation as a result of section 102 and undistributed profits tax liabilities assessments against, or paid or incurred by the corporation, exclusive of interest thereon, and to the extent of 20 percent thereof, in satisfaction of said interest and all other claims asserted in said action.

* * *

The plaintiffs contend that the detailed financial facts and data provided prima facie the basis for the charges made against the defendants. Broadly stated, their position is that the vast accumulations of earnings year by year, which reached a sum in excess of $23,000,000 in 1941, were far beyond the reasonable requirements of Trico and that the purpose of such accumulations was not to benefit the corporation but to serve the private advantage of the controlling stockholders. The plaintiffs contend that had Trico's profits been distributed the defendants would have been required to pay very substantial additional surtaxes. In further support of their position, they point out that a very considerable portion of the surplus was invested in Government and other securities rather than in operating assets, as indicating that the accumulations were not, in fact, either needed or utilized in the operation of Trico's business.

SIX STOCKHOLDERS WOULD HAVE SAVED $1,850,000 IN INCOME TAXES

In *Trico Products Corporation* v. *Commissioner McGowan* (169 Federal Courts (2d), p. 345) the court stated:

If we allow to stand, as we think we should, the finding that earnings or profits were permitted to accumulate beyond the reasonable needs of the taxpayer's business, then the finding that a tax-avoidance motive played a part in this result is also a permissible inference, notwithstanding denials by the officers. *Helvering* v. *National Grocery Co.* (304 U. S. 282, 295, 58 S. Ct. 932, 83 L. ed. 1346); *Helvering* v. *Chicago Stock Yards Co.* (318 U. S. 693, 701, 63 S. Ct. 843, 87 L. ed. 1086). Not only is the finding bolstered by the express provision of section 102 (b) of the Revenue Act of 1936 but the defendant presented evidence from which the court found that had all the net earnings been distributed as dividends in 1936 and 1937, the six largest stockholders would have had to pay additional income taxes aggregating $1,850,000.

SECTION 102 OF INTERNAL REVENUE BUREAU CODE

"SEC. 102. Surtax on corporations improperly accumulating surplus—

"(a) Imposition of tax:

"There shall be levied, collected, and paid for each taxable year (in addition to other taxes imposed by this chapter) upon the net income of every corporation (other than a personal holding company as defined in section 501 or a foreign personal holding company as defined in supplement P) if such corporation, however created or organized, is formed or availed of for the purpose of preventing the imposition of the surtax upon its shareholders or the shareholders of any other corporation, through the medium of permitting earnings or profits to accumulate instead of being divided or distributed, a surtax equal to the sum of the following:

"27½ percent of the amount of the undistributed section 102 net income not in excess of $100,000, plus

"38½ percent of the undistributed section 102 net income in excess of $100,000.

"(b) Prima facie evidence:

"The fact that any corporation is a mere holding or investment company shall be prima facie evidence of a purpose to avoid surtax upon shareholders.

"(c) Evidence determinative of purpose.

"The fact that the earnings or profits of a corporation are permitted to accumulate beyond the reasonable needs of the business shall be determinative of the purpose to avoid surtax upon shareholders unless the corporation by the clear preponderance of the evidence shall prove to the contrary."

Do not overlook the phrase "or availed of."

CONCLUSIONS

It appears evident that directors of a corporation cannot illegally withhold earnings without subjecting their corporation to the penalty provided by law.

If the directors violate section 102 and a corporation is compelled to pay the penalty, it is likely that the directors will be held personally liable.

In addition it appears reasonable to presume that minority stockholders may compel the liberalization of a dividend policy to forestall a potential impact of section 102.

In view of existing law and the rulings of the court, it would appear that the directors of corporations would prefer to pay the money in dividends to the stockholders rather than subject the corporation to a heavy penalty and make themselves personally liable for the penalty imposed.

Attached hereto are copies of letters to the Commissioner of the Bureau of Internal Revenue, and the chairman of the Committee on Ways and Means of the House. It is contemplated that when the Ways and Means Committee considers this question, small businesses will be given some preference for the purpose of expansion:

MARCH 24, 1949.

Hon. GEORGE J. SCHOENEMAN,
Commissioner, Bureau of Internal Revenue,
Internal Revenue Building,
Washington, D. C.

DEAR MR. SCHOENEMAN: The object of this letter is to make the request that you carefully analyze, investigate, and study the income-tax returns of corporations for the years 1946, 1947, and 1948 for the purpose of determining whether or not excess earnings were retained in violation of section 102 of the Internal Revenue Code.

Congressional investigations have disclosed that for the 3 years mentioned corporate earnings amounted to $51,915,000,000. If two-thirds of these earnings had been paid to stockholders, as customary before World War II, the stockholders would have received $34,610,000,000. However, the corporations for these years reversed the usual and customary policy by only paying to the stockholders $19,713,000,000, which was $14,897,000,000 less than two-thirds of the corporate earnings, after taxes and after allowances for wear and tear, depletion, and obsolescence.

Under section 102 of the Bureau of Internal Revenue Code, it is contemplated that 70 percent of the earnings of corporations be paid to stockholders. If 70 percent had been paid these 3 years, the stockholders would have received $36,340,500,000, instead of the $19,713,000,000 actually paid to them.

It is my request that a special investigation be made of all corporations failing to pay their stockholders at least two-thirds of the corporate earnings after the payment of all Federal and State taxes, and in cases where it is disclosed that earnings are illegally held that a penalty tax be invoked in accordance with section 102. It is my opinion that this work should be undertaken as soon as possible.

Since I announced several days ago that the corporations were undoubtedly withholding excessive amounts in violation of law as retained earnings, I have received a large volume of correspondence containing interesting information that confirm my beliefs about specific corporations, which I shall be very glad to place at your disposal. Many of these letters from stockholders disclose that directors frankly admit that the earnings are withheld for the purpose of avoiding the payment of surtaxes. It is possible for such investigation to produce several billion dollars in additional revenue for the 3 years mentioned.

Thanking you for giving this matter such attention as you believe the subject deserves and at your earliest convenience, I am,

Sincerely yours,

WRIGHT PATMAN.

MARCH 24, 1949.

Hon. ROBERT L. DOUGHTON,
Chairman, Committee on Ways and
Means, House of Representatives,
Washington, D. C.

MY DEAR MR. CHAIRMAN: Retained earnings by corporations are becoming an economic evil. For instance, last year corporate earnings were $21,000,000,000. Instead of the corporations paying to the stockholders two-thirds of this amount, or $14,000,000,000, as customary before World War II, the stockholders were paid approximately $7,000,000,000. The withholding of these earnings for corporation purposes, the reasons usually given are for expansion, operates against the interests of the private-enterprise system and is destructive to small business.

Corporation leaders have announced that they expect to spend $55,000,000,000 the next 5 years, and they expect to get 75 percent of

their money from retained earnings. In other words, they are making the consumer pay the cost of expansion, at least to the extent of 75 percent. This means that in a few decades a few of the large corporations will practically own and control the corporate wealth of the Nation.

With such a policy in effect, the small-business man does not have a chance. The capital market is dried up and he is unable to get funds. In addition if he is able to get funds he must pay the venture capital back with interest, whereas the corporations getting their capital from profits compete with him with costless capital. Therefore this trend, Mr. Chairman, is toward monopoly and will crush personal initiative and private enterprise if not stopped.

It is believed that section 102 of the Internal Revenue Code is sufficient to compel these corporations to pay their stockholders a fair percentage of their profits. However, the question is so important I am writing this letter to suggest that your committee give this matter careful and early consideration. In the event it is discovered the present law is inadequate to properly deal with the situation, then I suggest that adequate laws be proposed by your committee.

Thanking you for considering this matter, I am,

Sincerely yours,

WRIGHT PATMAN.

The City Built by Living Men

EXTENSION OF REMARKS
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Saturday, April 9, 1949

Mr. THOMAS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Krock, from the New York Times of April 7, 1949:

THE CITY BUILT BY LIVING MEN

(By Arthur Krock)

HOUSTON, TEX.—Although the contrasts between Texas and Mexico, in all their visible aspects, are registered with stunning sharpness to airplane passengers as they cross the Rio Grande and afterward when they move about among the Mexican people, the impact of these differences strikes the homeward traveler even more powerfully when he returns to Houston. The atmosphere of antiquity, the culture and tempo of modern Mexico disappear into a background that seems to be the fragment of a dream.

The sudden and revolutionary nature of the change would not be felt as much in any other American city near the border. But Houston is perhaps the outstanding symbol of the transition the independence of Texas wrought in the history of this continent and in the mores and physical aspects of what was the richest part of Mexico a hundred years ago.

A FABULOUS STORY

Mexico lost that part, amounting to almost one-third the area of the United States, at the battle of San Jacinto, which was fought about 20 miles outside Houston. On the shaft that rises from the center of the battlefield—as noble a memorial to American greatness as that dedicated to George Washington, and in some aesthetic values its superior—is a simple inscription relating incontrovertibly that San Jacinto was one of the decisive battles of history. When 1,200 Texan immigrants, from all sections of the United States and western Europe, defeated a Mexican Army of 4,000 on this site the Nation began its inevitable advance toward continental scope and the acquirement of natural resources which have brought it to its primary estate.

The battle monument is a true introduction to the fabulous story of Houston, and the qualities which animated the victors at San Jacinto seem to the visitor to live in the strong pulse of the city. The shaft, the memorial park that surrounds it, the battleship *Texas* that rests in retirement nearby, the oceangoing ships that appear to be sailing through the prairie toward the port of Houston, and its towering skyline—all these belong to that large part of the city's history which was made by its famous citizen, Jesse H. Jones.

MR. JONES' VISION

He is at home again after the long career in Washington as head of the Reconstruction Finance Corporation and the Federal Loan Administration during which, in the opinion of many, he did more than any public official to save the free-enterprise system in the depression period of the thirties and World War II. Mr. Jones is building again, still pursuing the practical vision which he described as follows to his fellow citizens in May 1933 at a banquet in his honor:

"To get a picture of the Houston of the future we should have to get a picture of the whole growing empire of the South and the Southwest, and the best way to do this is to look back over 50 years of growth of the great Middle West and Northwest. * * *

"Private industry, and the common carriers by land and water, will invest sums here compared with which our own public investment will appear infinitesimal, and before the children of today have become the representative men of tomorrow every foot of frontage from Main Street to the Gulf of Mexico will be in use, not because of the efforts of any man, but because of the natural movement, growth, and progress of civilization."

THE RISE OF INDUSTRY

This prophecy grows daily with its realization. First the source of industry and wealth was cotton, then oil, and then chemicals. But, unlike the history of other American cities, the new industry did not supplant the old. New and old flourished side by side, and today the recession or disinflation which occupies the thoughts of other industrial areas does not concern Houston. A recent survey by the American Public Works Association offers these statistics by way of explanation:

In 35 major industrial areas of the United States, accounting for 45 percent of industrial expansion since VJ-day, the Houston area's new construction plans call for expenditures of $110,000,000 as compared with $86,600,000 for New York's tri-State metropolitan region and $79,600,000 for Pittsburgh and Chicago, respectively. In the value of new industrial investment Texas stands first with $323,000,000.

The depression fears elsewhere, the price-cuts worrying the national administration which so recently was calling for lower prices, seems to be as distant from this city as if they were disturbances in the moon. The new Shamrock Hotel, one of the largest and most luxurious in the world, can barely handle its trade, though its wares come high and it was located 5 miles from Houston's center by another of the extraordinary citizens that exist in such numbers here—Glenn H. McCarthy.

The millionaires of Houston come in battalions, which encourages the hope that, when they have expressed themselves to the utmost in towering concrete and splendid houses in River Oaks, they will set out to zone and otherwise beautify this lusty, sprawling industrial capital of the Southwest. The time for that is overdue.

Economic Conditions in California

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Saturday, April 9, 1949

Mr. SHEPPARD. Mr. Speaker and Members of the House of Representatives, we of the West, particularly in the great State of California, feel it is incumbent upon us to call the attention of the membership of the House to the economic conditions which prevail in California.

First of major importance is the solution of the Colorado River Compact in which we are asking the Congress to give to us the equity of determination by reporting out and passing House Joint Resolution 3 which authorizes the Supreme Court to adjudicate the controversy which has been going on for the past 20 years between the States of California and Arizona. The respective representatives of both States, have, in my opinion, tried to work out a solution but have utterly failed due to different concepts of the basis of water distribution of the Colorado River emanating from the Colorado River Compact. We definitely feel we are entitled to go to the Supreme Court for adjudication of this problem in order that we may know in the final analysis what our water resources may be. If the Supreme Court should render an adverse opinion to California, then at least we would know what we have to do as the next step to provide the necessary water to preserve our economic existence.

Among other disturbing factors, since the war, California has had a terrific influx of population and the housing conditions to take care of the increased population are deplorable.

The old philosophy that the only economy of this country worth protecting is that of the Mideast and East is no longer adaptable to the reasonably successful economy of the West. We must have flood control, reclamation, and public power. The only way these projects can be made possible is through a sympathetic and realistic evaluation of our requirements by the membership of the Congress.

Because of outmoded concepts by some of our departments of Government, we are continuously being penalized. For example, the following is an editorial from the San Bernardino Daily Sun of March 18, 1949, which explains one aspect in which we are being penalized:

SOAKING THE WEST

California is a long way from the big markets of the country. So is the rest of the Pacific coast.

The West pays Uncle Sam a penalty for this geographical position.

This is how the penalty is applied: The Federal excise tax on freight and passenger fares involving California amounted to $32,970,000 in 1948; the same tax on communication was $49,634,000; the total, $682,604,000.

That is the figure for California. The total for the rest of the Pacific coast is not available.

No other section of the country pays such a proportion of these taxes. The reason the West pays through the nose is that the tax is a percentage of the transportation and the communication bills. Naturally it costs more to ship a car of freight from California to New York than from Chicago to New York. By the same token, the Californian who travels to Washington to transact business with his Government has to pay a far greater tax than the citizen of New York bound for the Nation's Capital on the same errand.

The West has protested vigorously to the Federal Government, but without result.

Now the California Public Utilities Commission demands the removal of the tax.

Says R. E. Mittelstaedt, president of the commission:

"The commission has gone on record in a formal resolution as announcing support of present efforts in Congress to repeal or modify the excise taxes on transportation and communications

"The taxes are 3 percent on freight shipments; 15 percent on passenger-fare transportation; and 8 to 25 percent on telephone, telegraph, cable, radio, and wire-equipment services.

"The commission charges that the present heavy wartime Federal excise taxes on transportation and communications when first imposed were reportedly designed for emergency revenue purposes and to lessen public uses of the taxed facilities."

The commission says that the 3-percent freight tax inevitably falls heavier upon all shipments originating long distances from the larger consumer markets, thus discriminating against all long-haul traffic. And, of course, the same is true of passenger-fare tax and the tax on messages which are sent over long distances.

Here is a job for the western Congressmen. They should inform Congress that the West cannot longer tolerate the discrimination that results from a percentage tax, and that either the tax measure be corrected or the West must support total repeal.

Mr. Speaker, the only consideration we are asking of the membership of the Congress is to give the West a fair and equitable participation in governmental functions that will permit the economy of the State of California to support its population; and it is obvious to anyone who is fair-minded that a request of this character is compatible with the legislative thinking the Congress of the United States has for a long time been giving to other States of the Union. We respectfully request your understanding and equitable consideration of our proposals.

The Problem of the Older Worker—Jobs Cannot Stop in the Forties

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, April 9, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks, I wish to include a report of a campaign to stimulate job opportunities for middle-aged and older workers that has been made by the Federal Employment Service. This report outlines a few concrete steps toward increasing employment opportunities for older workers. The report is primarily based on an educational program.

Providing jobs for older workers constitutes one of our most complex problems. We are all aware of this problem, and we realize that it is not a simple one to solve. The problem must be solved not on the basis of giving special privileges in the labor market to the older people and lessening job opportunities for the younger people.

During the war, when there was an acute labor shortage, the problem temporarily solved itself. Now that we have a certain amount of unemployment, the older people are the first to be cast aside, and that is why I feel that this article is most timely.

I wish to congratulate the Federal Employment Service for the constructive suggestions that they make and for the exploratory job that they have commenced. The phrase "Life begins at 40" must sound like a hollow mockery to a man who is thrown out of a job as being too old.

The report follows:

THE PROBLEM OF THE OLDER WORKER

During the war, the word "unemployable" went through a radical change in definition. Under the stress of wartime manpower demands, physically handicapped persons, workers of limited mental ability and other hard-to-place employees found, and held, a wide variety of jobs. Among these unemployable persons were a tremendous number of middle-aged and older people who had previously retired, willingly or otherwise, from the labor market. And with the others, the majority of the older workers had demonstrated their ability to handle jobs that had ordinarily been barred to them in the past.

With the end of the war the situation returned to normal and workers in these categories once again found employment avenues closed to them. Employment throughout most of the country was maintained at high levels, but in New York City the job market was uncertain and during 1947 there were between three and four hundred thousand workers unemployed at any one time.

The effect was immediately felt by workers over 45 years of age. Hiring standards reverted to prewar conditions, and older persons again encountered job discrimination based on age alone. Large numbers of these people who had proven their value as workers, found it hard, psychologically, to accept the fact that jobs were no longer readily available.

At FES, we felt an immediate trend away from the employment of mature persons. Job orders without age limitations fell sharply while the number of older applicants rose sharply. One year after VJ-day, our files showed that more than one-half of our applicants were over 45 years of age. And the incoming mail began to reflect the same trend, underlining some of the personal tragedies:

"I'm a woman 51 years old and a few weeks ago went job hunting. I called on a store which advertised for help and was told they wanted sales people not over 35 years old. It looks as if middle-aged people have no place in this world."

"I am 50 years of age, but faithful, loyal, dependable, and conscientious, as my employer will state. I want to make an honest living. It feels terrible to be discarded with that age. I am desperate. Please help me to find a position. I would appreciate it very, very much."

"I have been unemployed for a year and 5 months. Why? Wherever I go I am told I am too old. To be too old to work at 53 that's what happened to me—a sober, industrious, and loyal worker. I was good enough to work for one firm for 18 years."

"I find it very difficult to obtain work due to most places having an age limit of 40. I am in good health and lots of experience. At the present time I am ready to work at a minute's notice. My trouble is that I am 57."

"I am 52 years old, and after serving my country as an officer for 6 years, I find myself a victim of circumstances. An excellent service record, including letters of commendation from three-star generals, and valuable civilian experience seem of no help in finding a job. I have answered more than 40 advertisements, directly contacted more than 50 corporations, registered with numerous employment agencies, and tried to get my old job back. All to no avail * * * men who have served their country twice since 1915 are entitled to better jobs than messenger boys or elevator operators. I am now under the impression that life ends at 50. Unless industry realizes that we have something to offer, men in my category are licked. Let's salvage the men over 50. They deserve a break."

The conditions emphasized the need for a special effort. But before making any decisions, we felt that further investigation was required. Three questions seemed to be important:

1. How widespread was the problem?
2. What proof was there that older workers could competently handle jobs?
3. Why was industry reluctant to hire these people?

THE SCOPE OF THE PROBLEM

On the first question, regarding the size of the problem, we found rather quickly that the country was facing a social and economic issue of tremendous scope. As we examined the literature in the field it became apparent that our Nation is aging. Medical advances have performed miracles in prolonging man's life span, and as a consequence older people are becoming a larger proportion of our population.

Of four babies born in 1900, the statistics showed, only three reached age 25; of four babies born today, three will reach age 57. In 1860 there were 860,000 persons over 65; today the number is approximately 10,000,000; and in 1970 the figure will have risen to approximately 16,000,000. Population projections indicate that 30 years from now one-half of America's citizens will be over 45; 15 percent over 65.

In light of these figures it seems apparent that our present concept of age is outmoded. As a group, older people are healthier and better able to work than the similar group 50 years ago. And modern psychology points out clearly that chronological age does not measure the fitness of any one worker. Individuals differ in so many ways that age can be considered only one factor in the total make-up of the person.

As population problems go, the increase of older workers has affected the Nation with relative rapidity. In terms of planning, America will now have to make major social, economic, and industrial readjustments. Of necessity, planning for jobs will become more vital. By 1980 our working force will number 30,000,000 people more than the present labor pool. Unless jobs are forthcoming, the burden of care for unemployed older persons will fall on the shoulders of younger workers and the taxpayers. It is difficult to predict what this might mean in increased taxes and relief costs.

CAN OLDER WORKERS HANDLE JOBS?

On the second question, regarding the competency of older workers, our own wartime

experiences were rather positive. Exploring further, moreover, we examined a number of studies which proved clearly that older persons make good employees. The New York State Legislative Committee on Problems of the Aging, for example, reported that older workers, when compared with their juniors, were as productive, more experienced, more conscientious, less distracted, and absent less frequently. They found, in the words of the slogan we were to develop for our campaign, that "Experience, loyalty, skill, come with age."

Similarly, studies by the California Department of Industrial Relations, the United States Bureau of Labor Statistics, and others showed the same facts, proving as well that there was less turn-over in jobs among older persons, and that, according to studies of compensated accidents, they suffered fewer industrial casualties.

In general, the reports showed that the family responsibilities of mature persons made for greater stability. They indicated that age did not diminish efficiency except in jobs with heavy physical demands. More enlightened employers, the reports stated, preferred older workers in jobs calling for experience, judgment, and qualitative performance.

INDUSTRY'S POINT OF VIEW

Question 3, regarding industry's hesitance in hiring older workers, was not simply answered. The fact that age discrimination existed was fairly apparent; the reasons behind the prejudice, however, were not so clearly evident.

Employers whom we questioned gave a number of vague and inconclusive reasons to the effect that older workers could not do their jobs, would not fit in with younger people, could not be offered beginner's wages, could not be trained in new ways, and so on. Some generalized that older workers had passed the peak of efficiency; others stated that it was difficult for mature people to work under younger supervision; still others used the reverse of this argument and said that if older workers did not move on there would be no promotional possibilities for younger workers. Some employers insisted that it was difficult for them to hire older workers because of their particular type of pension plan. They contended that they felt obliged to pay the same retirement rates to a worker who could only give them a few years of service as well as to one who could give them 25 years of service.

Too frequently the reasons were based on scanty information and generalized thinking about older persons as stereotypes. Equally significant, we found, was the fact that a great deal of hiring is based on out-dated policies. Many firms continue employment practices established in the past when the worker of 45 or 50 had fewer productive years ahead of him than the worker of 45 or 50 today. Many of these policies have continued despite the present-day extension in life expectancy and improved physical well-being.

THE CAMPAIGN GOALS

The decision to embark on a campaign, and the goals at which to aim, grew from our investigations. As our plans developed, we realized that the primary objective should be an educational drive to acquaint employers with the positive values of hiring middle-aged and older workers. It was important, we believed, to have people know the facts; to point out that the hiring of mature persons was sound business practice and not charity. And the obvious related goal was the promotion of actual job opportunities for our applicants.

It is difficult, of course, to separate an educational campaign from a service program, and during the drive we worked toward both ends. We know, however, that the size of the problem made the finding of specific jobs a difficult task. For the future we hope to start a larger movement and involve many other facilities to carry on beyond the time of our relatively short campaign.

PROCEDURE

The major trade associations, as well as a number of prominent persons were invited to endorse the campaign and serve as honorary sponsors. The response was very gratifying indicating a vital interest in the problem. Gov. Thomas E. Dewey, Mayor William O'Dwyer, State Senator Thomas C. Desmond, Emil Schram, Jacob Potofsky, Julius Hochman, and many other eminent individuals gave support to the campaign. Twenty-five important trade organizations similarly responded.

A campaign slogan was created; the opening date of the campaign was set; and it was decided to concentrate the publicity in a 10-day period.

Fact sheets, newspaper releases, magazine stories, radio spot announcements, and other interpretive material were prepared for release, on a scheduled basis.

An employer field visiting schedule was drawn up; staff schedules were rearranged to allow for field visit time; and a campaign postal card, in cartoon format, was prepared for direct mailing to employers.

All of the preliminary activity crystallized on April 19, 1948, when the campaign was officially opened with a press conference held at the federation building. Speaking at the conference were: the president of the Federation of Jewish Philanthropies, Mr. Ralph A. Samuel; the president of FES, Mr. Walter A. Miller; the campaign chairman, Mr. Arnold S. Askin, and a prominent industrialist, Mr. Benjamin Lazrus, president of Benrus Watch Co.

On the day of the press conference and in the succeeding 10 days we mailed cards to thousands of employers, visited newspaper and magazine editors, called radio stations, sent staff members out on field visits and released our prepared material to all of the public relations media we could reach.

RESULTS

The response to the campaign was immediate, exceeding all our expectations. We felt, in fact, that we had struck an exposed nerve in our social and economic structure.

As an educational campaign, our primary goal, this is what happened:

More than 60 newspaper stories were devoted to the campaign. Every New York City daily paper carried an account of the drive and a large number of stories were printed in various parts of the country. We received letters from people in Chicago, Oakland, Montreal, and other cities, stating that they had read about the campaign in their local newspapers.

The New York Times, New York Sun, New York Post, Brooklyn Eagle, and others carried editorials supporting and commending the drive.

Newspaper columnists Sylvia Porter, Newbold Morris, George Sokolsky, Howard Rusk, and others wrote stories about the campaign and the job problems of older people.

The newspaper PM (now the New York Star) wrote an illustrated week-end feature in its magazine section, featuring an interview with Mr. Roland Baxt, the executive director of FES.

A number of business organizations inserted messages concerning the campaign in their newspaper advertising.

Stories on the drive were carried in more than a hundred trade papers including Women's Wear Daily, Printers' Ink, Law Journal, Laundry Age, National Jeweler, Men's Reporter, and similar publications.

Every New York radio station carried spot announcements directed to employers. Several nearby New Jersey stations also carried the message.

Over 30 leading radio programs gave attention to the drive, and to the problems of the aging. Among some of the well-known programs were: Mary Margaret McBride, Martha Deane, The Fitzgeralds, Arthur Godfrey, Hi-Jinx, and Kate Smith.

J. Raymond Walsh on his regular Sunday afternoon program, interviewed Mr. Baxt. Station WMCA sponsored a round-table forum composed of Gen. John Reed Kilpatrick, president, Madison Square Garden Corp.; Frieda S. Miller, Director of the Women's Bureau, United States Department of Labor; Dr. Robert W. Searle, executive secretary, Human Relations Committee of the Protestant Council; and Dr. Channing H. Tobias, director, Phelps Stokes fund. Walter A. Miller, president of FES, served as moderator.

Reports came in that various radio commentators and newscasters gave time to the campaign, although it was not possible to monitor all of the programs and we cannot say how many covered the story.

The Town Hall Meeting of the Air, over a national hook-up, devoted a meeting to the topic: Are you preparing to grow old successfully? In preparation for the program, Town Hall called FES for technical consultation, suggestions for speakers, subject content, and methods of presenting the basic ideas. During the broadcast, the moderator devoted a portion of his remarks to the FES campaign, noting that it was a concrete demonstration of what might be done in trying to solve the job problems of older workers.

An attractive poster, designed by professional copywriters and commercial artists, was displayed without charge in 3,100 positions on the subway platforms and suburban railroad cars. The city of New York also gave subway advertising space to the campaign by means of the Subway Sun, a car poster used for city projects and public-service programs.

A number of magazine articles, in whole or in part, covered the story of the campaign. Look magazine, Survey Graphic, Business Week, and others featured the material. The New York State Industrial Bulletin and Coronet magazine have written stories for early release. Writers for Life magazine, Ladies' Home Journal, Reader's Digest, and other national magazines have come to the agency for information for future stories. At least six or seven authors who are writing books on the problem requested further information on the drive.

The City Council of New York passed a resolution supporting the campaign, and Acting Mayor Vincent R. Impelletteri (in Mayor O'Dwyer's absence from the city) accepted the official campaign poster from Mr. Miller, the president of the FES board, and the campaign chairmen, Mr. Askin and Mrs. Schulte.

The March of Time produced a documentary film entitled "Life With Grandpa," containing a number of scenes which high light the FES campaign.

The National Association of Manufacturers, in cooperation with the United States Chamber of Commerce, organized a program in the interest of older workers. The effort was stimulated, in part, by the FES campaign during which we initiated conferences with officials in the industrial relations department of NAM.

It is always difficult to evaluate an educational campaign, but despite limited resources we were able to reach a listening and reading audience of huge proportions.. Town Hall, for example, is heard by an estimated 10,000,000 persons; March of Time is seen by

approximately 30,000,000 persons; and additional millions read about the campaigns either in the newspapers, the magazines, or on the subways and trains.

During the life of the campaign we placed a few hundred older workers, constituting a 68-percent increase in placements as contrasted with the preceding period. Anticipating only a limited immediate response to this objective, we were heartened by the sharp gain. However, despite the fact that we found jobs for a number of persons, 10 of our older applicants remained unemployed for every 1 we placed. The reaction, encouraging though it was, reinforced our original belief that we were attacking a very difficult situation.

Significantly, however, we learned later that our campaign was helpful to other vocational agencies, many of which were able to capitalize on our publicity in dealing with their own employer accounts. Veterans' Administration, for example, wrote to say that "reports from employment agencies, social organization, and guidance clinics indicate a favorable response to the program. They have noted a willingness on the part of employers to relax their age requirements. * * * The value of this campaign should not be measured only in terms of the number of job orders received. It has started a movement, the effects and ramifications of which will add to our productive capacity and richness as a Nation." From a number of other sources we received reinforcement of the opinions expressed in the VA letter.

Significant also, was the fact that the persons we placed stayed on their jobs. As a matter of routine, FES follows up with employers to find out whether its placements are satisfactory. And the results showed that the proportion of workers placed during the campaign who were still on their jobs was higher for older persons than for younger people placed over the same period of time.

As an anticipated byproduct of the campaign, we were immediately deluged with older job seekers. Although our publicity material was deliberately directed toward employers, we were flooded by thousands of applicants. From all parts of the country written requests for help further underscored the extent of the need.

Moreover, our experience revealed that most of the older applicants were between 45 and 55 years of age. Over 70 percent of the persons responding were in this age group. These were not aged people, but persons with skills and good work backgrounds who were rejected by employers primarily because of age. And yet most of them, physically, mentally, and emotionally, were ready and able to work.

GENERAL COMMENTARY

During the campaign some of the problems we had anticipated were confirmed. In addition, our experiences justify several observations:

1. We were attacking a problem that hit home. Reaction to the campaign was widespread and indicated that job difficulties for older persons are very real situations to a tremendous number of people. These include not only unemployed older workers but a larger number of younger people who find it necessary to support aged parents.

2. The lack of adequate employment often contributes to personal and social maladjustments, family conflict and related emotional difficulties. While satisfactory placement does not necessarily remove these problems, it frequently lessens their impact. This is true, of course, for all age groups, but with older persons there are the many additional complications that family life imposes.

3. The community was receptive to a demonstration campaign in the interest of older workers. We were given a great deal of cooperation, volunteer effort, radio and press assistance. If New York City, which has many worthy causes vying for attention, can respond so well to a drive of this kind, it seems probable that campaigns in smaller communities would receive similar support.

4. The campaign helped to shape positive community opinion regarding older persons. Future programs can succeed if based on wide public understanding, and the establishment of a climate of opinion will help materially in leading to direct action.

5. Employers, by and large, are not aware of the effectiveness of older workers when placed in the right jobs. There is a need to explode some of the misconceptions about mature persons and their potential value to industry.

6. Many employees claim that pension systems make it difficult for them to hire older workers. Others state that the newer pension plans do not cost them more for older workers than for younger persons. There seems to be some confusion not only in the manner in which pension systems operate but in related employee benefits including group insurance, health insurance and workmen's compensation.

7. Age, as a factor in employment, begins before the time for retirement. Varying with the occupation and the individual, age may be a stumbling block long before 65. Workers over 45 have problems in finding jobs and in achieving job promotions. Workers over 65 have job-finding problems but their situations are troubled by inadequate finances upon which to retire, enforced idleness and related difficulties.

8. The majority of workers have done little in making vocational plans for the future. Our experience with older applicants showed that as younger people they failed to recognize that they would ultimately face job discrimination because of age.

9. Older workers, out of necessity, are frequently willing to make major job compromises, often at great personal cost. The majority of our older applicants had expended considerable effort in job hunting, were able to work, and were not interested in relief grants. Many, however, were discouraged and had reached the point where they were willing to accept lower salaries and jobs below their maximum level of skill. Obviously this spells out wasted productive manpower, and can lead toward economic exploitation.

RECOMMENDATIONS

FES began the campaign for workers over 45 as a demonstration program, knowing that any real solution would require the energy of larger forces. With the impetus of the campaign, and the resultant communal interest, however, it seems appropriate to recommend further action.

The major recommendation, and the structure from which further recommendations might flow, is the establishment of a permanent citizen's committee to study the problem and plan long-range constructive steps.

Ultimately committees might be organized in the major communities of the Nation. Our immediate recommendation, however, is for an organization to consider the problem in New York City. The problem is acute in this area, the geographical unit is fairly large, and the city has a concentration of interests and people who could offer much constructive assistance.

The committee should be composed of outstanding persons representing industry, labor, Government, private organizations, and other major interests in the community. To be a truly communal organization, it should not be weighted in any one direction. Adequate financing will be required and might come from the groups involved or from foundation support.

Out of our experiences a number of projects recommend themselves as activities for the committee's consideration. Some of them might logically fall within the framework of the committee; others might be pursued independently. Briefly, they are as follows:

1. An industry-by-industry analysis of jobs to determine which of them are appropriate for middle-aged and older workers. Recognizing that individuals of the same age may differ markedly in their ability to handle the same job, it still seems important to set up general age guides when analyzing jobs in terms of work skills, physical ability, required training, and related factors. If this were done and the facts made available through widespread publicity, it would be simpler for employers to understand that many older workers can handle jobs in their plants.

2. A study into private pension systems with a view toward eliminating whatever present barriers there may be in the employment of older workers. Examination of this area might be broadened to include other insurance and compensation benefits.

3. An educational campaign among employers to—

(a) make the age of industrial retirement more flexible;

(b) establish plans to transfer older workers to less demanding jobs when they can no longer handle their usual tasks;

(c) allow for part-time employment when older workers find full-time work too difficult; and

(d) arrange for retraining to related positions within the worker's capacities.

4. An educational campaign among workers to help them realize that with age they must prepare for the eventuality of lessened job opportunities.

5. The development of special facilities within the public employment service to care for the vocational needs of older persons. This might take the form of a special office for older workers, special staff consultants within each office, or other devices that might be accommodated within the structure of the public agency.

6. The stimulation of adult education facilities to plan training programs geared to the needs of older persons.

7. Communication with trade associations, labor unions and related bodies to have them endorse and support drives in the interest of jobs for older workers.

8. A year around public relations program, highlighted by a Hire the Older Worker Week.

9. Some of the above recommendations are long-range goals; some may be achieved in the near future. In the immediate future, however, it seems possible for employment and guidance agencies to be of great assistance by devoting more attention to the job problems of older applicants.

From the viewpoint of an employment service there are many drawbacks to such action which must be carefully weighed. In the first place, it is entirely possible to lose employer accounts if an agency "sells" applicants whom employers feel do not meet their requirements. Secondly, any activity in this direction will mean a rapid rise in the number of older applicants, which may be difficult for the agency to absorb. And thirdly, the added time and effort that must go into this work means that each placement will cost the agency more per case than it will for younger and "better qualified" workers.

Despite these handicaps (and FES was aware of them all before launching its campaign) the gravity of the problem still suggests that employment and guidance agencies seriously consider a policy of additional service for older workers.

Throughout the country many of these agencies are members of coordinating councils and so may be able to press for joint communal effort. Some of them may be able to launch campaigns along the lines of the FES drive. In any case, it seems entirely feasible for the agencies to develop practical techniques for use in day-by-day operations.

Depending upon the size and kind of agency, it may be possible to do some of the following:

(a) Attempt to have age specifications left open on job orders.

(b) Plan in-service training sessions to orient staff workers regarding the problems of older applicants and the methods of working with them.

(c) Assign counselors to the special task of developing retraining plans suitable to the needs of older persons.

(d) Develop special job promotional letters high lighting qualified persons in the upper age brackets.

(e) Allocate staff time to promote jobs through telephone solicitation.

(f) Hold group meetings with older workers to discuss job-hunting techniques, methods of writing effective application letters, and related job-finding devices.

(g) Visit employers to stimulate the greater utilization of mature persons.

(h) Discuss the problems of older workers with labor unions to determine where and how they might be employed.

(i) Sponsor joint meetings with labor and management to explore the problem in specific fields of employment.

Depending upon local circumstances, many other approaches can be used. The important consideration is not one of mechanics or techniques, for these can be developed; it is rather the adoption of policies in the interest of a vital human problem. If vocational services take these steps, and develop positive interpretive programs, it will be easier for employers to understand that "experience, loyalty, skill—come with age."

The Only Rapid Road to Fortune

EXTENSION OF REMARKS

OF

HON. ALBERT THOMAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, April 9, 1949

Mr. THOMAS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Krock from a recent issue of the New York Times:

THE ONLY RAPID ROAD TO FORTUNE

(By Arthur Krock)

HOUSTON, TEX.—Texas is booming with the production of land crops, steel, chemicals, and the direct mineral yields of the earth, and public spending for necessities and luxuries is sustained despite a high-price level. But, though the old fortunes here were made in building, cotton, and ranching, the national tax structure now allows only one way for a citizen to become a new millionaire. That way is to strike oil.

When oil is found the rights to drill the land have usually cost very little; the owner of the land gets one-eighth of the value of the product; and Government taxation begins only with production. If the lessee keeps his rights he is entitled to charge off high percentages for depletion and depreciation; and, if he sells them after the strike, which he often does, he only pays the capital gains tax of 25 percent.

Under this system, the great oil fortunes have been made, and the opportunity remains. The story of Dan Harrison and Jim Abercrombie related here is typical; also that of Hugh Roy Cullen, whose vast benefactions for hospitals and for the struggle to deal with cancer are of national scope. Harrison and Abercrombie, with a small loan from a prosperous merchant of Houston, made what is known as the "Conroe strike." They were offered $50,000,000 for it, or $25,000,000 apiece. Harrison sold and netted about $18,000,000 after paying the capital gains tax. Abercrombie held on for a while and got over $50,000,000 for his half with a net of more than $40,000,000.

Nevertheless the two most prominent citizens of Houston, whose fame is international, made their fortunes wholly outside the oil business and still have no part in it. The career of one, Jesse H. Jones, was briefly sketched in this space yesterday. The other is Will L. Clayton, whose last official post was that of Under Secretary of State for Economic Affairs.

THE RISE OF MR. CLAYTON

With two members of the Anderson family and his brother, Mr. Clayton, at Oklahoma City in 1904, started the business of cotton merchanting which under the name of Anderson, Clayton has become one of the largest industries in the world. In those days Government taxes did not bite into corporate earnings, and the young cotton men, who began with a capital of $9,000 and made a profit of $10,000 the first year, were able to plow back the income from their enterprise. By 1914 the company was a very important one; in 1920 it was first in its field, and there it has remained, meanwhile expanding into cotton ginning and compressing, manufacture of cottonseed oil, construction of ports and docks, and the operation of large model farms, one of which is the source of the present fertility of the San Joaquin Valley in California. And like most other successful men in this region, Mr. Clayton and his partners set up a charitable foundation in the interest of public health.

As a cotton merchant Mr. Clayton traveled in many countries and acquired early the international viewpoint which has made him one of the chief architects of the current foreign policy of the United States. His observations in Europe and as our representative at the Geneva trade conference in 1945–1946 produced the memorandum to George C. Marshall, then Secretary of State, which was one of the principal bases of the Marshall plan. And now, out of office, he is concentrating on the Habana Charter of the International Trade Organization, soon up for congressional approval, and on the Atlantic Union which he believes is the logical and necessary sequel to the North Atlantic Pact and all our foreign policy steps since the neutrality laws of the thirties were repealed and lend-lease was authorized by Congress.

A HOUSTON TRAIT

Mr. Clayton was summoned to Washington by Mr. Jones in 1940 to take charge of the prewar stock piling of critical materials, and from that time until recently he has been a distinguished Government servant in the field of economic foreign policy. It was he who, returning from Geneva when Congress raised the tariff on wool in 1946, induced President Truman to veto it as a reversal of established policy. By that action, Mr. Clayton observes, the President proved himself an executive of the greatest courage with full understanding of world conditions and needs.

He said today that the I. T. O. Charter, if accepted by Congress, will commit the world to principles and policies which will return it to multilateral, nondiscriminatory trade, that any other path is the road to destruction. This view Mr. Clayton shares with Cordell Hull, former Secretary of State, with whom he has long been associated.

Like most of the unusual number of Houston citizens who have engaged importantly in national and international affairs, Mr. Clayton has returned to residence in his home city. Perhaps that trait helps to explain why he, Mr. Jones, and those other prominent Houstonians who reveal it have attained such high places and why they have built a dynamic city. The President describes men who hold office in Washington and never want to go back home as sufferers from "Potomac fever." There are no signs of Potomac fever along the banks of Buffalo Bayou, which Houston enterprise transformed into an oceangoing ship canal that brings the Gulf of Mexico to the foot of Main Street.

The War of Food

EXTENSION OF REMARKS

OF

HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, April 9, 1949

Mr. McCARTHY. Mr. Speaker, the question of nutrition, of an adequate food supply, not only in volume but in terms of fundamental nutritional values, cannot be underestimated. The foundation of a good nutrition is a good, healthy soil.

Under leave to extend my remarks I include an excerpt of the following article from the 1949 edition of the Old Farmer's Almanac:

SCIENTISTS AT WORK

(Courtesy (in part)—U. S. Department of Agriculture)

1. THE WAR OF FOOD

While much of the world remains unable to feed itself, while our population and the world's (despite famine, and disease, and war) increases as the amount of arable land and its fertility decreases, the need for bigger and better crops becomes most urgent. We must, it is argued, therefore wage war on all enemies of crops—especially the insects. This means more insecticides. The number of these that have been experimented with is scarcely believable. In just the last 5 years no less than 10,000 chemical compounds have been tested. We used to think of basic insect killers as being kerosene, pyrethrum, the arsenicals, nicotine, and rotenone, but as this is written there are no less than eight new ones so deadly that we might well throw all the old ones away and not miss them at all. It is estimated that crop losses in the future should be cut no less than 25 percent and perhaps by as much as 75 percent. Coupled with this is the fact that many plant varieties resistant to diseases and insects are being developed. Agricultural scientists generally believe that the deadly new insecticides (and fungicides) and these new plant varieties will be important factors in winning the war of food.

But they are not the chief factors. We are turning to these fungicides and insecticides as an emergency measure, and should recognize that they are in no sense a cure-all for our real trouble. Indeed they may in the long run be getting us into more and more trouble, since it can be argued that the more we use of them the more we may have to use. It is our soil that is sick. Over the

years we have relentlessly been taking from it more than we could put back in those minerals that make for healthy, healthful crops. There are those who believe that a thoroughly natural, normal soil will produce crops needing no fungicides and insecticides at all since they will not be attacked by insects and disease. All of us can at least go along with them in this hope, and certainly agree that the preservation and restoration of our soil is the first essential. Unfortunately, restoration cannot be had with a snap of the fingers, and we must fight ignorance, careless farming methods, and lack of fertilizers to really preserve what we have left. Soil building can be done organically with compost methods, but on a large scale this, at the writing, appears a slow, terribly laborious job—excellent though it be. Our commercial fertilizers are "the quick way," if we know the right fertilizers to use in the right amounts. Almost invariably we underfertilize or put on mixtures that are not best for the balance of our soils. And, of course, we have had and still have a serious lack of nitrates.

Any measures to immediately protect our crops are necessary; therefore, the use of fungicides and insecticides. But the basic long-range battle remains to win back the fertility of our soil.

We are up against a vicious and apparently inevitable circle: a rapidly increasing world population (despite wars and famine), greater demands for more and more food from decreasing croplands most of which become less fertile each year.

Here are some population and food statistics for the United States. The population in 1918 was 105,000,000, in 1945 it was 145,000,000 and it is not unreasonable to suppose that in 1960 we may see 155,000,000 and 10,000,000 more in 1990.

Nutritionists estimate that it takes about 3 acres of land to provide each American with food and clothing to maintain an average American standard of living. At the present time we have about 460,000,000 acres of cropland, and that sounds like a lot, but in the next few years a point may be reached where there are less than 3 acres of cropland for everyone. We believe farmers and scientists and manufacturers working together will lick the problem, but in the meanwhile it leaves us with plenty to think about.

The Big Rat Hole—United States Policy in Greece Scathed as Wasteful in Secret Document

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, April 9, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles which were written by Robert S. Allen and appeared in the Detroit News:

THE BIG RAT HOLE—UNITED STATES POLICY IN GREECE SCATHED AS WASTEFUL IN SECRET DOCUMENT

(By Robert S. Allen)

WASHINGTON, April 6.—Scathing criticism of United States aid policies and officials in Greece is contained in an unpublished report in the hands of the Joint Congressional Committee on Foreign Economic Cooperation.

This committee is known popularly as the watchdog committee on the Marshall plan. The highly denunciatory report was prepared by Louis E. Wyman, the committee's counsel, following an extensive personal survey in Greece. Mimeographed copies of Wyman's report have been received by all members of the committee.

Senator MCCARRAN, Democrat, of Nevada, chairman of the committee, stated that no decision has yet been made on the publication of the Wyman report.

Wyman's blunt blasts at United States officials and Greek authorities echo criticisms contained in another official report on Greece submitted to the State Department several months ago. This report, revealed exclusively by the North American Newspaper Alliance in a series of articles, declared that "certain major rat holes" are seriously impairing United States-sponsored recovery and anti-Communist military operations in Greece.

REGIME DENOUNCED

The tenor of Wyman's numerous and detailed charges is summed up in his flat statement, "we are not getting our money's worth out of our ECA dollars in Greece. There is grave danger that our efforts to aid Greece may slip into a situation of outright subsidy of an unsound internal administration."

Wyman denounces the Greek Government as incompetent, reactionary, and obstructive. He declares that it does not represent the people, and has been a constant thorn in the side of United States officials.

The latter are also caustically criticized. Wyman declares that there are too many United States officials in Greece, that many are inadequate, and that they live and act in a disruptively ostentatious manner.

"It is impossible to avoid the impression of confusion, excesses in personnel and program planning, and lack of central direction in the administration of our Greek program," Wyman asserts. "A substantial percentage of the American personnel is paid in excess of $10,000 a year, and (receive) an additional $7,000 rental and food allowance.

TOO MUCH SWANK

There is too much American ostentation in Greece, including specifically, too many new automobiles being driven by chauffeurs, and too much pomp, circumstance, and privilege for Americans, who move about well-fed, with good clothes and expensive cars, in a country where poverty and tragedy are on all sides."

In contrast to this display of opulence, Wyman reports the direst need and poverty among the great mass of Greeks.

"There was practically no heat when I was in Athens," he states, "and very little decent food, except at the American Mission Hotel and at expensive local establishments. Everywhere in the city crowds milled around in rags and tatters. There is no such thing as a middle class in Greece. In this nation of 7,500,000 people, approximately 1,800 individuals have wealth. The remainder are very poor."

Wyman states flatly that the Greek Government is not representative of the Greek people and does not have their confidence and support. It is these factors, he holds, which are breeding despair and turmoil in Greece.

FEW REBELS ARE REDS

"It is impossible to win in Greece by a purely military operation," Wyman declares. "Nor will money alone buy the Greek people. It is apparent that a purely military operation without a sound economic foundation, without a 'cause' for the Greek people, cannot succeed in eliminating the guerrillas.

"Until some visible evidence is given the Greek people that their government offers them something to make life more bearable than a miserable dole, many of them will remain susceptible to the appeals of the guerrilla forces."

UNITED STATES URGED TO FORCE BETTER GREEK REGIME—"MUST GET TOUGH IN ATHENS TO GET VITAL REFORMS," WYMAN TELLS CONGRESS UNIT

(By Robert S. Allen)

WASHINGTON, April 7.—Drastic changes in both the Greek Government and the United States administration in Greece are vigorously recommended in an unpublished report submitted to the Joint Congressional Committee on Foreign Economic Cooperation.

High lights of this sensationally critical report of United States aid operations in Greece were exclusively revealed Wednesday by the North American Newspaper Alliance. The report was written by Louis E. Wyman, the committee's counsel, following an extensive personal survey in Greece.

Members of the committee, popularly known as the "watchdog committee on the Marshall plan," have received mimeographed copies of Wyman's findings. It is reliably understood that publication of the scathing report has been held up at the instigation of the State Department and the ECA.

NO PROGRESS MADE

Wyman's caustic comments on United States and Greek officials are a repetition of similar criticism in another official report on Greece submitted to the State Department several months ago. This report also revealed exclusively by the North American Newspaper Alliance, characterized the Greek aid program as a "major rathole."

This official report never has been made public. But meantime, President Truman has released a State Department report on Greece painting a very optimistic picture of the progress of the aid program. And the State Department has privately indicated that it will seek another $400,000,000 for this program.

Wyman's report declares flatly that no real economic or military progress is being made in Greece.

RECOMMENDATIONS LISTED

Wyman states flatly "we are not getting our money's worth in Greece," and holds there is no hope of doing so unless a number of sweeping reforms are instituted. His chief recommendations are as follows:

1. Putting an end to the incredibly wasteful and corrupt practices within the present Greek Government.

2. Setting up a fair and reasonably representative Greek Government.

3. Much firmer American control of the policies and personnel of the Greek Government.

4. Cessation of Communist-inspired aid to Greek guerrillas from the Balkan border, either through the United Nations or, if that is impossible, by outright western power inspection.

5. The establishment of a single United States agency for aid to Greece, making the military, economic, and political an integrated operation.

6. Reduction of the number of American personnel in Greece, with emphasis on fewer but more competent administrators.

"For more than a year and a half," Wyman says in support of his recommendations, "several hundred Americans have been spending nearly $1,000,000 a day in Greece for peace and economic stability. Satisfactory progress toward neither objective has been gained. United States economic aid to Greece must not be permitted to earn us the title of 'Uncle WPA.'"

REGIME MUST GO

Wyman holds that no real progress can be hoped for in Greece as long as the present Government is kept in power. He is unspar-

ing in his condemnation of this Government. He declares that it is incompetent, corrupt, obstructive, and totally lacking in popular support.

"The continuation of the Greek Government as presently constituted," Wyman declares, "with its waste, graft, inefficiency, and narrow representation, is overwhelmingly prejudicial to the attainment of ECA objectives."

A Government reorganization, with United States support, is urgently necessary to achieve a representative government composed of able and younger administrators.

Wyman is sharply critical of both the State Department and the United States Embassy in Greece.

"Having the political side of American policy in Greece in the hands of the State Department," Wyman asserts, "practically sterilizes the powerful inductive force of future ECA dollars to accomplish in the political arena by economic duress, if necessary, the fundamental political reforms without which continued aid of either an economic or military nature can only succeed in perpetuating an unsound situation. Political control in the United States Embassy in Athens has demonstrably harmed ECA's Greek mission leadership."

Restoring the Panama Canal Toll Exemption for Coastwise Trade

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. RANKIN. Mr. Speaker, on February 8 I introduced a bill, H. R. 2511, to restore the Panama Canal toll exemptions for American vessels engaged in the coastwise trade of the United States.

We built the Panama Canal and paid for it. We are now maintaining it. Yet we are forced to bear an unreasonable burden in the payment of tolls for our coastwise trade.

Remember that no foreign vessel can do a coastwise trade. Therefore, restoring the Canal toll exemptions for our vessels doing a coastwise trade would not affect any foreign power that now uses the Canal, for the simple reason that they cannot compete with our own vessels doing a coastwise trade for the reason that they cannot engage in our coastwise trade.

The American people have been deprived of the benefits they were given to understand they would enjoy by building this great Canal. Those benefits should be restored, especially insofar as our coastwise trade is concerned.

In this connection I am inserting a statement by Hon. Charles L. Wheeler, of San Francisco, Calif., which I trust every Member of Congress will take the time to read.

The matter referred to follows:

THE CASE AGAINST PRESENT PANAMA CANAL TOLLS

(By Charles L. Wheeler)

The urgent need for a reduction in the tolls charged by the Panama Canal has long been evident; only recently has the possibility of effecting a change been more than remote. A month ago, House Resolution 44 empowered the Committee on Merchant Marine and Fisheries to examine tolls charged by the Panama Canal with particular attention to proper accounting and allocation of costs. Such examination may well be the forerunner to an intelligent and far-sighted revision of tolls, if the most is made of the present opportunity.

A few figures will prove the importance of Canal tolls not only to the shipping industry but to the economy of the coastal States as well.

For the fiscal year ending June 30, 1947, total tolls collected amounted to $17,596,602. Of this amount 51.1 percent was paid by American-flag ships. It is equally significant that 26 percent of the entire tolls bill was charged against our intercoastal lines. Of this amount, iron and steel manufactures moving intercoastally paid tolls amounting to $913,197 during 1947. Lumber and mill products moving to the east coast from the Northwest were charged $872,744 for the same year, and canned-food products contributed a total of $335,508.

The unhappy plight of the intercoastal trade is well known. Today the volume of shipping on that route is 40 percent of the prewar figure—and that 40 percent is operating at a loss. It is estimated that the intercoastal carriers lost a total of $7,500,000 in maintaining operations during the period July 1, 1947, to December 31, 1948.

At present rates, the Canal toll for the intercoastal round voyage of a C–3 is $13,826, or almost as much as the entire monthly wage bill including overtime and all other supplemental payments. Fourteen thousand dollars a voyage can mean the difference between the revival of the intercoastal trade to its prewar level, or its gradual abandonment in the face of mounting losses.

The intercoastal trade is not alone in the difficulties it is experiencing. Our entire merchant marine is finding it increasingly difficult to meet the renewed competition of low-cost foreign-flag operators. And in two world wars it has been our merchant marine that has supplied the vital nucleus of trained personnel and available shipping which are invaluable in time of emergency. It would be false economy to let this part of our economy deteriorate, when its importance from the standpoint of national defense is beyond question.

There are two general misconceptions with regard to the Canal, and the first of them revolves around the question of tolls. It is widely believed that the tolls charged are barely sufficient to cover the actual out-of-pocket costs incident to Canal operation. Actually, the reverse is true. The Governor's report for fiscal 1948, just released, indicates a net revenue from operation of the Canal and its business units of $2,622,672.75. Such sizable profits are not out of line with past performance.

Over the life of the Canal, toll revenues have exceeded expenses attributable to transiting by over $274,000,000. To put it another way, commercial tolls, plus tolls forgiven on Government vessels, have been sufficient to pay all operating and maintenance expenses on the basic Canal and its cost of construction, with a profit remaining of over $2,000,000.

The matter of forgiven tolls is worth special attention. From the first, American warships have been allowed to transit the Canal without charge. The result has been an undercollection averaging $1,000,000 annually from 1914 to 1942. A further undercollection of approximately $43,000,000 occurred between 1942 and 1947 for a total short-charge of some $73,000,000 to date. The result has been the curious spectacle of a Canal built primarily for national defense with nearly 100 percent of its capital and operating costs charged against commercial shippers.

The Kiel Canal affords the closest parallel to the Panama Canal in origin and employment. Built primarily to increase the mobility of the German Navy, its employment by commercial shipping was always secondary. Shipping tolls prior to the First World War paid for less than 1 percent of the initial cost of construction. In 1919, the capital investment was written off as a military expenditure and subsequent tolls reflected nothing but operating costs and such sums as might be needed for commercial betterments.

It is true that the accounts of the Canal purport to show an accumulated loss from operation, but this result is arrived at only through application of an interest charge at the rate of 3 percent of the total cost of the Canal. This charge is at present in excess of $15,000,000 annually.

It is manifestly unfair to make this charge solely on the basis of commercial use, when the semi-military nature of the Canal is self-evident. Needless to say, such practice is unique as far as our Government is concerned.

The second general misconception concerning the Canal is based on the Hay-Pauncefote Treaty. The object of the treaty was simply to establish certain principles of neutrality, but it is supposed to contain a specific guarantee that our intercoastal vessels will never be exempt from tolls. No such guarantee exists, though through constant repetition the originators of this myth have probably come to believe it themselves.

The wording of the treaty itself is worth examining. Article III, which is customarily cited as bearing on the intercoastal toll position, merely states that "there shall be no discrimination against any nation—in respect of the conditions or charges of traffic." But the intercoastal movement of cargoes is exclusively an internal transportation affair, open only to American vessels. Toll concessions granted in this trade could by no stretch of the imagination be considered discriminatory against foreign shipping. Congress followed an identical line of reasoning in the Panama Canal Act of 1912, which specifically exempted our intercoastal vessels from tolls. Although this legislation was rescinded 2 years later, Congress took pains to reserve all treaty rights in future toll legislation.

Many suggestions have been made for restoring a measure of vitality to our intercoastal shipping. The most effective immediate assistance would be through the elimination of all tolls on transits of intercoastal domestic vessels. The forgiven tolls should be treated as revenue as are forgiven tolls on Government vessels, and would not, therefore, act as a burden on other vessels using the Canal.

It is clear that there is no treaty obligation against removing these tolls, and that considerations of national defense and our domestic economy both underline the necessity for such action.

In the past, tolls have been fixed without regard to the fact that the Canal is one of our greatest military assets. Its worth from the standpoint of national defense would at the very least equal its commercial value. If such a 50–50 division were made, it follows that present tolls could be cut 40 percent and still leave a wide operating margin.

Such a toll reduction is more than justified by past earnings of the Canal, by its semi-military nature, and by the fact that 51 cents out of every dollar of tolls collected comes at present from the pockets of our own hard-pressed shipping industry.

Finally, there is every reason to believe that reduced tolls would result in increased traffic through the Canal, and that actual loss of revenue would accordingly be decreased.

It has taken years of effort on the part of the shipping industry and a serious depression in our domestic steamship operations to obtain the investigation called for in H. R. 44. We must not let our hard-won opportunity slip through our fingers; we must push most vigorously for the removal of intercoastal tolls, and for the reduction of other tolls by at least 40 percent.

There is not much time to secure this action, for the report of the investigating committee must be submitted prior to June 30, 1949.

Favorable results will be obtained only if the civic organizations, port authorities, importers, exporters, community interests, labor and management groups, propeller clubs, and similar organizations in the principal coastal cities band together in demanding a revision of tolls while it is still not too late to help our shipping industry.

Federal Power Commission Betrays Trust

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, April 9, 1949

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article which appears in Trainman News, issue of April 9, 1949:

FPC BETRAYS TRUST

The Federal Power Commission is guilty of grave betrayal of public interest in approving the sale of $60,000,000 of Texas Gas Transmission Corp. bonds without competitive bidding.

The shocking truth is that when FPC permitted the private sale of these bonds to a handful of mammoth eastern insurance companies it had before it the assurance of a Middle Western banking group that a saving to gas consumers of at least $3,000,000 would be made if the bonds were sold at sealed bids.

The equally shocking truth is that FPC simultaneously approved the payment of the fabulous fee of $235,000 to the Wall Street banking house of Dillon, Read & Co. for "introducing" the gas company to the insurance company buyers of the bonds.

The Commissioners who perpetrated this double violation of their sacred public trust are appointed by the President. It is time Mr. Truman took his big stick to these agencies of his to make them quit selling the country down the river to Wall Street.

Warsaw Bible Shop Reports 130,000 Sales in 10 Months

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Saturday, April 9, 1949

Mr. SADOWSKI. Mr. Speaker, undear leave to extend my remarks, I wish to include an article that appeared in the Christian Science Monitor, stating that the British and Foreign Bible Society has sold in the city of Warsaw over 130,000 Bibles in the last 10 months.

WARSAW BIBLE SHOP REPORTS 130,000 SALES IN 10 MONTHS

WARSAW.—In the midst of the devastation and ruins of Warsaw is a little shop, clean and neat, run by the British and Foreign Bible Society. The manager, a Pole, reported in perfect English that in 10 months over 130,000 Bibles had been sold.

By that he meant New Testaments and "Portions," or extracts from the Bible. He pointed to the almost empty shelves and said he was awaiting r new consignment from England.

Ninety-nine percent of the Bibles sold were in Polish and the rest in English.

In 1563 the Bible was printed in the Polish language from the original Hebrew and Greek, at Brest-Litovsk; this version is called the "Brest" Bible. Another translation from the original, printed in Danzig in 1632, is called the "Danzig" Bible.

REVISION IN 1881

As the Polish language had changed somewhat, this translation was revised in 1881, and the revised version is the one in current use. Since the printing plates of this translation were destroyed in Warsaw during the war, the Bible is now printed in England. Soon it will be printed in Poland—first the New Testament only, later the full Bible.

The Protestants in Poland are organizing the Polish Protestant Council, which includes Methodists, Baptists, Lutherans, Reformed, and Evangelicals. Among the Protestants is also a small group of Christian Scientists.

And another article which appeared in the same issue of the Christian Science Monitor, Thursday, April 7, written by R. H. Markham, in which he states:

Postwar Poland has a more uniform population than any other state in eastern Europe both from the ethnological and religious point of view. An overwhelming majority of the inhabitants are Poles and 96 percent of these are nominal or practicing Roman Catholics.

So far, the Roman Catholic Church in Poland has been subjected to less onerous pressure or persecution than is the case in any other Communist-ruled land.

The 210,000 Protestants enjoy more freedom there than anywhere else in eastern Europe.

METHODISTS CITE GROWTH

The head of the Methodist Church in Poland, the Reverend Konstanty Najder, is quoted by the Chicago Daily News as saying there are now 17,000 adult Methodist Church members in Poland, in addition to 30,000 children and youth. They are served by about 60 churches. Pastor Najder is quoted as saying that before the war there were fewer than 4,000 Methodists in Poland.

There are 10,000 Calvinists or Presbyterians, whose origin dates from reformation years, according to Polish sources.

Semiofficial Polish sources report 13,000 Baptists, mostly in the new areas. The number is said to be growing.

There are 10,000 Jehovah's Witnesses and 5,000 Adventists, spokesmen for new Poland say. Also 3,000 Unitarians whose movement dates from reformation years.

ISSUE MANY PAMPHLETS

These churches, as well as Roman Catholic organizations, issue religious pamphlets, books, and periodicals.

A semiofficial government source says 10 percent of the books appearing in Poland are produced by religious institutions. More than 400 books and pamphlets of a religious nature appear yearly, the regime says, as well as a number of weekly and monthly papers, mostly written by Roman Catholics.

Church services, including outdoor processions, are held regularly. Some religious schools, including theological seminaries, function, and religious subjects are taught in public schools.

In a word, Roman Catholic churches continue to hold mass, perform religious ministrations, issue religious literature and maintain some schools, while Protestants are free from many restrictions in the strictly defined field of worship or evangelization. In this sphere non-Lutheran Protestants are freer than before the war.

Mr. Speaker, this should refute the charges made by shallow-minded people that the Poles are Communists.

I wonder how many Bibles were sold in Berlin last year, and whether the Mein Kampf is still their official bible?

Russia Can Now Import From 42 Countries

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. REED of New York. Mr. Speaker, I have just received from the Polish Research and Information Service, an agent of the Polish Government, a most revealing document relating to Poland's world trade. Inasmuch as I cannot, under the rules of the House, have the illustrations appearing in the document reproduced in the CONGRESSIONAL RECORD, I am including under leave to extend heretofore granted only the factual statements appearing in it:

Poland's foreign trade has recovered from the ruins of war so rapidly that in 1948 it was more than double that of prewar 1938. Poland is now not only a major supplier to her western neighbors, but also a fast-expanding market. The growing reach and volume of Polish commerce abroad is indicated by the drop of the U. S. S. R.'s share of the total to little more than 20 percent in 1948, against more than 90 percent in 1945.

Poland's world trade in 1938 was $468,900,000, in 1945 it was $71,800,000, in 1946 it was $270,700,000, in 1947 it was $547,400,000, and in 1948 it was $1,000,000,000. These figures are exclusive of army surplus purchases.

Poland is buying: Needs machinery, equipment, certain industrial raw materials, and credits.

Poland is selling: Offers coal, textiles, iron, metal products, timber and furniture, chemical products, glass, china, newsprint, and foods to United States.

Poland's world trade report goes on to say:

The rapid increase of imports is due to the extraordinary progress in national recovery from war devastion, and to basic trade policy. Imports have grown as follows:

1945	$33,870,000
1946	143,550,000
1947	301,480,000
1948	509,511,000

Exports—

Says the report—

have grown as spectacularly as imports. Here are the figures:

Exports in 1945 were $38,010,000; in 1946, exports were $127,240,000; in 1947 exports were $245,880,000, and in 1948 exports were $528,134,000.

The compelling reason for the successful effort to increase exports is that in view of

the shortage of gold and foreign-exchange reserves, Poland's total needs from abroad for recovery and well-being can only be met by what Poland sells.

Poland has always had much to offer that other countries need, above all coal, which was the first postwar export to revive quickly. Now, although total coal exports are growing, the proportion of coal in the over-all picture is steadily diminishing.

In 1945 and 1946, exports were mostly industrial. Besides coal, there were cement, soda, cotton and wool textiles, zinc, iron, and steel products. In 1947, agricultural products, which in 1938 accounted for 40 percent of all Polish exports, appeared again in export lists, as farming began to recover.

Coal and coke exports

	1945	1946	1947
Millions of tons	3.64	14.60	18.60
Percent of total exports, by value	82.25	67.4	62.9

The changing character of exports

	1938	1946	1947
	Percent	*Percent*	*Percent*
Coal and coke	19.1	67.4	62.9
Textiles	3.4	9.2	13.7
Agricultural	40.1	2.2	5.4
Iron and steel products	8.1	6.6	5.2
Glass and ceramics	.1	.9	2.5

The other outstanding development in exports has been their rapid diversification geographically since 1945, when the U. S. S. R. was almost the sole customer.

In 1945, Poland had trade contracts with 6 nearby countries; by the end of 1946, with 23; and in 1948, with 42 countries in all continents.

Especially because the U. S. S. R. could supply capital goods and raw materials, which were scarce elsewhere in Europe, Polish-Soviet trade has boomed since the war, whereas it was minimal before 1939. As rehabilitation of transport and production has increased Poland's trade elsewhere, the importance of exchanges with the U. S. S. R. has proportionately decreased, although it shows an over-all increase:

	U. S. S. R. share of all Polish imports	U. S. S. R. share of all Polish exports
	Percent	*Percent*
1936–38	1.1	0.4
1945	90.6	93.4
1946	70.4	49.4
1947	26.5	28.6
1948	[1] 21.5	----------

[1] Estimate of all trade.

The Scandinavian countries, partially replacing Germany, were next, in increased volume of trade with Poland as compared to prewar, supplying iron ore, machinery, etc., in return for Polish coal, coke, textiles, and chemicals.

Countries of eastern Europe accounted for 46 percent of total Polish 1948 trade. Western European trade had great impetus in 1948.

Overseas trade connections were resumed in 1946 and in 1947, especially with the United States of America, Latin America, and the Far East.

Trade agreements with other countries have been a conspicuous feature of Polish international trade, because of the general lack of foreign exchange.

Immediately after the war, these agreements were short-term and on a clearing basis providing simply for exchanges of goods in a balance-free relationship for both countries.

More recently, particularly since 1947, the agreements have been longer-term, covering a period of years, rather than 12 months only as before, and two new features have appeared in them. 1. Poland has been granted special credits, accumulated through Polish sales to the country involved, against which Poland may buy or order. This applied where the other country was mainly a supplier of producers' goods and thus could not deliver as fast or steadily as Poland. 2. A further development has been partial payment to Poland in foreign exchange, enabling Polish purchases elsewhere.

Outstanding trade agreements are—

With Great Britain, signed January 14, 1949, for a 5-year term and exchange of goods to a total value of more than $1,000,000,000. Poland will receive: Wool (Britain giving credits for purchases in British Dominions), rubber, crude oil, copper goods, capital equipment, tires, dyestuffs, and others. Britain will receive increasing amounts of bacon, eggs, lumber, poultry, fish, berries, and frozen fruit—50,000 tons annually of bacon by 1950 and 480,000,000 eggs annually at the end of the 5-year period, from Poland. 3,000–5,000 tons of rubber and $40,000,000 worth of wool from Britain.

With Sweden, under which Poland received capital equipment, orders being placed immediately.

With the Netherlands and Czechoslovakia similarly providing for acquisition of capital equipment.

Careful, advance planning is another essential element of Polish trade.

The advent of the 3-year plan on September 21, 1946 (see Poland's Recovery, Polish Research and Information Service, September 1948), made it both possible and necessary to develop a meticulous plan covering foreign trade.

The foreign-trade plan is the basic guide in negotiation of agreements and in making all purchases. It is based on the larger national plan covering all investment, production, consumption, and sales. The larger plan determines the export potential on which imports, and thus much of the whole national development, depend.

Truman's Fourth-Point Program as Compared With Earl Browder's Program

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, April 9, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, it is strange to find and realize that the fourth point of President Truman's bold new program for undeveloped areas is strikingly similar to a program announced by Earl Browder in a book which he published 5 years ago entitled "Tehran: Our Path in War and Peace."

We are indebted, Mr. Speaker, to Mr. Henry Hazlitt, editor of Business Tides, in the current issue of News Week. Mr. Hazlitt is an outstanding economist and his column is widely read throughout the country. This article should be of great interest to Members of the House. As part of my remarks, I am including it herein:

In his inaugural address President Truman announced what has now become the famous fourth point—a bold new program for underdeveloped areas, a program to foster capital investment in areas needing development, to greatly increase the industrial activity in other nations, and to raise substantially their standards of living.

No sooner was this announced than the brains of Washington bureaucrats began to bubble with grandiose schemes for giving away still more of the American taxpayers' money to foreign lands. Our Government representative put the idea before the Economic and Social Council of the United Nations, which adopted a resolution approving it. Now the ECA has set up a Colonial Development Division. And Deputy Administrator Bruce says that this new Division is intended to carry out point 4.

Before we go further with this idea it may be instructive to look into its origin. I do not know who sold the idea to Mr. Truman, but at least the record shows clearly where the idea came from in the first place. The following quotations are from a book published in 1944:

"America can underwrite a gigantic program of the industrialization of Africa to be launched immediately. * * * It must initiate a general and steady rise in the standard of life of the African peoples.

"Closely related socially, economically, and politically with Africa are the near-eastern countries of Arabia, Iraq, Iran, Syria, Lebanon, Palestine, and Transjordan. * * * Here also a broad regional program of economic development is called for.

"What is clearly demanded by the situation is that the United States take the lead in proposing a common program of economic development of the Latin-American countries. * * * For Latin America [such a program] opens the door for an immense leap ahead in progress.

"For the United States especially it contributes a large part of the answer to that all-important quesion as to whether we shall be able to keep our national economy in operation.

"The Government can do it, if free enterprise fails to meet the challenge and bogs down on the job.

"Our Government can create a series of giant industrial development corporations, each in partnership with some other government or group of governments, and set them to work upon large-scale plans of railroad and highway building, agricultural and industrial development, and all-round modernization in all the devastated and undeveloped areas of the world. America has the skilled technicians capable of producing the plans for such projects, sufficient to get them under way, within a 6-month period of time after a decision is made. * * *

"On a world scale the combined projects could be self-liquidating in the period of a generation. They would become the best investments the American capitalist class has ever made in its whole history."

The book in which this proposal appeared 5 years ago was Tehran: Our Path in War and Peace (International Publishers). And the name of the author was Earl Browder, then still officially head of the American branch of the Communist Party (temporarily calling itself the Communist Political Association).

We need not point out here everything that is wrong with this proposal on political and economic grounds. We need not point out, for example, that every million dollars of capital we send abroad sets back our own capital development by just that much. And this at a time when President Truman himself insists that at least $50,000,000,000 should be invested by industry to improve and expand our [own] productive facilities over the next few years, and when he complains that our own steel, oil, and electrical industries are not being expanded fast enough to suit him.

It is enough to point out for the moment that the idea for the bold new program comes straight out of the book of the then head of the Communist Party in this country.

Basing-Point Pricing System Opposed by Wholesale Grocers—Serious Objections Voiced to Language of Moratorium Bill—Robinson-Patman Act Regarded as Vital Protection Against Unfair and Destructive Discrimination

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, April 9, 1949

Mr. PATMAN. Mr. Speaker, the United States Wholesale Grocers' Association, through its general counsel, William A. Quinlan, Esq., has voiced opposition to the basing-point moratorium bill, S. 1008, according to a dispatch to the New York Journal of Commerce from its Washington bureau, under date of April 6, 1949. Mr. Quinlan, in outlining USWGA policy, emphasized that his association "regards the Robinson-Patman Act as vital protection against unfair and destructive discrimination, and they do not want it weakened in any way."

Referring to the moratorium bill's broad and ambiguous references, Mr. Quinlan pointed out that such references "might be construed as legitimatizing an infinite variety of discriminatory and destructive pricing practices."

At this time, when small business is compelled to fight ever-growing monopolies, the thought of legislation which, by its very nature, lends aid and comfort to the proponents of discriminatory pricing must be terrifying. Surely, the interests of hundreds of small independent wholesale grocers scattered throughout our land must far outweigh the monopolistic design of the food, or any other trust-like group banded together for purely predatory purposes. The moratorium bill must be defeated. The article in full follows:

DELIVERED PRICE BILL AMENDMENT PROPOSED—MORATORIUM MEASURE SEEN ENDANGERING ROBINSON-PATMAN ACT GAINS

WASHINGTON, April 6.—United Wholesale Grocers' Association today announced that it had filed with the Senate Judiciary Subcommittee proposed amendments to delivered-price moratorium bill (S. 1008).

The amendments, proposed by William A. Quinlan, general counsel for the wholesalers' group, were accompanied by serious objections to the language of the proposed measure, the association stated.

The suggested amendments, the association said, are designed to confine the legislation to providing, in effect, that uniform delivered prices to competing customers are not to be considered discriminatory merely because of differing delivery or shipping costs or, in other words, confined to banning the contention that price as used in the present antitrust statutes means the so-called mill net.

CHANGES PROPOSED

The essential portion of the amendment proposed by the association follows: "The Federal Trade Commission Act, as amended, and the Clayton Act, as amended (Robinson-Patman Act) shall not be construed as prohibiting a seller merely because of differing delivery, or shipping costs and, in the absence of conspiracy or combination or other agreement in restraint of trade, from charging the same delivered price to all competing customers."

The vital portion of S. 1008, the association contended, is the following: "The Federal Trade Commission Act, as amended, and the Clayton Act, as amended (the Robinson-Patman Act), shall not be construed as depriving individual companies, in the absence of conspiracy or combination or other agreement in restraint of trade, of the right to independently use delivered-price systems or to absorb freight to meet competition in any and all markets."

OBJECTION CITED

In objecting to the present wording of S. 1008, Mr. Quinlan made the following assertions:

"The bill's broad and ambiguous reference to 'delivered-price systems' might be construed as legitimatizing an infinite variety of discriminatory and destructive pricing practices, and its deletion is suggested. Likewise, the language 'to absorb freight to meet competition,' which makes no reference to good faith or to whether meeting competition is confined to meeting an equally low price, as presently provided in section 2 (b) of the Clayton Act. It is suggested that further legislation, if any, with respect to meeting competition should await more thorough consideration."

POLICY OUTLINED

Mr. Quinlan, in a statement to the subcommittee, outlined the USWGA policy on the moratorium bill, as follows:

"They would welcome a removal of whatever legal cloud there may now be over normal and reasonable delivered-pricing practices, which was not intended by Congress or anticipated by industry when the Federal Trade Commission and Robinson-Patman Acts were enacted. But at the same time they are vigorously opposed to any legislation which might go beyond the removal of that cloud and alter the basic purposes of the provisions outlawing price discrimination or weaken their effectiveness.

"They regard the Robinson-Patman Act as a vital protection against unfair and destructive discrimination and they do not want it weakened in any way. They emphasize the danger that legislation on the complex problem before you might inadvertently have that result.

"The wholesalers' organization," Mr. Quinlan added, also believed that the effective life of the moratorium bill should be limited to 1 year instead of 2 years, as now provided in the measure.

Those Who Dance Must Pay the Fiddler

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. CANNON. Mr. Speaker, supplementing remarks previously extended in the RECORD, I am including further excerpts from letters received by the Committee on Appropriations on the subject of economy in Federal expenditures:

THREE RIVERS, MICH.

It is extremely important that action be taken now to reduce the cost of Government if we are to maintain a sound and solvent Nation. The national budget can be reduced below $40,000,000,000 a year and still maintain all necessary departments and agencies on an effective and efficient basis. This can be done by weeding out all unnecessary funds.

I have discussed this great problem with several Congressmen and Senators. All of them agreed that Government spending and the budget should be drastically reduced and that it could be reduced. The difference of opinion came on the question "Will it be reduced?"

WELLS MANUFACTURING CORP.

MACON, GA.

We are facing a very serious situation in this country and we need to cut expenses in every way possible. One of the chief ways to do this is to stop spending money.

A. S. GRINALDS & SONS.

BLOOMFIELD HILLS, MICH.

The greatest danger lies in financing programs beyond our abilities to pay.

The great bureaucratic hodgepodge is costing needless billions in duplication of effort, inefficiency, and waste, surely far more than what could possibly be afforded by any individual or corporation.

CHARLES R. WEIR.

FORT WAYNE, IND.

National solvency is the first consideration at this time—the "first line of defense" against communistic ideologies. If this line is violated in fact, we are vulnerable indeed.

WILLIS S. MARTIN CO.

MILLERSBURG, PA.

Anyone using a bit of common sense can realize that the present rate of spending will land any nation in a state of bankruptcy.

WILLIAM E. SEAL & CO.

MILWAUKEE, WIS.

While we don't claim to be more patriotic than our fellow man, we believe those of us who are conducting businesses of our own are perhaps better able to understand the necessity of keeping expenses below income.

One does not need to go farther back than the present generation to readily understand what eventually happens to even the lowest income groups if this cardinal rule is continuously ignored.

ENGLE BROKERAGE CO.

ATHENS, TENN.

We need men in Washington who will put a curb on wasteful spending.

WILLIAMSON HOSIERY MILLS, INC.

STEVENS POINT, WIS.

It seems so very obvious that the Government cannot continue to spend and spend and remain solvent.

VETTER MANUFACTURING CO.

ALLEGAN, MICH.

Bring down within reason the spending of the taxpayers' money for unnecessary appropriations.

It is only through such efforts that this country can hope to exist.

DAVIES-WHEELER, INC.

ROYAL OAK, MICH.

Drastically reduce the unreasonable expenditures of our Federal Government.

It is my opinion that in reducing appropriations for the Federal Government we will have the key to the whole situation, giving us a chance to handle other important things demanding rigid attention.

FOSTER ENGINEERING CO.

WESTBORO, MASS.

Industry and business as a whole are being considerably hampered by the mounting expenses of government.

I am enclosing herewith copy of letter sent to Paul A. Dever, governor of the Commonwealth of Massachusetts, which is a statement of actual conditions in our State, and needless to say, is no doubt reflected in the majority of States of the Union. This is real food for thought and I trust that all Members of our Congress and Senate are giving consideration to appropriations regardless of party or politics.

KENWORTHY BROS. CO.

OMAHA, NEBR.

The end of the financial road the Government has been taking since the war is certain disaster. The incentive to work and produce is to better our own individual conditions and to help our children achieve a better life. Excessive taxation removes that incentive and bankrupts both us and our children.

EASY PARKING CO.

SCHENECTADY, N. Y.

Small-business men are taxed so heavily at the present time that it is impossible to build up reserves for depreciation and other business contingencies. It is alarming to everyone that the budget increases year after year and particularly when business volume and projects have started down at a very fast pace since the first of the year.

LEACH AUTO PRODUCTS, INC.

CAMDEN, OHIO.

It seems that for a number of years budgets are being prepared in a somewhat thoughtless manner.

Some thought must be given as to where this money is going to come from.

THE NEFF & FRY CO.

BRIDGEPORT, CONN.

"Cut" should be the byword in Congress these days as far as the budget is concerned. We certainly should be defensively prepared, militarily, but as to spending money the report of the Hoover Commission should be followed, where possible, in cutting down overlapping Government agencies.

Let's reduce those taxes.

WHITEMAN, INC.

COVINGTON, KY.

It is high time that a program of economy be adopted by our Government to reduce every expense possible, as well as, eliminating all unnecessary expenses.

Otherwise, unless we business people get some relief from these high taxes and costs of living we are just going to have to throw in the sponge.

THE COUNTRYMAN CO., INC.

MINNEAPOLIS, MINN.

I, like most people, am unable to conceive of $1,000,000,000, much less $40,000,000,000.

We need more legislators with the stamina to face the present-day problems as they really are, instead of as some select few would like to have us think they are.

WESTERN MINERAL PRODUCTS CO.

WHITE RIVER JUNCTION, VT.

We "little people" of Vermont mostly Republican, claim to think straight and talk straight. We are willing to go along with national spokesmen of the people who stand first for the welfare of American democracy.

THE SHEPARD CO., INC.

BUFFALO, N. Y.

As a small-business company, we are forced to watch our expenditures practically 24 hours a day. Relaxing in this vigilance for even a short period of time and we soon get into hot water. It seems elementary that expenditures must be controlled and yet in Washington, D. C., where supposedly some of our greatest citizens are gathered to protect the interest of all, the only cry you hear is spend, spend, spend.

Recently, the newspapers and news services have been full of vast new spending programs. Undoubtedly, in addition to the cost of the programs, many thousands of new employees would have to be added to the already swollen Government pay roll. Can it be possible that sincere thinking men and women can honestly believe that this increased spending can go on from year to year without a day of reckoning?

Frankly, it is my personal opinion that all business, both large and small, are frightened half to death on the news coming out of Washington and undoubtedly, a good deal of the present slump in business can be attributed to this fright.

M. J. GRASS SCREW MACHINE PRODUCTS CO.

DEPEW, N. Y.

Your committee is the first defense of our country against the orgy of governmental spending.

Upon your committee rests the hope and prayer of all thinking Americans, and your efforts and results will be anxiously watched by the rank and file of America. The one common subject in our land is that of taxes, and in order to halt the further increasing in taxes, spending must be reduced.

CABLE GUIDE RAILING CONSTRUCTION CO., INC.

LOUISVILLE, KY.

Keep Federal expenditures at an absolute minimum. All sound thinking businessmen in the country today realize that the Government cannot continue their reckless program of wanton spending.

DIXIE WAREHOUSE CO.

LOUISVILLE, KY.

Bankruptcy is slavery. It's history that Lenin had declared that this country would be taken over by making us spend ourselves to exhaustion, and it appears as though we are striving to the limit to make Lenin's prophecy come true.

It's my humble view that a good start would be to adopt the Hoover Commission report of reorganization in full, any deficit could be corrected in future years as the need showed itself.

MILTON CROWE,
Grain Broker.

HAGERSTOWN, MD.

It is beyond the comprehension of the average man how any administration—politics or no politics—can continue spending and spending and taxing and taxing, without realizing what it is doing to the country.

CENTRAL MOTORS, INC.

WHITE PLAINS, N. Y.

Thank you from the bottom of my heart for your statement on March 2 concerning the billions set up in the President's budget for socialistic and experimental projects.

Eighteen months ago we were all scared of Russia—today we are all scared of Washington, our own National Capital; what a pity. The tax-and-spend theory is fast ruining the businessmen of America. Every one of them that I talk to is scared for the future of his business.

I pray that there will be debt retirement and a reduction in taxes.

P. R. LETTS.

DULUTH, MINN.

Surely, we must all realize by this time, that you can't buy prosperity and survive for any length of time when the liabilities exceed the assets. Something must be done immediately to eliminate this waste.

MOLAND BROS. TRUCKING CO.

FLINT, MICH.

The country in general and business and commerce in particular are suffering seriously from too much Government bureaucracy. I feel that appropriations should be drastically cut. I also think efficiency should be increased and number of employees reduced even in the bureaus which are necessary and desirable.

ARNOLD GAUGE CO.

ALBUQUERQUE, N. MEX.

May I particularly express my concern for the large amount of money our Federal Government is spending.

BROOME'S.

JACKSON, MICH.

We all shudder at the thought of a depression such as occurred in the thirties when the interest of our national debt would be greater than the total national budget was at that time. We must remain solvent if our form of democracy is to survive.

DR. C. CORLEY.

GRAND RAPIDS, MICH.

I am working hard to keep business going and pay all the taxes we must pay. If these taxes are cast about loosely then we are ready to give up.

HAMILTON LUMBER & VENEER CO.

NEW YORK, N. Y.

Expenses have to be cut all down the line, or costs reduced in Government as in industry and business.

I plainly observed among the Congress and the administration an expense consciousness, and I also feel that the good old solid Americans who came up the hard way and who really made this country the greatest in the world have the same consciousness.

A reduction in expenses is necessary and the expenditure of tremendous sums of money must stop and will stop either by voluntary direction and control now or by malevolent forces later on.

JAMES A. JACKSON.

WHEELING, W. VA.

If I read accounts correctly, just last week the Appropriations Committee approved an increase in the Department of Interior funds which would enable that agency to add 8,000 new employees.

Now on one hand it seems foolish to talk about economy in government unless we are willing to practice a little of it. In a sense it's very unfortunate that some of our money spenders and those who pass on expenditures have not a more impressive background as producers or as administrators of funds in private enterprise.

It will take the incomes of thousands of taxpayers to pay this additional 8,000 employees that your appropriation to the Interior Department would enable it to put on the public pay roll.

OTT-HEISKELL CO.

WICHITA, KANS.

To an intelligent individual, there has always been some question as to how a person,

company, or country could spend itself rich.

Fight for economy and the curtailing of Federal spending.

ELLIS M. SKAGGS.

Mr. Speaker, supplementing these letters, I am appending names and addresses from similar letters received by the committee on the same subject too lengthy to be included in the RECORD:

Lincoln Dairy Co., Hartford, Conn.; Union City Chair Co., Union City, Pa.; Furniture City Dowel Co., Grand Rapids, Mich.; Henry River Mills Co., Henry River, N. C.; Scheuren & Mok Lumber Co., East Detroit, Mich.; Chamberlain's Sheet Metal Works, Greeneville, Tenn.; Jefferson Drug Co., Inc., Beumont, Tex.; Wentworth Military Academy, Lexington, Mo.; Gifford-Hill Pipe Co., Dallas, Tex.; Oliver Manufacturing Co., Rocky Ford, Colo.; Samson Cordage Works, Boston, Mass.; Seldner & Eneguist, Inc., Brooklyn, N. The Panama Canal

EXTENSION OF REMARKS

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, April 9, 1949

Mr. THOMPSON. Mr. Speaker, divers extensions of remarks by Members of the Congress show that the modernization of the Panama Canal is one of the most important problems currently presented for determination.

The questions involved are so important to interoceanic commerce, national defense and security, and the foreign relationships of the United States that it is incumbent upon the Congress to explore every vital phase of the subject during the course of the investigations now authorized, or which may be authorized in the future.

The August 1948 edition of Marine Progress, a magazine devoted to the development of the merchant marine and the improvement of waterways, contains an able and informative editorial discussion of Panama Canal problems. The writer makes some pertinent observations concerning the atomic bomb, and deals with the very important treaty question which must be faced in any realistic treatment of the subject. Strong reasons are stated in behalf of the contention that the main features requiring correction are those of an operational character in the present Canal. His approach is from the standpoint of the navigator and the merchant marine.

The editorial reflects an extensive section of maritime and engineering opinion. It is admirably presented, and should be of value to the appropriate committees of the Congress, and to the general public.

It may be added that House Resolution 44, introduced and passed at the present session, contemplates a full and thorough investigation of the financial operations of the Panama Canal as to military and commercial transit, a subject of paramount importance touching the entire Canal problem.

Under leave given, I am including as a part of these remarks the indicated editorial:

WATERWAY IMPROVEMENTS—ISTHMIAN PLAN

Recent developments concerning interocean canals have brought to the attention of the maritime industry the current controversial question of sea-level versus terminal lake plans for the Panama Canal. The new development is a report in the Bogota, Colombia, newspaper El Tiempo, which reports Colombian Foreign Minister Eduardo Zuleta Angel as saying that the United States has proposed a new canal linking the Atlantic and Pacific via the Atrato and Tranto Rivers.

The Atrato is the more important of the two and it empties into the Caribbean via the Gulfs of Uraba and Darien.

This proposal for a new canal naturally focuses attention once again on the present Panama Canal and the plans for its modernization. Little has been done about the modernization since the Panama Canal Zone Governor's report was issued. In this report a sea-level canal was recommended but the minority opinion was so strong that no action has been taken. The plans that have been advocated other than the sea-level canal are for a high level terminal lake at Miraflores and also for a third set of locks at all the present lock sites. This last plan has been abandoned, leaving the terminal lake plan and the sea-level plan the ones to be considered.

Since the sole purpose of the waterway is to facilitate travel between the two oceans it would seem that the logical thing to do would be to examine the existing waterway with a view to seeing whether it can serve the needs of defense and commerce in its present form or in either of the two proposed modifications.

SEA-LEVEL PLAN

The sea-level plan, as proposed, would provide a channel of adequate depth from the Atlantic to the Pacific with a tide lock at the Pacific end to compensate for the different range of tide between the two oceans. Part of this canal would be between dikes which would be built along the route and protected against flood during the rainy season.

Since the present Canal is at a height of 85 feet above sea level on the portion between Gatun and Pedro Miguel locks it would be necessary for the engineers to excavate that depth in addition to the existing cut in order to reach sea level. Such additional excavation naturally calls for extreme care in disturbing the terrain since the danger of slides is ever present.

The danger of major slides, which would close the Canal to use, is ever present should the existing channel be utilized by the sea-level advocates. Major dislocations of the terrain are looked upon by competent engineers with some misgivings since the tendency of rock structures to slide are enhanced by their formation, particularly if the earth structure is relatively soft as shale or thin strata of limestone or sandstone, volcanic ash, and similar earth materials.

Any structure is in danger of sliding as the result of strong explosions in the vicinity and such an event would close a sea-level canal to use just as surely as it would close a lock-type canal.

THE ATOM BOMB

The possibility of an explosion naturally brings the atom bomb to the fore in thinking about the Canal. The recent tests at Eniwetok have indicated that improvements in the atom bomb are such that no canal structure can withstand the forces of its explosion. Should a potential enemy of the United States develop an atom bomb it is reasonable to believe that their physicists will also make improvements in it to the extent that it, too, will have destructive power enough to incapacitate the Canal structure.

As a result any calculations that entertain the idea that the Panama Canal can be built to withstand an atom-bomb attack are at variance with known facts and this major premise of the sea-level advocates must be abandoned.

TREATY QUESTION

There are many indications that the proposals for a sea-level canal contemplate locations other than along the present Canal route. The treaty entered into between the United States and Panama calls for a strip of land extending 5 miles from the center line of the channel on each side. Slight modifications in this area are provided for in the region of Gatun Lake. In the original treaty it was also provided that additional land, or modifications of the present limits were permitted in perpetuity but this part of the treaty was subsequently given up by the United States.

Should a new location be laid out for a sea-level canal, a new treaty would, in all probability, be required before the waterway could be started. To think that such a new agreement could be reached on the same financial basis as the present treaty would be looking at the entire idea with the most optimistic viewpoint imaginable. The disagreements between Panama and the United States over the bases on Panama territory are an indication of their present attitude.

A high-priced treaty would naturally bring the cost of any new canal well up above the present estimates which have been termed too moderate.

THE TERMINAL LAKE PLAN

Since there are strong arguments against the advisability of digging a sea-level canal one must necessarily turn to the other major proposal for canal modernization, the Terminal Lake plan most recently envisioned by Capt. Miles DuVal, United States Navy, while he was port captain at Balboa about 5 years ago. Briefly this plan calls for the entire removal of the locks at Pedro Miguel and the construction of a three-lift lock close by at Miraflores. It also calls for the damming of the relatively shallow valleys between the ring of hills close to the Pacific end of the Gaillard cut and impounding the water of Miraflores Lake until it reaches the height of 85 feet above sea level, the present height of the Gaillard cut and Gatun Lake. This would then create an anchorage area at Miraflores adequate for the mooring of a considerable number of vessels in safety.

There are, however, more practical reasons for this man-made lake than providing an anchorage for ships. The operational difficulties of canal navigation have been aggravated by the presence of the Pedro Miguel locks in their present site. This flight of locks lies at the Pacific end of the long Gaillard cut and at a point where ship handling problems present themselves at a time when room to maneuver is most essential. Lock surges occuring in the cut have had an adverse effect on ships as far away as Gatum Lake and within the cut itself the force of the surges has literally picked up a large, ocean-going vessel that had touched bottom and thrust it farther aground than it already was.

Further navigating difficulties are met when fog closes the cut to navigation. Ships Pacific bound anchor in Gatun Lake when the fog closes down and, when the channel is clear, proceed through. Ships Atlantic bound, however, must remain out in Panama Bay or tie up at the lock structures of Miraflores and Pedro Miguel until the fog lifts. Then the rate of transit is governed by the speed of locking through which is approximately an hour per ship.

Should the terminal lake be created, vessels delayed by fog would be locked through the single Miraflores locks, move to anchorages in the lake and then transit the cut on a 5-minute headway with ships coming from Gatun moving through at the same rate. The procedure would then be to have the ships bound for the Pacific anchor in Miraflores Lake and lock through in turn and the ships for the Atlantic anchor at Gatun for a similar process through Gatun locks. Traffic would then be speeded to the capacity of the waterway.

Many prominent engineers have studied the modernization problem and have come to the conclusion that the terminal-lake plan at Miraflores will offer the best canal obtainable. One such engineer, Harry O. Cole, who was resident engineer at the Canal at the time of the building, and later in charge of the completion of the Pacific locks, speaking before the Panama Canal Societies of the United States said, "I am convinced that the terminal-lake plan is not only the most feasible but the most suitable way to modernize the Panama Canal and that the failure to adopt this plan would be a grave mistake. Such a failure would probably delay action for many years to come because the present public interest could not be easily aroused again should it be allowed to die."

Mr. Cole was emphatic about the failure of the group to study modernization of the Canal to avail themselves of available first-hand information on the engineering problems connected with the construction of the waterway. He said, "The recent studies at Panama recommending the conversion of the present lock canal to sea level were made without the advice of those who have first-hand knowledge of the difficulties and hazards encountered in the building of the present Canal. They are certainly the ones best qualified to advise on the major engineering questions and any report that does not consider their views is fatally deficient."

OTHER CANAL ACTION

Representative Willis Bradley, of California, a former Navy officer, has prepared legislation for introduction into Congress calling for the creation of a nine-man Presidential Commission to make a final determination of the Canal modernization. Three of the members would represent the armed services while the other six would be civilians. This legislation was presented to an earlier session of the Eightieth Congress and should the present session fail to act, the bill will be reintroduced. Mr. Bradley, in commenting on the proposed bill said, "It should be noted that this bill does not require that those appointed from civil life be engineers, although I assume that a considerable number of them would be of that profession. It does contemplate the appointment of the best-qualified men of established reputations and backgrounds of experience, men in which the public may have every confidence. With a Comission such as this, there would be every reason to expect a final determination which both the people and the Congress could accept as the best within the scope of our present-day knowledge and ability."

Atlantic Pact and ERP Legislation

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, April 9, 1949

Mr. MADDEN. Mr. Speaker, the accompanying editorial by H. B. Snyder, editor of the Gary Post-Tribune, reveals that the Atlantic Pact is the best assurance against a future war. Today the Congress takes up the European recovery bill which is companion legislation to the Atlantic Pact. The Atlantic Pact is merely another step in the pathway of making amends for the mistake our Senate made 28 years ago when it refused to join Woodrow Wilson's League of Nations to preserve peace in the world:

ATLANTIC PACT IS WEAPON FOR FIGHTING AGGRESSION

All of the speeches made at the signing of the Atlantic Pact emphasized its defensive character. The western nations are getting together merely for protection against aggression and no country which stays in its own sphere need fear the new organization of nations.

It should not be necessary to spend so much time to prove the obvious, but in view of the Communist effort to give new meaning to old words we must keep hammering on the accepted meanings to prevent Communist propaganda from taking effect.

Most of the people of the newly allied nations will not be deceived by this Communist deception, but some will be led astray unless we keep telling them our purpose. Then there are the hundreds of millions in eastern Europe, in Russia, in Asia, in Africa who must be told repeatedly that our intentions are peaceable as long as the Russians let us alone.

The speeches indicate that finally the west has awakened to the methods of the aggressor nation and intends to fight back with similar but better weapons. For assuredly it will be easier to speak the language people know than the one that is being forced on them. It may be hard to understand why anyone would believe the Russians are using democratic methods no matter how often they insist they are, but the fact remains that some will believe if the lie is repeated often enough and no denial is made.

Indeed the Russians have already charged that the new pact has been created for the purpose of aggression and this story will be repeated so long as the present dictatorship exists. This type of mendacity is effective as is shown by the accomplishments of Stalin and Hitler before him. But it has its limitations as proved by the downfall of the latter.

There seems to be little doubt that the Stalin methods will last until his death, but no one can be sure what will happen then. Winston Churchill implied in his recent speech that some internal convulsion may concentrate all Russian attention on a civil war and relieve the outside pressure.

If that should happen, it might mark the beginning of the decline of communism as a world force. For it has nothing to go on but the pressures the Russian dictatorship is able to exert. Lying propaganda endlessly repeated and pressures exerted in countless ways are the basic ingredients of the Communist mechanism. If we can scotch the lies, it won't have much life left. This is the lesson we are learning as the pact and speeches inaugurating it prove.

The Phoenix City of Warsaw: The Feverish Rebuilding, the Vigor, the Shattering Ruins, and the Pervading Fear

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Saturday, April 9, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article written by Richard Hughes, which appeared in the March 15 issue of Vogue.

Richard Hughes is a Welshman, a playwright, and the author of more than a dozen books, among them High Wind in Jamaica, his most famous. The dramatic version, called The Innocent Voyage appeared on Broadway in 1943. While still an Oxford undergraduate Hughes wrote his first play, The Sisters' Tragedy, which was produced in London; George Bernard Shaw called it "the finest one-act play ever written." The article follows:

THE PHOENIX CITY OF WARSAW: THE FEVERISH REBUILDING, THE VIGOR, THE SHATTERING RUINS, AND THE PERVADING FEAR

(By Richard Hughes)

It is time somebody wrote a natural history of ruins. There is the common or tufted ruin, the noble fragment dear to the romantics; with its ivy and its tussocks of turf and wild flowers, it dwindles still from century to century. There is the same ruin tidied up by a government department, with slabs of concrete instead of verdure and guardrails for the giddy tourist instead of ivy—what might be called the ruined ruin. Again, there are all the characteristic ruins of natural cataclysm: the earthquake ruin, the wild debris of the hurricane or the flood. But in Europe today a new genus, formerly rare, is now the commonest of the lot: the man-made ruin, the urbs debellata.

Even in this genus there are many species. One soon learns, for example, to distinguish between the effects of air bombing and those of shell fires. If you fly over Berlin or any other large town principally ruined from the air, it is like looking down on a honeycomb the top of which has been sliced off. The roofs are gone—miles of them. The walls still stand, the houses are rows of little empty boxes without lids. A town destroyed by shell fire, a town such as Breslau where the Nazi armies made their last big stand in the east, looks very different. For shells go particularly for the walls. Little shells knock holes through them, big shells kick them altogether out from under the roofs they support. Then the roof may collapse utterly; but more often it still hangs askew from some fragment, looking rather like the sort of umbrella a tramp abandons in a ditch. But even shell fire is uneven in its effect, leaving many a dramatically jagged fragment still standing among the brick heaps and torn concrete.

Warsaw suffered both bombing and shell fire in its two sieges, but that was not enough for Hitler. He seems to have had a maniacal hatred for Warsaw. When it was apparent that the Nazis must presently retreat, he gave orders that the town should be destroyed so utterly that it could never be rebuilt. Thus, while the last remnants of General Bor's tragic insurrection were being stamped out in the old city, and the Russians waited on the far bank of the Vistula, squads of skilled demolition workers moved from home to house and street to street. For these specialists the difference between a medieval church, a sewer, an eighteenth-century palace, a block of flats was purely technical, a problem of the type and placing of the explosive charge required to destroy it.

No other great city had been razed like this since Carthage. The job was done so thoroughly that even the Polish Government thought it was successful and proposed to move the capital to Lodz, leaving Warsaw as a memorial mountain of rubble in the middle of the great plain. But the remnant of the people of Warsaw, unbidden, came back like ants to a shattered anthill. Burrowing into the cascades of bricks they found shelter in cellars and basements. Rebuilding began. Half the citizens of Warsaw seemed to discover that they were bricklayers born. A passageway for handcarts would be cleared down the middle of some broad street. The women set to work to sort the billions of bricks and clean them for reuse. Shops and restaurants opened at the ground-floor level, a low facade of new plate glass and cement topped by the crazy outsize crenellation of the shattered walls above.

Warsaw is already a new city, a city of resurrection, of life, vigor, national pride. Everyone has sore throats from the clouds of dust, but through the clouds the miracle of a town growing from day to day like a mushroom astonishes the eye. Nor is there anything shoddy or "utility" about the work done. Where a palace once stood a palace rises again, detail by detail. Museums, theaters, churches, were not left to the last (as we should have done): they were given priority. It all happens with incredible speed. To walk in the streets of Warsaw today is to see Phoenix reassembled feather by feather.

Only in the ghetto is there no resurrection. What was once a teeming quarter of the city is now a flat tableland of level, trodden rubble, some 6 feet above normal street level. Crushed among the crushed masonry there still lie some 20,000 murdered bodies. There is a moldy smell, and no life there but a few desolate tufts of dusty willow herbs.

In the gardens of the Lezienki Palace (which happily escaped destruction) there is a little eighteenth century open-air theater. The stage, a perfect setting for the tragedies of Racine, is on the shore of an island and defined against the willow trees by a semicircle of Greek columns. Two of the columns are broken off short. They were built like that. So they still stand today; memorial, among the canyons of shattered buildings, to an age so civilized that its ruins had to be artificial, an age when "ruins" were a pleasing architectural conceit.

HARVEST FESTIVAL

West of Warsaw a vast, mostly sandy plain stretches to the marshes of the new frontier: a patchwork of pinewoods and small farms, the occasional modest manor now derelict and smothered in its own shrubberies, or turned over to government uses. The pattern is small and intimate, not widespread as the horizons would suggest; and certainly not dreary.

Suddenly near a country town we came on the gayest of scenes, a harvest festival. Processions of decorated wagons covered in branches and flowers and corn sheaves (one wagon top was a model windmill made of straw): children in traditional peasant finery of white flounces and tight bodices, smiling and singing, all converging on a sweet-smelling Catholic church whose bells sent out peal on peal.

Under the lee of a pinewood the smashed fighter aircraft still littered the ground in a silvery line, like dead fish left by the tide.

Almost every yard of the fields had to be searched for land mines before they could be tilled. The ravaging armies left the country bare of every means of transport (UNRRA supplied what horses you see today, and except for a few Fiat busses and Skoda cars traded for Silesian coal, automobile traffic is still rare). They might well be thankful for a harvest.

THE BEST FOOD IN EUROPE

Yet in Poland you will eat better food today than in any country of Europe I know. Rationing? Your purse is your ration book: you can eat whatever you can pay for. A country inn will knock up a meal for a prince; a Warsaw restaurant a meal for a god. I went to a reception given by the Prime Minister in his official palace, through anteroom after anteroom decorated with saluting guards to a supper room that recalled Vienna before 1914. It was a function as punctilious as any court, except in the matter of dress.

If you have occasion to talk to eastern Europeans, you will be struck by the fact that as soon as the word "fascism" has crept into a discussion they cease to be able to argue rationally or even sanely. You might as well tell a medieval Christian that the Devil was dead as argue to a Pole that fascism is dead, or hope to get him to believe that it is not, even today, the source of every evil abroad in the world. Yes, his attitude is almost precisely the medieval one about the Devil—he conceives of fascism as an eternal spirit of all human evil, and it is a subject on which he is mad—mad as any witch burner.

It is important to understand why this has happened, for it is the mainspring of much that seems otherwise inexplicable in the eastern scene.

Janus-like, nazism had two faces—one turned west, the other east. We in England only saw the western face. We liked even that little enough. Heaven knows; but the eastern face was beyond measure more horrible.

THE BELIEF THAT IS BEYOND REASON

Such a figure as 2,000,000 civilians slaughtered in cold blood cannot move the imagination, since human suffering is not susceptible of arithmetic; but let me recount one instance out of the 2,000,000. I will tell it as plainly as I can, without details.

At the time when all Jews were confined in the Warsaw ghetto, children would sometimes slip out for an hour or two. An SS man found one such little child crying in a Gentile street. At first she denied she was Jewish; but he questioned her, and at last she admitted it. So he ordered a Polish policeman to take the manhole cover off a sewer, and he dropped the child in alive, to drown in filth.

How could anyone of the passers-by who saw this happen ever be quite sane again when the word "fascism" stirred his memories? The Poles are a nation of which almost every man has himself seen at least one such thing happen.

Thus we can begin to understand, perhaps, how easy it is to work malicious magic in eastern Europe with that word. When it is whispered that Washington is the home of Fascist warmongers, that ERP is a Fascist plot—then there is awakened a kind of belief that is beyond reason.

For as well as wishful thinking there is such a thing as fearful thinking. As well as believing what he wants to be true, man also tends to believe what he most fears to be true. And what the Poles fear most in all the world is that fascism is still, somewhere, alive and menacing.

Soil Conservation in Iowa

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Saturday, April 9, 1949

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I invite the attention of the Members of the House to the following newspaper articles which appeared in the Dallas County News, Adel, Iowa, on April 6, 1949:

SET NEW RECORD IN CONSERVING SOIL

Iowa farmers set an all-time record during 1948 in applying soil-conservation practices to their land.

Soil conservation district cooperators' reports bear this out. Farmers put 236,000 acres of land on the contour, bringing the State's total up to 845,000. They added 9,000 acres of cover crops to bring the State total to 25,000 acres.

During the year 26,000 more acres were strip cropped, more than 9,500 acres of Iowa pastures were improved, 2,000 miles of terraces were built, and 19,000 acres of land were made more productive by drainage.

Too, farmers are planning these improvements so that they fit their farms. A total of 15,000 farmers in the State have now developed complete farm conservation plans with technical assistance of the Soil Conservation Service. These plans cover 2,800,000 acres. During the calendar year of 1948 alone, service technicians helped 3,269 farmers develop complete plans which increase farm income as much as a third, control erosion, and hold more rainfall on the land. They gave assistance to 3,000 other farmers with one or more conservation practices.

THREE HUNDRED THOUSAND IOWANS ATTEND 1948 SOIL-SAVING DAYS

Iowa farmers are conscious of the need for conserving their soil and are eager to learn how they can carry out good land-use programs on their farms. This was shown by their interest in soil-conservation field days, tours, demonstrations, and plowing contests during 1948.

Total attendance for these events scattered throughout the State was an estimated 319,150. This is more than double the estimated attendance at similar occasions during 1947.

State and National events drew the largest crowds, accounting for 229,500 of the total attendance. These included the all-Iowa soil conservation field day on the Ben Cole farm in Clarke County, the national plowing contest, and soil conservation field day in Dallas County, the national plow-built terrace contest in Shelby County, the forage field day in Jones County, the Pilot rock soil conservation field day and plowing contest, and the Conservation Sunday soil conservation district as a follow-up to the field day held in 1947.

DEMONSTRATE

Conservation practices which are essential to good land-use programs in the particular areas were demonstrated at all of these events.

Twenty-three local and county-wide contour plowing contests and field days drew 28,500 people. Soil conservation and other improved farm practices demonstrated at these events included preparation of grass waterways, building terraces, pasture improvement, gully control, drainage, contour cultivation, diversion ditches, weed spraying, and plow adjustments.

These same practices and others were demonstrated before 22,400 people attending 13 local and county-wide field days. These were held in Des Moines, Louisa, Black Hawk, Mahaska, Monroe, Muscatine, Cass, Wayne, Jefferson, Decatur, Appanoose, West Pottawattomie, and Johnson Counties. Particular emphasis was placed on soil-conservation demonstrations.

District or area-wide contour plowing contests and field days were attended by 19,750 Iowans. These events were held in Clayton, Van Buren, Adams, Clinton, Butler, Jasper, and Washington Counties. Major practices demonstrated included gully control, pasture improvement, waterway construction, terrace construction, drainage, and the building of farm ponds.

A total of 8,400 people turned out to experimental farm field days. These included events at the Howard County experimental farm, soil conservation experimental farm in Page County, western Iowa experimental farm in Monona County, the pasture-improvement farm near Albia, and the agronomy and agricultural engineering field day held at Iowa State College.

Attendance at local or county-wide terrace building contest, tour, field demonstrations, and contests sponsored by Iowa soil-conservation districts made up the rest of the total figure.

Building Awards Up 10 Percent in March

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, April 9, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of April 9, 1949:

BUILDING AWARDS UP 10 PERCENT IN MARCH—SHARP RISE OVER YEAR AGO LIFTS TOTAL FOR FIRST QUARTER OF 1949 IN 37 STATES

A substantial upswing in March made a good-sized cut in the margin of decline in building and engineering awards in the first 3 months of 1949, the F. W. Dodge Corp. reported here yesterday. The report covers the 37 States east of the Rocky Mountains.

Awards in the first quarter totaled $1,799,070,000, or 9 percent under the $1,986,936,000 reported for the same period of 1948. Building and engineering awards in March, however, totaled $747,619,000, or nearly 10 percent over the total of $689,763,000 in March, 1948.

Despite the 3-month decline, the Dodge Corp. said, the quarterly total was the second highest on record for a first quarter, exceeded only by last year.

Nonresidential building for the quarter gained 1 percent over last year, totaling $771,219,000. Public building contracts were chiefly responsible for the rise.

Residential building awards in January, February, and March were down 19 percent under last year, from $746,889,000 to $603,971,000. Heavy engineering awards, including roads, bridges, and heavy industrial works, totaled $423,880,000, an 11-percent drop, under last year.

The Dodge report said 4 of its 15 major reporting districts showed increases in dollar volume of contracts in the first quarter. They were metropolitan New York and

northern New Jersey, the Southeastern States, northern and eastern Ohio and the region composed of Minnesota and North and South Dakota.

United States Policy Is Failing in Greece

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks, I wish to include the following article by Willard Edwards that appeared in the Detroit Free Press:

UNITED STATES POLICY IS FAILING IN GREECE, REPORT SAYS

(By Willard Edwards)

WASHINGTON.—The Greek ship of state is sinking fast despite the spending of 1,000,000 American dollars a day to bail it out.

In this testing ground of our foreign-aid program, the United States must either take over complete control of the Greek Government or pull out.

These are among the high lights of a confidential report to the congressional "watchdog committee" on the Marshall plan. It has been suppressed by Democratic leaders.

The lengthy report is sensational in its implications, which affect the entire $17,000,000,000 plan for military and economic aid to Europe.

It states, in effect, that a drastic change in Government policy, constituting virtual domination of Greek affairs, is essential if any results are to be obtained for vast expenditures.

This will support Russian claims of imperialism against the United States, the report concedes, but Stalin is making such charges in any event.

The report was made some weeks ago to Chairman MCCARRAN (Democrat, Nevada), of the joint congressional committee on foreign economic cooperation.

It was based on an inspection trip in Greece by Louis C. Wyman, committee counsel.

The report brands the administration of aid in Greece as incompetent. American behavior has stimulated hatreds and jealousies.

"A present lessening of American ostentation in Greece, including specifically less chauffeur-driven new automobiles and less pomp, circumstance, and privilege for Americans is recommended," it states.

"Such individuals now move well-fed, with good clothes and expensive cars, in a country where poverty and tragedy are on all sides."

Communist guerrillas are not out to conquer Greece, the report asserted.

"The objective clearly is to harass, spoil, and break up the Greek economy so as to prove before the world from the wreckage of Greece that the western powers have no ability to make their great experiment (the Marshall plan) succeed," the committee was told.

"This single plan to destroy the Greek economy and to cause Greece to fall into pieces urgently requires a single plan for the United States."

Greek officials themselves recognize the need for a new political formula with basic appeal to the Greek people, the report states.

This would involve a social reform, revision of taxes, prices, and distribution control without graft, and better administration under a Greek-American program.

"The more intelligent among the Greek people want such a change, but as long as the United States Government supports the present Greek Government as presently constituted, such a change will be impossible," the report continues.

Our Patent System

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, April 9, 1949

Mr. BRYSON. Mr. Speaker, since becoming a member of the Committee on the Judiciary, having jurisdiction over patents my interest has been revived about our patent system.

In this fast changing age I fear we do not fully appreciate the significance of our patent system.

I attached hereto an article appearing in a recent issue of the American Scholar entitled "Is Our Patent System Obsolete?" as prepared by Judge Clarence G. Galston, district judge of the United States Court, Eastern District of New York.

IS OUR PATENT SYSTEM OBSOLETE?

Had Professor Hamilton (autumn 1948) sought merely to demonstrate that our patent statute is ancient, and therefore in need of thorough revision, one could hardly disagree, for from its insufficiencies has sprung judge-made law probably beyond that found necessary in any other Federal statute. But it is a system which he attacks.

The objectionable system, as the article describes it, is the fostering of monopolies by assignments and licenses from inventors to powerful corporations.

Professor Hamilton's thesis seems to stem from what, with all due respect, I regard as an unsound reading of the constitutional clause. A proper evaluation of this clause as given by the courts is to place the emphasis on the promotion of science and arts as the objective of the framers; the reward to the inventor is but secondary. The early period was marked not by mass workers but by the produce of the farmer and the product of the individual craftsman. Certainly there was no prevision of the industrial evolution which followed, nor of the dominant scientific era in which we live.

Just as other clauses of the Constitution have yielded to congressional enactments to meet economic conditions without destroying or impairing our capitalistic base, the patent clause should not be denied comparable elasticity.

But in the system Professor Hamilton finds lurking monopoly because patents may be assigned or licensed to offending corporations. Well, the Supreme Court has thrown up safeguards which, to be sure, though not found in the patent statute, are derived from the broad equity power of the courts. Now no one—inventor, licensee, or assignee—who reaches beyond the frontier of his lawful monopoly grant can secure relief against infringers.

Nor should Professor Hamilton be too much concerned lest the reward to the inventor be not commensurate with his contribution. It is difficult to see how, without substantial financial backing, an individual inventor could effect commercial success in fields which require enormous sums for research. Not to recognize such existing conditions is to close one's mind to actuality. Are inventions in industrial adaptations of atomic energy, radar, cyclotronics, and ultrafax not to be protected by patents because such patents may and probably will be controlled by corporate interests? The age of the garret inventor is over, and, despite the functions of the governmental Office of Scientific Research and Development, research laboratories of private interests are necessary for chemical, electronic, and other forms of industrial development. To say that corporations which maintain such research laboratories under appropriations which run to enormous annual outlays are not to profit thereby over competitors who make no such investments would be, not to promote progress but to stifle it.

No; granted that the patent statute needs drastic revision, it by no means follows that a system which has contributed heavily to the material welfare of our people is obsolete.

World Health and Power Politics

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, April 9, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article entitled "World Health and Power Politics" written by Richard L. Carp.

Mr. Carp is the son of Mr. Avery Carp, prominent businessman of Granite City, Ill., and a close personal friend of mine.

Richard Carp is in Geneva, Switzerland, at the present time on a fellowship, and has contributed this article to the St. Louis Post-Dispatch:

WORLD HEALTH AND POWER POLITICS

(By Richard L. Carp)

GENEVA, SWITZERLAND.—Russia's use of any means for political ends is painfully apparent in the recent action of the Soviet Union, the Ukraine and Byelorussia in withdrawing from the World Health Organization.

Excuses offered by Russia for this action simply do not make sense when official Soviet statements are compared with the record of Health Organization activities. The very right of children to live, and to achieve a healthy maturity has become a pawn of Russian political policy in the cold war.

The telegram sent to the World Health Organization here by Nikolai Vinogradov, Soviet Deputy Minister of Health, announcing Russian withdrawal from the WHO, gave as reasons:

"Tasks connected with international measures for prevention and control of diseases and with the spread of medical science achievements are not being accomplished by the Organization satisfactorily. At the same time, maintenance of the Organization's swollen administrative machinery involves expenses which are too heavy for member states to bear. All this shows that the direction taken by the activities does not correspond to those which were set before it."

During the first World Health Assembly of the WHO, in June 1948 here in Geneva, the same Dr. Vinogradov addressed the founding group in these words:

"What are to be the fundamental tasks of the organization in years to come? In our opinion they should comprise, in the first in-

stance, assistance to nations which have suffered from the war; elimination of the effects of the war on health, cooperation in the fight against epidemics, and a strengthening of international relations in the field of science."

Comparing this statement with accomplishments, Dr. Brock Chisholm, of Canada, director-general of the WHO, pointed out that the World Health Organization has been officially in action only since last September, although functioning as an interim commission since 1946. Dr. Chisholm said the Russian condemnation of the Organization now was premature to say the least. By Dr. Vinogradov's own statement, hopes for the WHO were based on years to come.

Dr. Vinogradov had said the WHO should offer assistance to nations which have suffered from the war. Dr. Chisholm pointed out that the Special Office for Europe, under the WHO, was set up for this purpose in January of this year. Within less than a month arrangements were made to rehabilitate penicillin plants in Poland, Czechoslovakia, and Yugoslavia. In addition, the WHO is coperating with the United Nations Childrens' Emergency Fund to supply war-devastated countries with streptomycin. Distribution already has begun in Czechoslovakia, Hungary, Yugoslavia, Romania, and Bulgaria.

Efforts to increase penicillin production were impeded by the fact that Byelorussia and the Ukraine, where additional penicillin plants are located, refused to attend the conference held on this subject.

Medical books, X-ray films, microscopes, and other supplies have been sent to war-torn countries, including Poland, Byelorussia, and the Ukraine. The Ukraine alone, for instance, has received some 5,500 medical books through the WHO. Between last September and December, 50 medical fellowships were awarded by the WHO to students in war-devastated countries for study at some of the world's chief medical centers. Medical teams have toured many war-torn areas, advising on improvement of medical facilities and methods.

When Dr. Vinogradov said the WHO should try to achieve "cooperation in the fight against epidemics" he anticipated what has been one of the most dramatic of the WHO's achievements. When a cholera epidemic threatened Egypt last year, airplanes were pressed into service to fly anticholera vaccine from China, Switzerland, Russia, Palestine and the United States.

In a large measure through the efforts of the WHO, the epidemic in Egypt was brought to a halt within 6 weeks. Thousands of lives were saved, judging from the experience of past epidemics of cholera in the Middle East.

In 1950 it is proposed that the WHO set up an eradication program against cholera in selected areas all over the world where it is endemic, such as India, China and Burma. This type of action represents protection for the whole world, for in the past the great plagues and epidemics have started in small areas and spread with great speed. WHO now is sponsoring a series of daily world-wide radio broadcasts detailing methods of controlling epidemics of all kinds.

To aid in "strengthening of international relations in the field of science," as called for by Dr. Vinogradov, the WHO has entered into active relations with the World Federation for Mental Health, the International Red Cross, the International Council for Nurses, the International Union Against Cancer, the International Union Against Tuberculosis, the World Medical Association, the International Union Against Venereal Disease and other nongovernmental agencies.

In discussing Dr. Vinogradov's tardy complaint about WHO's heavy expense, Dr. Chisholm pointed out that for 1948, the American share of these expenses totaled $1,860,000, compared with the U. S. S. R., $295,000; Ukraine, $39,000, and Byelorussia, $10,000.

The U. S. S. R., the Ukraine, and Byelorussia, however, have not bothered to pay their bills, as yet.

Dr. Chisholm has answered the Soviet telegram of withdrawal by suggesting that this action be reconsidered and that he be allowed to go to Moscow for fuller discussions. His answer was sent in mid-February. "I await your invitation," said Dr. Chisholm. He is still waiting.

As to Russia's real reasons for withdrawing from the WHO, it has been suggested that there are too many western representatives in this vital world health work, also that the WHO was not useful to Russia for propaganda purposes. It is clear only that the Soviet motives seemed to be political; the precise political logic that led to the withdrawal may be clear only to members of the Politburo.

Excise Taxes Seriously Affecting Business

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, April 9, 1949

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following special article in the Saginaw (Mich.) News:

Where is the luxury in such items as baby oil, electric light bulbs, diaper bags, and laundry cases?

Thousands of Saginawians who buy these items daily and pay the Federal or excise tax, which usually amounts to 20 percent of the cost, are asking that question.

They ask it of clerks, who shake their heads and explain they don't understand the tax either. Merchants are bitter over the tax. They assert the tax reduces sales of certain items, and they can get sales records out to prove their point.

The tax, the merchants and clerks say, isn't equitable. Why should baby oil and all baby toilet items be subject to a 20-percent tax and dad's shaving soap be tax free?

Why should electric light bulbs, which are as necessary as the switch that turns the lights on, be subject to a 10.4-percent-excise tax? The lamps the lights glow in are tax free.

Why should a student needing a laundry case made of canvas or a mother needing a diaper bag pay a 20-percent tax when another person buying a cigaret case or poker chips not pay the tax?

The excise tax was put on by the Federal Government during World War II as an emergency measure to help finance the war. Merchants and customers alike believe the tax should be lifted.

Arthur S. Boettcher, of Lansing, assistant manager of a luggage firm, has spent 2 years and $1,500 of his own money fighting the excise tax. The Michigan Junior Chamber of Commerce consented to sponsor a pamphlet Boettcher prepared, which points up the inequities of the tax.

"The ridiculous taxes that make me mad are those on witch hazel, eyewashes (if they bear beauty claims), sunburn preparations, and peroxide (20-percent volume)," Boettcher said.

He sees no justice in taxing a woman's handbag, even if it is only the $3 cloth variety, when a jewel box for her trinkets is tax-free. Boettcher has been corresponding with Congressman R. L. DOUGHTON, chairman of the House Ways and Means Committee, on the excise tax. DOUGHTON wrote him:

"I am hoping in this Congress and perhaps in this session we will be able to consider the entire tax problem.

"But the President has asked for increased revenue of $4,000,000,000 over and above what present tax laws will yield. For every dollar we would take off present taxes we would have to more than make up on new or increased taxes."

At least one Saginaw merchant complains the excise tax has so seriously affected his business he has been forced to reduce wages of his employees.

Many customers stay away from the expensive items that carry 20 percent excise taxes. Paying the 20 percent on a tube of lipstick may not seem like much, but paying it on a $500 luggage set, or a $1,000 diamond ring the tax assumes major proportions.

The retail merchants division of the board of commerce has taken no action to form a policy on the excise tax. Individual merchants, however, are outspoken in their opinions of a tax which they claim is unfair to them and to their customers.

Plight of American Children

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, April 9, 1949

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Garry Cleveland Myers:

PLIGHT OF AMERICAN CHILDREN

(By Garry Cleveland Myers, Ph. D.)

Out of America's 46,000,000 children, 4,000,000 do not attend school at all either because there are no schools or because of inadequate school attendance enforcement. For many children there are only 6 months of school each year.

In some school communities children have to attend in two shifts, even three shifts. The birth rate has risen rapidly in recent years. In 1951 school enrollment will be up 2,400,000 over 1948; in 1956, 8,000,000. In the next 5 years the much needed school construction would cost $6,800,000,000.

BABIES DIE NEEDLESSLY

Every year hundreds of thousands of mothers and babies die needlessly, though at least one-half of the maternal deaths and one-third of the infant deaths are preventable. Almost a quarter of a million mothers and babies have no medical care at childbirth, and the first few days of life.

Three-quarters of our American children need dental care. Ten million have defective vision, 4,000,000 defective hearing. Half a million have orthopedic and plastic defects, 175,000 tuberculosis. Annually, rheumatic fever and diseases of the heart cripple half a million children. Forty-five percent of the counties throughout the United States have no hospitals and a quarter of our children live in areas having no full-time public-health service. Only one school unit out of four in the United States has a school-lunch program. At the present rate,

1 out of every 20 children in our Nation is destined to be a patient in a mental institution. Though most mental difficulties begin in childhood, 25 States have no child-guidance clinic. Full-time clinical service for child guidance is provided in only 27 of our largest cities.

SINGLE CHILD

We have about 4,000,000 children who are fatherless, motherless, or both. Yet 6 out of every 10 of these children receive neither public assistance nor social security. The average monthly benefits for a family, in which a single child receives a benefit, is $13.10. One-half the children whose fathers died in 1946–47 did not qualify for this. Five out of six of all the counties throughout the United States have no full-time welfare worker.

Over 2,000,000 boys and girls 14 to 17 years of age work part time or full time. Besides, many thousands of children under 14 work in agriculture, not half of whom are attending school. Even Federal laws protect only about a fifth of America's children against harmful employment in industries which ship goods across State lines. Annually about a quarter of a million children come before juvenile courts.

Among our States and different communities of each State there are great inequalities of educational, health, and welfare facilities. In the poorer States there is not enough wealth to bring in enough revenue from taxation to provide adequate schools, health, and welfare services. Moreover, in the poorer States there are 50 percent more children per 1,000 adults than in the richer States. So children in these poorer States don't have opportunities afforded most children in the richer States. Even in the richer States many schools are overcrowded and manned with poorly trained teachers and the welfare services are, in places, pitifully inadequate.

These and similar facts have been presented by the American Parents Committee Education Fund, Inc., 52 Vanderbilt Avenue, New York City, and appear in the February issue of Parents' magazine.

Italy's Recovery

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Saturday, April 9, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of April 9, 1949:

WITH UNITED STATES AID—ITALY TAKES LONG STEPS IN RECOVERY

ROME, April 8.—Italy's recovery is progressing so well with the help of the Marshall plan that it may reach its goal of a balanced budget even before 1952, Giuseppe Pella, Minister of the Treasury, said tonight in his annual report to Parliament.

The Italian deficit will be $290,000,000 in the current financial years, compared with $1,300,000,000 last year. The new financial years starting this summer will show a further improvement, Pella said. The improvement was obtained in large part by raising the prices for transportation, postage stamps and telephones.

But Pella said the average Italian income is only $200 a year, 20 percent below prewar.

Italy's exports rose 50 percent in 1948 and industrial activity increased 17 percent, bringing production up to 90 percent of prewar.

Generals Open Up—Oratory on Army Day Likened to Ominous Thunder of War Drums

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Thomas L. Stokes that appeared in the Washington Star:

GENERALS OPEN UP—ORATORY ON ARMY DAY LIKENED TO OMINOUS THUNDER OF WAR DRUMS

(By Thomas L. Stokes)

The generals have been sounding off recently, scaring us well-nigh to death. But they really opened up, with all stops out, on Army Day, mounted stumps here and there with the brass clinking, and let the oratory roll with the ominous thunder of war drums.

Despite all the noise and furor, there were two factors which might offer some consolation to the peace-hungry citizen who is the target of much of this high-pressure psychological warfare.

One was the announcement that hereafter there will be only 1 day a year set aside for the parades and speeches, which will be known as "Armed Forces Day," instead of the four we have had yearly for Army, Navy, Marine Corps, and Air Force. The reason is to promote the idea of unity in the services.

PEACE DAY SUGGESTED

It might be a good idea also to have every year a day of silence, which might be called Peace Day, on which the citizen could pick up his newspaper and listen to his radio and watch his television without reading or hearing about or seeing a single soldier, tank, airplane, rocket ship, warship, or fiery speech from a general or admiral.

The other consoling factor in the Army display this week was that some of the military seem to have become conscious of the criticism of the gun play and cries of alarm and the way the military has been throwing its weight around in a manner unseemly in peacetime for a Government supposedly in charge of civilians.

For example, Gen. J. Lawton Collins, Vice Chief of Staff, in his speech at Pittsburgh, said: "Our foreign policy is not made, and should not be made, by the Army." It would appear that the caustic criticism of Herbert Hoover's Commission on Reorganization of the Government might have had some effect. The Commission's task-force report on the National Defense Establishment said the military had been arrogating to itself too much influence in the field of policy.

Then there was Gen. Albert C. Wedemeyer, who, in a speech before the Union League Club in Philadelphia, had the grace to admit he might be charged with preaching a doctrine of fear. This was a recognition at least of the sort of psychology that seems to be the aim from what has been going on in recent weeks.

EXCUSES APPROACH

Then he excused this approach, thus:

"A powerful nation is using fear to intimidate neighboring peoples and to hold satellites in submission. We are, therefore, compelled to employ fear of inexorable retribution against that powerful nation if we are to stop her arrogant and ruthless aggression."

Here is a clue to the apparent strategy: To scare Russia, to scare our own people, and to scare Congress; the last in the interest of getting all the appropriations the military wants, including those to arm western European nations in the Atlantic Pact.

Russia just screams back, and in a rising crescendo, with all sorts of boasts about her might, and feeds her own people with propaganda that we are getting ready to make war on them, all of which creates a highly emotional state in which it becomes more and more impossible to sit down around a table and negotiate our differences.

It's like two bullies swaggering up and down opposite sides of a street shouting their prowess and daring the other to do something.

Split in Communist Bulgar Ranks

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, April 9, 1949

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor of Wednesday, April 6, 1949:

SPLIT IN COMMUNIST BULGAR RANKS

(By R. H. Markham)

The demotion and arrest of Traicho Kostov, long one of the most important Communist leaders in Bulgaria, is an event of considerable political importance. It reflects profound Bulgarian dissatisfaction with the Communist regime and with onerous Russian domination.

The authenticity of the event seems to be proved beyond doubt, since it was reported in the official Sofia Communist paper, and announced by the official Communist news agency.

The decision by Bulgarian Communist leaders to debase and fire such a powerful Bolshevik comrade—the term "Bolshevik" is now preferred by Bulgarian Communists—could not have been taken lightly.

Mr. Kostov was a revolutionist of unusual worth and standing in the Communist world. He was a virtual economic dictator, Deputy Premier, member of the supreme Communist governing body, the Politburo, and occasionally served as Acting Premier. He was considered the party's leading practical economic expert, at a time when such a person was direly needed.

MILITANT LEADER

His record during the great hours of Bulgarian communism was exemplary. He became militant Communist youth leader at the age of 23, participated in Bulgaria's first serious Communist revolution at the age of 26, spent long years in prison, was once condemned to life imprisonment, studied world revolution in Moscow, preferred to do dangerous underground work in Bulgaria rather than sit in exile, and played a leading role in events that gave Bulgarian Communists absolute power after the overturn of September 9, 1944.

Why was such an experienced, tireless, devoted Communist purged?

Marshal Tito's press agents report, on the basis of the findings of alert Yugoslav spies in Bulgaria, that Bulgarian Communist leaders are being arrested on a large scale. Although Belgrade is always prone to exaggerate in appraising Bulgarian developments, Marshal Tito's men have shown them-

selves well informed regarding the actions of their Bulgarian comrades.

OPPRESSION SEEN

It appears that Russian oppression of the Bulgarian nation had become so onerous that even Mr. Kostov couldn't ignore it. The Bulgarian economic and social machine was faltering. Five-year planning, so dear to Communists, was being stalled. The economic expert openly advised that the social, political, and economic pressure be slackened and that Russia relax in its draining off of Bulgarian wealth. Therefore, his comrades purged him for opposing Russia and the great George Dimitrov (Bulgarian dictator).

Evidence of widespread Bulgarian resistance abounds. The Bulgarian Communist press and radio stations have been shouting, "Peasants, sow more grain." The peasants were far behind in sowing and prospects for food to feed the proletariat seemed terrifying.

Such a situation in Bulgaria in April is almost beyond belief. Bulgaria is southeastern Europe's best-tended peasant land. The Bulgarian peasant is proverbially a good gardener and tiller of the soil.

HARD WORKER

He has not been a serf for centuries. He owned his own land. He turned his valleys and plains into a succession of parklike gardens and little fields. No one had to tell a Bulgarian peasant to work; on the contrary, others were told to "work like a Bulgarian." But now he doesn't sow his precious fields.

On March 28 the Sofia Communist daily wrote: "The Ministerial Council is alarmed. The sowing season is nearing its end. We are way behind."

The day before the Communist press was filled with threats and coaxing. There was to be wonderful production, the papers said. Peasants were to be marvelously rewarded; but now let them sow "according to the Soviet example."

The same day the Minister of Agriculture ordered the People's Councils, the Fatherland Front, youth societies, and women's associations to prod the peasants into sowing. He declared: "It is disgraceful that tractor drivers do not start working till 10 a. m. Kolkhoz workers do worst of all, setting bad examples."

APPEALS ISSUED

Appeal after appeal was issued for everybody to become a "shock worker" and outdo his neighbor. The villagers were told they must sow at night, must toil night and day. All "activists" were instructed to get busy. Young activists, who had spent their time in party clubs studying propaganda and reading about Leninism-Stalinism, were set running from house to house to make their "tatkos" (papas) go out and sow.

The Government commanded: "Work every available hour. Bring the nation under mobilization."

For a millennium Bulgarian peasants with their gray oxen had been arising at 5 a. m. to plow and sow, but now with Communist tractors work started at 10.

Why? Because a minority party had seized the country and was skimming off the cream. More than 3 years a large Russian Army had stripped the land before the eyes of the people. Thousands of Russian civilians still remain in privileged positions.

LESS FOOD

The Bulgarian people, amid a plethora of rosy promises, have less food, more ragged clothes, more meager supplies of fuel than for decades.

Expressions of enmity toward Russia resulted. Grandpa Ivan was called oppressor, not liberator. Economic and political advance bogged down. Some Communists, including Mr. Kostov, sensed all this and urged a lightening of burdens. Moscow opposed, Dictator Dimitrov obeyed Moscow and Economic Dictator Kostov was purged.

The long-silent Bulgarian peasants in homespun clothes, wearing sheepskin caps and pigskin moccasins, and using handmade hoes are making their silence heard.

Giving the Pact Teeth

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Saturday, April 9, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial which appeared in the New Hampshire Morning Union, published in Manchester, N. H., under date of April 7, 1949, entitled "Giving the Pact Teeth":

GIVING THE PACT TEETH

It has been correctly said that signing the Atlantic Pact is only a beginning. The pact constitutes a pledge by the Atlantic nations to stand together in a mutual defense against aggression.

This pledge is important, but only if its implications are followed through by practical implementation:

1. The pact must be supported by mutual steps toward a reasonable rearmament.

2. It will demand a greater unity of purpose and a stronger spirit of cooperation among the nations of western Europe than has yet appeared.

The policy toward Germany may also prove the greatest test the pact will have to face. Germany is generally recognized as the key to western Europe's economic recovery. It is the key to its military defense. What happens in Germany will set the stage for successful resistance to Soviet aggression or eventual defeat.

If Germany remains an area of unrest and uncertainty, the stability of all western Europe must be affected. Therefore the foreign ministers of Britain, France, and the United States have done well to follow their signing of the Atlantic Pact with a search for a solution of the German problem.

Western Germany has made much progress economically. Production has been stepped up and food shortages have been relieved. But the constitutional convention at Bonn, called to create a democratic West German state, has bogged down. Cynicism and the old unwholesome German nationalism is again spreading. The Russians are playing their propaganda hard of a united Germany and it is winning some willing listeners. The western Germans do not want communism, but neither do they want frustration, conflict, and division.

Most of this situation hinges on the incoherence of western policy. Britain and the United States are at odds over the dismantling of German industry. Britain wants the German industrial capacity held low for selfish reasons. Britain wants a strong centralized government in western Germany, while France wants a loose federation of sovereign German states.

These differences should be ironed out and an agreement reached on a sensible, coherent policy. Above all, the time has come to throw away prejudice and meet the German problem in a realistic way. Effective restraint on a rebirth of German militarism is obviously imperative to the peace of mind of Germany's neighbors, but this should not obscure the fact that the rebuilding of western Germany as a free, stable country, and its integration with western Europe is essential to the security and prosperity of the West. Moreover, the hope of unification of Germany—East and West—must never be lost sight of.

Germany stands at the crossroads between Russia and the West, and what happens there can cancel out much of the efficiency of the Atlantic Pact.

Is Communism in China Different?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, April 9, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks I include a recent radio broadcast by Jack Beall, distinguished reporter and commentator. It is the eightieth in his series of informative broadcasts on communism. How much longer must the world wait in jeopardy before those in our State Department, who make far-eastern policy, wake up to the true nature of communism in China, as General Marshall and Secretary Acheson belatedly woke up 2 years ago to the nature of communism in Europe?

Good evening. This week, eight nations have published a historic document—the Atlantic Pact—the treaty which they propose to sign. It is, in effect, a statement of solidarity against the inroads of communism in western Europe and on the North American Continent. It does not declare war on communism, because it is a defensive pact—it doesn't come into operation until one or more of the countries signing it, has been attacked in a major way by some aggressor. That potential aggressor, while not named—is nevertheless known by everybody to be Soviet Russia. We are not declaring war on Soviet Russia, through this alliance. But we are banding together to tell Soviet Russia that it will have a large fight on its hands if it goes any farther. We have, in effect, drawn a line across Europe and told the Kremlin so far and no farther, at your peril.

But, while we are doing this in Europe, we have a highly negative attitude toward the encroachment of communism in the Far East, where it is in a far more advanced form. We do not uphold the hands of the anti-Communists there. We positively do things which hurt them. The attitude of our State Department seems to be that the great potential enemy of the United States is not Soviet Russia, but Chiang Kai-shek. From various reports, notably a story in the current Newsweek magazine, it seems the State Department is behind a move to cut off the last refuge of Chiang Kai-shek and destroy the last bastion of Chinese anticommunism—the Island of Formosa. It was there that Chiang expected to go, or the Chinese Nationalist Government expected to go, in the last extremity. Great quantities of records, personal belongings of high officials and much of the remaining gold supply of the government were shipped there. The governor's palace was being prepared to receive Chiang. Now, all such preparations have been suspended. And the unanimous opinion of the foreign colony in the capital of Formosa is that the State Department had stopped it. I don't know what other high policy may have got in the way, but, it looks, from the outside, very much as if the covert little crowd in the Far Eastern Division of the State Department, who have done so much to

help the Communists, to beat down Chiang Kai-shek and to defeat the fundamental interests of the United States Government, vis-a-vis communism, had gotten in its deadly work again.

As to the relative importance of the Asian Continent and the European Continent, I don't pretend to know which is really more vital to us. It would be hard for anybody to pick the more vital. Both are highly important. I shall show a little later that the Communists themselves think that Asia is more important to them, for purposes of subduing their arch enemy—America. But, it seems very strange that when we have this openly avowed policy in Europe, of opposing communism, we have only a "wait and see" policy in China. Secretary Acheson was up on the Hill, only this week, and told the so-called watchdog committee that the United States is waiting for the dust to settle, in the Chinese situation. The only trouble with that is that when the dust does settle, everything else will have been settled, too, and China will become a Communist satellite nation.

It is also reported, from among those on the watchdog committee that the State Department does not now have any objection to the granting of funds to China—a thing which many Members of Congress have been pressing for, while the State Department has been heretofore holding back, waiting for the dust to settle. The new approach is that there is no objection to the granting of funds—but there must be no strings on it, so far as the Nationalist Government is concerned. The inference there is that a succeeding government—very possibly a Communist government in China, would fall heir to whatever the United States granted. I don't think for a moment that Congress would want, or intend, that a Communist government anywhere would fall heir to its funds. But what else is to be supposed of this reported State Department attitude that there be no strings on it as earmarked for the Nationalist Government?

It all smacks too much of the bill of goods which was sold the State Department, back during the war and shortly thereafter—the general Communist line that a coalition government—of Communists with the Kuomintang—should rule China. That line certainly was not the line we proposed to follow in Europe.

And it is rather disconcerting to find that on June 19, 1946, the general press quotes Dean Acheson—then Under Secretary of State, as saying that the United States had agreed to train and supply Chinese Communist troops as a preliminary to incorporating them into a nonpolitical Chinese Nationalist Army. Now, it's impossible for me to believe that anybody who formulated this concept, or passed it, or anybody who talks in those terms has much understanding of the nature of communism. There couldn't be any nonpolitical incorporation of the Chinese Reds into the Chinese Nationalist Army. The concept is as impossible as a political coalition—and the State Department acknowledged this later, concerning Europe.

This was all some months after the Kremlin had shifted its line of cooperating with the west, as during the war, and had decreed "cold war" with the west. In 1945, Mao Tse-tung, the leader of communism in China, had openly declared himself with Russia and against the United States, telling the Chinese Communists that coalition government was a temporary expedient, and one that would lead to the destruction of Chiang Kai-shek and American imperialism.

I want to quote now from a very important article, which I hope you will all read, in Collier's—the issue for March 19. It is by Louis Budenz, the former Communist editor of the Daily Worker, who finally foreswore communism and has been a most valuable source in telling what went on while he was among the inner circle. I think I will avail myself of that publication's permission to quote a limited amount of the article which was well documented before publication. Here is the way it starts:

"The Communist conquest of China, now dangerously near completion, long has been planned as a major milestone in Moscow's road toward creation of a Soviet America. Japan and Korea are next on the schedule, then Indonesia and the Philippines. Once in control of the western Pacific vast manpower and vital rubber, tin and oil resources, Russia hopes to be ready for the final showdown with the United States.

"That is the blueprint, at least, of Soviet world conquest. It has been known to United States Communists since 1927, the year Earl Browder was sent to China to plant seeds of anti-Americanism there. Since 1927 every American Communist has been inculcated with the Soviet tenet that China is the master key to a Red White House." Budenz continues:

"During my 10 years as a Communist editor and party worker, no other indoctrination program was more important. Numerous United States Red leaders stated their belief that China's 463,000,000 people would be the decisive factor in Sovietizing the United States. At a 1940 educational meeting of Daily Worker staff members, William Z. Foster, now the party's national chairman, stressed China's role in America's future.

" 'China's millions,' he said, 'will be a great aid to the Soviet Union in helping the American proletariat establish a Soviet America.' Continuing, he pointed out that China was also the key to Korea, Japan, and the Philippines. * * *

"The tremendous potential of China's manpower and materials dominated many discussions at United States Communist Party headquarters while I was editor of the Daily Worker. Conferences with secret conspirators, spy and saboteur agents like J. V. Peters and the late Jacob Golos always traced the route Asiatic operations would follow: China first, followed by Japan, Korea, and the Philippines, and then Alaska and Hawaii."

I might say that some very effective preparation for the coming of communism to Hawaii has recently been going forward in those islands. From all I can gather, the Harry Bridges-CIO organization is in pretty much complete control out there.

Mr. Budenz gives some very interesting light on just how the American people and the State Department were sold the line that the Chinese Communists were not real Moscow Communists but were simply "agrarian reformers," and remember that this comes from someone who was there, who sat in on the meetings, who helped to plan the campaign. It began, he says, in 1937, when Earl Browder called a meeting at Communist Party headquarters in New York. Ten United States Communist leaders were there. Browder announced to them that he had received word that "the followers of Mao Tse-tung have to be presented in a new dress." Then and there it was planned to further the "agrarian reformist" line. It was decided to plant the idea in the legitimate far eastern organizations. Frederick Vanderbilt Field, whom Budenz describes as a "millionaire and dilettante left-winger," emphasized use of the Institute of Pacific Relations, which is not a Communist organization, although its most influential committees and publications have been infiltrated by Communists and their sympathizers. Frederick Vanderbilt Field got to be secretary of its American council. The idea of "agrarian reformers" took root in such organizations and such publications and spread to certain policy-making circles in the State Department and then gained headway in the general American press. But the chief success the Communists had was in planting articles in American journals of special interest on the Orient, such as Far Eastern Survey, Pacific Affairs, and the renowned Amerasia. This latter magazine faithfully followed the Communist Party line and figured in the first case of State Department secret documents being abstracted. There wasn't very much of a splash, as compared to the Hiss case, but the publisher, Philip Jaffee, received a fine. Budenz recounts, in this article, that, after paying the fine, Jaffee threw a party that night for his codefendants and members of the staff of the Daily Worker, and he says, "Toasts were drunk that night to 'the coming victory of communism in China and the defeat of American imperialism'."

Budenz says he discovered that the main objective of Amerasia was the establishment of State Department contacts which could prove helpful in stopping aid to Chiang Kai-shek.

These magazines I have named were widely read in the State Department and there came to be a group, with Communist core, which existed in the State Department that used the arguments and the articles in these magazines with telling effect in selling the higher echelons of the Department on the Mao Tse-tung status, as a mere agrarian reformer.

I think probably the best way in which that idea can be disabused is to quote from Mao, himself. He finally threw off the mask, after it was no longer useful and, in a broadcast, proclaimed his absolute solidarity with Stalin in the world-revolutionary united front headed by the Soviet Union. He said that any idea of a middle road or third road between capitalism and communism is utter hypocrisy and total bankruptcy.

Mao has certainly followed every twist and turn of the Communist Party line, in his actions, as well as in his words. He has been held up as a patriot—a man who would place the interest of China above the interest of any other nation, when the show-down came. But there is at least one strange discrepancy here. How can it be explained, if he was such a patriot and not following some higher line of policy, laid down by interests other than the interests of his own country, that he allowed 10 Japanese divisions to move through Communist-held territory, without meeting any show of resistance? And yet this happened and it cannot be satisfactorily explained away. The 10 Japanese divisions were allowed to come down from Manchuria, to the central China front, in 1944, and it was this Japanese force which eventually cut through to east China and overran Gen. Claire Chennault's Air Force bases. Apparently General Mao was more interested in Japan chewing up some of Chiang's divisions than in keeping the Japanese out.

But the concept of agrarian reformer, carefully and deliberately planned by the Communists, was attached to Mao and was sold to this country and it had important effects on our policy. I begin to suspect that two new concepts have the same parentage: first, the idea that it is too late to do anything about China, and second, the idea which you hear more and more that it won't amount to anything, anyway, if the Soviets do take over China because Mao is such a good Chinese patriot. And besides, the Chinese are such individualists that Russia will have more than it can handle in China.

I wonder how it can be argued that individualism can defeat this great collectivism when whole nations and world organizations have not been able to stand up against it?

This is Jack Beall saying good night from Washington.

Why Democracy Works—Prize-Winning Essay by Miss Isabel Bern

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, April 11, 1949

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the RECORD an essay entitled "Why Democracy Works," by Miss Isabel Bern. The essay, which won the prize in a contest held by the Elks, was printed in full in the April 4, 1949, edition of the Anderson, S. C., Independent.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

WHY DEMOCRACY WORKS

(Prize-winning essay in Elks contest, written by Miss Isabel Bern)

Democracy. A word cherished and dear to the hearts and minds of freedom-loving people all over the world. Democracy. A way of life, a free way, which has a government to insure equal rights and liberties for all.

What is the true meaning of democracy? The ancient Greek philosopher Aristotle defined it as "polity or constitutional government," "the rule of the majority of the free and equal citizens as opposed to monarchy and aristocracy"; but it is even more than this. Since it is a government "of the people, by the people, and for the people," its basic principles enhance the welfare of the people whom it serves and provides for them a larger way of life. The main principles which it sets forth are (1) the value of individual worth and dignity is held as sacred, (2) open and orderly justice is given to all, (3) the five freedoms are granted to everyone, (4) the powers of the government are gotten only from the consent of those who are governed, and (5) the people are to be uplifted through education. In such a form of government the individual is truly able to enjoy "life, liberty, and the pursuit of happiness."

What makes this ideal form of government work? It works because it recognizes its weaknesses and strives to correct them. Constructive criticism of the government definitely helps democracy to work and to better the conditions of its people.

Democracy works because of the will of the people for it to work. Every individual is born with a desire for freedom and liberty, the kind which can be had only in a democratic form of government. All of us who are fortunate enough to live in a democracy love our form of government. We love it because of the privileges we enjoy; the opportunity to live and work and better ourselves, the right to develop our personality and broaden our field of service. We love it because it is true. Democracy is indeed true to the people it serves, and true to itself in upholding the respect of our Nation in the eyes of the world. The main principle on which democracy is founded is truth, which is righteousness, sincerity, and a real representation of fact. It has been said that "Truth crushed to the earth will rise again." Since democracy is based on truth, it shall always rise again and flourish as the right way of life, so long as the peoples of the earth seek that which is good and noble.

Democracy works because of the feeling of brotherhood in men. Every person should have a feeling of good will and love toward each other. When all men have this feeling, they will be as their brother's keeper and will do kind things for them rather than any evil. Men who have this feeling will enjoy some of the world's greatest gifts, such as friendship, tolerance, compassion, good will, truth, and peace.

The reasons why democracy works may be summarized by saying: Democracy works because its firm foundation is truth, its strong walls are brotherly love, and its lofty roof is the will of the people for freedom, equality, and justice. An altogether strongly built government must be formed to work in accordance with the will of God. We believe democracy does this better than any other form of government; and therefore, it works more effectively than others do. We all hope it will continue to spread and flourish in our country and in others with the help of God.

Veterans' Pensions—Letter From S. Fred Olsen

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, April 11, 1949

Mr. CAIN. Mr. President, sometimes we are led to believe that every veteran feels his Government owes him something in a material way. I ask unanimous consent to have printed in the Appendix to the RECORD some observations from a veteran in Seattle who seeks only an opportunity to make something of himself. I have long been of the opinion that Mr. Olsen's views are shared, in whole or in part, by tens of thousands of veterans everywhere.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SEATTLE, WASH., *March 19, 1949.*
Senator HARRY P. CAIN,
The United States Senate,
Washington, D. C.

DEAR SIR: I don't want a pension.

No, Mr. CAIN, I am not interested in a veteran's pension when I reach the age of 65. Here are a few of the reasons why:

1. At no time during my 5 years' service did I expect the Government to subsidize me in old age for the few brief years spent in defending my country and our way of life.

2. At no time during those 5 years did I hear any talk among either enlisted men or officers about a pension. I firmly believe it was everyone's desire to win the war and then go home with the knowledge that the United States was still a free country where every man could plan his own way of life without interference.

3. Today, it is obvious that a few people in Congress wish to plan our future for us. This is just plain socialism—and the sad part is that they are promoting this pension for vote-getting purposes alone. This plan is certainly not one conceived by a real veteran of World War II.

4. It is obvious that the recipients of this pension are veterans of World War I. When are those people going to quit patting themselves on the back for their great sacrifice 30 years ago? I am not willing to pay the taxes necessary to pay off those people.

5. It is as clear as crystal that a pension plan involving expenditure up to $8,000,000,000 a year—then continuing year after year—is liable to be the straw to break our back.

6. As a taxpayer, I am not willing to bear this expense for 35 years more (when I will be 65). I prefer to plan my own retirement program—in my own way—and in any manner I choose.

7. The Government brokerage fee in a plan like this would be tremendous. Another bureau with thousands of new employees to administer the plan. Which way are we headed, Mr. CAIN? I want to see this fantastic maze of Government bureaus, divisions, departments, administrations, etc., etc., cut down—not increased.

8. The real veterans of this last war did not come home. Thousands of other veterans were disabled and occupy hospitals throughout the Nation. These are the people I want to see helped in every way possible. And we do have the Veterans' Administration for that purpose.

9. But why give a pension to everyone who participated in World War I or II? A good percentage never left the shores of the United States—are they entitled to a pension? I say "No."

10. Finally, I don't believe the real veterans want this program.

I respectfully, yet strongly urge you to do everything you can to prevent this legislation from being passed.

Very truly yours,

S. FRED OLSEN.

Top-Level Salaries

EXTENSION OF REMARKS
OF
HON. RALPH E. FLANDERS
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Monday, April 11, 1949

Mr. FLANDERS. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Top-Level Salaries," published in the Washington Post of April 11, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post of April 11, 1949]

TOP-LEVEL SALARIES

Under a bill which is expected to come before the Senate this week, the salaries of Cabinet members would be raised to $25,000, while other top executives and administrators would be put in three groups with salaries of $20,000, $18,000, and $16,000, respectively. By comparison with the salaries paid in comparable private employment, the proposed scale of payments is still very modest. The Federal Government cannot, for obvious reasons, attempt to compete with private industry for the services of qualified executives and professional men. Efficiency demands, however, a scale of salaries that, as the Senate Civil Service Committee says, will not subject competent officials and their families "to economic sacrifices so great as to outweigh the nonsalary incentives and advantages of the Government service."

At present the salaries paid high-ranking Government employees obviously do not meet this simple test of adequacy. That is proved by the reluctance of able men who lack independent sources of income to enter the Government service and by the exodus from Government employment of capable officials. The loss of trained and experienced men comes, too, at a time when the duties and responsibilities of the executive heads of

Government agencies are becoming increasingly difficult and men of exceptional ability are needed to insure efficient management.

While some changes in the proposed salary grouping seem desirable, the salary increase bill as a whole is a careful, well-balanced measure that, if enacted, would be of tremendous value. The cost would be slight; only 250 officials are covered by the Senate bill, and the salary increases amount to less than $1,400,000. That outlay would be recovered many times by the gains resulting from the increase in efficiency and improved morale.

Apart from salary increases, the bill also undertakes to adjust salaries on a rational basis, with regard for the nature of the duties and responsibilities of officials. At present some of the most exacting and responsible positions in Government service have a lower salary rating than others of much less importance. The salary scale is, in fact, erratic and illogical, due largely to the practice of creating new positions carrying salaries that Congress fixed with slight regard for the prevailing rates of pay for comparable existing positions. This lack of standardization has a bad effect on morale and has been one of the reasons why good men have left the Government service for private employment.

This bill is, as the Senate committee states, only a start toward a comprehensive revision of the Government's whole salary structure. But general revision is a much more complicated and time-consuming undertaking. Top-ranking Government employees have been denied the advantages of pay roll increase given their subordinates with the result that the gap between the salaries of high-ranking officials and lesser Government employees has been steadily narrowed and in some cases has disappeared. There is no reason for further delay in dealing with this neglected aspect of the salary problem. Indeed, haste is essential to arrest the deterioration in efficiency caused by the retirement to private life of public officials who are disheartened and disgusted by the failure of the Government to provide reasonable salary increases that would to some extent offset the pressure of high living costs.

The Military Problem in the Pacific—Editorial Comment

EXTENSION OF REMARKS
OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Monday, April 11, 1949

Mr. McCARRAN. Mr. President, I hold in my hand two articles, recently published, which present different aspects of the same problem. The first of these is an editorial which appeared in this week's issue of Life magazine, and which is entitled "Pacific Retreat—Military Planners Are About To Let Down the United States and Asia."

The second of these articles, which appeared in the Washington Sunday Star on Sunday, April 3, carries the byline of Mr. Constantine Brown, one of our best informed writers on international affairs, and has the headline "United States neglecting to protect Pacific interests."

Both of these articles are cogent, coherent, and timely; and I ask unanimous consent that they may be inserted in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

PACIFIC RETREAT—MILITARY PLANNERS ARE ABOUT TO LET DOWN THE UNITED STATES AND ASIA

In its issue of February 28 Life had some sharp things to say about Secretary of the Army Kenneth Royall and his nitwitted inferences in Tokyo that the United States was preparing to pull out of the western Pacific in time of trouble there. We must now apologize to Secretary Royall: he was all too right. The United States military, with the consent and knowledge of the State Department, has indeed decided to write off China as a total loss: to maintain the present United States position in Japan as long as it is cheap and convenient but not to invest any further men, money or effort in strengthening our fringe positions off the coast of Asia, as Gen. Douglas MacArthur so strongly recommended to Washington 3 months ago (Life, December 20).

Our planners have gone much further: they are instructing the armed services to regard the United States west coast as the basic defense frontier in the event of war in or affecting the Pacific, which means that the Philippines and hard-won Okinawa, as well as Japan, are now to lie beyond the area of primary United States concern and effort. The Marianas and the Aleutians are given a higher rating and with luck may be held, but anything beyond their line is to be considered expendable. This ugly little cat was popped from the military bag by an alert Associated Press correspondent in Pearl Harbor. His dispatch reporting naval plans to reduce emphasis upon the far Pacific and to look backward toward the United States west coast was not denied, and Life has reason to believe that it reflects the thinking of military Washington. The excuse for this line of reasoning is that China is lost anyhow, that the Russians lack the resources and the will to make it a new center of Soviet strength in the immediate future and that the main United States effort must be concentrated in Europe. Besides, the planners reason, land-minded Russia can't advance across the wide Pacific in any case. Viewing the Pacific as a purely military problem, this reasoning may make a modicum of sense. But there are no purely military problems in the world of 1949, as any general or admiral worthy of his rank should know by now at this late date in history.

This news doubtless comes as a shock to those who, agreeing or resigned to the write-off of China, have assumed that things still would not be too bad if we maintained strong positions in Japan, Okinawa, and the whole ring of peripheral Pacific bases. Indeed it has been argued that one justification for "facing the facts" in China is that after all there is still Japan. The decision recently taken in Washington does not of course mean immediate or outright withdrawal from the Pacific periphery; but, until further notice, it does mean that the United States will not commit any important part of its strength to preparatory defense of the far Pacific.

There can be no quarrel with a decision to create the strongest possible United States position in western Europe. But the assumption that this decision requires an abandonment of so much of the Pacific and of Asia is false and foolish. Secretary of State Acheson, who had a wonderful opportunity before him to carve out a distinctive Asiatic policy of his own, has feebly bowed out. His policy in China, he has recently said, is to wait and do nothing "until the dust settles." It will be a long and fateful time before the dust settles over a Pacific world abandoned without a murmur to Moscow and to communism. We cannot believe that this decision will stand; our necessities and our times will not allow it. But that it should be entertained even for a moment is a grave reflection upon the men and agencies who are responsible for the peace and survival of the west.

UNITED STATES NEGLECTING TO PROTECT PACIFIC INTERESTS—ATLANTIC FACT PROVIDES FOR NO RECIPROCAL ASSISTANCE FROM EUROPEAN NATIONS TO SUPPORT US IN THE FAR EAST

(By Constantine Brown)

The foreign ministers of the Atlantic Pact nations are now gathered in Washington to sign the document which, for the first time in history, will bind the United States to Europe and will compel us to support the free European nations with all our resources in the event of aggression against them.

Although the U. S. S. R. is not specifically mentioned in the document which creates this new coalition, the alliance is aimed to deter Russia from further encroachments against nations outside the iron curtain in western and northern Europe.

The creation of this coalition is regarded as the last diplomatic effort of the free nations to put an end to Russia's aggrandizement in the west. It is a warning to the Kremlin that henceforth its military actions will be answered in kind.

However, while we focus our attention on the free countries on the other side of the Atlantic, we are once more neglecting the vast American interest on the other side of the Pacific, where Russia has made tremendous strides in areas where 1,350,000,000 persons live and where vital basic raw materials are produced in vast quantities.

While we pledge our unlimited assistance to western Europe—and to a lesser degree to the countries of the eastern Mediterranean—none of them is required to support us in the Far East. Europe and particularly western Europe is the cradle of American culture. All of us are descendants of European ancestors. Hence it is understandable that emotionally Europe should play a great role in the formulation of our policies.

FAR EAST GLOSSED OVER

But in doing this we have not attempted to obtain even the limited assistance which our allies might be able to afford us in the struggle in the Far East, which is being glossed over by our policy makers. Russia has been acting in a spectacular manner in Europe; but she has been far more efficient in her policy of aggrandizement in the Far East.

Russia has taken from under our noses the most important parts of China and northern Korea, while in India, Indonesia, Indo-China, Burma, and Malaya she has made rapid strides. The men in the Kremlin are probably more acutely aware than we are of the importance to our national defense of the raw materials which lie in those countries. And she intends to create a situation which will prevent us from having access to those materials, even if she does not directly control all of Asia.

Soviet activities in China have been misunderstood by the American people. The optimism displayed by so many officials in the Government is entirely out of place. These men erroneously contend that Russia "cannot possibly digest nearly 500,000,000 Chinese and will have her hands full for generations to come."

The Kremlin evidently has no intention of controlling a centralized China. Its Far Eastern experts, who are far better informed and more realistic than their opposite numbers in our State Department, realize that it is impossible to organize and control that

vast country, regardless of how harsh and ruthless Soviet methods may be.

Moreover, the Kremlin does not wish to repeat the mistakes it made in Yugoslavia, where an able and unscrupulous dictator—Marshal Tito, whom Moscow trusted because of his long service in the Soviet secret police—became a rebel. If Yugoslavia had been divided into its component parts with a puppet at the head of each, Tito would never have succeeded in his ambitions.

That is the reason why Mao Tze-tung, who at one time was considered Moscow's principal stooge in China, now has become a secondary figure, whose role will be confined soon to heading a certain part of China. Mao already has been dislodged from Manchuria, where the Soviets' top man now is Li Li-san.

The armies under Mao's control now are operating in other areas, while a newly trained Chinese Communist Army, supervised by Russian commissars and other officials, now is in possession of that strategically and economically vital area which Russia intends to convert into a Russian province on the pattern of Outer Mongolia.

NEW COMMUNIST ARMY

The actual plans of the Soviet Government in the Far East were set forth last fall at a joint conference of the East Asian Affairs Council of the Communist International held at Harbin, Manchuria.

Alexander Leskiv, the secretary of the organization, and Gen. Ivan Lokotikov, Russia's commander in northern Korea, were alternately in the chair. Those present included Mao's rival, Li Li-san, representing the Chinese Communists. General Lokotikov told the conferees in part:

"The reactionaries in the world are focusing attention upon us right now. They might consider that we are advancing in big strides in eastern Europe and Germany to an extent that we may make war against the capitalistic imperialists of Great Britain, the United States of America, and France.

"I hope that our comrades will keep a clear understanding of these developments. I wish to say that the essential point of the present world revolution is still being focused on east Asia. We have already built a firm foundation in Europe, and we are in full grasp of the power to make peace or war at our own will.

"We are employing temporarily political offensives to distract the attention of those capitalistic countries like Great Britain and the United States. While in east Asia if all our comrades would put to proper utilization the 1,000,000,000 people and the resources of the continent of east Asia, we could gradually capture the Pacific Ocean and expand westward to the Mediterranean Sea. When that time comes, it will be the most suitable occasion for us to launch military operations in Europe."

We are already feeling an oil shortage. The resources of the American continents are sufficient under existing conditions. But as time goes on we shall have to depend more and more on oil from other sources.

Soviet policies in Iran are aimed not so much at the Tehran government itself as at the oil resources of that country.

At the same time the activities of Moscow's agents in Burma, Indonesia, and Borneo are intended to create a situation in which we shall be denied access to those still almost unlimited oil fields, which in war or peace can provide the world with large quantities of the fluid gold.

CAN ISOLATE SUPPLIES

Deposits of tin, antimony, bauxite, and many other minerals which have never been fully extracted from the soil of the vast Pacific and Indian Ocean areas, and which are so vitally important to our peacetime as well as wartime industries, also can be denied to us in the event that the present do-nothing policy continues in the west.

Most political and military observers in Washington seem to think in terms of whether the U. S. S. R. will attack us from the Pacific, and are attempting to solve the problem in those terms. But few among our top policymakers seem to pay attention to the fact that without any physical aggression the U. S. S. R. can weaken our defense to a dangerous extent, merely by creating conditions which will shut us off from Far East supplies.

Ever since the U. S. S. R. became our associate in World War II we let her have the initiative in the political field. We pride ourselves that with the Marshall plan, the Berlin airlift, and now the Atlantic Pact we have taken the initiative from the men in the Kremlin. This is not correct, however. By the cold war the Russians have succeeded in focusing our attention exclusively on Europe, which they themselves consider only a shell.

NEED ANOTHER PACT

The Atlantic Pact unquestionably is an important political step and conceivably may give the Russian rulers some food for thought. The rearming of Europe for defense is an even more important move because without it the Atlantic Pact is only an expression of good intentions and nothing else.

However, some pact or agreement to ward off, with every means at the Allies' disposal, Soviet encroachments in the Pacific and Indian Ocean areas is a must which our policymakers seem to have overlooked. The British, French, and Netherlands Governments are unwilling to discuss the matter publicly, lest they be accused of old-fashioned imperialism.

The American Government is neglecting—to put it mildly—the situation in that area for fear of the criticism by the liberal element that we are imperialistic-minded. In fact, however, this Government should realize that no Russian aggression can actually be defeated unless we thwart the Kremlin's effort to exclude us from the Eastern Hemisphere.

The North Atlantic Security Pact

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, April 11, 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Invitation to the Hangman," published in the Chicago Daily Tribune of April 6, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Chicago Daily Tribune of April 6, 1949]

INVITATION TO THE HANGMAN

The American Secretary of State and the foreign minister of the 11 western European nations who on Monday signed the North Atlantic Military Pact have denied Russia's assertion that the alliance is an aggressive move against the Soviet Union. They can say that the pact is defensive, but the Russians don't have to agree.

Some illuminating remarks on this subject were made in a recent address before the Iowa Press Association by Owen Cunningham, an American lawyer who appeared as counsel in the Tokyo trial for a Japanese diplomat who was sentenced to life imprisonment. Speaking of the trial in relation to present-day problems, Cunningham said:

"Weeks of time were consumed during the trial to prove that Germany, Italy, and Japan sought through a military pact to oppose any European aggressor who might attack them. The present Atlantic Defense Pact is almost identical with the pact proposed between Germany, Japan, and Italy. When Germany, Italy, and Japan made such an agreement to curtail and frighten Russia by demonstrating solidarity, it was sinister. Now that we are making one, it is purely defensive. Can Russia not make the same claim against the European powers as the Allied powers made in the Tokyo trial against Japan?"

The answer to that is self-evident. Russia already has submitted the contention that the North Atlantic Pact is aggressive. We have denied it. If there is war, our position can be upheld only by military victory. If we should lose, Russia has already entered in the record a contrary view, and, by our own action in the Nuremberg and Tokyo trials, we know what the consequences will be should Russia be in a position to enforce them in the light of these precedents.

Mr. Cunningham quite properly notes the parallel between the North Atlantic Pact and the German-Japanese agreement of November 25, 1936, to which Italy adhered a year later, commonly known as the anti-Comintern pact. The only difference is that the anti-Comintern pact was more frank in the statement of its intentions. The North Atlantic Pact is not directed against Russia by name, although there is no other nation against which it could be directed, and Secretary Acheson in his accompanying explanation did not dissimulate. The anti-Comintern pact, on the other hand, specifically named the Communist International, the international arm of Russian communism, as the force to be held in check.

It is stated that the German and Japanese Governments recognized that the aim of the Communist International, known as the Comintern, is to disintegrate and subdue existing states by all the means at its command. It stated that Germany and Japan were convinced that the toleration of interference by the Communist International in the internal affairs of the nations not only endangers their internal peace and social well being, but is also a menace to the peace of the world. It invited the adherence of other states, established a permanent committee to consult on countermeasures in the manner of the North Atlantic Pact, and provided for defensive measures necessary for the struggle against the subversive activities of the Communist International.

The purpose of containing Russia and of preventing the further spread of communism is the same as that which animates the Atlantic Pact. In association with Russia, at present a declared threat to the peace, and with France, Britain, Holland, and Canada, which in the Atlantic Pact join us in this view, we labored with infinite diligence at Tokyo to prove that the anti-Comintern pact was a criminal conspiracy to plan, prepare, initiate, and wage aggressive war. Now, when we assume the same role and same means as the defeated nations of World War II, in order to check Russia, we turn around and call our pact defensive.

The ceremony in Washington, when the pact was signed and this country assumed the mission to which Hitler dedicated himself in 1936, is one of the great ironies of history. We fight a world war to military

victory only in order to confess that our aims in that war and the peace aims with which we emerged from that war are identical with those of the man against whom all of America's resources were marshaled in order that he might be destroyed and his surviving associates hanged.

We can only hope that the outcome of the lunacy of national policy during the last 8 years will not validate the somber prophecy made by Mr. Cunningham: "The precedent we have set at Nuremberg and Tokyo, until it is repudiated, will come back to haunt us some day, if it has not already."

Moral Rearmament—Letter from H. Kenaston Twitchell

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, April 11, 1949

Mr. CAIN. Mr. President, all of us have heard of moral rearmament. Most of us are curious these days concerning its progress and success. I ask unanimous consent to have printed in the Appendix of the RECORD a letter on this subject which I have received from H. Kenaston Twitchell in Germany. Mr. Twitchell is making a contribution to his time, and I think that his letter will be of substantial interest to all Senators.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MOUNTAIN HOUSE,
CAUX-SUR-MONTREUX,
March 19, 1949.

DEAR HARRY: The inside story of what has been happening in the Ruhr during these weeks is of such importance that I want to send it on to you at once. We have been able to put a hundred trained moral rearmament workers at the center of the war of ideas which is so intense in that valley. Using as a spearhead the Forgotten Factor, we have been in close touch with some 50,000 key men in labor and management who represent hundreds of thousands more. Theaters showing the Forgotten Factor at night have been packed out with hundreds standing and many more turned away. During the day our people have been addressing trades councils, union meetings and other industrial groups. They have been living and eating in the homes of the workers.

The great battle is for the mind of the workers who have been trained in the Marxist ideology. In many of the unions Communists number 30 to 40 percent. In many of these sessions the Communists have counterattacked vigorously after our presentation of an ideology that has a moral backbone and can make democracy work. These sessions have lasted sometimes 7 hours or more. But out of them has come a most significant change in the thinking and living of men who lead both workers and management today. Leading Communists are renouncing the class war and accepting a greater conception. Socialists are accepting for the first time that a change in human nature is fundamental to the good of society and that teamwork with management is possible.

August Schmidt, president of the Mineworkers of the Ruhr, has just said: "We leaders of the miners' executive understand the ideology of MRA. We have examined it thoroughly and we approve of it."

Last week end Heinrich Kost, chairman of the German Coal Board, gathered 190 of the chief industrialists of the Ruhr for an all-day meeting at Essen. Invited to attend was Hans Boeckler, head of the German trade-unions of 3,000,000 workers in the British zone. Industrial spokesmen from nine nations brought evidence of the way in which this ideology is gripping the mind of management and workers alike and enlisting both in the ideological advance which can out-live and out-think communism and bring to western Europe the flowering of a truly Christian civilization.

At this meeting one of the top industrialists of France said: "Management has so often been late by 1 hour, one idea, 1 franc. Unless we fight for the remaking of our civilization, we are not doing our job." Heinrich Kost stated: "We must get these ideas with all possible speed to our people in the Ruhr." And Boeckler, the workers' leader, summed up the day by saying: "This has been a great success. This is the way we must talk to management in the future."

At the invitation of Dr. Adenauer, chairman of the parliamentary conference at Bonn, which is framing the new western Germany constitution, we took the forgotten factor to that city. Delegates were invited to attend by Dr. Adenauer and by Dr. Carlo Schmid, his political opponent, who heads the Socialists at that conference. While there our workers found an immediate and deep response from the university students at Bonn, an indication of the hunger of German youth for an ideology to fill the void in their lives.

As a result of these developments the cabinet of North Rhine-Westphalia, the top leaders of management and the unions are working enthusiastically with us. There is, of course, intense opposition, but there is as well the possibility that the Marxist thinking which has historically dominated industry in western Europe may be lifted to a new conception.

The men who are under God creating these new developments have been trained at the MRA ideological training center at Caux-sur-Montreux, Switzerland. The spirit of Caux has become a byword in the cabinets and councils of many countries. It can bear the same relation to the training of men and of ideological weapons for democracy as the Comintern furnishes for communism.

I am writing at this time to bring you the news of these results. But above all I am writing in the hope that you may be able to come to Europe this year and see them and the men concerned in them at first hand. I cannot tell you how much the visits and personal contacts of American leaders mean to these men over here. They are facing enormous problems and always with the shadow of the iron curtain over their heads. I sincerely hope that you may be able to be with us at Caux, even if only for a few days as you did last summer.

Yours sincerely,

H. KENASTON TWITCHELL.

(Statement by Alfred Wimmelmann, general manager of the Harpener Coal Co., which employs 18,000 workers, and next week takes over another coal company with 9,000 workers.)

FEBRUARY 26, 1949.

Moral rearmament is the only way at the present time to create a new teamwork in industry because it enables each side to see each other in a completely different way. One of my shop stewards who is a Communist came to me after seeing The Good Road and said, "This has so shattered me I need a week to think it over."

This has created a completely new basis for all our negotiations; a new atmosphere has been created in which we have found many solutions over wages and prices. We gave holidays with pay without knowing where the money was coming from, but increased production has made up all the money that it cost.

We are now undergoing new negotiations concerning the workers' part in the control of industry. I am sure it is only possible to have these negotiations because we are beginning to apply MRA. Time and time again in our negotiations the spirit of Caux comes up, and there is no session of negotiations in the coal industry where we do not spend 2 hours afterwards, literally, discussing moral rearmament.

On this basis of applying moral rearmament, August Schmidt, president of the mineworkers, is our strongest support in these negotiations which affect the entire coal industry of the Ruhr. We shall soon have for the first time complete agreement between the management, the union, and the Ministry of Economics. This will revolutionize the coal industry of Germany and will affect also the other industries of Germany.

Ratification of North Atlantic Security Pact

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, April 11, 1949

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Petition Asks Senate to Ratify Atlantic Treaty," published in the New York Herald Tribune of April 5, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PETITION ASKS SENATE TO RATIFY ATLANTIC TREATY—BACKERS SAY PACT SUPPLIES POLICE POWER LACKING IN UN TO GUARANTEE PEACE

A petition calling on the United States Senate to ratify the Atlantic pact as an instrument which remedies the United Nations' defect of having no police power is being circulated by the Committee on National Affairs, 100 East Fiftieth Street, for submission to President Truman and Congress. The committee announced yesterday that 114 signatures have already been obtained.

The petition says that the Atlantic pact conforms "in principle and intent" with United Nations mechanism and falls within the UN Charter provision for regional pacts.

"It forcefully demonstrates" the petition says, "the determination of the United States and associated nations, joined by a common faith in the dignity of the individual, the principle of democracy and the rule of law, to exercise their inherent right of self-defense against the threat or fact of aggression.

"One of the obvious weaknesses of the United Nations is the lack of a police force as authorized by the Charter to compel compliance with its decisions. This defect is remedied under the terms of the Atlantic Pact until the international organization is provided with its own gendarmerie. Whatever may be the cost of arming our associates against another war, it will be microscopically small in comparison with the vast sums that would have to be spent in prosecuting a war. The Atlantic Pact is not only the best insurance for the maintenance of peace but additionally offers the most promising assurance

of survival, if, in spite of everything, war should come."

Frederick C. McKee, Pittsburgh manufacturer, is chairman of the Committee on National Affairs. Arthur J. Goldsmith, of the Hotel Waldorf-Astoria Tower, Park Avenue and Fiftieth Street, is secretary. Among the signers of the petition, it was announced, are Barry Bingham, Margaret Culkin Banning, T. E. Braniff, Leo Cherne, the Reverend Edward A. Conway, Dr. George S. Counts, Charles Denby, Eddie Dowling, Maj. George Fielding Eliot, Christopher Emmet, Raymond S. Fanning, James A. Farley, John Farrar, Desmond FitzGerald, Dr. Harry D. Gideonse, Mrs. William Henry Hays, Sidney Hook, Goodhue Livingston, Jr., Cord Meyer, Mrs. O. L. Mills, Edgar A. Mowrer, Lithgow Osborne, Robert P. Patterson, Joseph M. Proskauer, Philip D. Reed, Mrs. Kermit Roosevelt, Mrs. William Dick Sporborg, Herbert Bayard Swope, Robert H. Thayer, Dwight D. Wiman, Matthew Woll and Wilson W. Wyatt.

Investigation of Accounts of the Commodity Credit Corporation

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, April 11, 1949

Mr. MARTIN. Mr. President, on April 4 there appeared in the Washington (Pa.) Observer an editorial entitled "Warren Backs WILLIAMS." I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Washington (Pa.) Observer of April 4, 1949]

WARREN BACKS WILLIAMS

Accusations of multimillion dollar shortages which Senator WILLIAMS, of Delaware, leveled against the Commodity Credit Corporation have now been supported in full in a report by Lindsay C. Warren, Comptroller General of the United States.

These are the charges which Senator LUCAS, majority leader, described as pure politics and sought to keep from consideration by the Senate. If Mr. LUCAS is now of the same mind as before, he is shockingly indifferent to the need of elementary efficiency in the conduct of the Government.

The record, as Mr. Warren reveals it, is one of incredible carelessness in the distribution of the taxpayers' money, of a waste of fixed assets, and of clear favoritism in the award of contracts. They may not have been actual fraud but the invitation to fraud was always present.

In any event, says the Comptroller General, the accounting deficiencies encountered were so substantial and the inaccuracies so material that he cannot express any opinion whether the financial statements prepared by the Corporation present fairly its financial position.

Senator WILLIAMS is entitled to the utmost credit for bringing the sordid facts to light and the Senate owes it to the taxpayers to speedily adopt the Comptroller General's recommendation for a further investigation into the whole situation.

What Is the Matter with the Taft-Hartley Act?

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. SADOWSKI. Mr. Speaker, from time to time and particularly in recent days, some of my colleagues in the House have asked, "What, in specific terms, is the matter with the Taft-Hartley Act?" For example, the gentleman from Michigan [Mr. HOFFMAN] recently inserted what was substantially an information-wanted advertisement in the CONGRESSIONAL RECORD, asking for reasons why the Taft-Hartley Act is a bad law and should be repealed and replaced by the Wagner Act with certain amendments as provided in H. R. 2032.

I will give ten examples of ways in which the Taft-Hartley Act is loaded against unions—ten reasons why it is an unfair, unjust, and evil law that outrages the American sense of fair play:

First. An employer charge of unlawful sympathetic strike must be given priority treatment, regardless of the number of union unfair labor practice charges on the docket.

But a union charge, no matter how urgent or important, must await its turn in the tedious processes of the Taft-Hartley board.

Second. If union members strike during the term of the contract or before the expiration of a 60-day notice, in order to change the conditions of the contract, they may be fired summarily without right to reinstatement.

But if the employer locks out the union members for the same purpose or unilaterally breaches the contract he may only be charged with an unfair labor practice—and much, much later be told not to do it again.

Third. If the NLRB entertains a charge by an employer of unlawful sympathetic strike the board must seek an injunction.

But in no kind of unfair labor practice charge by a union is the NLRB required to seek an injunction.

Fourth. If the union participates in sympathetic strikes or boycotts which are unfair labor practices the employer also may sue the union for damages.

But there is no unfair labor practice on the part of the employer which also entitles the union to sue for damages.

Fifth. If, during a strike for a new contract, the employer hires scabs and petitions for an NLRB certification election strikers are not allowed to vote.

But all the scabs can vote.

Sixth. In every grievance, the employer has the right to press his interpretation of the contract.

But in grievances that may be taken up by individuals, the union has no say as to what the contract means.

Seventh. Unions must file full financial data in order to utilize the NLRB.

But employers need file no financial data in order to utilize the board.

Eighth. Union officers must reveal political beliefs and swear to political affidavits before their unions can utilize the board.

But employers may keep their political affiliations and opinions secret and still retain full access to the NLRB.

Ninth. Union cases are subject to periodic and continued delay while registration and affidavits are brought up to date annually when new financial reports are due.

Employers, however, are subject to no such delays.

Tenth. The law prevents union members from combating sweat-shop labor within their own industry by refusing to handle nonunion goods.

But the law does not prevent the employer from breaking down union standards in his union contracts by utilization of sweat-shop goods; dealing with sweat-shop employers.

Basing-Point System Exacts Toll From TVA—Members Asked To Consider Effects of Basing-Point Pricing on Small Business—Cement Trust Would Welcome Moratorium Nullifying Supreme Court Decision

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. PATMAN. Mr. Speaker, the basing-point system as perfected by the cement industry exacted a heavy toll in the construction of the great Tennessee Valley projects. I desire at this time to call the attention of the Members of Congress to 18 different abstracts of bids for cement shipped to various destinations for use by the Tennessee Valley Authority. These bids were selected at random from a series of abstracts covering a period from December 1946 to April 1948. The bids are representative and definitely portray the pattern of all bids on cement prior to the Supreme Court decision on April 26, 1948.

The tables described above follow:

227 barrels of cement for Martin substation, f. o. b. cars, Martin, Tenn.

(Bids opened Dec. 24, 1946)

	Price per barrel	Discount terms	
		Per barrel	Days
		Cents	
Hermitage Portland Cement Co.	$2.69	10	15
Cumberland Portland Cement Co.	2.69	10	15
Penn-Dixie Cement Corp.	2.69	10	15

Awarded to Hermitage Portland Cement Co. by drawing between equally low bidders.

250 barrels of cement for Fort Loudoun project, f. o. b. Lenoir City, Tenn.

(Bids opened 10 a. m., Jan. 14, 1947)

	Price per barrel	Discount terms	
		Per barrel	Days
		Cents	
Cumberland Portland Cement Co	$2.59	10	15
Volunteer Portland Cement Co	2.59	10	15
Hermitage Portland Cement Co	2.59	10	15
Penn-Dixie Cement Corp	2.59	10	15

Awarded to Cumberland Portland Cement Co. by drawing between equally low bidders.

500 barrels of cement for Watts Bar project, f. o. b. cars, Spring City, Tenn.

(Bids opened Feb. 3, 1947)

	Price per barrel	Discount terms	
		Per barrel	Days
		Cents	
Cumberland Portland Cement Co	$2.65	10	15
Volunteer Portland Cement Co	2.65	10	15
Penn-Dixie Cement Corp	2.65	10	15
Hermitage Portland Cement Co	2.65	10	15
Signal Mountain Portland Cement Division	2.65	10	15

Awarded to Cumberland Portland Cement Co. as the only bidder offering firm price.

1,000 barrels of cement for Cherokee project, f. o. b. cars, Jefferson City, Tenn.

(Bids opened 10 a. m., Feb. 12, 1947)

	Price per barrel	Discount terms	
		Per barrel	Days
		Cents	
Volunteer Portland Cement Co	$2.59	10	15
Cumberland Portland Cement Co	2.59	10	15
Hermitage Portland Cement Co	2.59	10	15
Penn-Dixie Cement Corp	2.59	10	15
Signal Mountain Portland Cement Division	2.59	Net	------

Awarded to Cumberland Portland Cement Co. as the only bidder offering firm price.

280 barrels of cement for Cleveland substation, f. o. b. cars, Cleveland, Tenn.

(Bids opened March 12, 1947)

	Price per barrel	Discount terms	
		Per barrel	Days
		Cents	
Signal Mountain Portland Cement Division	$2.61	10	15
Hermitage Portland Cement Co	2.61	10	15
Cumberland Portland Cement Co	2.61	10	15
Penn-Dixie Cement Corp	2.61	10	15

Awarded to Signal Mountain Portland Cement Division because their bid was most advantageous to the Authority.

32,000 barrels of cement for Wheeler project, f. o. b. cars, Town Creek, Ala.

(Bids opened 10 a. m., Apr. 9, 1947)

	Price per barrel	Discount terms	
		Per barrel	Days
		Cents	
Alpha Portland Cement Co	$2.67	10	15
Universal Atlas Cement Co	2.67	10	15
Lehigh Portland Dement Co	2.67	10	15
Hermitage Portland Cement Co	2.67	10	15
Signal Mountain Portland Cement Division	2.67	10	15
Penn-Dixie Cement Corp	2.67	10	15

Awarded to Penn-Dixie Cement Corp. by drawing between equally low bidders.

7,000 barrels of cement for Fort Loudoun project, f. o. b. cars, Lenoir City, Tenn.

(Bids opened 10 a. m., Apr. 30, 1947)

	Price per barrel	Discount terms	
		Per barrel	Days
		Cents	
Lone Star Cement Corp	$2.59	10	15
Cumberland Portland Cement Co	2.59	10	15
Penn-Dixie Cement Corp	2.59	10	15
Volunteer Portland Cement Co	2.59	10	15
Hermitage Portland Cement Co	2.59	10	15

Awarded to Volunteer Portland Cement Co. because their bid was most advantageous to the Authority.

2,500 barrels of cement for Cherokee project, f. o. b. cars, Jefferson City, Tenn.

(Bids opened 10 a. m. May 7, 1947)

	Price per barrel	Discount terms	
		Per barrel	Days
		Cents	
Volunteer Portland Cement Co	$2.60	10	15
Lone Star Cement Corp	2.60	10	15
Hermitage Portland Cement Co	2.60	10	15
Penn-Dixie Cement Corp	2.60	10	15
Cumberland Portland Cement Co	2.60	10	15
Signal Mountain Portland Cement Division	2.60	10	15
Universal Atlas Cement Co	2.60	10	15

Awarded to Volunteer Portland Cement Co. because their bid was most advantageous to the Authority.

1,000 barrels of cement for Fort Loudoun project, f. o. b. cars, Lenoir City, Tenn.

(Bids opened 10 a. m. May 7, 1947)

	Price per barrel	Discount terms	
		Per barrel	Days
		Cents	
Volunteer Portland Cement Co	$2.60	10	15
Lone Star Cement Corp	2.60	10	15
Hermitage Portland Cement Co	2.60	10	15
Penn-Dixie Cement Corp	2.60	10	15
Cumberland Portland Cement Co	2.60	10	15
Signal Mountain Portland Cement Division	2.60	10	15

Awarded to Volunteer Portland Cement Co. because their bid was most advantageous to the Authority.

1,000 barrels of cement for Watts Bar project, f. o. b. cars, Spring City, Tenn.

(Bids opened 10 a. m. May 7, 1947)

	Price per barrel	Discount terms	
		Per barrel	Days
		Cents	
Volunteer Portland Cement Co	$2.60	10	15
Lone Star Cement Corp	2.60	10	15
Hermitage Portland Cement Co	2.60	10	15
Penn-Dixie Cement Corp	2.60	10	15
Cumberland Portland Cement Co	2.60	10	15
Signal Mountain Portland Cement Division	2.60	10	15
Universal Atlas Cement Co	2.60	10	15

Awarded to Volunteer Portland Cement Co. because their bid was most advantageous to the Authority.

1,500 barrels of air-entrained cement for Wilson project, f. o. b. Sheffield, Ala.

(Bids opened 10 a. m., May 20, 1947)

	Price per barrel	Discount terms	
		Per barrel	Days
		Cents	
Universal Atlas Cement Co	$2.67	10	15
Penn-Dixie Cement Corp	2.67	Net	------
Signal Mountain Portland Cement Division	2.67	10	15
Lehigh Portland Cement Co	2.67	10	15
Lone Star Cement Corp	2.67	10	15
Hermitage Portland Cement Co	2.67	10	15

Awarded to Hermitage Portland Cement Co. by drawing among equally low bidders.

12,000 barrels of cement for Chemical Engineering Division, f. o. b. cars, Sheffield, Ala.

(Bids opened 10 a. m. June 25, 1947)

	Price per barrel	Discount terms	
		Per barrel	Days
		Cents	
Cumberland Portland Cement Co	$2.67	10	15
Alpha Portland Cement Co	2.67	10	15
Universal Atlas Cement Co	2.67	10	15
Lone Star Cement Corp	2.67	10	15
Signal Mountain Portland Cement Division	2.67	10	15
Hermitage Portland Cement Co	2.67	10	15
Penn-Dixie Cement Corp	2.67	10	15
Lehigh Portland Cement Co	2.67	10	15

Awarded to Cumberland Portland Cement Co. because their bid was the most advantageous to the Authority.

330 barrels of cement for Watts Bar project, f. o. b. Spring City, Tenn.

(Bids opened 10 a. m., July 9, 1947)

	Price per barrel	Discount terms	
		Per barrel	Days
		Cents	
Penn-Dixie Cement Corp	$2.65	10	15
Cumberland Portland Cement Co	2.65	10	15
Signal Mountain Portland Cement Division	2.65	10	15
Hermitage Portland Cement Co	2.65	10	15

Awarded to Cumberland Portland Cement Co. because their bid was the most advantageous to the Authority.

500 barrels of cement for South Holston project, f. o. b. cars, Bristol, Tenn.

(Bids opened 10 a. m., Aug. 21, 1947)

	Price per barrel	Discount terms	
		Per barrel	Days
		Cents	
Signal Mountain Portland Cement Division	$2.76	10	15
Penn-Dixie Cement Corp	2.76	10	15

Awarded to Signal Mountain Portland Cement Division because their bid was most advantageous to the Authority.

12,000 barrels of cement for Wilson project, f. o. b. Sheffield, Ala.

(Bids opened 10 a. m., Dec. 9, 1947)

	Price per barrel	Discount terms	
		Per barrel	Days
		Cents	
Hermitage Portland Cement Co	$2.82	10	15
Signal Mountain Portland Cement Division	2.82	10	15
Universal Atlas Cement Co	2.82	10	15
Cumberland Portland Cement Co	2.82	10	15
Lone Star Cement Corp	2.82	10	15
Lehigh Portland Cement Co	2.82	10	15

Award made to Hermitage Portland Cement Co. by drawing between equally low bidders.

28,000 barrels of cement for Wheeler project, f. o. b. Town Creek, Ala.

(Bids opened 10 a. m., Feb. 18, 1948)

	Price per barrel	Discount terms	
		Per barrel	Days
		Cents	
Alpha Portland Cement Co	$2.95	10	15
Lone Star Cement Co	2.95	10	15
Penn-Dixie Cement Corp	2.95	10	15
Signal Mountain Portland Cement Division	2.95	10	15
Lehigh Portland Cement Co	2.95	10	15
Cumberland Portland Cement Co	2.95	10	15

Award made to Cumberland Portland Cement Co. on proposal most advantageous to the Authority.

7,500 barrels of cement for Upper Holston project, f. o. b. cars, Elizabethton, Tenn.

(Bids opened 10 a. m., Mar. 18, 1948)

	Price per barrel	Discount terms	
		Per barrel	Days
		Cents	
Signal Mountain Portland Cement Division	$2.95	10	15
Penn-Dixie Cement Corp	2.95	10	15
Volunteer Portland Cement Co	2.95	10	15

Awarded to Signal Mountain Portland Cement Division by drawing between equally low bidders.

8,000 barrels of cement for Air Entraining Chemical Engineering Division, f. o. b. Sheffield, Ala.

(Bids opened 10 a. m. Apr. 15, 1948)

	Price per barrel	Discount terms	
		Per barrel	Days
		Cents	
Lehigh Portland Cement Co	$2.95	10	15
Penn-Dixie Cement Corp	2.95	10	15
Signal Mountain Portland Cement Division	2.95	10	15
Universal Atlas Cement Co	2.95	10	15
Cumberland Portland Cement Co	2.95	10	15

Awarded to Lehigh Portland Cement Co. by drawing between equally low bidders.

BASING-POINT BIDS ON CEMENT INCLUDE PHANTOM FREIGHT CHARGES

Each and every abstract clearly indicates the collusive use of phantom freight charges propagated and perfected by the cement trust during the past several decades. It will be noted that each price bid to each destination is identical. Such bids are not made by chance but by the systematic use of the basing-point system of pricing. The basing-point system as practiced by the cement industry is useless without the unearned increment of phantom freight—phantom in the sense of having the appearance of freight charges but in truth, unreal and nonexistent. Phantom freight charges, however, by being included in the destination price become a real and heavy burden on the purchasers of cement, whether they are governmental agencies, dealers, contractors, or consumers.

MEMBERS OF CONGRESS ASKED TO CONSIDER EFFECT OF MORATORIUM BILLS S. 1008 AND H. R. 2222

It is not my purpose to criticize or to impugn the motives of the sponsors of these bills. To the contrary, I know that the distinguished gentlemen are actuated by the highest principles. They are my friends, and I respect and honor them, not only in friendship, but for their true and solid worth in the field of public affairs. They represent a great State and their convictions in respect to the moratorium are undoubtedly well-founded in the viewpoint they now hold.

My viewpoint is equally well-founded. Years of study on pricing problems and discriminatory pricing practices have convinced me that the basing-point system is a pricing instrument, which, in the hands of the cement, the steel, and other trusts, has sabotaged our antitrust laws. I am convinced we shall take a long step backward in our efforts to foster and preserve small business if the moratorium is allowed to become law. I earnestly appeal to the Members of this House to give some thought to the weakening effect on our antitrust laws, if by way of legislation we upset and nullify the very purpose for which Congress passed antitrust and price discrimination legislation. For 60 years or more we have endeavored to evolve a set of laws which would protect and aid the small-business institutions of our country. Let us not abandon them now.

Security and Freedom—Can We Have Both?

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 11, 1949

Mr. JAVITS. Mr. Speaker, the Third Annual International Student Conference was held on April 8 to 10 inclusive at Bard College, Annondale-on-the-Hudson, N. Y., on the subject of the dimensions of security. Student panels discussed economic, military, and individual security with representatives from 30 European, Asiatic, African, Central, and South American countries. The conference heard addresses by the Honorable Adolf A. Berle, Jr., former Assistant Secretary of State, and by the Honorable Ernest A. Davies, M. P. I append hereto my address made at the opening session on Friday night, April 8, entitled "Security and Freedom—Can We Have Both?"

SECURITY AND FREEDOM—CAN WE HAVE BOTH?

Mr. Chairman, ladies and gentleman, no discussion of freedom and security can be realistic without at once coming to the main point of the ideological struggle now raging in the world which we euphemistically call the "cold war." For the challenge of the communistic ideology, the chief propagator of which is the Soviet Union, is postulated upon assured economic security—or what the Communists like to call "economic democracy"—and this is contrasted by the Soviet propagandists with what is called our political democracy but economic insecurity. Though the Communists talk a lot about the new democracies as defining their kind of political organization, generally speaking even they do not go so far as to claim that their one-party system and monolithic state has anything in common with our constitutional democracy so far as individual freedom is concerned.

This then is the cut-and-dried choice which the world is offered by the Communists.

But should we accept this issue and debate it on that narrow ground, we would not only be doing ourselves a great disservice but we would be belying the facts; for the Communists neither offer economic security nor do we of the democracies necessarily have to be content with a lack of economic security.

I do not think it is necessary to labor the point that living conditions in the Soviet Union are bad. We are all well aware of the dreadful congestion of housing, with four to six people to one room in Moscow not at all unusual, with the absence of sanitary facilities and with other shortages. I did, however, note an analysis, however, recently which was most interesting to me. It showed that the worker in the Soviet Union must labor 10 times as long as the worker in the United States for the ordinary necessities of shoes, clothes, food and beer, and, of course, these do not include automobiles, refrigerators or bathtubs which are simply unobtainable except for members of the Politburo and the higher government hierarchy. The Soviet worker, for instance, must labor 583 hours and 20 minutes to get a new suit, while the United States worker need labor only 38 hours and 28 minutes for his new

suit—and a very much better one at that; the comparison for new shoes is 108 hours and 20 minutes for the Soviet worker and 9 hours and 37 minutes for the United States worker.

But let us consider our own situation first, rather than the faults of the Soviet Union. The economic situation of the rest of the world leaves much to be desired. It is calculated, for example, that the average annual income in the world is $70 per annum per capita—hardly enough to maintain life let alone a decent standard of living. It is interesting, too, to analyze the annual incomes in dollar terms of even the democracies closely allied to us in the European recovery program and now in the Atlantic Pact. France, Italy, and the United Kingdom may be taken as the leading nations, and for 1946—the last year for which comparable figures are available—compared to our annual per capita income of over $1,262 per annum, their incomes were $214 per annum per capita for France; $653 per annum per capita for the United Kingdom (about $400 when adjusted for exchange), while for Italy the comparable figure was $94 per annum. In Latin America the situation is no better. Average per capita income varied just before the war between about $30 per annum and $334 per annum, between Eucador and Argentina.

The toll of World War II in terms of economics in the non-Communist world has been very grave. Ravaged countries like Italy, Austria, and Greece have had their incomes about halved. Other countries have fared somewhat better, but certainly not well.

We are all too familiar with the need, but the fundamental difference between the Communists and ourselves is that we are ready to recognize the need and free to mobilize the best solutions, while with the Communists recognition of the need is considered counter-revolutionary activity, and self-criticism by those in absolute power was never so likely as to be a reliable spur to action. The Communists are not at liberty to get the best solutions being confined only to the solutions for which the ruling clique of the Communist Party can be responsible. But the mere freedom of choice on our part is obviously not enough, we must go forward to make the best choice. The important thing is that the choice is there to be made and that we can assure the democratic peoples of the world not only of their political freedom and of the recognition of their human rights but of economic security as well, thus not only meeting the Communist argument by going far beyond it to realize in fact what the Communists only promise. For this purpose, I propose a five-point program to seek to bring to ourselves and the world the benefits of economic security and at the same time the retention and expansion of political democracy. We can in this way do what the Soviet Union and its satellites the new democracies admit they cannot do.

First, the establishment within the United States of an economic planning mechanism composed jointly of trade and industry, agriculture, Government, workers and consumers, to establish economic goals for our economy and to implement the attainment of those goals.

Second, greater democracy in corporations making their managements truly trustees for a broad electorate—the holders of their voting securities.

Third, employee participation in management through labor-management councils and in profits through profit-sharing or guaranteed employment plans.

Fourth, coordination of Government and private social-security activities, including pensions, retirement, disability, and similar benefits.

Fifth, international economic development by Government-industry partnership.

The planning mechanism which I have outlined is essential to deal with one of the two overriding fears in the minds of the American people—that we shall have a depression—the other being war. There is also a haunting fear of the whole democratic world which looks to the United States for leadership, because it is recognized that a depression in the United States will either require the United States to withdraw its aid to the other democracies or so dislocate world economic conditions as to make their situation intolerable.

It is by now clear to us that we cannot afford the jeopardy of permitting automatic adjustments of our economy by alternate booms and depressions. Right now we are depending upon the interposition of Government through expenditures from tax moneys to avoid a depression, but the scare we are just going through because of the diminution in the volume of private business and the rise of unemployment indicates only too well how unreliable is our dependence upon Government spending to stave off a depression. Government can do much to relieve the results of a depression, but its expenditures of under 25 percent of the total, in terms of a gross national product in the magnitude of $250,000,000,000 are unlikely alone to halt at its inception a major economic slide.

The planning mechanism which I have described would set goals for our economy through the joint action of trades and industries, agriculture, government, labor, and consumer. It goes much further than the Employment Act of 1946 under which the President's Council of Economic Advisors are now operating. Such a planning mechanism could operate by permitting voluntary agreements in private business in order to effectuate these goals under its supervision. It would also perform the present functions of the Council of Economic Advisers in advising upon the utilization of the regulatory powers of government, whether of credit, banking, expenditures, securities, or otherwise as they have an impact on the Nation's private economy. Such a planning mechanism is not equivalent to the planning ministries of the Soviet Union and its satellites because it does not proceed by decree or by force but by agreement. It does serve the essential purpose of establishing the end result in terms of economic goals, which is sought to be achieved by agreements freely made in a continuing private economy.

I have spoken of greater democracy in large corporations. And this is a very real thing, for our corporations today are owned directly by a number estimated at 7,000,000 or more holders of stocks and bonds; indirectly by 75,000,000 holders of private life insurance policies aggregating over $50,000,000,000 and 50,000,000 savings-bank depositors with over $57,000,000,000 on deposit. It is significant that in some of our greatest corporations the number of stockholders materially exceeds the number of employees. So, for example, in the great General Electric Co. there are 249,311 stockholders to 196,798 employees; in the American Telegraph & Telephone Co. the ratio is 765,800 stockholders to 651,500 employees, and the United States Steel it is 228,006 stockholders to 290,785 employees.

Most people undoubtedly feel that the managements of these great corporations are hand-picked by a few families and a few bankers. Whether or not this is so is really arguable, but it certainly need not be so if the security holders exercise their franchise, and it is our job as part of the plan for making security and freedom both possible to see that they do exercise their franchise; it is our job to see that, and that the resultant corporate managements operate in the public interest, because they are elected as trustees by a broad segment of the public. Lest we think this is a small matter, let us remember that in 1947 more than 79 percent of the manufacturing in the United States was done by corporations with assets of $5,000,000 or more.

Labor-management relations have profoundly affected the issue of our Nation's economic security as is shown by the great wave of strikes which succeeded the war and by the struggle over the Taft-Hartley Act, which is not yet settled. Yet our principal problem is generally recognized to be the problem behind management-labor relations—the human interest of the worker in his job. First, there is the feeling by most of our workers that the means of production are so complex and expensive to come by that their chances of going into business for themselves are practically nil, and, second, as a corollary of the first, their resulting feeling that they are just a cog in the machine of some big corporation and have no meaning of their own in its operations.

During the war we tried a remarkable experiment in making production operations more efficient through labor-management councils. These were directly concerned with the operations of individual plants. In this way, the worker was given a personal relationship to his job, and it could be made to have meaning and content for him. Nor, according to the record, did any such practice result in diminishing the authority or effectiveness of management, despite the fears of management presently reiterated. Hence, a new effort should be made to again give the worker this personal interest in his job, and the whole labor-management-council practice should be revived and utilized even more extensively in peacetime.

We are today engaged in a great effort to extend the social-security activities of the Federal Government. This applies to old-age and survivors insurance, unemployment insurance, and to the new fields of disability and health insurance. Yet great segments of American trade and business, many fraternal and social organizations, and cooperatives have social-security plans of their own for retirement annuities and pensions, disability and health benefits, severance and lay-off pay. Little effort has been made to fit these two systems together so that in sum total a man who has given his years of greatest usefulness to the community through work in the private economy receives from the private economy and the Government the security which his work deserves. This problem may be complex, but its solution is essential and we must apply ourselves to it if we are to realize security and freedom, too.

The President outlined in point 4 of his inaugural address a means by which the United States through the utilization of those of its resources, which have no ceiling in terms of dollars, may bring the world through economic recovery into a new plateau of economic well-being and security. This point calls for the mobilization of the technological skill and manpower which have made the American productive machine both in industry and agriculture the greatest on earth. It has been discussed and considered before in and outside of Congress and the President was restating it again.

A study made not so long ago under the auspices of the National Bureau of Economic Research by Louis H. Bean, leading economist and statistician, showed that in the areas of the lowest per capita income in the world, enormous progress could be made by relatively small shifts in the labor force from food production to industrial production. In the United States under 25 percent of the working population is engaged in agriculture, but in the world as a whole 60 percent of the 800,000,000 gainfully occupied

persons are so occupied. It is calculated that in countries like China and India a shift of not more than 15 percent of the population from agriculture to industry would double standards of living. A shift on the world basis, it is estimated, would raise average per capita income from $70 per year to $190 per year.

Dr. Milton S. Eisenhower, president of Kansas State Agricultural College, has recently suggested that the United Nations bring together the world's best agricultural talent for the purpose of conserving the world's soil resources. Other examples of the potential economic development of the world are readily available. The United States, because of depletion or unavailability in our territory, is short of a whole host of scarce materials, among them tin, petroleum, tungsten, bauxite, copper, lead, zinc, nickel, and vanadium. Vast underdeveloped areas in the world contain these materials, but they cannot be brought out because of lack of exploitation due to lack of manpower and transportation. Already under the European recovery program great projects are contemplated for the development of the British colonial empire in Africa of approximately 2,000,000 square miles. This development is to make accessible rubber, copper, and other scarce materials. Vast mileages of roads are necessary in all parts of the world as well as great works of housing, sanitation, and education. Rates of illiteracy in great areas of the Middle East, Africa, Asia, the East Indies, and Latin America, generally speaking, exceed half the population and in some areas runs as high as 95 percent.

In a real sense, it is not parts of our world which are underdeveloped, but the whole world is underdeveloped. The challenge inherent in the utilization of our technical resources in the interests of world economic development are staggering to the imagination, but it is clear that the Government alone cannot carry on these works, and for two reasons. First, because our technologists are reluctant to devote themselves to exclusively Government employment, and, second, because were the Government alone to undertake this program on a world-wide basis it would be underlining the charge of imperialism already being leveled against it constantly by the propagandists of the Soviet Union. We may indeed have to undertake recovery programs in the Middle East, in Asia, in Africa, and in Latin-America, but in undertaking them government will have to work as a team with business, government determining the broad international policy involved but business actually seeing to production.

It will be essential, also, to strip these operations of the old imperialism which sought inordinate returns for small risk and constituted a drain on raw materials from underdeveloped areas without regard to the best interests of the peoples of the underdeveloped areas themselves. A Government-business partnership is essential to see that this is no longer the case and that return bears a reasonable relation, both in time and amount, to capital investment and skill expended and to the economy of the country or area be developed. Also, that as soon as is practicable, indigenous management and ownership be developed and encouraged. In return, business will have a right to ask that it be assured against political risks of the loss of investment or reasonable return from investment.

To my mind, youth is especially interested in the opportunities opened in this way. It used to be a popular expression in the United States to recall Horace Greeley's injunction: "Go West, young man," when the West was an area of golden opportunity. Today that expression should be "Go anywhere, young man," for all the free world now offers similar opportunities. If we undertake realistically the effort to square our freedom with economic security and thus to confront the Communist ideology with the fact that the democracies deliver in the terms of goods and human satisfactions, while the Communists only promise and talk, I see ahead for the youth of the democratic nations the greatest adventure, the greatest exploration, and the greatest opportunity for material and spiritual reward which the world has ever in history vouchsafed to its youth.

Pennsylvania Gridiron Dinner—Song by Milton V. Burgess

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, April 11, 1949

Mr. MARTIN. Mr. President, last Tuesday evening, April 5, the biennial gridiron dinner of the Pennsylvania Gridiron Club was held in Harrisburg, Pa. This gridiron dinner is an even older institution than the famous National Gridiron Club dinner held in the Capital city of Washington. The president of the Pennsylvania Association is Gerson Lush, of the Philadelphia Inquirer. Mr. Milton V. Burgess, political writer for the Pittsburgh Sun-Telegram, composed the closing song for that program. It is a parody on the song Roll Along, Covered Wagon. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the song was ordered to be printed in the RECORD, as follows:

ROLL ALONG, PENNSYLVANIA

(From the finale of the Pennsylvania Gridiron Show, Harrisburg, April 5, 1949)

Roll along, Pennsylvania, roll along.
To your rivers and your hills we sing a song.
Other places may be fine,
But give me that State of mine.
Roll along, Pennsylvania, roll along.

Roll along, Pennsylvania, roll along.
To your women and your men we sing a song.
Keep your flag a flying high
From your mountains in the sky.
Roll along, good old Keystone, roll along.

The China Tragedy

EXTENSION OF REMARKS

OF

HON. L. GARY CLEMENTE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 11, 1949

Mr. CLEMENTE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an article which appeared in the China Monthly, March 1949, by Anthony T. Bouscaren, assistant professor of political science, University of San Francisco:

THE CHINA TRAGEDY

(By Anthony T. Bouscaren, assistant professor of political science, University of San Francisco)

On December 7, 1941, the Japanese struck at Pearl Harbor and thus declared to the world their intention of establishing a Far Eastern empire, a Japanese co-prosperity sphere. By December 7, 1948, the Soviet Union, through its agents the Chinese Communists, had achieved the military control of Manchuria and north China, making possible the establishment of a Soviet Far East empire, a Communist coprosperity sphere. The Soviet goal in the Far East is seemingly no different than that of its Japanese predecessor-in-aggression: control of 968,000,000 human beings in China, India, Japan, Korea, Indo-China, Burma, the Netherlands East Indies, Siam, and Australia, and of some of the world's richest mineral resources, including most of the world's tin and rubber, and almost all its exportable rice.

This time as last, independent China has been the main bulwark against totalitarian aggression in the Far East. In World War II China was America's ally and a most valuable one at that. The United States declared that if China was lost, the Far East would be lost and America's position in the Pacific would become precarious, as would its very existence as an independent nation. How much more true that is today, with the advent of the atomic bomb, guided missiles, schnorkel-type submarines and fifth columns that are more efficient than ever before. Lenin once declared that the time would come when, while the attention of the world was focused on Europe, the Soviet Union would conquer the whole Far East.[1] That time seems to be at hand. Stalin is well on the way towards fulfilling Lenin's prophecy, and just as Japan's aggression against China in the 'thirties was but a prelude to a larger conflict, so may Soviet-Chinese Communist aggression in China be a prelude to a wider struggle, especially since the West is holding the fort in Europe, but is encouraging the same expansionist-minded dictator to realize his goal in the Far East.

In 1941 the United States answered the totalitarian challenge, and in alliance with China, met force with force to save the Far East and world peace. Since World War II, the United States, drugged into a false sense of security and paralyzed by fifth columns in high places, has betrayed its trust as watchdog for world peace, and has encouraged, at least by default, what it fought almost 4 years to prevent—the control of the strategic Far East by a powerful expansionist dictatorship. China, which has never known real peace due to Japanese and Soviet aggression, was readily saved from the former, but when confronted with the latter, has not been extended the same aid, even though American interests are still endangered by the disappearance of a free and independent China.

Soviet propaganda has achieved no greater triumph than on the Chinese question. It has enlisted the cooperation of many Americans, who wittingly or not, do much to further the Soviet cause. Theodore White, John Fairbank, Edgar Snow, Harold Isaacs, Richard Lauterbach, Owen Lattimore, Harrison Forman, Alger Hiss, and John Carter Vincent have outdone one another in denouncing the Nationalist Government, in stating that the Chinese Communists are just agrarian reformers; that they have little or

[1] For Lenin's views on China as a potential Soviet colony see Selected Works of Lenin (International Publishers, New York, 1943), vol. 4, pp. 300, 305-313.

no link with Moscow, and that no aid be given to the embattled Chinese Government. It has been unfortunate for China and the United States that this group has had the official ear in preference to such people as Alfred Kohlberg, Freda Utley, Walter Judd, William Bullitt, General Wedemeyer, David Dallin and Claire Chennault, who, perhaps, understand more fully the dynamics of the Soviet plan for the Far East from personal experience than many in the first-mentioned group.

The U. S. S. R. has, on its own initiative, taken by force Tannu Tuva, Mongolia, and Sinkiang. To make it feel more secure, the United States gave it Sakhalin, the Kuriles, the Liaotung peninsula and effective control of Manchuria. Today the Soviet attack is extended to China, Burma, Siam, Indo-China, Malaya, and the Netherlands East Indies. China, as the key to control of the others, is under the most severe fire.

To better understand the Far East in international relations a proper perspective must be had. In 1911 the Manchu dynasty was overthrown in China and a republic was established under the leadership of Sun Yat-sen. The Kuomintang Party was his party, and was the dynamo of the Chinese regeneration. The Soviet Union, keen to take advantage of all young revolutionary movements, sent Michael Borodin and General Blucher to develop Communist infiltration and control of the Kuomintang. Following Sun's death in 1925, his young lieutenant Chiang Kai-shek succeeded to Kuomintang leadership, but was soon faced with a Communist frontal attack on his government. Acting with energy and courage he sent Borodin and Blucher back to the Soviet Union in 1927 and got rid of the Communists in the government who always put the interest of the Soviet Union above those of China. The Comintern then sent Gerhart Eisler and other agents to Canton, where they attempted unsuccessfully to continue the rebellion.[2]

In 1929 a war between Russia and China in Manchuria resulted in Russia's wresting certain economic advantages. In the same year Russia successfully completed its infiltration and control of Tannu Tuva. In 1931 the U. S. S. R. made a secret treaty with Sinkiang,[3] giving it much internal control there, and in the same year indicated its friendship with Japan, who was launching its major attack on China. China, reeling under the Japanese attack, asked Russia for aid, which was not forthcoming.[4] In 1933 Russia extended its control of Sinkiang. In 1935 the U. S. S. R. helped Japanese aggression by turning over to Japan the key Chinese Eastern Railway, seized from China in 1929 in violation of treaty obligations.[5] At this time Litvinov hailed the good relations between Japan and Russia.[6] In 1936 the Soviet Union concluded a treaty with Mongolia, to gain complete control of the Mongolian People's Republic in that year, in violation of a treaty made in 1924 with China.[7]

As Japan became stronger in the Far East, however, Russia changed tactics and determined to make use of China as a buffer between her and Japan. In line with the 1935 tactic of the united front, or trojan horse, a gradual policy of rapprochement with China was followed, and the Comintern ordered Chinese Communists to seek a coalition government. Ambassador Bogomolov set the new tempo by declaring: "There will be no more civil wars in China."[8] The Soviet Union even gave the Chinese limited aid so that they might hold off Japan from key Soviet interests, while at the same time using the Chinese Communists to infiltrate and gain control of the Chinese Government. Chinese-Russian relations worsened, however, after the Hitler-Stalin and Stalin-Matsuoka pacts, and only improved when Germany attacked Russia in the summer of 1941.

The Chinese Soviets (or Communists) have been led since 1931 by Mao Tse-tung, who was appointed to that job by the Comintern.[9] With the aid of Chu-Teh, a military leader trained in Moscow's military academy, Mao was able to create a state within a state, and a private army, always obedient to the Soviet Union. In this he has been helped by direct Soviet aid and encouragement, and by the weakness of the Central Government and the vast size of rural China. The Chinese Communists had shown their true colors when in 1929 they sided with Russia in the war against China over Manchuria. When in 1931 the Japanese struck at Manchuria, the Chinese Communists offered no aid to China. The Chinese Communists set up their own government in 1931 in Kiangsi Province, again on Comintern orders.[10] Based on the unity of party and Government, this regime was an exact copy in miniature of that in the U. S. S. R. By 1934 the Chinese Nationalist Government of Chiang Kai-shek succeeded in driving these Soviet agents out of south China, and the Communists made their famous long march to north Shansi Province, and finally established their capital in Yenan. Direct liaison with the U. S. S. R. was maintained through Wang Ming (Chen Shao-yui), who was also a member of the Comintern. The Central Committee of the Chinese Communist Party sent the following greeting to Stalin at the fourteenth congress of the Communist Party of the U. S. S. R.: "Thou, best disciple of Lenin, our teacher in combat, our ardent friend, our commander, our leader: The revolutionary proletariat and peasantry of China have created their own Soviet Republic in one quarter of China with a population of 80 million. We now have our own armed force for the defense of the achievements of the revolution from our class enemies. Let the entire capitalist world shudder at our success. Only the Soviets can save China from final disintegration and encroachment. Lead us on, O our pilot, from victory to victory."[11] Wang Ming declared in 1935: "The ideological, political and organizational growth of the Communist Party in China is due to the fact that it has been under the guidance of the Communist International. Our party has remained faithful to the teachings of Stalin."[12] Further evidence of the direct link between the Chinese Communists and Moscow came with the appointment in 1935 of Mao Tse-tung, Chou Enlai and Wang Ming to the executive committee of the Comintern.

In line with the new tactics, the U. S. S. R. and its agents the Chinese Communists brought about a rapprochement with the Nationalist Government in 1936. The Communists, however, insisted on keeping their own government and army in Shansi Province, which made incongruous their coincidental demand for representation in the Nationalist Government. Unfortunately the Government, faced with Japanese aggression, was forced to accept proffered aid from any quarter, and Chiang Kai-shek allowed seven Communists into the National Political Council. He was not particularly heartened when the sixth congress of the Chinese Communist Party was held in Moscow in 1938, and the official organ of the Comintern stated: "The Communist Party of China owes its success to the immediate and constant guidance and help which have been forthcoming from the executive committee of the Comintern."[13] In March 1939 Mao Tse-tung sent the following message to the Eighteenth Congress of the Russian Communist Party: "The central committee of the Communist Party of China sends flaming Bolshevik greetings to Comrade Stalin, leader of progressive humanity of the whole world * * * Long live Comrade Stalin."[14]

The period 1937 to 1939 saw limited cooperation between the Government and the Communists, with the Chinese Red Army receiving supplies and equipment from the Government, but remaining autonomous. However, there were constant clashes over which areas each army was responsible for, and the Government soon discovered that the Communist Army was taking no major action against the Japanese, but rather was conserving its strength for future use, and that the Communists were taking advantage of the coalition to gain control of the Government permanently.

Relations cooled when the Chinese Communists hailed the Nazi-Soviet pact of August 23, 1939, and the Soviet-Japanese pact of April 13, 1941, in which the Soviet Union de facto joined the Axis, and the three dictators denounced the decadent democracies. During the period 1939–41 serious clashes occurred between Nationalists and Communists, the most serious being that of January 1941 in Anhwei, when the Chinese Red Army crossed into Nationalist territory in violation of a July 1940 agreement regarding their respective spheres of operation. The Soviet-Japanese treaty of April 1941 enabled Japan to turn her attention to American and British Pacific bases, and in particular to prepare the Pearl Harbor attack without fear of embarrassment from the Soviet Union on its western flank. In March 1942 a fisheries agreement with Russia was renewed. Japan constantly sought to patch up Nazi-Soviet relations after the two dictators fell out in June of 1941, in order to present a grand coalition of totalitarians against the democracies.[15]

In spite of the fact that Russia was receiving American lend-lease, and American lives and ships were being sacrificed in great number to deliver supplies over the Arctic route to Murmansk and the Red Army, Russia would offer no cooperation to the Allies in the Far East. In April 1942 five American airmen from the Doolittle raid were interned. American planes were fired at by Soviet batteries, and American fliers were disarmed and interned when they were forced to land in Russian territory. Soon 250 American airmen were interned in a Tashkent detention camp. In March 1944 the Soviet Union agreed to give Japan oil from north Sakhalin (assigned to Russia by the Matsuoka agreement). In 1942 the American military coordinator in Russia, General Deane, reported that Russia had agreed to allow the United States the use of air and naval bases in the Maritime Provinces. In anticipation of this, the United States sent a steady stream of supplies and munitions to Soviet Far East destinations, only to have the Soviets declare in December of 1944 that the United States could not have the use of these bases. Need-

less to say the supplies and munitions remained.[16]

At the Cairo Conference in 1943, the Chinese Government had been promised the return of all territory seized by the Japanese, but Roosevelt broke his Cairo promise at Yalta in 1945 by bribing Russia to come into the Pacific war, when he promised her Chinese territory without the knowledge or consent of China. Roosevelt's desire to bring Russia into the Pacific war at the expense of China was based on the false assumption that the Pacific Allies needed Soviet military cooperation to defeat Japan. At Yalta the following concessions were made to the Soviets: (1) Their predominance in Mongolia was de facto recognized; (2) the Chinese port of Dairen was to be an international port but Soviet preeminent interests were recognized; its municipal administration, was, however, to revert to Chinese sovereignty. Port Arthur, the other key port of the Liaotung Peninsula, was to be leased to the Soviet Union as a naval base; (3) the Chinese Eastern and Southern railways were to be jointly operated by a Soviet-Chinese company, but again the fatal formula of Soviet preeminent interests was inserted; Chinese sovereignty in Manchuria was nevertheless recognized; (4) South Sakhalin and the Kuriles were turned over to the U. S. S. R. In return for these gifts, Russia promised to enter the war no later than 3 months after the German surrender. At the Potsdam Conference, the Soviets insisted that the United States force China to agree to these odious conditions, which the United States did. This led to the Sino-Russian agreement of August 14, 1945. In this pact the Russians promised to get out of Manchuria 3 months after the Japanese defeat, and to recognize the Nationalist Government as the only government of China. The U. S. S. R. finally entered the Pacific war on August 8, but participated only for 6 days, as Japan surrendered on the 14th.

This was one of the cheapest territorial acquisitions that any country has ever gotten, and it marked the beginning of the attack on independent China. It has been suggested that if the United States had not made concessions to the U. S. S. R. that China would not be in any better position than she is today. That is, of course, speculation but it would seem that appeasement having failed to save Czechoslovakia, Poland, and others, both in the thirties and in the forties, would not succeed (and has not succeeded) any better in China. It does seem certain that China's position could not be much worse if the Yalta concessions and others had not been made.

The Chinese Communist role in the battle to defend China from Japan was insignificant. As Mao Tse-tung declared: "Our policy should be 70 percent expansion, 20 percent dealing with the Kuomintang, and 10 percent resisting Japan." [17] He also made the startling assertion that the Soviet Union was the only nation that assisted China in her fight against Japanese aggressors.[18] During the war the Chinese Communists kept their own forces largely intact, to be used against the Nationalists, and fought no major engagement with the Japanese. Lin Yutang has said that for every Jap killed by the Communists, they killed five Chinese Government soldiers, and this charge has been supported by David Dallin, among others.[19]

In July and August 1943 for instance, while the Government armies were locked in mortal combat with the Japanese invader, the Communists attacked them in the rear in Shantung Province.

In 1944 Henry Wallace was despatched to China by the American Government to make a report which was to be the basis of future American policy in China. He praised the Communists and damned the Nationalists and urged what the Soviet Union urged—a coalition government. Arrangements were made between Stalin and Roosevelt to send correspondents to the Chinese Communist capital of Yenan, where they were given the typical Soviet-type conducted tour, so that the world could be told of the attractiveness of that regime. This marked the beginning of the largely Soviet-inspired pro-Chinese Communist and anti-Nationalist propaganda which has been of so much aid to Soviet foreign policy. Leading the play here was Edgar Snow, who declared: "The Soviet Union cannot have any expansionist tendencies."[20] Owen Lattimore, who in 1943 had spoken of Chiang Kai-shek as a "world statesman and real genius,"[21] began to attack him and praised the Communist "election system" as "the most positive step yet taken in China toward democracy." [22] The Stilwell Papers, edited by Theodore White, also contributed to a pro-Chinese Communist sentiment in the United States. Stilwell, unlike Chennault, Wedemeyer, and Hurley, could not get along with Chiang Kai-shek, and his anti-Chiang bias strongly colors his remarks. Stilwell praises the Communists, although he apparently never visited Communist China. Interestingly, Mr. White in editing the papers, chose to delete several important passages.[23] Harrison Forman and L. K. Rosinger also took up the pro-Chinese Communist line, which was soon echoed in the publications Amerasia, and in the Far Eastern Survey (the latter put out under the auspices of the Institute of Pacific Relations).

On the basis of the Wallace report, successive American representatives, Patrick Hurley and George Marshall, sought, as part of their efforts to achieve peace and broaden the Government, to force Chiang into a coalition with the Communists. Negotiations broke down, however, in 1945 when the Communists refused to yield part of their army, and to allow a supreme military committee of one Nationalist, one Communist, and one American to direct the consolidation of the two armies. The United States did succeed to the point of forcing Chiang Kai-shek to send a Communist representative to the San Francisco Conference in 1945.

The Yalta agreement and the Japanese surrender played into the hands of the Chinese Communists. Manchuria and the Liaotung Peninsula were detached from China and the Chinese Red Army was built up by the Soviets for a final assault on the Government. When the Soviet Red Army entered Manchuria, it began the work of industrial removal to the Soviet Union: heavy machinery, tools, grinders, huge dynamos, hundreds of turbines, generators and rolling stock were removed. The American Reparations Commission which visited Manchuria in June 1946 put the damage at over two billions.[24] The Chinese Communists praised this looting of China's arsenal and the Soviet seizure of the Manchurian railways and economy.[25] To consolidate their work and to build up the Chinese Communists, the Soviets stayed in Manchuria well beyond their 3-month dead line. There were no Chinese Communist troops in Manchuria when the Red Army began its occupation. All foreigners were expelled by September 1945 and Chinese Government Army officers imprisoned. The iron curtain was down.[26] Officially no Chinese Communists were allowed in Manchuria, but in July 1946 Pravda admitted that in Manchuria there were growing "people's armies under Communist leadership." It has been claimed that Chinese Communists from Russia joined these armies.[27]

The Chinese Government was not permitted to enter Manchuria, in spite of the Sino-Russian agreement of August 14, 1945. When an American convoy bearing Chinese Government troops tried to land at Hulutao it was fired upon by Chinese Communists and retired. The Red Army allowed Chinese Communists into Yangkow to prevent Admiral Barbey from landing Chinese Government troops there. The only Manchurian city into which Government troops were allowed was Mukden, and this as blackmail to permit the Red Army to stay in Manchuria beyond the 3-month limit. All the while the Red Army was quietly incorporating northern Korea into the Soviet empire. It stayed in Manchuria until May 1946 to insure that it would come under the control of the Chinese Communists, and to get the machinery to the Soviet Union.[28] Even after the withdrawal, Russia administrators remained, especially to operate the Manchurian railway, and to control the Liaotung Peninsula."

The Chinese Communists built up their army between August 1945 and May 1946, greatly helped by the Marshall-imposed truce. Telling evidence has been accumulated to support charges that a new, strong Chinese Red Army, aided by Korean, Japanese, and Mongolian recruits, and educational and military advisers from the U. S. S. R., was trained and armed, part of it in the Soviet Union.[29] Many of the top officers were schooled in Soviet military academies and at the Sun Yat-sen University in Moscow.[30] Evidence of direct Soviet aid to the Chinese Communists is extensive and for the most part authoritative. The principal aid given has consisted of Japanese arms and arsenals.[31] The United States cooperated by diverting large amounts of UNRRA supplies to Chinese Communists.

[28] During this period the Chinese Government pathetically tried to prevent its press and student groups from protesting Soviet machinations in Manchuria in the vain hope that the Soviets would show a corresponding good faith and live up to the Sino-Soviet pact. The Chinese news agency in San Francisco was instructed not to say anything offensive about the Soviet Union. See also Dallin, p. 314.

[31] Dallin, p. 328, and Lien Lai, loc. cit.; see also China Monthly, July 1947, p. 57, UP dispatch San Francisco News, Dec. 28, 1948, by Arthur Goul, Henry Lieberman dispatch from Suchow to NYT, November 27, 1948, describes captured Russian equipment. On January 6, 1948, the United States challenged the U. S. S. R. in the Japanese Allied Control Council on Jap arms and equipment turned

In Manchuria the United States Consul General was refused admission into Harbin, and the Danish Consul ejected, but the Soviet Consul General was free to perform his duties. The Sino-Soviet treaty of August, 1945, had allowed joint control of the Manchurian railroads, but the Soviets saw to it that the designated Chinese officials never got to their posts. The port of Dairen has never been opened to the shipping of nations other than the Soviet Union, nor has its administration been returned to the Chinese.

Gen. George C. Marshall effected a truce between the Chinese Government and the Communists in January 1946, but this truce did not extend to Manchuria until March. In the interim the Chinese Communist armies built up their strength there. Christopher Rand, writing in the New York Herald Tribune of June 13, 1947, declared: "The Communists were no match for the Government troops as has been proved at the battle of Szepingkai in the spring of 1946. Most observers think that Government troops could easily have taken the Communist Manchurian capital of Harbin. They were prevented from doing so by the truce imposed during Gen. George C. Marshall's attempt to mediate the civil war." In November 1947 the Cominform for the Far East met at Harbin to plan a Soviet coprosperity sphere of Chinese, Mongols, Koreans and Japanese.[32]

During his mission, General Marshall could do nothing to prevent Soviet aid to the Communists, but he could and did bring pressure to bear on the Government. To bend Chiang Kai-shek to his will, he used a form of pressure that was potentially as damaging to the security of the United States as it was to the immediate security of China. He cut the military supplies of the Chinese Government armies. In the early summer of 1946, to force President Chiang Kai-shek to take Communists into the Chinese Government, as an attempt to broaden and liberalize it, General Marshall had the State Department refuse to give licenses for the export of arms to China. Thus he prevented the Chinese Government from buying munitions in America. General Marshall confessed to the House Committee on Foreign Affairs on February 20, 1948, that "it was in effect an embargo on military supplies." William C. Bullitt and other responsible observers claim that from the summer of 1946 to the end of February 1948, except for some ammunition left in China by our Navy and Marines, the Chinese Army did not receive one single cartridge or single shell from the United States.[33] In the field of aviation General Marshall's actions were seemingly even more damaging. In September 1946 he deliberately broke the contract of the American Government to deliver to the Chinese Government planes to maintain eight and one-third air groups for 3 years, and spare parts to cover replacements and ammunition, and materials needed for ground services during the same period. It has been charged that from September 1946 to March 1948 not a single combat plane was delivered to China under this agreement.[34]

Despite the Soviet-inspired propaganda of much American military aid to the hard-pressed Chinese Government, this aid has been comparatively slight until the spring of 1948, and very little has reached China since then, this in part due to the Pacific longshoremen strike. In December 1948, American military aid to China was running under one-third of that to the far smaller and more easily defended countries of Greece and Turkey.[35] At the end of October 1948, a Chinese Ministry of Defense spokesman declared that due to American red tape and obstructionism in certain quarters, not a single thing from an $88,000,000 military aid fund had been delivered.[36] The United States was so busy locking up the front door to Soviet aggression that it left the back door wide open.

Senator D. Worth Clark, of Idaho, special consultant to the Senate Appropriations Committee, issued a report after a visit to China, on November 21, 1948, which contained the most complete attempt made up to that time to compile an answer to Soviet far eastern aggression. His report recommended: (1) Immediate and extensive direct military aid to the Chinese Government in the form of guns, tanks, planes, and ammunition; (2) Combat advisory aid, extending to strategic and tactical authority; (3) Financial aid for the Chinese military operation of an amount which would remove a major portion of the war cost from China's internal budget; (4) Financial aid to stabilize China's currency; (5) Strict American supervision of expenditures. Clark reported that Chiang Kai-shek was willing to accept close American military supervision, and that he was willing to make essential political, and social reforms of which he had already made some, and would make others when peace was restored. Aid on the scale projected by Clark could salvage at least part of China and the price is not too high. It is far less than we thought it worth spending to keep China in the war against Japan. It is infinitesimal compared with the probable cost of allowing the Soviets to occupy China and the Far East. What logic is there in fighting tooth and nail to save independent China in our own interest against one aggressor, only to turn her over to another?

In addition to the recommendations of Senator Clark, Roger Lapham, chief of the Economic Cooperation Administration's mission to China, has urged increased military and economic aid, as has William Bullitt, who has made several extensive on-the-spot surveys of the Chinese problem. His most recent report, that of January 6, 1949, recommended an aid program designed to hold the Yangtze River line for the Chinese Government; the military defense to be under American guidance with a view to saving South China and southeast Asia from Soviet control.[37]

One of the excuses given by some observers for not having extended aid to the Nationalist Government is that it is corrupt and must first reform itself.[38] It might be recalled in this connection that pro-Nazis said the same thing about Austria in 1938, and about Poland in 1939. Decisions in international affairs can never be made in a vacuum. One must frequently choose between alternatives, especially when one's own security or world peace is at stake. In 1941 the British Government extended aid to an authoritarian Greek Government, not because Britain necessarily agreed with this government, but because it was being attacked by a far greater evil—the Nazi military machine. Let the Soviet apologists recall that the United States extended all-out aid to the U. S. S. R. during World War II, which was as absolute a dictatorship as the world has ever known, whose economic system is based on a slave labor army of 15,000,000, but there was no insistence that the Soviet Government should reform itself before the aid was extended. The same Chinese Government which has been under Soviet attack since 1945, was given aid without question in World War II, not because we necessarily agreed with it, but because it was the main bulwark against Japanese far-eastern aggression, and an ally of the Western World. The situation continues to be in its essentials no different than it was then; the aggressor has merely changed names. It is true that we now control Japan and have the atomic bomb, but our armed forces are far smaller and less well trained, and the Yalta concessions plus Communist successes in the Far East make our position precarious. To appease the Soviets and their adherents in the United States by not aiding China, is to change the balance of power overwhelmingly in favor of the Soviet empire.

With China gone and the whole far-eastern coast in Soviet hands, Alaska, the Aleutians, Japan, the Philippines, Dutch and British possessions and American bases would be endangered, as would Australia, Hawaii, and the American homeland. The situation would revert back in many respects to the period of Japan's greatest successes during World War II, except that it is perhaps an even more precarious position for the Western Powers, because of similar Soviet pressure elsewhere, and because of the effectiveness of their fifth columns, which most states still insist on treating as if they were normal political parties. With the Snorkel-type submarine and long-range bombers carrying deadly weapons of destruction, the Soviets do not need a powerful fleet to launch attacks in the Pacific.

It is not within the scope of this analysis to review the admitted weaknesses of the Chinese Government. That Government, like any government in wartime (and China has been at war almost constantly of recent years), has been authoritarian,[39] but at least through it there seems to be a possibility of extending political and economic democracy, and of building a peaceful Far East. There is no such possibility in a Chinese Communist regime.[40] In Nationalist China opposition parties such as the Democratic Socialists and

---

over to Chinese Communists and got no satisfactory answer. The Chinese Government has repeatedly charged that the U. S. S. R. supplied the rebels with 50,000 Japanese war prisoners. See also Chinese News Service No. 250 November 9, 1948, and articles by Scripps-Howard correspondent William Newton in early 1948 giving documentary evidence of the date, place, and amount of arms and equipment which the Russians have handed over to the Chinese Communists since the end of the war. See also NYT November 20, 1946, UP, July 4, 1947, and AP June 24, 1947.

[34] Bullitt, loc. cit.

[35] As of December 6, 1948, only 63 millions in military aid went to China, while 230 millions went to Greece and Turkey; New York Times, December 7, 1948.

[36] See Henry Lieberman in New York Times, October 14, 1948.

[37] See Bullitt's remarks and proposal for China, New York Times, January 7, 8, 1949, pp. 1, 2.

[38] Arthur Koestler terms this confusion in some liberal circles as the fallacy of the perfect cause. See his Babbitts of the Left, Life, May 3, 1948.

[39] This is not to say that the Chinese Government would be a political democracy in the western sense in peacetime.

[40] Eleven of twelve foreign correspondents in China, on being questioned as to whether or not freedom of religion, one of the most vital of the four freedoms, was allowed in Communist China, answered in the negative: Brooklyn Tablet, November 27, 1948, p. 1. Further, it is obvious from recent experience that no Communist regime extends any of the fundamental freedoms.

the Young China Party have had full and free play, and hold 260 seats in the National Assembly and 75 seats in the legislative Yuan. Both these parties have declared through their leaders that the principles enunciated by Sun Yat-sen could never be realized in a coalition regime which included Communists, and could only be realized by parties whose first allegiance is to China.[41] The Government claims, with some justice, to have done more in the way of genuine land reform than have the Communists.[42] In much of Nationalist China a 25 percent reduction in land rent was decreed in 1948, with a year's exemption from the payment of the land tax. Farm loans were extended and larger farms broken up into workable agricultural units. In November 1947 elections were held by the 250,000,000 in free China to elect a national assembly which drew up a democratic constitution for the Chinese Republic, and elected its officers. That a great deal remains to be done in democratization is of course obvious, but it should also be remembered that much of that path cannot be traveled until peace is restored to a free and independent China.

China has many imperfections, but what nation hasn't? The Nationalist Government is the legal government of China, one of the most valiant of the United Nations during World War II, and a member of the United Nations Security Council.[43] To stand by while this Government is overrun by the Soviet aggressor is to violate all that the UN Charter stands for. This is the sort of problem which the UN should act promptly upon, through articles 51 and 52 if necessary. The experiences at Munich, Tehran, Yalta, and Potsdam indicate that appeasement of dictators who threaten world peace leads only to war, with the appeasor at the greater disadvantage. The democracies in the thirties wanted peace at any price and they got war at a heavy price later on. History does not forgive those who do not learn its lessons.

The Chinese problem has been, and remains (as long as a non-Communist government exists), today primarily military. There can be no reform until the Soviet pressure on free China is ended.[44] General MacArthur defined the issue when he said: "the international aspect of the Chinese problem has become somewhat beclouded by demands for internal reform. Desirable as such reform may be, its importance is but secondary to the issue of civil strife now engulfing the land. Underlying all issues in China is now the military problem. Until it is resolved, little can be expected toward internal rehabilitation."[45] To these might be added the words of Claire Chennault: "If we fail to give China military support it will be the greatest failure of American foreign policy in all our history. The Russians are not willing to make Hitler's mistake; they will not move against us until their eastern flank is secure. In my opinion China is the key to world peace—or to victory if a third world war is precipitated."[46] It has been pointed out that the Government military position even as late as January 1949 was no worse than when it had to retreat to Chungking before the Japanese advance. MacArthur has emphasized that what is not spent to save China must then be spent to defend encircled Japan.

A Communist China means another colony in the Soviet empire. The Chinese Communists are no more mere agrarian reformers than were the Czech Communists, and a coalition government in China would have the same result it had in Czechoslovakia, and has had in all the Soviet satellite states.[47] Mao Tse-tung, writing in the Cominform magazine published in Bucharest in November 1948 scoffed at the idea of any middle road or third road between communism and democracy as utter hypocrisy. Praising the thirty-first anniversary of the Soviet revolution he declared: "We hail the constant strengthening of the U. S. S. R., bulwark of world peace and democracy * * * the world revolutionary front has defeated Fascist Germany, Italy, and Japan * * * after the victory of the Second World War American imperialism and its running dogs replaced fascism and are menacing the world."[48] Mao then called on all revolutionary forces throughout the world to unite behind the Soviet Union against the United States. Mao knows that there are in the United States many groups and individuals who will cooperate wittingly or unwittingly to extend the Soviet empire to include China and the entire Far East. With their aid, the Soviet empire will then embrace a total of 1,160,000,000 people.

In 1938, Neville Chamberlain, speaking of Czechoslovakia, said: "How can we help such a far away country about which we know so little?" and signed the Munich agreement, as Hitler looked on with anticipation. Have we, and are we making the same mistake in China?

[41] The China Magazine, April 1948, pp. 32–38 (Carson Chang).

[42] There have been serious peasant uprisings against the fraudulent Chinese Communist agrarian reforms. See for example Tillman Durdin's report from Shantung Province in New York Times, October 14, 1947; also New York Herald Tribune, September 17, 1946. For government land reforms see China's Rural Reconstruction Plan, China Monthly, November 1948, pp. 321–325, and Government Land Reform, ibid. January 1948, pp. 42–50.

[43] It is often forgotten by those who compare Soviet aid to the Communists and American aid to the Nationalists, that the United States is aiding the legal government, whereas the U. S. S. R. is aiding the rebels, in violation of the Sino-Soviet treaty and of international law.

[44] See Freda Utley, Marshall and Coalition Government, New Leader, March 27, 1948.

[45] Life editorial April 5, 1948.

[46] Loc. cit.

[47] That Czechoslovakia was an advanced democracy at the time of its Soviet coup does not mitigate the general principle that to form coalitions with Communists leads inevitably to Communist dictatorships. See Hanson Baldwin's analogy, New York Times, November 21, 1948.

The Building of a Personal Faith

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1949

Mr. SHORT. Mr. Speaker, the Right Reverend Austin Pardue, D. D., Episcopal bishop of Pittsburgh, Pa., has been delivering a series of broadcasts on the Building of a Personal Faith.

Under leave to extend my remarks, I include Bishop Pardue's broadcast No. 11, which was delivered over Station WCAE from Pittsburgh on March 15, 1949. All of these broadcasts are well worth reading, but this one is particularly timely and I hope it will prove most helpful in aiding each of the readers to discover the unexplored, undeveloped, but real and vital power that is in him.

This is the eleventh conversation on the building of a personal faith. Tonight we are concluding a section which deals with the short circuits in human personality. These short circuits prevent us from expressing the vast inner power that is entrusted to our keeping. You may believe that you are without this endless resource of spiritual energy which can accomplish all things. But it makes no difference who you are, where you are from, what you are, or how highly educated you are. You still are entrusted with more power than you can dream you could ever possess. No one could believe that the infinitesimal atom is the possessor of energy that could blow up a world until it was split. You can't believe the power that God will give you until you are relieved from the short circuits that may be blocking it.

Our Lord promised power. He said that you would have power after the Holy Ghost came to you. He said that your body is the temple of the Holy Spirit. He said that you are sons and daughters, and heirs of the greatest riches ever known to man. He wasn't talking about the power the little would-be dictators are trying to get. He wasn't talking about riches, personal ego, cleverness, stuffy social prestige, or the ability to bully people. Whether it be the big Hitlers and Mussolinis of Europe, or the little ones in every city block, they will pass away. The power we are talking about is that which has the wisdom to overcome every problem; the power to lead men for generations to come; the power to be selfless and therefore without worry; the power to maintain physical strength and health; the power to demonstrate fearless love; the power to think with charity; and to be relaxed under great pressure. Such is the power that God has waiting for you and me.

In the past two broadcasts we talked about some of the short circuits that prevent power from flowing through us. When we are short-circuited we are fatigued, tired, worried, despondent, nervous, jittery, jumpy, irritable, and confused. We live in rhythmic cycles of ups and downs. We have discussed some causes of these short circuits caused by fear, hate, revenge, jealousy, and anger. When they possess you they will empty into your thoughts and into your veins—a poison that will bog you down in defeat.

And tonight we will conclude these problems under one other powerful short-circuit heading "Pride." I wonder if we know how much one may suffer from pride? Sometimes we say, "Well, he has a lot of pride," not meaning pride at all. We don't always understand the word. When we say it as a compliment, we mean that people have courage and strength; but the pride I am talking about is a false inflation of the ego; that supersensitive nature which is so often hurt; that feeling which blinds us to the truth and makes us paralyzed with inner fears; that unattractive quality that makes us want to quit because someone has not appreciated us. I think it was John Ruskin who said that pride is at the bottom of all great mistakes.

Years ago, when I was a choir boy back in Chicago, each year on Easter night the rector and the choirmaster gave prizes to the outstanding choristers. They gave beautifully engraved gold and silver medals. I had never received a prize. Then came the last Easter that I was to sing; my voice was changing. I waited through the presentation of some seven or eight medals and then they came to the last one. But another name was called and no medal came my way. Instead I was given a book called The Rover Boys. My pride was hurt, so I went home and wrote a note to the choirmaster, which said:

"Dear Mr. Hyde: The book which I received for 5 years' faithful service in St. Peter's choir is now in my locker No. 13 in the choir room. I hereby resign."

Did you ever do that? Are you about to quit a church, or a club, or a lodge, or a

home, or a family, because your pride is hurt? Listen, take the hurt and give it to God, and ask Him to deflate your ego, and go on and forget it. Learn to carry the cross with joy. That's why you go to church. Do your feelings get hurt often? I knew a young woman in another city who joined a tennis club. She was an outstanding player. The girls in the club accepted her and played with her, but there was one who was a would-be social leader and she snubbed this new member. Every time the socialite had an opportunity she passed by without speaking. Now I happened to know the new member very well and I said to her, "What are you going to do about it?" She said, "Oh, I'll fix that. I am just going to stop whenever I meet her and speak to her regardless. She is a nice person with a small mind but I'll help her to overcome it." My friend rode out the storm, lived above it, was a lady, and before long had the respect and the affection of everybody including the problem girl.

How much better it is to have greatness of spirit. If you once see the principle of love and unselfishness, you can afford to take any kind of slights, snubs, insults, and oversights. Then everybody begins to recognize you as a true leader and a great person. Only the sensitive people are always being hurt, getting mad, taking their play things and going home. If you are big and have a sense of humor, you are going to be happy. One of the things that I have been observing recently among a group of outstanding men I know is that most of them are neither suspicious or easily bruised. They have risen above it.

So, finally, let's take all of these unpleasant things that we have been talking about for the past 3 weeks and let's dump them out of ourselves once and for all. We cannot overcome them by our own will power, that is impossible. But God will give us the power to defeat them. He called it grace. Tell Him, point blank, after you have carefully examined yourself and found the short circuits in your life; tell Him that of your own strength you can't conquer them; tell Him you know that with His power and strength you can be made new; and that the short-circuits will be destroyed. Then accept His forgiveness and His new life.

Speech of Maj. Gen. J. E. Dahlquist, Deputy Director, Personnel and Administration Division, General Staff, United States Army

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1949

Mr. BROOKS. Mr. Speaker, Army Day in north Louisiana this year was an outstanding occasion. The people of Caddo and Bossier Parishes were privileged to hear Maj. Gen. J. E. Dahlquist, Deputy Director, Personnel and Administrative Division, General Staff, United States Army. He spoke to a large gathering of many Kiwanis Clubs from all parts of north and central Louisiana and made a splendid speech on Army Day. General Dahlquist ingratiated himself with the people of my home and my congressional district, and it is my privilege to place in the RECORD a copy of the speech which he made on Army Day in Louisiana. It is as follows:

There is one great pleasure that the Regular Army soldier enjoys. He feels at home everywhere in America. Although I have never had the privilege of serving in Louisiana, I count as friends many of your people, especially the citizen soldiers, with whom I have been associated throughout the years. During the war many sons of Louisiana served with me in the Seventieth Division and the Thirty-sixth (Texas) Division. I was never quite sure whether they were Cajuns or not, but I was always certain of their soldierly qualities.

There was one great compensation from the war. It brought men together from every part of the country and forged friendships which will last as long as we live. I was in the Texas Division. When the war ended, it was an all-American division with men from every State in the Union. They were all Texans, of course. An incident that happened a few days after I joined the division in Italy illustrates that fact. In going around the division trying to get acquainted with it, I came upon a strange contraption in one of our areas. It was a bath unit which we had swiped in North Africa. A soldier came out of the tent, gave me a big salute and reported. I remember him as one of the smallest, skinniest men I have ever seen, wearing one of the biggest pair of horn-rimmed glasses. I asked him what outfit this was. He answered, "Company B, One Hundred and Eleventh Engineers." Not yet knowing all the numbers of my units, I asked him what division. He drew himself up to all of his 5 feet and said, "The Thirty-sixth Texas Division—the best division in the Army." "Is that so," I asked, "What part of Texas are you from?" "The Bronx" was his answer.

Whether we are Texans or not, we were all a part of the greatest Army and Navy the world has ever seen. No other nation of comparable size can boast of a people as homogeneous as we are. In another continent, people from areas as far apart as Minnesota and Louisiana would view each other with all the suspicion which springs from different languages, customs, histories, and national aims. This unity which we have is our greatest strength.

Today marks the thirty-second anniversary of our entry into the First World War. Those of us who participated in that war remember its slogans: "The War to Save Democracy," and "The War to End All Wars." Many cynical comments have been made about those slogans. In the decade following the armistice, America was flooded with an avalanche of books and articles and speeches dealing with the problem of war. Pacifism became vocal and strong. Wars were caused by munitions makers, by imperialism, by the international bankers, by the militarists. Do you remember the titles, "The Road to War," the "Merchants of Death," the "Martial Spirit," the slogan, "I Did Not Raise My Boy To Be a Soldier;" and the organization, "The Veterans of Future Wars"?

Many of our people became convinced that armaments caused wars and that disarmament was the solution. To prove that we believed that, we sank, with our own hands, more men-of-war than had ever been sunk in all of our previous wars by enemy action. We let the active Army deteriorate to a strength of 118,000, scattered in small detachments at home and abroad. More serious than that, we let a generation of young men grow up, firmly convinced that war was wrong under all circumstances and that anyway there would be no more wars. That was the generation which had to bear the burden of the Second World War.

What was wrong in our thinking? In my opinion we were too prone to accept the glib, the clever, the muckraking type of analysis which was about as follows: War is a terrible scourge. It is obviously wrong for fine young men to be destroyed in a struggle not of their choosing. We did not save the world for democracy. We did not end war. Who was to blame? Who were the individual culprits? Let's expose them. Names make good headlines anyway.

We in America, as well as the people in other parts of the world, had a rude awakening, but it took a long time. We were slow to grasp the meaning of the rise of the totalitarian powers. Disarmed spiritually, we failed to act when Japan began the rape of Manchuria, when Hitler occupied the Rhine, when Mussolini wantonly attacked Ethiopia. The depths of degradation for freedom-loving peoples were reached at that fateful meeting in 1938 when Chamberlain and Daladier signed the Munich Pact because they were helpless. Chamberlain announced, "Peace in our time," but what he probably meant was "Peace until we can partially get ready."

Would it have been better for the world had we not fought in World War I and had the German autocracy won the struggle? Assuredly not! World War II resulted not from militarism, from imperialism, from the machinations of either munitions makers or of generals and admirals. It resulted from a failure to recognize the fact that until a world organization is a successful reality, the freedom-loving nations of the world must be prepared to defend themselves and their way of life. In our haste to do away with the distasteful things about war we destroyed the means of averting another. War was bad. Armies and navies fought wars. Industry expanded in war and individuals made fabulous sums of money. Do away with armies and navies and damn the industrialists. That was the simple way in which we would solve a vexing problem. But it was bad reasoning.

We have now fought another great war and have won that. But the objectives we fought for, particularly freedom from fear, have certainly not yet been achieved. Our statesmen are still desperately seeking a solution which will secure the objectives. Winning the military victory was but the first step. It would have been wonderful could that victory have ushered in the era of peace. Unfortunately, such was not to be the case. Our demobilization, many think of it as the great demoralization, of the armed services, was stopped last spring.

A year ago the President in a special message to Congress urged the adoption of certain measures to strengthen our national defense. In support of that program, the Secretary of Defense when appearing before the Senate's Armed Forces Committee stated, "I propose a specific program which is solely designed to achieve one great objective—to avert war—whether it be open or covert, in these times and in the times which lie ahead for us and the free people of the world." The Congress held exhaustive hearings and lengthy debates on the proposals, and before the session ended approved appropriations and enacted defense legislation to give approval to the general program. It was an unprecedented thing. This legislation wrote in letters big enough for anyone to read that the United States is willing to take the preparedness measures required.

No longer is the issue one of preparedness versus unpreparedness as it was in the decade preceding World War II. Our people recognize now as they never have before the vital necessity that this Nation be strong if the free peoples of the world are to remain free. There is no debate in the halls of Congress, on the public forums, or in the editorial pages

of our responsible press on the necessity for military preparedness. The great problem that confronts us today is the amount and kind of military readiness that we need for our security.

If the zealots of each of the armed services had their collective ways, there would be an Army, a Navy, and an Air Force in being and ready for action, greater in size and superior in equipment to those of any other nation or collection of nations in the world. But in accomplishing such an objective, we would lose the very freedom we seek. We would have to adopt Hitler's famous dictum: guns instead of butter. All of our thought, all of our energies, all of our production would go into armament. Controls, regimentation, and a bare existence standard of life would be our lot. Obviously, we must seek a saner and a better solution than that.

If the partisans of any one of the services had their way, the available resources would be largely spent on their service to the exclusion of the others and generally on one type of weapon. Fortunately, for our Nation the men charged with responsibility for the problem of security, that is the President, the Congress, and our defense chiefs, both civilian and miltary, do not share this view.

In this connection, I would like to call your attention to the fact that for the last 2 years in both the Senate and the House there has been but one Armed Services Committee. Establishing a single committee in each House for all armed services has resulted in a most salutary surveillance of the problem of national security. It has been a surveillance from a national viewpoint instead of from a single-service viewpoint. Your Representative, OVERTON BROOKS, is a member of the House Armed Services Committee, and you have every right to be proud of the job he is doing. The Nation is fortunate to have committees composed of such men keeping close watch on the armed services.

When he submitted his budget this year, the President stated, "The basic concept on which my recommendations are based is that the Nation's military security should rest on a nucleus of highly trained and mobile forces—Army, Navy, and Air—backed by ready Reserves of trained men, stand-by equipment and productive facilities, and an integrated mobilization plan which relates our national security requirements to the tremendous productive capacity of American industry."

The Army wholeheartedly subscribes to this concept. Its theme on this Army Day of 1949 is "The United States Army—Part of the Team—for Security." For without a team made up not only of the Regular components of the Army, the Navy, and the Air Force, but also of the citizen soldiers, their civilian components, and of the great productive genius of our industry, we can have no security. Our Chief of Staff stated our viewpoint well when at Boston on February 4 he said: "Security is a cooperative venture; it is not a competitive race. To forewarn aggressors and to construct effective military might, we are in need of partnership, not partisanship, concern for the safety of this Nation, not the survival of our arms."

The security of the world was almost destroyed by the rising tide of pacifism in the democracies in the decades preceding the outbreak of World War II. Unpreparedness and weakness has never stopped an aggressor. It has encouraged him. Hitler's statement to his commanders on August 22, 1939, bears eloquent testimony to that fact. Just 9 days before the Nazi marched into Poland and started World War II, he said, "We have nothing to lose; we can only gain—our enemies have men who are below average—no personalities, no men of action * * * our enemies are little worms * * * I saw them in Munich." He was not impressed by weakness. No aggressor ever is.

Today, most people realize that fact. Pacifism is certainly dormant if not dead. Today the danger to the security of the world lies in the search for an easy solution. It lies in the siren song that wars can be won by science and technology alone. It lies in the doctrine preached by the arm-chair strategists that the atomic bomb carried to the heart of the enemies' territory will result in an instant decision. It lies in the delusion that we dare risk our future on any one weapon, no matter how devastating that weapon can be.

The prophets of such doctrines apparently believe that in a future atomic war each contestant will cower in his own homeland while he strives to destroy his adversary thousands of miles away by deluging his cities with destruction. The real "Buck Rogers" of this group would do it with pilotless rockets. Such a thesis completely ignores the fact that we live in a world of many peoples; the majority of whom have the same ideals, the same aspirations for freedom as we have. Sole reliance on the effectiveness of bombing alone means abandonment of these people to the ravishment of war. And if they should be overrun, would we then be willing to subject them to atomic bombardment?

If we fail to preserve the relative readiness of our Army and our Navy to seize and hold advance bases we do abandon the promise of timely help for our allies. American isolationists helped bring on two world wars because the aggressor felt we would not and could not bring our strength to bear in time. A new type of isolationism in which we abandon the whole Western World to the ravishes of war while we strive to end it by global bombardment from our own shores is just as dangerous. It would truly isolate us and leave us alone in a world subjugated and controlled.

Failure of the initial bombardments to end the conflict would condemn us to a war of attrition with the odds against us ever growing larger. It would make our homeland a beleaguered fortress, and no war was ever won from within a fortress. I do not think our people will be willing to subject themselves to such a fate.

Fortunately, for our Nation, the military leaders of all three services fully understand that the security of the Nation, yes, of the world, depends upon teamwork. It was General Vandenberg who, a few months ago, said: "The three services are in complete agreement that no one service can do the job alone." The United States Army is the most air-minded military force in the world. It recognizes the vast capabilities of air power as a priority weapon for attack against an aggressor. It realizes that threat of instant retaliation through an air offensive is possibly the greatest deterrent to war today. Finally, no one knows better than a veteran soldier of the last war that dominance in the air is a prerequisite for victory on the ground.

However, we also realize that air power itself is weak without the other services. The Army conceives its mission, first, to make possible; second, to complement the roles of the sea and air members of our defense team. Those missions dictate the present day form of your Army. It must contain small but highly trained and mobile forces ready for immediate deployment; it must also have trained reserves in sufficient numbers to permit the rapid mobilization of the forces necessary to bring a conflict to a victorious conclusion.

In the last 2 wars our insular position and our allies gave us time and space to build our armies. We could choose the time and place for our entry into battle. This is no longer the case. If we wish to make our air power effective we must be able to seize and hold the bases from which it can bring to bear in ever increasing intensity its blows. Sporadic and weak attacks will not do the job. Nor must we ever forget that bombers can fly in both directions. Security for our homeland lies principally in our ability to deny an enemy access to those places from which he could effectively hit us. Unless the enemy suddenly collapses from our air blows and unless we are willing to subject ourselves to a war of attrition from which there can be no end except ruin, we must be prepared to strike at his forces, wrest from him his bases, and destroy his armies.

This means two things, mobilization of armies and of our industrial might. Mobilization of armies depends upon the trained citizen soldier, the Organized Reserves and the National Guard.

The budget for next year gives a good picture of what is considered by our leaders the Army requirement for security. The total sum allotted, except for housing is $4,000,400,000. A sizable amount of this must go to the cost of our occupation troops. It will give us 10 Regular Army divisions plus 59 battalions of supporting troops, plus the overhead on which must be based mobilization. Two hundred and seventy thousand of these troops are of necessity deployed overseas. This Regular component must be ready for immediate deployment. It certainly is not a mass army, but properly equipped and properly led, it can give us some time. Backing up this force will be 550,000 Reservists and National Guard men in a training status.

Expenditures for this civilian component will total $760,000,000. That is 30 percent higher than this year and twice the amount spent last year. This money will be spent to cover drill and training pay and maintenance of reservists, operating expenses and procurement of equipment over and above the amounts transferred from wartime stocks.

Lacking universal military training, the work of the Reserve components is of vital importance to the Nation. They must form the framework for mobilization. We possess now something we never had before, thousands of war-trained and highly competent officers, but age has already started to take its toll and we must see to it that the younger brothers are given as much training as facilities and their time will permit. The ROTC just rebuilt after the war is of prime importance in producing the young combat leader of the future.

Fifteen billions of dollars for the National Military Establishment, four and one-half billion of which goes to the Army, is a tremendous sum of money. It imposes a burden on every one of you. But it is a burden worth carrying if it can avert another war. That can be the only justification for such expenditures. The size of our military forces today does not give us absolute security. I, personally, doubt that there is any such thing. If we are not to become a police state ourselves, we must accept some military risk. The Army subscribes to the necessity of precedence in military spending. Real security can only come from a healthy progressive people. Constantly improving living conditions for those who labor will insure that our great industrial plant will be equal to any challenge. The ability of our people to produce, coupled with a balanced military force able and ready to act quickly and decisively, gives the freedom-loving peoples of the world, and they are legion, faith and hope in eventual reconstruction of a world in which the dignity of the individual human being will be respected. War is not inevitable. It does not have to come. It can be prevented if we can rebuild the spirit and hope of men and women throughout the western Christian world. For the aggressor

will not strike if he knows defeat and destruction await him if he does.

Four things stand out in my memories of the last war. First, was the impression bombed London made upon me. I went there in May 1941, just as Hitler's furious bombardment was dying out. I saw the acres and acres of destruction along the East India docks. I saw the complete ruin of the so-called "City of London." But more impressive, I saw the courage of the Englishmen who refused to give up. He seemed to stand completely alone but he gave no thought to surrender. The second memory is of the great armada that stood off the shores of the French Riviera at dawn on August 15, 1944. We were beginning the sixth and final amphibious assault in the European and Mediterreanean theaters. Hundreds of ships bearing the men of three great veteran divisions, the Third, the Thirty-sixth, and the Forty-fifth, rode to and fro within sight of the shore as though thumbing their collective noses at Hitler. The last bombs of a great air strike had just exploded when the guns and the rockets of the men of war opened up and men in small boats started in to go across the beaches. It was the greatest assembly of power I have ever seen. The Mediterranean Air Force, the Western Naval Task Force, the Seventh United States Army were all part of it. Any one of these forces would have been powerless. Together they were irresoluble.

The third memory is of the indomitable spirit of the foot soldiers, the men of my own Thirty-sixth Division, in the fall of 1944. They had already spent one horrible winter in the mountains of Italy. Now after more than 100 days of continuous combat since landing in southern France, they faced the dark and forbidding Vosges Mountains. Nothing but great masses of heavily wooded, rugged hills faced them. Other units were to go through relatively open passes. These men had but one tortuous, narrow, winding, seemingly impassable road leading over the St. Marie Pass. Supporting aviators would be of little help because the aviators could see nothing below but a jungle-like tree growth. There was no room for massed artillery and its observers would be blind. Tanks could not be used except singly. Furthermore, the Vosges was an obstacle that never had been breached. Those men did breach it, however. They did, although they were dead tired, depleted in strength, and without much help from modern armament. They did it by climbing the hills and carrying their weapons in their hands and ammunition on their backs, destroying the German defender at close range. My memory of that fall is a memory of what indomitable men can do regardless of fatigue or obstacles or hardship.

The fourth and probably the most lasting memory is the picture of the last 10 days of the war, when we were deep in southern Bavaria and the Austrian Tyrol. As we had moved through the Siegfried line, across the Rhine, and on into Germany, we had seen the destruction wrought on German cities and Germany industry. They were nothing but a mass of rubble. They had been destroyed for months but still the German soldier fought on and the war was not over. But in those last hectic days we saw the death of an empire in the thousands, yes, tens of thousands, of prisoners, dusty, disheveled, bedraggled, who flowed past our leading columns in search of the prisoner of war cages in the area. We saw in those columns of wretched people the destruction of the mighty Wehrmacht, and, with it, for us the victory for which we had been struggling.

Those four memories, of bombed London, of the power of an amphibious assault, of the indomitable will of soldiers, and of the destruction of the German Army, teach one lesson and that is the victory in modern war is not won by sea power, or air power, or ground power—it is won by military power, which means a proper balance of all three supported by the industry and will power of a united people.

Stop Running

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1949

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include the following article by Lily Pons, which appeared in This Week magazine of March 27, 1949:

STOP RUNNING

(By Lily Pons)

"The ideal man is his own best friend and takes delight in privacy" (Aristotle).

American people are becoming more and more like the Red Queen in Alice in Wonderland, who had to keep running in order to stay where she was. The hectic tempo and mass activity of the business world have spread into all phases of modern life. People have forgotten how to slow down, how to be alone.

How often, during the furious activity of the week, we think of all the things we will accomplish on the week end—reading a book we have long heard about, taking care of unfinished correspondence, putting our houses—literally and figuratively—in order. But when the week end arrives, we find ourselves hurrying to parties to which we do not really want to go, being swept up by a dozen social obligations. Finally there is nothing left to the week end but the beginning of another working week.

But the ideal man whom Aristotle described, indeed, the healthy man in this or any other generation, allows himself some time for his own thoughts. He is able to behave as a social being when he is in society, but he is not afraid of his own company. He knows that each day he must give some time to contemplation—that is, to looking over his actions of the day and comparing them with his intentions, making constructive plans for the future, and simply being himself.

The problem, of course, is where to find the time or the place to be alone. Singers and musicians are fortunate, for their work compels them to take time to study and practice, and time to rest before performances or concerts.

If musicians find such relaxation a help, then I think men and women in the business world would, too. Take a little time before that next conference to let your mind run away from office cares. Break the boredom of a routine job, now and then, with a few minutes of escape thinking. If you have time left over after lunch, take a walk, and daydream or window shop as you go.

Privacy of this sort can be found by any man. And each of us must find it if he is to remain a consistent and sane individual with a normal, happy social life.

A Fine Citizen Passes

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, April 11, 1949

Mr. RODINO. Mr. Speaker, God and the people of my district were good to me on November 2 last.

I am not unmindful that there were many capable and good men in my district who also sought to come here to serve God and country. One of these was Dr. Horace Tantum, of Nutley, N. J. Though he was of the opposite political faith, I know that his was simply an unselfish ambition to sit here in this great and august body as a servant of the people and to work toward the common good. For this I admired and respected him. I do not stand alone. For the many fine people of Nutley, N. J., to whom he had dedicated a lifetime of public service and devotion had long before me counted him as one of their finest citizens.

Though the loss will long be felt now that he has passed away, I am certain that as Mr. Hunzin puts it, "The town is so much better for 'Tod' having passed through it."

I did not know him so well as others who affectionately called him "Tod," but having known his deeds and useful record, I can well say, "He was made of gentle clay." And in reverence and respect to his memory and ambition, I feel it fitting as one who also seeks to serve, that these remarks and the editorial tribute in the Nutley Sun be published in this, our CONGRESSIONAL RECORD:

A FINE CITIZEN PASSES

The town is so much better for "Tod" Tantum having passed through it.

Ever a fine citizen, devoted to his friends and fellows, without personal ambition as a stimulant, Dr. Tantum will long be remembered for the good he has done, the good will he has created. But for a quirk of politics, he would have ended his life in the halls of the Nation he loved and served with devotion.

Among us, there are few who do not have, for some widely different reason, cause to respect "Tod" Tantum, to revere his memory, to be grateful for his friendship, so warmly and richly given out of his gratitude for the trust and friendship of others.

Perhaps the greatest tribute that can be paid his memory is the realization that his long life of service and civic activity remains unsullied. In his character, there was only goodness and honesty, a loyal belief in his fellows. The belated maneuver which, last year, cost him a nomination to Congress impressed him only by the humorous antics of the dickerers. His true friends can be glad that another finally was chosen, for it preserved for his family and for all of us those final few months which were spent among us.

The entire community mourns the passing of a man who, surely, will stand out in the pages of history of our town as the outstanding citizen of our generation. As a comparative newcomer, without the opportunity to have witnessed the wealth of good deeds done by "Tod" Tantum for his town, I feel a depth of loss for a true friendship which he gave so generously in realization of the dif-

ficulties of a return, after half a life, to the land of birth.

With tears and a heavy heart, with gratitude and emotion, but with pride, Nutley and all of us will remember and revere a great friend, a fine citizen.

R. E. H.

A Great Week's Work

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1949

Mr. LEFEVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of Sunday, April 10, 1949, entitled "A Great Week's Work":

A GREAT WEEK'S WORK

A series of developments that began with the signing of the Atlantic Pact and ended with a truly impressive vote in the United States Senate for extension of the European recovery program might well be summed up in the words of Mr. Ernest Bevin as "a great week's work in the history of the world." It was a week which demonstrated beyond cavil the constructive vitality of Western democracy, the ability of men and nations to sink their minor differences in the face of a challenge that confronted them all.

There was progress in every major field of activity engaging the interest of the Atlantic community of peoples. The signing of the pact and the presentation of a program for European rearmament were important steps toward buttressing the military security of a great area of the world; the overwhelming reaffirmation by the Senate of the Marshall plan gave confidence that economic reconstruction would proceed at an accelerated pace; the agreement reached by the United States, Great Britain, and France on the German question went to the heart of the most difficult political problem vexing the Atlantic nations. There will be many practical obstacles in the way of carrying out the policies adopted during the great week, but the broad outline of a workable society of interdependent states has been sketched on a scale seldom approached in history.

There is no disguising the fact that much of the impetus for last week's efforts was defensive, that it was inspired by the threat of Russian aggression. The Kremlin would deny it, but it is the Politburo which has shaped this new, close union of nations, and has created a pattern of international collaboration which may well outlive, and overshadow in history, the fears which gave it birth. For it is to the honor of western statesmen, and the political order they represent, that although an emergency has called the Atlantic community into formal existence, its economic and political forms look beyond the immediate crisis, beyond the accumulation of weapons, in seeking security. Perhaps the nature of total war and the pervasive techniques of Communist infiltration should also claim some of the credit for this trend, but in any case the efforts of the west have been directed not merely toward military preparedness but toward the fostering of economic health and political sanity within its domain.

Thus, out of the tragedy of a world divided—a division which was not of the west's seeking, and which it did everything possible to avoid—has emerged a sense of unity among the Atlantic nations, expressed in practical measures to assist the well-being of their peoples. These steps are essentially peaceful in nature, and they require continued peace if they are to progress to their goal. The west poses no threat to any state, or group of states, but, like Scotland's symbolic thistle, it presents a warning: "No one provokes me with impunity."

The Skipper of Guadalcanal

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1949

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks I include an editorial entitled "The Skipper of Guadalcanal," from the New York Times of March 27, 1949.

This editorial is a fitting tribute to Gen. A. A. Vandegrift on the occasion of his retirement from active duty. General Vandegrift has achieved a reputation that places him among the great combat commanders produced by our Nation. In addition to his able professional attributes, his career was further distinguished by the fact that he was awarded the Congressional Medal of Honor for his bravery and leadership on Guadalcanal.

In a larger sense General Vandegrift's accomplishments are but a reflection of the Marine Corps itself. His courage in the face of Japanese supposed superiority in Guadalcanal was the same kind of courage as was possessed by those gallant marines who comprised the indomitable First Marine Division. This Nation will not forget the magnificent achievement of the First Division, which, under General Vandegrift, halted the Japanese imperial advance at Guadalcanal, and by so doing put our country on the road to victory.

It was no accident that General Vandegrift and his First Marine Division were selected to spearhead the Allied offensive in the Pacific. Marines had long studied and prepared for such an amphibious type of warfare. Indeed it was fortunate that marines had developed their amphibious specialty to such a point of perfection between the wars. When it was discovered that the First Marine Division was the only readily available division for the assault on Guadalcanal, the marines under the leadership of General Vandegrift were able to demonstrate the dominant attributes of fleet marine forces—ready availability and amphibious proficiency. Such fleet marine forces as General Vandegrift commanded proved to be a decisive factor in the campaigns waged in the vast Pacific. Although marines did not participate in all landing operations in the last war, it was still the amphibious know-how developed by our Marine Corps that was used by Allied troops in their many amphibious operations throughout the world.

It was under General Vandegrift and other able marine field commanders that the value of specialized amphibious troops was repeatedly demonstrated.

A maritime nation such as ours will never have an adequate number of specially trained amphibious troops in case of war. Therefore, Congress evidenced great wisdom when, in passing the National Security Act of 1947, it provided for the continuation of a permanent agency to develop landing techniques, equipment, and tactics. When we recall the record of General Vandegrift and his marines in the last war, as well as the brilliant achievements of the Marine Corps in developing amphibious knowledge and matériel, we can understand why Congress assigned the amphibious mission to the Marine Corps.

As we contemplate the true significance of the glorious achievements of General Vandegrift and his marines on Guadalcanal as they fought jungle and Jap to turn the tide of Nipponese conquest, and by so doing gave us our long-needed victory in the Pacific, we can be certain the historians will someday add Guadalcanal to the list of history's decisive battles.

With good reason peoples of the Allied Nations can, on the occasion of General Vandegrift's retirement, wish him well, for he and his marines have earned a "well done" message from all who believe in those things for which the Allied Nations fought the greatest of world wars.

The editorial follows:

THE SKIPPER OF GUADALCANAL

The retirement of Gen. Alexander A. Vandegrift will remove from the active list of the United States Marine Corps one of its finest officers and one of the most modest of the men who fashioned victory for their country in the war against Japan. It was the Marines' First Division, which he led in the attack on Guadalcanal, that exploded the myth of the Japanese soldier as a superman and set the pattern for the successful island fighting that followed.

When General Vandegrift—then wearing only two stars—sailed from New Zealand for the Solomon Islands in July of 1942 the Japanese conquest of half a world was almost complete. They held all of China they wanted, the Philippines, the Netherlands Indies, Malaya, Siam, and they were deep in Burma. The ineffectiveness of the defenses of those areas had inflated the Japanese to fantastic proportions as a fighting man. The 15,000 men led by General Vandegrift were about the only troops trained in amphibious warfare that the United States had.

Facing the frightening unknown on Guadalcanal, the reinforced Marines' First Division soon proved that a properly trained American, equipped with good weapons, was more than a match for the Japanese. With inadequate air support and only timid sea support for 3 months, the marines successfully slugged it out with a constantly reinforced enemy and did it with a proportion of fatalities that was not equaled again—700 marine dead to an estimated 10,000 to 15,000 of the enemy. The keyman of the whole show was the tall, balding, soft-spoken marine in unpressed khaki who occupied the No. 1 tent in the willow thicket hard

by the Lunga River. None deserved more the Medal of Honor that was awarded him.

General Vandegrift was the first marine ever to wear the four stars of a full general, which also was appropriate. For it was under his command in the South Pacific and later as commandant of the corps that the marines finally reached their full stature and received full recognition as the world's elite fighting force. Anyone who saw them in action would not trade Vandegrift and his marines for any other shock troops in the world. After 40 years of service he can leave the corps secure in the knowledge that he added luster to its reputation.

An Assault on the Civil-Service System

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1949

Mr. POULSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article taken from the April 3, 1949, issue of the Washington Times-Herald. Although the article is written in a facetious vein and without precise regard for factual accuracy, it nevertheless invites attention to what amounts to an assault on the civil-service system.

My purpose in placing the article in the RECORD is twofold. First, I wish to invite attention to the high purpose which apparently is followed by the Secretary of the Army, Mr. Kenneth Royall, and by the Assistant Secretary of the Army, Mr. Tracy Voorhees, in the selection and appointment of the civilian employees of the Department of the Army. Secondly, I want to bring to the widest possible attention the account of an assault on the position of a civil-service worker which, as I see it, really constitutes an assault on the civil-service system itself. It is immaterial to me whether this assault is motivated by a thirst for political patronage or by a consuming desire for personal revenge.

It seems that a former Republican candidate for Congress has been appointed to a position in the Department of the Army. On inquiry I have learned that the position is in the classified civil service, that it is a grade CAF–14 which pays somewhat less than $10,000 a year, that it is in the office of Assistant Secretary Voorhees, and that the appointment was made in strict observance of the civil-service law and regulations. The appointee, a former Navy commander, Roy E. James, is a long-time career civil servant and World War II veteran who has simply been reinstated into the civil service at the same grade which he resigned a little more than a year ago in order to run for Congress.

In my view, Army Secretary Royall should be commended, not censored, as the article indicates. In making the appointment, Mr. Royall quite properly refrained from inquiring into the party affiliation of the applicant. In that respect, Secretary Royall and his aides observed not only the letter but also the spirit of civil-service law and regulations. More than that, they demonstrated that neither party affiliation nor considerations of political patronage are taken into account in the selection of the civilians who work with the Army. It would be a sad day indeed if civilian positions in any of the component parts of the defense establishment were reduced to mere prizes in the patronage grabbag.

I herewith insert the newspaper item:

DEMOCRATS WAIL AS REPUBLICAN GRABS FANCY JOB

(By Edward K. Nellor)

Patronage-hungry Democrats have unwittingly provided an answer to the question of what happens to defeated Republican congressional candidates—they get $10,000-a-year jobs in the Truman administration.

At least, this was the happy fate of one Pennsylvania Republican, who slipped into a top-salaried Army job.

BATTLED PATRONAGE CHIEF

The occurrence has an added sting for faithful but job-hunting Democrats inasmuch as the individual involved was defeated by the veteran House stalwart, Representative WALTER, Democrat, of Pennsylvania, in a nip-and-tuck race.

WALTER, the good Democrats shudder to admit, is patronage chief of the administration.

Just how it happened the administration's patronage boss let a top-flight job go to a Republican, and (shades of Joe Grundy) to the man who almost trimmed a big administration wheel, is the subject of much soul-searching at the moment.

BLAME PUT ON ROYALL

Roy James, serenely entrenched in the $10,000-a-year Army information job, is the man who tangled with WALTER during the Pennsylvania congressional scrap. To make it worse, James had some harsh things to say about WALTER. In fact, both candidates swapped punches freely in the close race.

Unfortunately, the finger of guilt is now being pointed at Army Secretary Royall, as WALTER and angry White House aides seek a scapegoat to blame for the patronage fiasco.

Royall can't stand the harsh words that are being uttered about him over this incident. He is already on the skids as far as administration Democrats are concerned. Now, the scalp hunters are out after him in earnest.

IT'S A LAUGH TO GOP

Naturally, the incident is providing Republicans with many hours of mirth. As for James, he considers the cries of anguish from President Truman's faithful the just reward for victory-happy Democrats who sat around gloating instead of reaching for the political plum.

James is qualified for his post. He put in 17 years in the Department of Interior before resigning in 1947 to run against WALTER.

James can be removed only if WALTER can prove him unqualified, a violator of the Hatch Act or a Communist. Friends of the Pennsylvania Republican say James is simonpure on all three scores.

As Democratic patronage boss, WALTER has had plenty of trouble. However, all previous gripes from deserving Democrats are minor ones in comparison to his own shouts of anguish over Royall's approval of James for the Army job. He has carried his beef to the White House.

Naturally, Mr. Truman was not happy over the James appointment. Whether or not he can soothe WALTER'S ruffled feelings by getting rid of James is the subject of high administration strategy meetings of the moment.

Meanwhile, deserving Democrats drool outside Royall's Pentagon doorway, helplessly contemplating those 10,000 good administration dollars being wasted on a Republican politician.

Hon. James Wolfenden

EXTENSION OF REMARKS
OF
HON. BENJAMIN F. JAMES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1949

Mr. JAMES. Mr. Speaker, news of the death of James Wolfenden, a distinguished former Member of this House for nine successive terms, while not completely surprising, came to the people of Delaware County, Pa., as well as to his many former colleagues in the Congress, with unexpected suddenness.

Though in steadily declining health for several years he had waged a courageous battle against the inevitable and even the most recent reports gave no indication the end was near at hand.

I have the honor to represent here the people of the congressional district whom "Jim" Wolfenden served for many years, so ably and in so many ways. In their names and on their behalf I gratefully acknowledge the many splendid tributes paid to him as a man and as a public servant, and the many expressions of sorrow and remembrance by those in this body at whose side he had labored.

We of Delaware County will remember "Jim" not alone as an able and earnest Representative of our district in the Congress, but also as a leader in the development and growth of our largest community, the township of Upper Darby, to which he gave unstinting devotion and unswerving loyalty.

It was there that his forebears from England settled more than a century ago and established a small enterprise in the wilderness beyond the city of Philadelphia. Through three generations of his family that enterprise prospered with its community and Jim's pride in the little city that has grown from a village in the woods was boundless.

Like his father he served in the governing body of his township, and, like him, gave leadership and support to every movement for the greater good and contentment of its people.

Jim Wolfenden's faith in the American way of life as the means to a happier world was profound and often expressed. He had before him always the examples of high achievement within his family and within his community under the American system of free enterprise and freedom of opportunity. He labored diligently to sustain and promote the true, self-reliant spirit of American democracy in his community, his State, and in this Nation. May he find rewarding peace everlasting. May his widow and family find consolation in pleasant memories at this time of their great bereavement.

World Federation Necessary To Prevent War and Protect Freedom and Justice

EXTENSION OF REMARKS
OF
HON. THURMAN C. CROOK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1949

Mr. CROOK. Mr. Speaker, under unanimous consent I include a letter received from Prof. Charles C. Price, head, department of chemistry, University of Notre Dame, Notre Dame, Ind.:

UNIVERSITY OF NOTRE DAME,
Notre Dame, Ind., April 4, 1949.
Hon. THURMAN C. CROOK,
House of Representatives,
Washington, D. C.

DEAR SIR: As a Quaker scientist, with the deepest respect for our American principles and ideals, who has had and continues to have an active role in war research, I would like to express my thoughts on our present dilemma. It is my firm conviction and belief:

1. That another war would bring vast destruction to our American people, our cities, our economy, and our political institutions, as to all other nations involved;

2. That history demonstrates that any league or organization which depends solely on the good will and consent of all its individual members for its effective operation is doomed to fall and inevitably will lead to war;

3. That the only hope to avoid this catastrophe to us and to all humanity is through an effective world federation with powers limited but adequate to prevent war;

4. That if we are firm and clear in making a proposal which will prevent war and protect each nation's domestic rights, there is a real chance that Russia will realize the practical benefits and accept;

5. That, as our only hope, each of us must do everything within his power to present this, the greatest issue of our time, to the American people for action; and

6. That, to this end, everyone interested in the future of the United States and of the world should read and understand the Anatomy of Peace by Emery Reves, one of the truly great books of all time, one which will profoundly influence human destiny.

I hope and believe that you, as a representative of the American people, will do whatever you can to make a world federation strong enough to prevent war and protect freedom and justice the clearly expressed aim of our Government.

Very truly yours,
CHARLES C. PRICE,
Head, Department of Chemistry.

What Is a Liberal, Progressive Republican?

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. SHORT. Mr. Speaker, few men have I ever known in or out of Congress whom I respect as much, admire more, or love as dearly as Hon. FRANK FELLOWS, of the State of Maine.

The first day he came to Congress I greeted him and there began a friendship that has ripened, strengthened, and grown more precious through the years. Mrs. Short and I have been in his home and he has been in our many, many times.

Born in the rugged north country, FRANK FELLOWS has learned through long experience and bitter struggle how to deal with the formidable forces of nature and the strong competition of men.

Before coming to Congress FRANK FELLOWS was a brilliant and successful lawyer, building up with his brother, the former attorney general and now a supreme court justice of Maine, Hon. Raymond Fellows, one of the largest and most lucrative practices in that beautiful State. Since coming to the House of Representatives he has, by hard work, diligent application, pleasing personality, keen wit, rare humor, won an imperishable place in the hearts and minds of all his colleagues.

For many hours we have listened to him quote poetry, discuss complicated legal problems, discourse upon complex legislation, and with superb histrionic and theatrical ability entertain his friends.

FRANK FELLOWS is a philospher, as well as a scholar, lawyer, and statesman, and above everything else is a loyal friend. He is serious because he refuses to be too serious, and is most intelligent because he knows he does not know it all.

Recently Congressman FELLOWS delivered a broadcast over some of the radio stations in Maine, and when several young men from my district in Missouri were visiting the Capitol the other day I asked FRANK to read this broadcast to them. He kindly acquiesced, and these young Americans from the Key Club in Joplin, Mo., were so visibly impressed that they have written me since their return home to kindly send them a copy of the Honorable FRANK FELLOWS' inspiring address.

Mr. Speaker, under leave to extend my remarks I include this address which clearly reflects many of the sterling qualities of one of the greatest and best men I have ever known:

Spring has started up the coast, and touches with its magic wand the icy lids of lake and stream, stirs the sleeping crocuses and trailing arbutus, blows its warm and fragrant breath on the forsythia hugging southern walls of old farmhouses, and starts sap running and small boys' interest in marbles and kites. Its promise each year fills the world with new hope.

And in this year of our Lord 1949, the Congress of the United States has placed before it proposals that, if adopted, will in time remove this country forever from its present role as the hope of the hopeless. As of today, few, if any, nations offer the opportunity these United States set before their young people to work and build a competence. It is true that the present trend is toward taxing away more and still more of income, thus cutting incentive as well as possible savings toward such a competence. Already, so-called planners would, by Government subsidy, make up that difference in income between those who, given equal opportunity, succeed and those who do not. Such procedure disregards the nature of man. Man will not make a supreme effort and practice thrift to obtain something the Government will give gratis to the other fellow, who squanders both time and money.

Recently I received from a constituent a letter urging me to indicate by word and deed that I was "a liberal, progressive Republican." I don't know whether that person knew what he was talking about. Certainly I did not. The words "liberal" and "conservative" have been kicked around until Noah Webster or any student of English would be fit material for a psychiatrist if he attempted to rationalize some of the statements we hear made today regarding them.

Those who favor centralized government, and who, strangely enough, now refer to themselves as "liberals," encourage the natural tendency most people have to let someone else take responsibility—so, increasingly, eyes turn to Washington for answers to the questions that plague either individuals or groups. As a result, Congress is asked to give authority to Government agencies to confiscate the property of the landlord under the terms of a rent-control law which in thousands of instances will make illegal a fair return on the investment—and this under the guise of war. The Constitution forbids the taking of private property without just compensation.

Abraham Lincoln, that poor boy who sought no subsidy—no Federal assistance—in speaking of property said, "Let him not who is houseless pull down the house of another, but let him work diligently and build one for himself; thus, by example, assuring that his own shall be safe from violence when built."

Because, in the common course of human events, sickness and even death invade the homes of all of us, Government bureaus dream up scareheads for newspapers and statistics for radio broadcasts regarding the horrible prevalence of malnutrition, heart disease, etc. We are given to understand that malnutrition in our State, as well as others, is due to poverty, when, as a matter of fact, it is a condition almost as common among the wealthy as among the poor. Frequently it is the result of lack of thought, rather than of cash to buy proper food, that creates the difficulty. But Government planners and professional do-gooders would assure the hypochondriac that more power in and money from Washington will quickly solve the problem, and we must have, they tell us, compulsory health insurance.

If Federal supervision and control of the individual and business—government by bureaucracy—and relinquishment of personal liberty are liberal policies, then most certainly I shall remain what advocates of such things scathingly term "reactionary" and "conservative."

Wherever these social and socialistic schemes have been tried, they have failed miserably to produce either happiness or progress. What use is there in reading, if we do not note and profit by the experience of others? History is of little use if it records and does not teach. The New Deal and the Fair Deal were new to us, but were experiments that had been tried and discarded elsewhere. The old saying that "Experience is the only school for fools" labels us definitely as at least immature, unwilling to learn from others, tinkerers with rejected theories, and not worldly wise realists. Social planners—some no doubt with the best intentions—will bring this country to economic and moral bankruptcy if our present course is long followed.

In Washington last week, mayors held a convention at which Mr. Truman stated he holds out hope for some of his so-called Fair

Deal. As there was nothing new about the New Deal, so there is nothing fair about the Fair Deal. As the word "deal" implies, both involve the element of chance, as in any card game. To gamble with freedom, liberty, and national solvency is not only wicked—it is suicidal.

In speaking to this same conference of mayors, Mr. Bernard Baruch, the elder statesman with whom many Presidents have taken counsel, asked this question: "Everybody wants to lean upon the Central Government, but who is the Government to lean upon but the people?"

General Eisenhower also spoke, warning local government against being tempted to pass things unnecessarily to the Federal Government, lest in surrendering their responsibilities they surrender their authority. He said they may undermine the American concept of democracy if they depend upon the Federal Government to solve their problems.

I again quote Mr. Baruch, who said, "You have seen planners of all sorts in every country, and look at the mess. Some of the worst mistakes of modern times have been committed by Government planners."

So far as I can figure out, the main difference today between what they are pleased to call a liberal and a conservative is one of method. Presumably both desire the attainment of the greatest possible good for the greatest possible number, but a conservative believes in giving the individual freedom and letting him find the answers, while the so-called liberal of today believes in giving the central government both the power and privilege of furnishing the answers.

Mr. Baruch suggests that we look at the condition in which other countries find themselves; to observe what government planners can accomplish in the way of chaos and confusion. Baruch is definitely a conservative, I should say. He, too, believes that to ignore history and the awful experience of other countries is to deliberately court disaster with a view to marriage with calamity and ruin. Our Government and our way of life evolved through observation of the bitter experience of others with their forms and their ways.

The last outposts of freedom in this country are our religious institutions and our schools. We have prided ourselves on our freedom of religion and education, and others have envied us. But recently I heard the statement that more and more people are taking their problems to the labor unions for solution. And you and I know that more and more they are taking their questions to the Government for answer. What a commentary.

Where is our vaunted individualism? Where have our homes, our churches, and our schools failed? Failed they certainly have, if that statement is correct. No child acquires knowledge by letting his parents do his home work, and no athlete keeps in physical trim by allowing someone else to take his work-outs and sit in his place at the training table.

Reliance on our own initiative and acceptance by each of us of responsibility for our own economic future and that of less fortunate relatives and friends is sound procedure. The founding fathers thought it made for good morals and good government. It may mean I am a conservative—even a reactionary—but I agree with them.

Our Constitution recognizes no common or uncommon man, but endows each of us with self-respect, a certain dignity, and guarantees us freedom and opportunity to work out our own political and economic salvation. It recognizes that the desire for freedom of thought and action—the urge to function as an independent entity and acquire property—is inherent. It is as ridiculous to fail to perceive the laws of nature as it is to break them, for no act of Congress can repeal these natural laws.

Let us think on these things, while we join with one of our Maine poets in saying—

If we should pray and pray and pray
From now until next Christmas Day,
We could not ask God's intervention
In half the ills which merit mention.

And so, to save God's time, and ours,
To concentrate our utmost powers,
We have composed a simple prayer
For all our friends to bring to bear.

God, give us grit and grant us grace
To push Saint Paul from Jesus' place.
Make purpose firmer, action wiser,
To save us from the Organizer.

Without recourse to any plan,
Let each one do the best he can.
May here be where, and now be when,
Christ's way be how, peace why, Amen.

Andrew L. Somers

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1949

Mr. MULTER. Mr. Speaker, following is an editorial which appeared in the Brooklyn Eagle of April 7, 1949. It is but one more deserving tribute to a faithful public servant.

ANDREW L. SOMERS

With the death of Representative Andrew L. Somers, Brooklyn lost its second Congressman within the past half year. The son of a distinguished Brooklynite, Mr. Somers embarked on a political career as a young man and was first elected to represent the Tenth District in 1924. Last fall he was reelected for a thirteenth consecutive term. In the nearly a quarter of a century that he served in the House, Mr. Somers always took particular interest in those matters that closely concerned Brooklyn and her people. He won special recognition, however, as a champion of a Jewish national homeland in Palestine. He helped organize the Jewish Army, made a 2-week inspection tour of the Israeli battlefront, and was in the forefront of the fight for full recognition of the young nation by the United States. The passing of this experienced legislator at the age of 54 will be mourned by a host of friends and admirers.

Economic Cooperation Act

EXTENSION OF REMARKS
OF
HON. WILLIAM P. BOLTON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Saturday, April 9, 1949

Mr. BOLTON of Maryland. Mr. Speaker, the Economic Cooperation Act will have my support because I firmly believe the operation of the ECA over the past year has demonstrated that it is the most effective way of preventing the drawing westward in Europe of the iron curtain.

Everyone realizes that $5,500,000,000 is an extremely heavy burden on the American taxpayers, but it is small when compared to the cost of a world war III. It is estimated that $5,500,000,000 would not pay for more than 41 days of another world war. This program, having been inaugurated and having led the anti-Communist groups in Europe to take hope, should be continued, through the most critical period since the end of World War II and the most critical year of the ECA. The unification and confederation of Europe should be the aim of all peace-loving peoples, and the ECA has proved to be a decided step in that direction. This program has demonstrated that it possesses the sinews of resistance to the advance of communism, it is the Voice of America calling a halt to the further spread of communism. Furthermore, it is an effective way in which to protect our own economy, but I firmly believe its administration should have close scrutiny in order that certain segments of our economy are not destroyed, and I refer particularly to the American merchant marine.

The passage of this bill should result in increased activity in our American merchant marine and put back to work some of the thousands of American seamen who are now unemployed. In the port of Baltimore alone, we have more than 3,000 unemployed seamen, and I am told there are 30,000 unemployed seamen throughout the United States today. I want to do everything possible to help the war-torn countries of Europe rebuild their economy, which is so essential to our own economy, but, clearly, no foreign industry should be developed at the expense of an American industry, particularly one so important to our national economy and national defense as the American merchant marine.

The Congress has stated and repeatedly affirmed that "it is necessary for the national defense and development of its foreign and domestic commerce" that the United States foster, develop, and maintain the American merchant marine as an indispensable arm in its national defense, and to provide shipping service on all routes essential for maintaining the flow of a substantial portion of the water-borne export and import foreign commerce of the United States. The United States Government has spent many years and many millions of dollars in the hope of attaining this objective and, with the impetus given shipbuilding and American-flag ship operation during and subsequent to the war, the entire American fleet is at the crossroads. In effect, we have had a rebirth of what was formerly a great industry, and that industry, as reborn, is now in a position where present help is most essential. There is neither time nor necessity to outline the many advantages of a strong and balanced American-flag fleet to the thousands of American seamen now employed, the rather extensive shore staffs of those companies, the shipbuilding industry, and all of the other allied indus-

tries and crafts which contribute to its maintenance and operation.

The House Merchant Marine and Fisheries Committee recently held extensive hearings in connection with the determination of the advisability or necessity for a fair allocation of the overall ECA cargo movement to American-flag vessels. That committee concluded that such allocation was both desirable and necessary and presented for approval of Congress in H. R. 1340, the principles of which should have been incorporated in the pending measure. That bill would guarantee American-flag participation in the entire ECA program to the extent of carrying 50 percent of all cargoes wherever originating or terminating.

However, strong opposition to this provision in the bill was interposed by Mr. Paul Hoffman, director of the ECA, and after lengthy conferences between administration representatives, Mr. Hoffman and representatives of the shipping industry, the Magnuson amendment was agreed upon, with a definite understanding that if the ECA Administrator did not comply strictly with the terms of the Magnuson amendment, then H. R. 1340 would be presented to the House and the chairman of the Merchant Marine and Fisheries Committee would press for its immediate passage.

It would seem to me that opposition to carrying 50 percent of all cargoes wherever originating or terminating is both shortsighted and overreaching in the demand that the American-flag fleet be, in effect, relegated to its prewar status in order that the foreign fleets, or certain of them, may be rebuilt and maintained beyond their respective prewar sizes and resume their prewar trades to the exclusion of American vessels. There would seem to be but little logic in providing for the internal recovery of European nations not only at the expense of the American taxpayer but also at the expense of a very important American industry. It seems only right and equitable that our vessels be given an equal opportunity to participate in the movement of cargoes financed and paid for by the American taxpayer.

The demand that, if there be an allocation of 50 percent of cargoes to American-flag vessels, the allocation be limited in respect of cargoes originating in the United States is clearly improper.

The proposed elimination of American-flag vessels from participation in the "cross trades" would do violence to a 50-percent requirement and would greatly reduce the percentage of American-flag participation. It has been estimated that 35 percent of all ECA cargoes move in the cross trades. This figure does not include the vessels on which freights are paid for the movement of non-ECA cargoes. It was testified by the ECA representatives during the hearings in connection with H. R. 1340 that of the American-flag percentage of ECA cargoes about 10 percent of that figure is carried by Army vessels. Obviously, this further reduces American-flag participation and does not reflect the carriage of certain ECA cargoes on the 57 commercial-type tankers now operated by the Navy. While on the subject of tankers it might be well to point out that the Economic Cooperation Act requires that petroleum requirements be obtained from sources outside of the United States wherever possible. Automatically, therefore, such carriage is in the cross trades, and acceptance of Mr. Hoffman's proposal would practically eliminate American-flag tanker participation. ECA has reported that American-flag tankers have participated in but 23 percent of the entire petroleum movement. Admiral Smith, of the Maritime Commission, has testified that there is a world surplus of tankers at the present time and that all possible aid should be given this segment of the industry. The New York Journal of Commerce for February 6, 1949, carried the following significant article dealing with the tanker situation:

Coastwise tanker chartering continued dull during the past week, as mild weather cut further the demand for tonnage. Rates generally ranging from 15 to 20 percent below USMC scale. No appreciable improvement is now expected before next winter.

London reported a decline in both activity and rates during the week, Lincoln Ship Brokerage Co. reports. British and French charterers now find themselves in a very stable position, and have no pressing requirements. They have indicated, however, that May–June Persian Gulf vessels might be considered at 10 percent to 15 percent under schedule rates. The 10 percent for Transatlantic March–April positions, and are gradually covering these needs. The Swedish have fixed four dirty carriers at the flat MOT rate to fill February and March loadings, while vessels were fixed for creosote and crude oil cargoes for Italian destinations.

Standard of New Jersey has announced it will cut back imports of crude oil from the Middle East up to 50 percent, according to Ocean Freighting and Brokerage Corp., which reports that Standard is also planning to lay up about 25 tankers and redeliver approximately 58 ships, mostly T–2s, between now and September.

The foregoing statements are at variance with the statement contained in a report on recovery progress and United States aid published by the ECA in February, 1949. At page 248 therein the following appears:

In the tanker field these pressures are not likely to be important. The balance of ships and cargo will require that United States flag tankers be fully used, and if dollars must be paid for tanker freights in order to secure the movement of the cargo, it is a matter of small interest to the foreign countries whether such tankers are employed in the small United States export trade or in the larger movements from offshore areas. Furthermore, tanker rates are set in worldwide market and there are no cash discrepancies between United States flag and foreign-flag rates as appear in the dry-cargo tramp market.

Mr. Hoffman explained during the hearings on H. R. 1340 that the inclusion of American-flag vessels in the cross trades would include services in which United States-flag vessels are not now and have not traditionally been engaged. It would seem that this is small reason for exclusion of American-flag vessels. The philosophy that we must develop our merchant marine would seem to indicate that if there be an opportunity to extend our ships into new fields, every opportunity to that end should be encouraged.

A very apparent reason for the concerted effort to exclude American-flag vessels from the cross trades appears at page 248 of the ECA report just above described. It is here stated:

Second, the dollar shortage of the European nations will continue to be acute. This means that they will have very strong incentives to economize on the use of dollars by avoiding American-flag vessels and using soft-currency vessels whenever possible, and to attempt to earn dollars by offering their own vessels for employment in the United States export trade at low rates.

Phrased another way, it means that the foreign recipients of our aid, paid for with our dollars, would like to reserve for themselves the exclusive benefits of the cross trades, preserving their traditional position, and, at the same time, employing their excess tonnage in competition against American-flag vessels in the United States export trade at low rates.

Yes, I am going to support the ECA program but shall be alert to its administration as it affects the American merchant marine.

Social Security Fund

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1949

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial which appeared in the Gloversville (N. Y.) Herald for Monday, March 7, 1949:

WOULD BE INTERESTING

Should the Federal Government tell the people what it is doing with the money the workers of the country have paid in for social security?

Rather a strange question, you might ask, yet it is a legitimate one, for the Government spends this social security taxation money just about as fast as it comes—and not for social-security purposes.

The matter was brought into the spotlight on the floor of the House the other day by Representative KENNETH B. KEATING, of Rochester.

Mr. KEATING pointed out to his colleagues that although employers and employees have built up an accumulation of $10,700,000,000 in old-age and survivors insurance funds in the past 12 years, the money simply isn't there—with the exception of a paltry one hundred and fifty million. The remainder has all been spent for one thing or another.

Oh, yes; the Government has put in its I O U's for the money it has taken out of the social-security trust fund. These I O U's are in the form of Government bonds; and they are just as sound as the Government itself.

But in order to pay out benefits, it is necessary either to sell some of those bonds,

make new appropriations, or tap future pay rolls still more. In other words, the cash would have to be raised by some method all over again.

Representative KEATING believes that we should discontinue the practice of the Government collecting money for one purpose and using it for another.

"But if," he told his colleagues in the House, "we are going to follow that questionable practice, let us tell the people who put up the money frankly and openly what we are doing."

That would be fair enough, in all conscience. Actually, what has been happening is that the Government has collected staggering sums from pay envelopes to run the Government "on the pretext and the representation to workers that this is an insurance fund," to use the words of the Rochester solon.

Maybe, we all like being kidded along that way.

Brooklyn's Woman of the Week

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 11, 1949

Mr. MULTER. Mr. Speaker, I am indeed proud that another one of my constituents has been chosen by the Brooklyn Eagle for laudatory comment. The Brooklyn Eagle of Sunday, April 10, 1949, nominated Mrs. Gazelle Joblin as the woman of the week. The following article tells only a few of the many worth-while activities to which she devotes herself. May she continue to serve her community for many years to come.

BROOKLYN'S WOMAN OF THE WEEK—BOROUGH HOUSEWIFE LEADS 18,000 HADASSAH WOMEN

(By Arthur Pollock)

This is the story of Mrs. Gazelle Joblin of 3519 Bedford Avenue, president of the Brooklyn chapter of Hadassah, women's Zionist organization of America, though it is also more or less the story of 18,000 other Brooklyn women. They stand back of her.

They raise money for Israel, in pennies, in thousands, with parties, luncheons, bazars and in a hundred other ways. And they are constantly at work making themselves better citizens, which is one of the reasons for the existence of Hadassah.

In Brooklyn there are 54 groups of these women. In the United States Hadassah women number 250,000 and thousands are still enrolling. There is a Hadassah in 47 States, all but Idaho.

Of the chapters in the 47 States Brooklyn's is the largest. One month recently Mrs. Joblin signed a check for $83,000, the sum her co-workers had raised that month. Some such sum her people raise month after month.

The money goes for health work in Palestine, for the purchase of land.

"Even for the land that has been won by military victories," Mrs. Joblin says, "the Arab owners will be paid."

CLIMAXED BY LUNCHEONS

The drive that has been keeping 18,000 Brooklyn women busy this year culminates in four donors luncheons at the St. George Hotel on May 2, 3, 4, and 5. One luncheon would not accommodate all who want to come. The chapter's 54 vice presidents draw lots for a day for their group. Mrs. Joblin will make a report each of the 4 days, and each day Frank Kingdon, recently returned from Israel, will speak. At least $700,000 should be the year's fund-raising total.

"The need is greater than ever," says Mrs. Joblin. "And the understanding is greater, too."

Hadassah is 37 years old. It had an ambitious program long before there was talk of a Jewish state. Its program was—and is—in two parts. It aimed to rehabilitate the thousands of Jews in Europe who came to Palestine. And it strove here to further education, create leadership, teach Jewish history, work for a peaceful, democratic world.

"There can be no strong Israel," is the way the women's spokesman puts it, "unless democracy is maintained here."

Leading 54 groups of women and acting as a member of the National Board is not child's play. Eighteen thousand women can get terrific inspirations at all hours of day and night. And every inspiration is a potential jewel. Mrs. Joblin is therefore a busy woman all day every day and all evenings. If she were a businesswoman she would be less busy.

SHE'S EASY TO TALK TO

What is this woman like whom so many thousands chose in 1947 as their leader, re-elected for 1948?

She is relaxed, easy to talk to, gracious, intelligent, and without pose or affectation. She is 5 feet 4 inches tall and slender. Weighs the same today as she weighed at 16. She has gray-green eyes.

"I guess you'd call me rusty," she says. "I've always been called that." Her hair is rusty, a kind of tender titian. She freckles when the sun shines on her. But she does not mind freckles. When she was a child she was told they were "sun kisses," and she rather likes them. Her nails are long and red, well cared for. And when you look at her in profile she could be Jean Arthur or Gloria Swanson or Eleanor Holm, however the resemblance strikes you at the moment.

As a child in Philadelphia, where she was born, she wanted to be a pianist or a dancer and was being groomed for both. She loves to dance now. She would have gone to Europe for a musical education, but when she was 13 her father died and she went instead to business school. She was working as a bookkeeper and secretary when she married Emanuel M. Joblin, also of Philadelphia. They moved to Brooklyn 26 years ago. Her business training comes in well now.

She has two children. Son Shelby, 23, got his M. A. from Cornell last June. He's 6 feet 2. Daughter Nancy, going on 17, 5 feet 9, and troubled by the high-heel problem when going out with short young men, goes to Brooklyn College. Mrs. Joblin owes her success in Hadassah to "the tolerance of my husband and children."

When she is cross at the end of a day, Mr. Joblin, a business executive, says, "Well, it all comes under the heading of Hadassah." That is, no doubt, the reaction in the 18,000 other Brooklyn Hadassah households.

JOINED IN 1933

Since June 1947, she has been a composite of housewife, mother, and executive.

When she was installed, the outgoing president said, "You will have the privilege of being president in the first year of the Jewish state." It seemed nebulous then. But UN acknowledged the right of the Jewish people to state status in November 1947, the Jewish state was established May 14, 1948, and the following day President Truman gave it de facto recognition. It celebrates its first anniversary the week after the donors luncheons.

"It has been a historic time for me," Mrs. Joblin says with pride. "I'll be able to tell my grandchildren about it."

She joined Hadassah in 1933, when Hitler was threatening the world. She formed the Esther group here in 1938. She likes to cook. She cooks Hungarian style. Her parents and grandparents were from Budapest. Her mother, 74, lives in Atlantic City and comes from time to time to stay with the Joblins. Gazelle Joblin is named after the Hungarian Princess Gazella.

She collects, has ever since she was married, antique, silver, and jewelry. "It's the Hungarian Gypsy in me," she says, speaking of the jewelry.

"When I get up to address a meeting the women look to see what ring I'm wearing, not what hat."

NOT TIRED ANY MORE

Mostly she has a trim, tailor-made look. When the occasion is right, however, she is very feminine.

She looks tired. "But when I know that 35,000 homeless Jewish children of Europe have settled in Israel and are now living like normal human beings, I don't feel tired any more. When I count up the number of trees we've planted and the acres of barren land we have transformed into fertile soil, when I reckon the number of families now making a decent living tilling that soil, I can attend meetings day and night. When I know that 4,300 wounded Israeli fighters and civilians were treated by the Hadassah medical staff in Jerusalem alone, no effort is too great."

These 18,000 Brooklyn women of Hadassah are proud women. For Hadassah is going to build the first hospital in the Negeb, to be called the Hadassah Yassky Memorial, after Haim Yassky, Hadassah staff member killed by snipers. It will be begun this month. Hadassah is also the first to build a medical school in conjunction with the Hebrew University in Israel. Students are being screened now and enter in May. In honor of Rabbi Stephen A. Wise's seventy-fifth birthday Hadassah will dedicate an apprenticeship building in the Brandeis Vocational Center in Jerusalem.

Their summers the Joblins spend at Longshore Country Club in Westport, Conn., golfing, swimming, and going to the Westport Playhouse.

Mr. Joblin's golf does not show the strain appreciably. He plays in the low 90's. With a life less active he might cut a few strokes off his score. Say one stroke—on a good day. Still, he'd prefer Hadassah to the 80's.

School Hot-Lunch Program

EXTENSION OF REMARKS
OF

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. BURNSIDE. Mr. Speaker, the national school-lunch program is one of the most constructive services provided by the Federal Government. It helps maintain our Nation's health and at the same time provides a means of reducing agricultural surpluses.

Under this program the Federal and State Governments jointly contribute money to help them pay the expenses of serving hot lunches to their pupils. The Department of Agriculture also donates part of the surplus food it buys through its price-support program, and buys for distribution to the schools certain foods the children are known to lack in their

ordinary diets. These contributions allow the children to get a healthful meal at a very low price, and makes it possible for needy children to get their lunches free.

If it were not for this program, most of our school children, especially in rural areas, would have to carry their lunches long distances and eat the cold, monotonous meals under unsanitary conditions. Because of the school-lunch program they can have warm, nutritious lunches in healthful surroundings. If it were not for Federal and State aid, many children could not afford to pay the cost of these meals. As it is, needy children can get their lunches free or at a few cents a meal. Even children who are not from needy families often do not eat the right foods, as is shown by draft board rejection figures. This school-lunch program provides the proper foods for our Nation's children, and trains them in proper eating habits.

Health is only one of the objectives of the program. It performs another service by making use of surplus farm products.

Last year $20,000,000 worth of surplus commodities was purchased by the Department of Agriculture and used in the school-lunch program. The school systems themselves bought $140,000,000 worth of food products, and their selection was based on a list of foods in plentiful supply issued by the Department of Agriculture to encourage the purchasing of surplus commodities. The school-lunch program thus helps to keep the farmer's income at a high level while at the same time providing a healthful diet for his children.

The results of the program have been encouraging. It has been shown that children who get lunches under this program gain more rapidly in weight and height, have better attendance records, improve more in scholastic standing, have better deportment, and show more resistance to disease than children not participating in the program.

The appropriation bill for the Department of Agriculture, recently passed by the House of Representatives, provided funds for continuing the program another year. The House and particularly the members of the Appropriations Committee should be commended for approving this worth-while program. I sincerely hope the Senate will do the same.

Adequate Program of Slum Clearance Requires Enactment of H. R. 4009

EXTENSION OF REMARKS
OF
HON. GEORGE D. O'BRIEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 11, 1949

Mr. O'BRIEN of Michigan. Mr. Speaker, one of the first steps in achieving the solution of a national housing program is to meet the problem of slums and blighted areas in our larger metropolitan cities. The bad effect of slums upon the lives of our citizens now and in the future generations is clearly an appropriate matter of national concern.

Except in isolated instances no broad and effective policy has as yet been put into action to accomplish the necessary objectives. Extensive hearings were held in 1947 and 1948 by the Joint Committee on Housing of the Eightieth Congress. These hearings culminated in the report that provision be made for Federal aid to local communities to enable them to undertake clearance of their slum and blighted areas but the substantive legislation needed to achieve this commendable aspiration was never enacted by the Congress. The land costs in some cases and the demolition costs in others make construction for such areas prohibitive to private capital and municipalities. It is not from lack of interest or from any lack of appreciation of the seriousness of this vital problem that American cities have thus far failed effectively to meet the problems presented by their slum areas.

Without the help of Federal assistance they do not have access to sufficient resources to absorb the full costs. Title I of the pending bill, H. R. 4009, authorizes contracts with local public agencies for Federal loans and capital grants for locally planned projects. The basic idea is that the Federal Government meet the financial differential which stands in the way of the municipality acting for itself.

A loan authorization totaling $1,000,000,000 is provided. It becomes available over a 5-year period. Twenty-five million dollars commences to be available on July 1, the year of enactment, and is increased by $225,000,000 in the first succeeding year and by further amounts of $250,000,000 each of the three following years. Capital grant authorization for slum clearance would be $500,000,000. This grant authorization would be available over a 5-year period commencing with $100,000,000 on July 1, 1949, and increasing by $100,000,000 each July 1 of the succeeding 4 years. Provision is made for increasing in any particular year to the extent of a $250,000,000 loan authorization and a $100,000,000 capital grant, subject to the over-all amount of $1,500,000 for the whole program of slum clearance embodied in title I.

A requisite of the Federal aid provided in this title is that the project areas be redeveloped for essentially residential uses. One-third of the costs must be borne by the locality and the remaining two-thirds by the Federal Government. This slum-clearance program recognizes the importance of local initiative and local responsibility and requires that all the projects shall be subject to the approval of the governing body of the locality involved.

The early enactment of this legislation will enable cities, with Federal aid, to embark on a long over-due program on a large scale to eliminate their slums which have been growing in area and in blighting consequences. It is also timely that we embark on this work now when there are certain evidences of a recession in employment.

More Building in 1949

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 11, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks I wish to include the high lights of an article which appeared in the April 11, 1949, issue on page 57 of the magazine Steel, entitled "More Building in 1949":

MORE BUILDING IN 1949

Government authorities continue to be confident that the volume of new construction in 1949 will exceed that of 1948 by about $1,000,000,000. A joint estimate by the Department of Commerce and the Department of Labor places total new construction this year at $18,800,000,000 compared with $17,775,000,000 last year.

It is estimated private construction in 1949 will total $13,750,000,000, a slight increase over 1948. According to the forecast, residential construction, both urban and farm, will be off moderately. A minor drop in industrial construction will be more than offset by increases in commercial buildings, schools, churches, and hospitals. Although railroad construction is expected to remain at the 1948 level, the volume of other public utility building will increase.

Publicly financed construction in 1949 is expected to total $5,050,000,000, as against $4,040,000,000,000 in 1948. The increase is accounted for chiefly by larger expenditures for institutions, highways, sewer and water projects and conservation programs.

Oleomargarine

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1949

Mr. BIEMILLER. Mr. Speaker, the department of agriculture of the great State of Wisconsin is most concerned about some of the practices of the oleomargarine industry. Let me quote a letter I received on February 28 from Mr. Milton H. Button, director of the Wisconsin State Department of Agriculture:

WISCONSIN STATE DEPARTMENT
OF AGRICULTURE,
Madison, Wis., February 28, 1949.

Hon. ANDREW J. BIEMILLER,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN BIEMILLER: Efforts now being made to repeal all restrictions on the manufacture and sale of oleomargarine present extremely serious implications to the consumer, to the dairy industry, and to all citizens of the Nation.

Those who are interested in the long-range aspect of the matter, question the logic of a Congress that appropriates many millions of dollars for a program designed to preserve the priceless heritage of soil fertility, and simultaneously considers the adoption of legislation that will change our Nation's agriculture from a grassland ani-

mal husbandry structure, to a row crop soil-depleting type of agriculture that will inevitably destroy our irreplaceable top soil. The problem is basic and serious, and it must be given major consideration by all statesmen of Congress.

The Wisconsin Department of Agriculture is charged by statute with the duty of protecting consumers against fraudulent advertising and imitations. In this capacity it is our contention that the advertising of yellow oleomargarine with pictures of cattle, dairy barns, and pasture scenes, accompanied by phrases and slogans designed to make the consumer believe oleomargaine is a dairy product is a direct, intentional, and flagrant violation of the fraudulent advertising statute.

The United States Food and Drug Administration and the Federal Trade Commission have refused to give attention to this problem or are powerless to cope with it.

The oleomargarine industry has sought and received permission to imitate, synthetically or otherwise, the desirable qualities of butter. They are now imitating the distinctive butter flavor and texture, they are adding synthetic vitamins, they are packaging their product in cartons similar to those used by the butter industry, and have appropriated for themselves the age old butter trade-mark, its yellow color. These facts indicate that oleomargarine was developed and is being marketed as an imitation product. Historically, this Nation has protected consumers against such deceptive imitation.

For many years new legislation has been designed to provide additional protection against fraud and imitation to the consumer. This policy has been extended to include the interests of the producer and manufacturer.

Now great forces are at work to destroy this protection that we have taken for granted. The oleomargarine industry is asking that the controls against imitation and fraud that now exist in other industries be removed from its particular product.

In the main, other nations of the world maintain the consumer controls that the oleomargarine industry is attempting to avoid in the United States. Some nations maintain a tax or fee as we do. Some enforce the statutes relating to fair trade practices in labeling and advertising. Some require the addition of ingredients that will make identification immediately possible for the consumer. Some have controlled the matter through the establishment of a state monopoly which has removed the opportunity for unreasonable profits. Some do not permit the manufacture of yellow oleomargarine. Still others protect the consumer by rigid and arbitrary price-fixing schedules.

To summarize, the methods vary but other nations do afford consumer protection. We are looking to you and your associates in the Eighty-first Congress for legislation that is in keeping with the principles and traditions of consumer protection.

Sincerely yours,

STATE DEPARTMENT OF AGRICULTURE,
MILTON H. BUTTON, *Director*.

I also desire to quote a memorandum from Mr. Einar O. Hammer, editor of the Wisconsin Department of Agriculture, on the subject of oleomargarine controls in other countries.

Subject: Oleomargarine controls in other countries.

The following regulations pertaining to oleomargarine are enforced in the countries listed under each heading:

1. Artificial color prohibited: Cuba, France, Uruguay. Hungary permits use of approved dyes. Ireland prohibits use of specified coloring materials.

2. Artificial flavor: Prohibited in France. Greece permits artificial flavor in exclusive grade only.

3. Mandatory ingredients: Certain proportions of sesame oils, unrefined cottonseed oil, or starch required in Union of South Africa, Brazil, Chile, Cuba, Austria, Belgium, Finland, Greece, Ireland, Sweden, Peru, Uruguay, and Venezuela. The purpose of these ingredients is easy identification. Hungary requires chemical identification.

4. Specified size or shape of container required: Union of South Africa, Chile, Austria, Belgium, Finland, Greece, Iceland, Poland.

5. Special container markings required: Chile, Austria, Belgium, Finland, Norway, Poland, Uruguay.

6. Specified labeling required: Union of South Africa, Belgium, Chile, Cuba, Austria, Brazil, Finland, Iceland, Ireland, Norway, Poland, and Sweden.

7. Use of dairy terms prohibited: Poland, Sweden, Denmark.

8. Artificial preservative prohibited: Ireland, Norway, Iceland permits salt only.

9. Fortification: Advertising of vitamin fortification prohibited in Sweden and Denmark.

10. State monopoly: Norway controls include regulations of production as well as complete control of ingredients used.

11. Taxation: Sweden and Norway.

12. Price control: Norway, Sweden, and Denmark.

13. Manufacture and sale prohibited: New Zealand, Mexico.

14. Imports prohibited: Trinidad, New Zealand.

15. In the Union of South Africa manufacture of oleomargarine permitted only under emergency control law expiring July 1, 1948.

Sources: Compiled from reports of Foreign Service Officers of the United States to the United States Department of Commerce. Some of the reports have been published in Industry Reports, Fats and Oils, and World Trade in Commodities; others were consulted in the offices of the Foodstuffs Division, Office of International Trade, United States Department of Commerce.

Published: Hearings on oleomargarine tax repeal before the Committee on Agriculture, House of Representatives, Eightieth Congress, second session, pages 280–283.

O. B. Grimley, The New Norway (Oslo 1939) pages 86–89.

Supplementary information on Norway and Sweden, by Rolland Von Euler, Office of Scandinavian Area Studies, University of Wisconsin, February 18, 1949.

I think it is obvious that in a matter of such vital interest to consumers and farmers alike the House should proceed with caution. I agree that discriminatory taxes on oleomargarine should be removed. I think the Granger bill will accomplish this end with the least possible damage to the dairy industry and maintaining the greatest possible protection to the consumer.

Air Force Academy

EXTENSION OF REMARKS
OF
HON. EDWARD BREEN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, April 11, 1949

Mr. BREEN. Mr. Speaker, Hon. CLARENCE J. BROWN, of Ohio, and I are introducing legislation which calls for establishment of an Air Force academy with its location at Wright-Patterson Air Force Base, Dayton, Ohio. There are many excellent and substantial reasons why this academy should be located at Wright-Patterson Air Force Base.

The base is headquarters for Air Material Command (AMC), which is the largest command in the Air Force. AMC employs more than 100,000 persons at its bases throughout the United States. Its over-all mission is (1) research and development, (2) procurement and industrial planning, and (3) supply and maintenance.

Many experts and scientists in these three fields are stationed at headquarters, AMC, in Dayton. This makes Wright-Patterson Air Force Base the "heartbeat" of the United States Air Force. At this base, everything pertaining to the Air Force, in all its phases, begins and ends.

By establishing the academy at Wright-Patterson, cadets can take advantage of the brains of the country's foremost experts in the aviation world. They can work side by side with these experts in their work with electronics, armament, static testing, development of ground equipment and flight testing. A large number of the world's leading aeronautical scientists would be available to the cadets for lectures.

The Air Force already has established the Air Force Institute of Technology at Wright-Patterson. This school could be the nucleus for expansion into the proposed Academy. The institute is a post-graduate school of engineering with 34 professors and instructors. Approximately 300 students now attend the school. The instructors are both permanently assigned from accredited universities, as well as visiting professors on loan.

By establishing the Academy at Wright-Patterson air base, the cadet would be able to choose his career in the Air Force by being able to absorb under actual observation and practical training procedures the phase of aviation he wishes to specialize in. This would greatly increase the value of his education to the Nation.

In no other place could the cadet obtain more first-hand information and education on the latest aeronautical trends. The Academy at Wright-Patterson air base would be a tremendous saving to the American taxpayer by having young men embark on their careers from an installation which is responsible for the future progress and development of the United States Air Force.

Wright-Patterson air base is comprised of nearly 7,000 acres of land. There is sufficient room, Mr. Speaker, for establishment of the proposed Academy without great cost to the taxpayer. Considering the multimillion dollar investment the Nation now has at Wright-Patterson air base, it seems foolhardy to attempt to duplicate these facilities at another installation.

It should also be pointed out that cadets at the Academy could take advantage of the Air Force's all-weather flying station which is located a few miles from Wright-Patterson Field at Wilmington, Ohio.

In conclusion, Mr. Speaker, I would like to cite with justifiable pride that Dayton, Ohio, is the birthplace of the late Messrs. Orville and Wilbur Wright, coinventors of the airplane. The city of Dayton is the home and birthplace of aviation, and for this reason alone, even discounting the substantial facts mentioned heretofore, I respectfully believe this distinguished body of Representatives would be paying the proper salute and recognition to the memories of these famous Americans and to their contribution to our Nation. I bring this legislation to you for earnest consideration.

Riding the Cocked Elephant to Banbury Cross

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1949

Mr. O'SULLIVAN. Mr. Speaker, I am sure that all of us in our early childhood years were quite familiar with the following Mother Goose rhyme, and I regret that I must rely upon memory alone to quote same:

Ride a cockhorse to Banbury Cross,
To see an old lady upon a white horse,
Rings on her fingers and bells on her toes,
She shall have music wherever she goes.

If same was brought down to date, so as to conform to the actions of some of the overzealous, keyed-up Members of this Congress, affiliated with the Republican Party, this old Mother Goose jingle, I am sure, would be as follows:

Ride a cocked elephant to Banbury Cross,
To see an old "fooler" upon a strange course,
With politics on his "kisser," the next campaign on his toes,
He shall spread propaganda wherever he goes.

It is sad and singular, indeed, that House bill 3748, a bill to amend the very proper Economic Cooperation Act of 1948, having been reported out of the Committee on Foreign Affairs unanimously, should, on the slightest pretext, be made the occasion for unnecessary Republican propaganda for future campaigns, by the filing of an alleged minority report, joined in favorably by all of the 11 Republican members of the Committee on Foreign Affairs.

Two of the 11 Republican signatories to this strange document presented additional minority views. Throughout the alleged minority report, and also the additional minority views, the words "minority party Republican," "Republicans," and "Republican minority" are eased, so to speak, into the document by great and tremendous rhetorical flourishes.

In the light of our past boastful claim that we had formulated and put into practice a truly bipartisan plan as to our foreign relations, it occurs to me that it comes with mighty poor grace to sanctimoniously or otherwise drag the bedraggled Republican Party into the very fore in the alleged minority report and additional minority views. The doing of this I believe is but the putting in operation an ignoble, preconceived plan to carry on a Republican preprimary campaign in Congress, with all of the zeal of the reputed California real-estate salesman who attempted to sell the unknown mourners at the funeral of an unknown man building lots in a new Los Angeles subdivision. I have observed that wherever it has been humanely possible to do so there has been injected, at the most inopportune times and at the most inappropriate places, Republican propaganda. The only place that I, as a new Member of Congress, have not heard Republican propaganda has been in the fine morning prayers of our Chaplain, the good and rare Rev. James Shera Montgomery, D. D., and other equally fine ministers of the Gospel who have been selected by him to do the much-needed praying for us and our actions, legislative and otherwise. We Democratic Members of the House of Representatives must alert ourselves. We must be vigilant lest some of the Republican Members of this House surreptitiously try to get some of their propaganda into our Chaplain's opening prayers and in all of the funeral eulogies made in sorrowful appreciation of the memory of our revered dead. It is a joke, McGee, and it is not funny.

In the about-face language of the genial, handsome, and able gentleman from Wisconsin [Mr. FRANK B. KEEFE], I ask: Are you Republicans not ashamed of your propaganda antics? Are you not just a little bit ashamed, my dear Republicans, just a "teenie," "weenie" little bit ashamed of your new political doings in committee hearings and in Congress? Oh, I hope you are—I hope that you resolve to scrap your present practices of making political soup and political hash out of everything conceivable, when you know full well that your soup and your hash will turn out to be of no good whatsoever to either the cookers of these unwholesome dishes or to the unfortunate consumers of the foul, synthetic stuff.

Please, my Republican friends, as in the old fable, you are making stone soup and it has no political nutritive value whatsoever.

I am fully in support of this bill as it has been given to us by the Foreign Affairs Committee, plus amendments, and, with God's help, acting through both Democratic and Republican Members of the Congress, it shall be shaped into functioning United States law, in spite of the senseless and weak opposition which may be arrayed against it by the children of the darkness.

The European recovery program to stop communism must continue.

Something About National Security

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1949

Mr. DONDERO. Mr. Speaker, in a few days, a new list of Foreign Service promotions will be announced. Several hundred of the men who represent the United States of America abroad will be recommended for promotion.

I do not think I have to point out for the benefit of the Members how important this matter is for the country at a time when ideological differences split the world and make things more complicated at home.

It is my feeling that we in the Congress have every right to demand, in the interest of the American people whom we represent, that every precaution be exercised to make sure that the very best men are selected for the best jobs available to them in the foreign service.

So it is, Mr. Speaker, that I wish to point out that there is some doubt whether all precautions necessary have been taken.

Information has just come to me that makes me wonder if we really are alive to the perils which exist for this Nation; at least to wonder whether the responsible authorities in our State Department are aware of them.

I find that a State Department employee who 4 years ago was arrested and charged with stealing American secrets—and who was exonerated of those charges under circumstances questionable enough to warrant an investigation by a subcommittee of this honorable chamber—is a member of one of the boards which decide the promotions to be made in the Foreign Service.

Mr. John Stewart Service, one of six persons charged with the theft of an estimated 100 files of secret Government papers—and the State Department acknowledges this—is the third member of a five-man Board which passes on all promotions from classes VI to V, V to IV, and IV to III. It is called the Foreign Service Promotion Board B.

I might point out, Mr. Speaker, that so far as I know the State Department never announced this appointment of Mr. Service to such a position of responsibility. We have the ever-alert press to thank for that information.

Mr. Service, with Philip Jaffee, Kate Louise Mitchell, Navy Lt. Andrew Roth, Julius Mark Gayn, and others, was arrested on June 7, 1945, on charges preferred by two very responsible Americans—John Edgar Hoover and Under Secretary of State Joseph C. Grew. They were the charges generally referred to as the Amerasia case or the State Department espionage case. They alleged violations of the espionage laws. The charges originally were brought before the July 1945, grand jury; but for some reason a change of grand juries was obtained by attorneys for Service, Miss Mitchell, and Mr. Gayn. The August grand jury failed to return indictments because of insufficient evidence against the three.

As I have charged several times previously on the floor of this House, there is ample reason for the belief that the August grand jury never was presented the full evidence against Mr. Service, Miss Mitchell, and Mr. Gayn. Why that was, I do not know; but I have some ideas of which you will hear more later. In the meantime, Mr. Speaker, I rise to question the advisability under these very peculiar circumstances of appointing

Mr. Service to such a high position of responsibility. If he has since announced his previous Communist associations, he should, as a token of his complete loyalty, publicly reveal all those with whom he was involved and the full nature of his activities.

It is my understanding that the criteria for members appointed to these promotions boards include a requirement that they enjoy the full trust and confidence of the Foreign Service, the State Department, and other branches and agencies of the Government.

It would be interesting to know if Mr. J. Edgar Hoover and the FBI now have full trust and confidence in Mr. Service. If they have not, that, at least, is one doubt that should be resolved in favor of the United States Government and the security of its people. It is not too much to ask in times fraught with as much peril from enemy agents working for the Soviet Union as these.

Working Conditions of Agriculture on West Coast

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1949

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two letters from employees who earn their livelihood employed in west coast canneries and fields:

SALINAS, CALIF., *March 20, 1949.*
Representative ROY W. WIER:

I am writing to you because I seen in a newspaper that you are on a labor committee. I am a lettuce worker. I work in the sheds where the lettuce is processed and packed and shipped. Now before 1937 we lettuce workers come under social security and unemployment insurance. In the fall of 1936, the shippers sent a committee before a congressional committee to have this kind of work declared agricultural so they could beat us out of our social security and unemployment insurance. They got that decision from Congress, and I understand it, by a ruling from the Supreme Court. But when the Taft-Hartley union-busting bill was put out we were told we were not agricultural; we were workers in interstate commerce and we would have to live up to the Taft-Hartley Act. That split our union, Local 78, CIO, wide open. We have been fighting among ourselves for about a year; a few have landed in the hospital and a few have landed in jail. I quit working for those crooked lettuce shippers. I say "crooked" because they have beat me out of my social security by lying before a congressional committee (a contempt of Congress) and got away with it.

I think the lettuce workers should come under social security, unemployment insurance, and under the income withholding tax. The railway workers are workers in interstate commerce and the income tax is withheld from their pay checks and if they did not have their own insurance they would come under social security and unemployment insurance, and so should we. We are workers in interstate commerce and we always were. In 1936 we weren't eating the lettuce, we were processing it for the eastern market. I think that the lettuce shippers should be punished for their actions and pay those funds in to the social security and unemployment administrations that they have beat us out of.

Well, wishing you the best of health, I am,
CHARLES F. CONNORS.

LINDSAY, CALIF., *March 18, 1949.*
Congressman ROY W. WIER,
Representative of Minnesota.

DEAR CONGRESSMAN: Not knowing who else to write on the repeal of the Taft-Hartley law, I am taking the liberty of writing to you as I fully believe you are for the repeal of same.

I am an employee of a canning industry in California and have worked in fruit canneries here since before the union went in. I am now in an olive cannery. Anyone that worked in the canneries before the union went in, after the union went in before the Taft-Hartley law and after the Taft-Hartley law was put in effect can see the unfairness of the bill.

Before the union went in the people that worked in the canneries were known as cannery slobs. However, they were decent, respectable people trying to make an honest living. They stood in mud during rainy seasons and the working conditions were terrible, to say nothing of the unfairness. The unions have cleaned these places up, made them decent places to work. College students and school techers work there through their summer vacations. You feel you are a human being and are not ashamed to be seen entering the premises as an employee. The canneries have been run on a seniority basis and a person know where they stand the same as any other job.

Then they pass the Taft-Hartley bill, the most unfair deal ever passed to my knowledge. We have practically no protection. The employer has it all. Every unfair deal that is pulled the employer comes back we are covered by the Taft-Hartley law. We pay union dues for decent working conditions. The company signs an agreement but the agreement doesn't mean a thing; they are covered by the Taft-Hartley.

If we are to have such a law, let's at least make it a fair law.

I wish some of these lawmakers could or would step in workingmen's shoes for a while. We are all decent American citizens and should all have equal rights.

I don't suppose this letter will ever be read or even considered, but I feel in my heart I at least have done my part in expressing part of my opinion on the repeal of the most unjust law ever adopted.

Thanking you for your consideration and hoping you'll do all in your power to repeal this law.

Respectfully yours,
MRS. JEANNETTE ROUPE.

The Case of the American Watch Industry

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1949

Mr. MARTIN of Massachusets. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by George Sokolsky from the Washington Times-Herald of Monday, April 11, 1949:

THESE DAYS
(By George Sokolsky)

I got interested in the American watch industry when I heard the gossip that the representative of a Swiss watch company was in Washington lobbying for a higher minimum wage for American workers.

Said I to myself: Naturally, if the wages of watchmakers go up in America, it will be a good thing for their only competitor, the Swiss watchmakers.

For, as it works out, the American pay roll already costs about two and one-half as much as the Swiss pay roll for the manufacture of the identical commodity: That is, a jeweled watch. So I looked into the picture—and, of course, found that the reciprocal trade agreements hit this industry very hard indeed.

Actually, only 3 American firms out of 60 remain in this field, Hamilton, Waltham, and Elgin. Waltham is in bankruptcy.

Bulova does make some watches in the United States, but its principal business is importing them from Switzerland.

These figures tell the story:

	Imports	Elgin, Hamilton, Waltham
1936	2,131,000	1,396,000
1937	2,947,000	1,504,000
1940	3,267,000	1,484,000
1942	5,107,000	885,000
1943	7,609,000	271,000
1944	6,754,000	174,000
1945	8,709,000	618,000
1946	9,039,000	1,124,000
1947	7,357,000	1,582,000

The very low figures for the years from 1942 to 1945 are due to the fact that the American makers were engaged in war work during that period, the sales representing stocks trickling into the market. It was during those years that the Swiss captured the American market.

Walter W. Cenerazzo, national president of the American Watch Workers Union, had this to say in his testimony before a congressional committee:

"The problem of the American jeweled-watch industry is simple; it's a matter of competitive factors. The Swiss watch importer buys the uncased watch movement in Switzerland and brings it to this country.

"It costs him on an an average of $6.50 for these movements. These are not my figures; these are the figures of the Department of Commerce, which has averaged the cost of the movements imported into this country during the years 1946, 1947, and 1948.

"These importers pay a duty based upon the line, size, and number of jewels, ranging from $1.80 to $2.25. The minimum cost of production on any jeweled movement made in the United States is $13.

"This is a comparable movement as is shipped into the United States for $6.50 from Switzerland. Now, add the duty of $2.10 to this $6.50, and you have a cost of $8.60; subtract the $8.60 from $13, and you have an edge of $4.40 per unit that the Swiss watch importer has over the American jeweled-watch manufacturers.

"And you must remember that some types of movements produced in the United States cost three times that $13. Now, what is this $4.40 utilized for? Brand-name advertising, principally * * *."

Citing the Bulova Watch Co. as the largest importer of Swiss watches, Cenerazzo said:

"This company, in the year ended March 15, 1947, sold approximately 3,000,000 units. Its gross sales totaled $38,000,000.

"Its net profit was $3,800,000 after taxes and after spending more for radio advertising than any other single product in America. Mind you, not more than any other watch company—more than any other single product in America.

"Now, with 3,000,000 units, multiply this by the $4 cost differential and you have $12,000,000 available to this company that is not

available to any American manufacturer for advertising."

In going through the various statements on the subject—and I preferred the printed word rather than emotional interviews—I find nothing notable to contest Mr. Cenerazzo's contentions.

The American companies cannot successfully compete against the Swiss advantage. The proof of it lies in the greater rise in profits of the Swiss companies as compared with the American companies.

Nor does the evidence that Waltham was inefficient stand up, if a study is made of unit costs. In fact, they lost the market because they could not afford, out of earnings, to advertise their product adequately in a competitive market.

The United States cannot afford to lose a precision industry. Although it would be nice make the Swiss rich, it would make more sense to protect American production.

Commission on Organization of the Executive Branch (Hoover Commission)

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1949

Mr. TEAGUE. Mr. Speaker, almost daily there are articles in our newspapers berating Congress for their apparent lack of interest in the reports of the Hoover Commission. I, for one, have been very much interested in these reports and so has every other Member of Congress to whom I have talked. I also deplore the fact that anyone who mentions some provision of the report with which they do not agree they are accused of playing politics with the Hoover Commission report. I know personally many members of the Hoover Commission and I have taken much more than passing interest in their work.

I hope the Congress will adopt the majority of the Hoover Commission reports but certainly I do not intend to vote or support any provision which I do not think to be best for my district or for the country as a whole and I expect every other Member of Congress to take the same attitude.

Under leave to extend my remarks in the RECORD, I wish to include an article by Frank R. Kent which appeared in the Washington Star regarding this subject:

HOOVER REPORT RECEPTION IN CONGRESS DEPLORED—REORGANIZATION HELD MENACED BY INDIFFERENCE AND POLITICS

(By Frank R. Kent)

The sluggish indifference in Congress to the Hoover Commission's recommendation for reorganization of the Federal Government, grotesquely swollen and incredibly bungling, wasteful and inefficient, is a direct reflection of the inertia and unintelligence of the American people. There is no other way to explain it. The present situation is as complete an indictment of our unfitness to govern ourselves as has been made.

These may seem harsh words, but they are justified by the facts. If this Nation were free of debt; if its citizens were lightly taxed; if there were a dependable surplus in the Treasury; if there were no war clouds in the foreign sky; if peace were assured, our defense armament reduced to the minimum and the rest of the world on its economic feet (an ideal condition which, of course, will never occur but may be assumed for the sake of argument), even then it would be inexcusably stupid not to enact the Hoover recommendation, which not only would save $3,000,000,000 a year but, through the elimination of duplication, waste and absurdities, restore reason and efficiency to a machine close to bogging down of its own weight.

Even under the ideal conditions above described there could be no defense for inaction, no argument against adoption, no sense in refusal. But, under conditions as they really are, not to act swiftly and favorably is more than stupid—it is wicked. It comes close to national insanity. It would be the most shocking demonstration of popular incapacity in all history. It would exhibit this Nation as having, first, gone on record as realizing the necessity of regaining control of its governmental machinery; second, as having its request to be shown the way fully complied with; third, with full knowledge of the danger, as having turned its back, shut its eyes, and done nothing.

These statements are by no means too strong. The truth is they cannot be made too strong. For here are the facts—far, indeed, from those ideal conditions, financially, the Nation is in an appalling state. Instead of being free of debt, the debt—now more than two hundred and sixty billions—is far greater than anyone dreamed could be sustained. The annual interest alone is twice as much as the total cost of government 20 years ago. Instead of being lightly taxed, the tax burden is unprecedentedly heavy. It bears grievously upon rich and poor alike. It has reached the point where to gain acutely needed revenue, economists generally fear the result of adding to it. Instead of a dependable surplus for nearly 18 years, we have consistently run increasingly large deficits. Under such conditions any business, big or little, would be marked insolvent, branded as bankrupt. In other words, our Federal fiscal structure is strained to the limit.

Instead of permanent peace, for 2 years we have been engaged in a frightening cold war with Russia and no man can be sure it will not become a shooting war. Instead of reduced armaments, at vast cost we are forced to build up a gigantic defense machine. And billions are being poured into the friendly countries of western Europe to promote their economic stability and strengthen our position. Finally, we have just concluded the North Atlantic Pact, under which in the next 12 months we will furnish to the other signers $1,500,000,000 worth of military supplies. This one and one-half billion is not provided for in the President's budget and must be added to the five and one-half billions necessary for the Marshall plan in the coming year. On top of all this, before the session has ended Congress will have appropriated several other nonbudgeted billions for a variety of purposes. The drain upon the Treasury will be terrific. We have got to get more revenue or go under. Where is the money coming from? Even if more taxes are levied, we will still be far short of our needs. In face of these facts, which no one disputes, one would think the Hoover proposal to eliminate waste, increase efficiency, and save three billions annually would seem heaven-sent.

Literally, there is everything to commend it. It is not as if the Hoover Commission were trying to sell it. The idea was not originated by Mr. Hoover but by Congress itself. It was Congress which unanimously passed a resolution creating the Commission and asking it to do the job. The Commission has done the job. Neither the accuracy of the report's figures nor the soundness of its recommendations are questioned by anyone. Practically every newspaper in the United States has approved. There isn't so much as a trace of politics anywhere. No one connected with the Commission has anything even remotely to gain. No one in any party disputes the vital necessity of the proposed reorganization, which every President since Theodore Roosevelt has urged. Informed men know that if it fails this time it will never be done. This is the last chance.

Opposition comes from the intrenched Federal bureaucracy and the labor lobby. Powerful as these are, they should be easy to override on so tremendously essential a matter as this. Yet, incredibly, it lags. Already it is being said that Congress will evade responsibility itself and merely authorize Mr. Truman to reorganize to the extent he desires. That, of course, means nothing at all. Most Congressmen shrink from doing anything to disturb the constituents whom they have on the pay roll. Their disposition is to run away from the drastic steps they are now asked to take in the national interest. If some way is not found to save this report from the lingering death which its opponents predict, this country's future is not pleasant to contemplate. Easily, it is the most important matter before Congress. Its fate will affect every project upon which we are engaged, abroad as well as at home. It is a dreadful thought that the people are incapable of being aroused on so vital and simple an issue.

The Politician's Utopia

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1949

Mr. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem by Mrs. R. Earle Smith:

THE POLITICIAN'S UTOPIA

To socialize doctors, politicians would try—
A dictator's paradise, no one can deny.
Good honest medicine they would efface,
A political nostrum, instead to replace.

The totalitarian talk is only for the majority,
They think it's unimportant—to protect the minority;
If this trend of thought is not quickly curbed
All private enterprise will soon be disturbed.

The bureaucrats, socialism would spread,
Such a state of affairs is something to dread;
If their propaganda the public should heed—
To communism this eventually will lead.

We always look to our country with pride;
For our democracy, men have fought and died
Free enterprise is part of their contribution;
Any kind of dictatorship is against the Constitution.

The demagogues' talk is so full of deception—
What they mean, the public has no conception;
These bills they promote—greatly increase the tax,
To mention the truth, agitators are lax.

Thousands of employees will have to be hired,
To handle the red tape and taxes required.
The things they claim to the people are free
A national burden, ultimately will be.

Political medicine fails wherever it is tried;
The best medical care—patients are denied.
American medicine is the best in any land;
This truth the layman must understand.

If honest facts the proponents do not hide,
Each man for himself can then decide
And the black flag of absolutism will never wave
O'er the land of the free and the home of the brave.

MRS. R. EARLE SMITH.

CARE Packages of Food and Clothing

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 12 (legislative day of Monday, April 11), 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD a statement by me showing what the great humanitarian organization CARE has been able to do to help millions of Europeans by sending over during the last 3 years a total of well over 7,000,000 CARE packages.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

At this time when plans are under discussion for the continuation of United States long-range assistance for the rehabilitation of the economies of the war-devastated countries of western Europe, it seems to me important that we take a few moments to review the role played by individual Americans who, through their own initiative, have helped to reconstruct the lives of millions of Europeans by sending over the past 3 years a total of well over 7,000,000 CARE packages.

Last year Congress directed the allocation of certain sums of money out of ECA funds for the subsidy of ocean freight charges for CARE packages of food and clothing. This sum was a very small one in relation to the total ECA funds appropriated, but from an economical standpoint it has shown important results by encouraging many more Americans to take a personal part in what has been called the junior Marshall plan by sending an increased number of CARE parcels, each of which—clearly marked as originating in the United States—carries its message of American generosity and interest, bringing new hope and material help to the distressed abroad.

May I briefly review the origin and growth of this new American institution which has come to be regarded by the citizens of many countries as the symbol of American individuality and humantarianism.

CARE, meaning Cooperative for American Remittances to Europe, came about as the result of the combined planning of 26 American voluntary relief agencies and some of our leading citizens who had spent much of their lives in the field of overseas relief.

At the close of World War II it became apparent that widespread famine in the war-devastated countries was an even greater danger than it was after World War I. From all sides Americans began hearing cries for help, from their friends, from their relatives, and from millions of persons overseas who had no one in America to help them. Many of us tried to respond to these calls by buying food supplies, packaging and mailing them. But only comparatively few of these improvised parcels reached their destination. The postal systems of Europe, the railroads, and other internal transportation means were disrupted as the result of the war and, in addition, a great many packages were pilfered by people driven to desperation by hunger and cold.

Our Government was, of course, participating in the relief activities of UNRRA, but there was no organization which could serve the millions of Americans eager to send direct and scientifically planned help to individuals in Europe. Such a private organization was desperately needed.

Late in 1945 the President's War Relief Control Board brought together 24 of the leading American voluntary agencies, representing the major religious, relief and labor groups, and on November 27, 1945, CARE, a nonprofit organization was incorporated in Washington under the laws of the District of Columbia.

Early in 1946 the first CARE food package was handed by a CARE representative to a European citizen. The ceremony took place among the ruins of the French port city of Le Havre. On the day before, the steamship *American Traveller* had steamed into the harbor carrying the first shipment of 15,000 CARE food packages. Three years have passed since that first package was delivered, and more than 7,000,000 CARE packages, ordered and paid for by individual Americans, have been delivered to the homes, the orphanages, the hospitals and schools of Europe.

The figure of 7,000,000 packages perhaps does not convey the full significance of the amount of assistance involved. These packages represent more than 156,000,000 pounds of the kind of food that in many parts of Europe could not be bought at any price. Where it was obtainable it was, and often still is, far beyond the reach of the average family. In the majority of cases the cost of a single item in a CARE food package—such as the dried whole milk or the meat—was the equivalent of a week's wages.

And food alone does not tell the whole story of CARE. As the second winter after the war approached it was evident that many of the men, women, and children living in the unheated homes of Europe were in desperate need of warm clothing. CARE packages containing blankets, cotton or woolen materials were then made available so that American donors could help their friends survive what turned out to be the worst winter in Europe's history.

In order that there should be no burden on the needy recipients of the packages, CARE, with the approval of the Advisory Committee on Voluntary Foreign Aid, was able to work out agreements with European governments for customs-free, ration-free admittance of the packages, and a carefully thought-out system of distribution was arranged so that the delivery of each package could be guaranteed and a signed receipt returned to the donor.

As the demand on CARE'S service grew throughout America the organization was proportionally expanded. In the New York offices of CARE, a staff of 500 is now engaged in purchasing food and textile supplies, receiving and processing orders. A large plant in Philadelphia, capable of packing 50,000 packages a day, operates an efficient assembly line. In major cities throughout the United States, CARE offices, largely manned by volunteers, have been opened to serve the public.

Overseas, American personnel supervise missions in 11 European countries, as well as in Japan, Okinawa, and Korea, the most recent area of CARE's expansion. At strategic points in all these lands thousands of packages are stock-piled and distributed upon individual orders received from this country.

It seems to me that one of the outstanding features of CARE is its adaptability to each particular stage of Europe's struggle for recovery. As conditions change new packages can be offered to meet specific shortages. For instance, because of the current critical lack of fats in Europe, CARE is now offering a special 10-pound package of lard, enough to supply the average family through the crucial winter months.

With the assistance of the ocean-freight subsidy CARE has found it possible to revise and add to its packages so that the standard food package now contains a greater variety of the foodstuffs at present in short supply. In addition it has been able to provide a special food package designed to meet the deficiencies of the British diet; another conforming to the needs and tastes of the people of Greece and Italy; and another for the people of the Orient.

This year CARE has made available a new package which I believe will do much to help individuals in European countries to assist in their own rehabilitation. I refer to the vegetable garden seed package. In connection with this package I would like to mention a statement by Sir Herbert Broadley, Acting Director General of the United Nations Food and Agriculture Organization. Sir Herbert said that the FAO had made an estimate of the increased supplies of food needed to give individuals abroad a satisfactory diet. It was estimated that fruit and vegetable production ought to be increased by 163 percent, two and one-half times the amount produced at present. He said that domestic gardeners all over the world could help greatly to improve this situation and that the assistance provided through the CARE vegetable seed package should result in a very desirable increase in the supply of vegetables for the European countries where their nutritive content is particularly important.

Of interest to all of us is the disposition which is made of any surplus funds accruing from the sale of CARE packages. All such funds are turned back either into the improvement of the parcels or into the purchase of packages for general relief.

Because of bulk purchasing and shipping methods the standard food package which costs $10, including all packing and delivery costs, now contains more food than could be purchased for $10 in the retail stores. Despite this outstanding value CARE has found it possible to distribute general relief packages at the present rate of 100,000 per month in areas of critical need.

To date more than a million dollars of CARE relief packages have been distributed on the basis of need alone, on the advice of CARE's member agencies, cutting across religious and political lines. Such well-known agencies as the American Friends Service Committee, the Save the Children Federation, the National Catholic Welfare Conference, the Church World Service, the AFL's Labor League for Human Rights, the National CIO Community Service Committee—all member agencies of CARE—have guided the distribution of such packages.

The New York Times, which honored CARE with the title of "ambassador of good will," recently said editorially that CARE has "carved itself a bright and honorable and ever widening place in communities the world over." Let us glance briefly at the list of countries to which the American people have been able to send CARE packages.

In Austria distribution started in June, 1946. Since then 700,000 CARE packages of all descriptions have been delivered in that country. On the basis of Austria's population, this means that one person in every four has received a CARE package. Indeed, the head of the Austrian Government has said that "CARE has become an honored word in our language."

Four hundred thousand packages have gone into France since that first delivery in early 1946. To Germany Americans have sent through CARE 4,500,000 food and cloth-

ing textile packages, many of them to the homeless displaced persons. To Czechoslovakia, 106,500. To Finland, whose people have felt the blows of three wars in the last decade, 46,000. To equally stricken Greece, 50,000. To Italy, 210,000. To Poland, 177,500. To England, Northern Ireland, Scotland and Wales, nearly half a million. CARE packages have also brightened the homes of Belgium, Hungary, the Netherlands, Bulgaria, Eire, Norway, Rumania and the island of Cyprus.

It will be asked, as it has been asked before: Does the need for CARE's service continue now that the United States has undertaken the long-term aid program under the ECA? The answer is decidedly in the affirmative.

Last year the Congress, by authorizing the payment to CARE of the ocean-freight subsidy from ECA funds, gave distinguished recognition to the fact that CARE's operation has an important part in our country's over-all program for European recovery. We are trying to reestablish the productive capacity of Europe. As the various countries try to rebuild their economies, their agriculture, their foreign trade, the problem of the daily diet of their citizens remains a serious one. For many months Americans will be called upon to help sustain their relatives and friends and the many other needy persons through direct aid. This can be done effectively through CARE.

Reports from Europe indicate that there is a gradual over-all trend toward improvement in conditions. But by no means do these reports show that the need for direct aid has ended, particularly in certain areas. We could terminate what we are doing now in the field of direct individual relief only at the risk of a later general collapse, with results impossible to calculate. The withdrawal of CARE from Europe would mean, aside from the material loss to its citizens, an irreparable drop in morale. Peace and security are not so well grounded that they can withstand further strain at this moment in history.

For these reasons I have thought it timely to remind Congress of what Americans have done, through CARE, over the past 3 years, and to urge that all aid and encouragement be continued to this worth-while effort. I would like to congratulate all those who have participated in the operation of CARE, its founders and its member agencies. Most of all I would like to congratulate the American people whose faith and help have made this humanitarian and practical program possible and who continue to demonstrate that, given the means to help, they will gladly and generously do their best to alleviate human suffering and misery wherever and whenever it may exist.

FM Radio

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1949

Mr. WALTER. Mr. Speaker, I want to bring to the attention of the House what I consider to be an appallingly flagrant disservice to the American people—and to America's progress.

America has grown, prospered, and become the bulwark of the world's free societies by reason of a competitive, free enterprise which has stimulated the initiative and the inventiveness of Americans, and made possible the world's best, most comfortable and richest way of living.

What has made this possible is the freedom for the merit of a man, a machine, or a method of doing something he has discovered to rise to the top.

When the marketing, or acceptance of something newer and vastly better than what we have is prevented or impeded, that is not only evil, it is also shackling the thing that makes America great.

That, I believe, is what is happening in the case of one of the important discoveries of the twentieth century—a discovery which was proved 15 years ago to be one of great and unchallengeable beneficence.

But its benefits today—15 years later—are not made available as they should be to the American people. I refer to FM radio, or frequency modulation, to use the full name.

It has been 15 years since FM was demonstrated to be not only the best, but the only system of clear, high-fidelity radio communication—one that is free of noise, static and interference—no matter how bad the weather, and no matter how near or intense the power lines or other man-made disturbances may be.

It is the only system of radio that is able to provide reception for large blocks of listeners throughout the Nation, particularly in rural areas, and even inside the boundaries of the so-called areas of existing AM broadcasting stations.

But, despite FM's obvious advantages and benefits, and the clear necessity for employing FM to give uncounted thousands of people the services of radio, FM has been obstructed, stepped on, blocked, or ignored from the start—by some of the big interests in AM radio—and by the Federal Communications Commission.

A prominent consulting radio engineer has said, that if FM had been allowed to proceed naturally, there is no question but that FM would be far ahead of where it is today, and in fact, would probably be the accepted system of sound broadcasting. AM, he declared, would be on the way out.

With this thesis, many other engineers and experts in the radio industry are in agreement.

Edgar Kobak, president of the Mutual network, declared recently that there was what he described a strange broadcast apathy toward the wider use of FM.

FM, Mr. Kobak declared, is the only means the radio industry has for giving every person good reception, especially, he said, the millions of people still getting poor service from standard broadcasting.

He charged that broadcasters have been selling too much poor listening over bad AM reception; they have been selling the blue sky too long.

Ever since the superiority of FM radio was first demonstrated on a field scale—in 1934—it has been beset by opposition, and it has had to go over and around road blocks.

The Radio Corp. of America, to whose executives it was demonstrated, ignored it. The Federal Communications Commission's chief engineers labeled it visionary and impractical. The Commission for 10 years would assign no channels for relaying FM programs across the country.

Three years ago, in an obviously stupid blunder, the Commission moved FM broadcasting channels to a new band on the dial, thereby delaying the quantity production of receiving sets at reasonable prices for several years.

It has done other things to favor and encourage AM over FM. Members of the House and Senate have charged that the Commission has served corporate, rather than the public interests. And one Senator has stated that the FCC and RCA have often been synonymous.

And in a report from the Senate Interstate and Foreign Commerce Committee 2 months ago, it was stated the Commission relies on, and appears to be overawed and too much impressed by the engineering views of major commercial interests, and does not always balance these views against the broad public policy of what is best for the general interest of the people.

The big networks have opposed before the Commission the development of regional FM networks. The clear and superior reception of small FM stations would be too much competition for their high-power AM stations.

FM would put all broadcasting stations on an equal footing, since FM reception is equally good in all parts of the broadcast area. The only commodity a station would then have to sell, would be the quality of its programs; the fortune or the influence that provided a high-power station would count for nothing.

More recently, the attitude of the FCC has changed, and it has even offered FM a helping hand on occasion.

Obviously, a local station that is trying to serve its listeners with programs of interest to the community cannot meet this condition.

Secondly, FM facilities are constantly subjected to a barrage of propaganda designed to convince advertisers that their money should be spent on AM broadcasts.

As an example, I cite a listening survey conducted by an organization called the Broadcast Measurement Bureau for the National Association of Broadcasters—AM broadcasters, that is—on comparative coverage of AM and FM.

The BMB report favored AM coverage by an overwhelming margin. But a quick look at the sampling techniques used by the organization demonstrates that it gave a false and erroneous picture. The samplings were not taken in accordance with the densities of population, and the questions were so worded that the result was largely a score sheet on how distant a station a listener could get on his set rather than what stations he usually tuned in on his dial.

The president and chief engineer of BMB were discharged following this survey. But that did not prevent AM broadcasters from using the figures to make a little hay with advertisers and advertising agencies. So far, neither BMB nor the broadcaster's association—which foots BMB's bill—has done anything to rectify the damage done by the faulty survey.

But the most important consideration in this whole field is the discouraging fact that the public has a hard time getting a good FM receiver. A radio executive—in the business of manufacturing both AM and FM sets—has declared, and I quote:

There are many models in stores that are so deficient in sensitivity, tone quality, and freedom from noise that they are no better than the cheapest AM receivers. These contraptions, incidentally, do no good for FM's reputation.

Continuing, he said:

Here is the picture we found when we tested 16 competing makes of FM sets. They had average sensitivity of 106 microvolts, and some of them were worse than 200. On the FM sets we produce, we had no difficulty maintaining an average sensitivity of 30 to 35 microvolts—three times as good as the industry average. And there is no magic about it. Anyone can do the same. There is no more reason for building insensitive sets than there would be to power heavy automobiles with motorcycle engines.

Perhaps some of these things may account for an item in the column of Danton Walker, in the New York Daily News the other day. It said the Federal Communications Commission is pondering a strange turn of events, whereby in the first 3 months of this year, 46 FM stations have turned back their licenses.

Could it be, Mr. Speaker, that these FM broadcasters just quit cold because they could not get network programs to fit their needs? Did they become discouraged because the propaganda of the National Association of Broadcasters had driven away advertisers with life-giving revenue? Or did they just decide that there was no point in operating stations whose listeners were unable to get decent receiving sets?

All of these things do not add up to a pretty picture. The public has waited too long to reap the benefits of a revolutionary discovery which proved its worth 15 years ago.

Any single one of the obstacles to the development of FM broadcasting could be considered an accident. But these "accidents" have been too frequent and too closely connected.

It is impossible to escape the conclusion that somehow, somewhere, there is an underlying pattern that ties all these things together. It seems to me that the Antitrust Division of the Department of Justice might well look into this matter in order to determine whether or not there are any violations of our laws.

Tax on Colored Oleomargarine

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 12 (legislative day of Monday, April 11), 1949

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the RECORD the brief statement I made on April 8, 1949, before the Senate Committee on Finance regarding the taxes and license fees on colored oleomargarine.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman, I have appeared before this committee so many times in order to voice my opposition to the existing taxes and license fees on colored margarine that I feel right at home in coming back here today.

I hardly think it necessary to again go through the long 63-year history of this injustice. That has been done before this committee many times in the past, and is a matter of record in the printed proceedings which are available to all. Extensive hearings were held in the House of Representatives, and the arguments were thoroughly and ably presented prior to the passage of this bill (H. R. 2023) by that body. It does not even seem necessary to go into the many, many reasons for the repeal of these taxes and license fees again at this time.

As far as the manufacturers, wholesalers, retailers, and housewives are concerned, they are positively aware of the unjustness of these regulations. Their testimony is clear and true evidence of their feelings. The farmers, the men who produce the high-grade vegetable oils used in the manufacture of margarine, are certainly well acquainted with the facts, and, Mr. Chairman, all of these people have felt the burden of these ridiculous penalties far too long.

This is a question that transcends the lines of any party or any group, even so powerful a group as the one which has been able to maintain this legislated stranglehold on an otherwise competitive industry.

Mr. Chairman, the American people are no longer willing to tolerate the existence of such a restraining hand on the manufacture of one product, a product which has every right to take its deserved place and stand on its own merits along with other products in its field.

The properties of margarine and the benefits to be gained from its use on the family tables of this country have been expounded over and over again by competent authorities. Its nutritional value is an established fact, controlled and regulated by our Pure Food and Drug Administration standard of identity.

The argument always resolves itself to one of color. While butter, the admitted opponent in this particular battle, may be colored any tint of yellow without even being so labeled, even though it may have been white originally, the ingredients of margarine must be bleached to keep from giving the finished product a natural yellow tint. Butter, cheese, and ice cream each enjoy special and unique exemption from labeling artificial coloring under the act of 1923. Margarine is denied the use of yellow simply because the dairy industry has used its enormous political influences to drive a competitive product off the counter. This is discrimination and a flagrant violation of the American principle of open, competitive business.

Mr. Chairman, it is my sincere belief that these regulations are pointedly designed to restrain the free marketing privileges of one group of manufacturers. They go beyond that. They place undue hardships and restrictions on our housewives in their daily marketing. I have no doubt but that the majority of our people prefer butter for table use. That may be habit and education, and it may not.

The main point is this: The low-income families of this Nation have no choice. The purchase of margarine for their daily table use is an economic necessity. But whether they buy margarine by choice or by necessity, it is their inalienable right to be free to buy yellow margarine if they so desire. Butter is colored a particular tint of yellow to meet the consumer preference of a particular market. Why not margarine?

Secretary Brannan's Proposed Farm Plan

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 12 (legislative day of Monday, April 11), 1949

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very timely editorial entitled "The Old Shell Game," published in the Omaha (Nebr.) Evening World-Herald of April 8, 1949. The editorial relates to the agricultural plan which has been proposed by Secretary of Agriculture Brannan.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE OLD SHELL GAME

Agriculture Secretary Brannan's proposed farm plan, outlined to Congress Thursday, has all the earmarks of the old carnival shell game.

The social uplifters doubtless will rally round. But we don't believe the rank and file of good farmers will go along with the Secretary down the road to socialized farming.

Secretary Brannan proposes:

1. To let prices of farm products in the market place seek the levels determined by supply and demand.

2. To fix theoretical prices on farm products by arbitrary directives from Washington.

3. To pay the difference to producers by doling it out to them from the taxpayers' income collected by the Federal Treasury.

That is what the Secretary offers to replace the Aiken law, passed last year and due to become effective next January 1. The Aiken law, indorsed by most responsible farm leaders, would return to farmers a considerable measure of individual initiative and offer a method of averting surpluses and low prices by a sliding scale of support prices. Crops in large supply would carry low-support prices, and farmers thus would be encouraged to use their own initiative to shift production to crops in which higher support prices reflected relatively lesser supplies.

This system hasn't even been tried yet, to see how well it would work.

Secretary Brannan's plan hasn't been tried either, but he makes it sound simple. He improves on the shell game barker's technique by using not one but two little green peas. He is going to give consumers low-food prices. He is also going to give all producers high-farm prices. But when he lifts the little shell, the traditional result is apparent. You're hooked again.

The plain fact is that the money to pay the difference between market prices and what the Washington deep thinkers would consider a fair price has to come out of the pockets of consumers. For in these days of tax and spend all consumers are taxpayers, whether they be farmers, wage earners, or the hated capitalists.

So how would the consumer be any better off? While he might pay lower prices at the corner grocery, the Federal tax collector's hand would be in his pocket to pick up the loose change that the consumer thought he had saved.

How would the farmer be any better off? Except in the case of the indolent, inefficient farmer, the producers of food would be no better off than under the Aiken law, which

sets up a scale of sliding support prices that could be used as incentives to produce the commodities that were in shortest supply.

They would be less well off, if they consider their individual initiative as worth anything. For under the Brannan plan, farmers would be subjected to more rigid controls from Washington than ever before. They would be told what to plant, when to sow, and when to reap. They would have to comply with a Government-directed program.

Farmers deserve and should have reasonable legislative safeguards within which they can exercise their own good judgment and direct their own initiative and labor to guaranteeing their own incomes.

But if farmers can have incomes that are guaranteed by the Government, regardless of sound business practices, why shouldn't the Government guarantee through taxation the incomes of labor, of management, of capital investments?

This may be what the socialistic planners in Washington have in mind. If so, it is away past time for this seedling Politburo to be uprooted and tossed into the ashcan.

European Recovery Program and the British Government

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 12 (legislative day of Monday, April 11), 1949

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I received this morning from a lady in England. I have made a copy of the letter and purposely left her name and her husband's name from the letter, because I did not have her permission to use their names, and I did not want to have any reprisals against them as the result of the printing of the letter in the CONGRESSIONAL RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

APRIL 9, 1949.

Hon. WILLIAM E. JENNER,
United States Senate, Washington, D. C.

DEAR SENATOR JENNER: Congratulations on your remarks in the Senate on April 7, relating to the new appropriation for the European recovery program. I am thrilled and delighted with them.

I am an American woman from Cleveland, Ohio. My husband, * * * is in Britain on business and I am with him. We shall be here for a year or more. And I am doing what Americans for Democratic Action suggest, studying current, political conditions in Britain. May I send you a magazine article which will be published shortly which I have written on the present Socialist Government?

Through ERP the United States is supporting an incipient Communist Government in Britain. I am terrified by the arbitrary restraints with which people in this nation are being suffocated. A mad Socialist government is traveling the road to communism.

1. I have to carry an identification card, as do all other inhabitants of Britain. Without it, I am liable to arrest, a fine, and imprisonment. 2. Four years after the close of the war, this Nation still has direction of labor. No one may quit his job or seek another except through direction of the Government. And at any time the Government may drag a man or woman off one job and thrust him into another. 3. My British friends eat nothing except what the Minister of Food dictates. And they may buy their meager rations only where he dictates. 4. There is a shocking injustice in the distribution of food. Those who have access to industrial or school canteens are fed lavishly while those who have access to neither, and no bit of land upon which to sustain themselves, have the magnificent choice of slow starvation or existing on bread and potatoes. 5. No British subject may leave this Nation today except as a pauper. His possessions may never be taken out. This Government recognizes no right to private property. 6. Some of my British friends have had their collieries seized and their only compensation has been a promise that they will some day be paid in an amount which the confiscators only will decide upon. After 2 years and 3 months since the siezure, they have not yet received a penny for what was taken from them. 7. The Town and Country Planning Act, which was passed about a year ago requires every industrialist who wishes to expand his industrial facilities to pay to the Government a tax of 100 percent on expansion cost. If a new factory costs $100,000, the same amount must be paid to the Government for the privilege of building. 8. At a meeting of the Conservative Party which I recently attended, a Socialist arose and arrogantly reminded the Conservatives that the present Government is magnanimously allowing the continuation of freedom of speech.

I could go on for pages with the stupidities of the present Government of Britain. But I am in a hurry, as you may see, and I shall not take too much of your time. Government here today is not by law, but solely by the whims of bureaucrats. They are weaving a web in which they are entangling themselves so that nothing but chaos can possibly lie ahead. Should Marshall aid be cut off, the entire structure would collapse over night. The the sooner, the better.

I know of almost no one in Britain today who would not leave it, if he could take his possessions with him and go to America, Africa, Canada, or elsewhere. The young are going in vast numbers. But the middle-aged are tied here by the hope that the brakes will be applied on the road to communism, and their right to their own property again recognized.

If you are interested, I shall be glad to send you newspaper clippings from time to time supporting all that I have said to you in this letter. The Conservative Party of Britain has never had a fair hearing in America. But we have been bombarded at home on lecture platforms and in publications by British Socialist crackpots until we have no conception of the truth. I had to come to Britain and live here to learn the truth.

Sincerely yours,

——— ———.

Food Subsidies: Fiction Versus Fact

EXTENSION OF REMARKS
OF
HON. ROBERT A. TAFT
OF OHIO
IN THE SENATE OF THE UNITED STATES

Tuesday, April 12 (legislative day of Monday, April 11), 1949

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Food Subsidies: Fiction Versus Facts," written by Edward H. Collins and published in the New York Times of April 11, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of April 11, 1949]

ECONOMICS AND FINANCE—FOOD SUBSIDIES: FICTION VERSUS FACT

(By Edward H. Collins)

Secretary of Agriculture Brannan produced a blueprint for a new farm program last week that could have emanated only from an administration politically desperate for a plan that would be popular at any cost.

Last summer and fall during the election campaign spokesmen for the administration repeatedly assured the Nation's farmers that under its prevailing support policies there could not possibly be a repetition of the break in farm prices that followed World War I. It was the farmers' reliance on these assurances more than anything else, perhaps, that produced the unexpectedly large rural vote for Mr. Truman in November and swung the election to the Democratic Party.

But farm prices since that time have fallen if not disastrously, at least very severely. Moreover, the declines in many cases have carried prices right through the Government's supposedly impenetrable support levels, the result being to raise doubts in some quarters as to the dependability in a crisis of the present machinery. To the administration this unhappy misadventure apparently suggested the need for a new formula for circumventing the law of supply and demand—one which would be more surefire in operation and preferably one which would antagonize neither the farmer nor the consumer. And like everyone who ever set out on such a quest it now announces that it has found the answer in that sovereign cure for the incurable, the two-price system.

The Journal of Commerce summed up the plan of Secretary Brannan in its political aspects pretty completely last Friday when it declared:

1. To farmers generally he has offered an over-all annual income of the attractive levels of wartime.

2. To consumers and labor he holds out lower prices for meat, milk, fresh vegetables, eggs, butter and other perishables that represent a large chunk of the cost-of-living items.

3. To southern producers and Congressmen he offers a price-support program for cotton and tobacco even higher than the 90 percent of parity they have been demanding.

4. To the powerful Corn Belt he offers drastically increased price-support levels for meat animals—and most corn is marketed in the form of meat.

5. To producers of fruit and vegetables—and their vociferous congressional representatives—he offers for the first time a real and permanent place in the price-support system.

6. To small farmers he offers a preferred price-support position over the large producers, who represent only 2 percent of the Nation's farmers but grow about a quarter of the commodities.

When a program has to be made as unashamedly attractive to as many groups in the community as this one has, it is usually because it will not stand inspection economically. There is little doubt that that explains the general resemblance of the present proposal to a political Christmas tree. Farm price-support programs are difficult to justify under any conditions, but there are limits beyond which a government cannot go with such adventures so long as the mechanism operates in clear view of the public and so long as the consumer is conscious of the fact that he is paying the bill. The peculiar iniquity of the so-called two-price system is that, by guaranteeing high prices

to the producer and low prices to the consumer, the Government virtually eliminates all opposition and criticism in those quarters that are politically articulate. It creates, in effect, a huge mechanism for the redistribution of wealth, the cost of which is footed by the taxpayer, and which, once established, not only perpetuates itself, but grows larger and more burdensome with each passing year.

It is not necessary to rest such conclusions as these on mere theory. Britain embarked during the war on just such a two-price system of food subsidies. In her case, it should be observed, there were plausible reasons for doing so as a temporary expedient; reasons which do not exist in this country and which, in theory at least, have nothing to do with long-range policy. The holding down of food costs was, for Britain, part of a larger plan for combating inflation and strengthening her competitive position in world trade. Moreover, food subsidies in Britain's case are not identified with the idea of abundance, but with a Spartan system of food rationing. Yet the table below shows how, even in that economically highly disciplined nation, annual expenditures for food subsidies have grown year by year over the past decade:

Year:	*Amount in millions of dollars*
1939	52
1940	252
1941	384
1942	572
1943	608
1944	900
1945	1,232
1946	1,456
1947	1,568
1948	2,272

This is the general picture that Sir Stafford Cripps had in mind when, in his budget speech last week, he declared that such subsidies have grown and grown and grown beyond anything that was ever contemplated. And it goes far to explain what the London Economist meant when it said recently, "It is still official policy that the food subsidies—or most of them—are temporary. But it requires a sanguine temperament to believe that any government will ever dare actually take them off."

Federal Aid to Education—Letters in Opposition

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, April 12 (legislative day of Monday, April 11), 1949

Mr. WILEY. Mr. President, like other Members of the Senate, I have been glad to receive many comunications from constitutents on pending Federal aid to education legislation. In the March 4 CONGRESSIONAL RECORD, I secured the printing of several resolutions which I had received from educational and parent-teacher groups supporting the aid legislation.

It would, of course, only be fair to indicate that I have heard from many prominent individuals in my State who are as deeply and sincerely opposed to this legislation as are constituents who have written to me favoring it.

Many of the folks who oppose this legislation feel that it would be a step toward Federal control of education. Naturally, I for one, like my colleagues, am deeply opposed to any such control; that is, to regimentation of the Nation's schools.

Because I believe that the communications which I have received opposing aid to education merit my own careful study and the study of my colleagues, as a token of thinking throughout the Nation on one side of this issue, I ask unanimous consent that there be printed at this point in the CONGRESSIONAL RECORD several representative letters which have come to me vigorously objecting to passage of this pending legislation.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

SCHMIDTMAN CO.,
Manitowoc, Wis., April 7, 1949.

Hon. ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR WILEY: The Federal Aid to Education bill, S. 246, should be quashed. We don't want Federal bureaucrats to set the policies, programs, and costs of our schools. Certainly the people who are writing you in favor of the bill are misinformed and do not realize the threat it involves to the very foundations of our American public-school system and our traditions of decentralized responsibility in government and in education.

We trust you will serve our future by voting as an American would vote, rather than be guided by an uninformed public.

Dr. John McClure, dean of College of Education, University of Alabama, said in 1948: "I believe that it is the obligation of school as well as other leaders to have a philosophy of government and of education that will stand firm and unshaken even with the temptation of $300,000,000 to be distributed to the States on the basis of a law which threatens the very foundations of the American public-school system, and our traditions of decentralized responsibility in Government and in education."

Also this, said by the United States Supreme Court: "It is hardly lack of due process for the Government to regulate that which it subsidizes." (*Wickard* v. *Filburn* (317 U. S. 111).)

We feel certain you won't be coerced into voting against your personal principles in order to appease a misinformed constituency.

Very truly yours,

SCHMIDTMAN CO.,
E. J. SCHMIDTMAN.

HURLEY X-RAY CO.,
Milwaukee, Wis., April 8, 1949.

Hon. ALEXANDER WILEY,
Senate Office, Washington, D. C.

DEAR SENATOR WILEY: I have been watching with considerable interest bill S. 246, with reference to Federal aid for educational purposes in the different States and for the Nation as a whole.

I have heard several discussions concerning Federal aid to education, and my conclusion is that a program of this type will open many channels for extravagances and irresponsibility in administration through the Federal Government. This has definitely been evidenced by many of the programs already undertaken by the Federal Government, and it seems to me that it is up to the States to provide proper education for the residents of their respective States, independent of the Federal Government.

Federal aid, in many of the programs I have observed, means Federal control, and Federal control must be cut and not increased. Unquestionably the greater part of $1 collected in taxes for Federal aid will be wasted in administration of such a program. It seems to me that our State has the necessary financial ability to meet its educational needs. Information which I have shows that about 25 percent of World War I draftees were unable to read or write, while approximately 4 percent of World War II selective-service registrants had to be rejected for educational deficiencies. It seems to me that this is conclusive evidence that the States have the ability to supply their own educational facilities and funds.

There is unquestionably need for improving our own Wisconsin educational facilities because many of the schools now are overcrowded, but most communities with which I am familiar in this State can very well afford to issue bonds, raise money, and increase their educational facilities to the extent that is needed at this time.

I am unconditionally opposed to any such program that will add to our already top-heavy Government and increase personnel that will be required to operate and administer this program.

Respectfully yours,

V. H. HURLEY.

ADJUSTABLE FIXTURE CO.,
Milwaukee, Wis., April 8, 1949.

Senator ALEXANDER WILEY,
United States Senate,
Washington, D. C.

DEAR SIR: A group of businessmen in Milwaukee, of which I am one, has been discussing this bill, S. 246, regarding Federal aid to education. We have agreed definitely that passage of this bill, S. 246, would surely be a step in the wrong direction. The people behind this bill are looking only to the immediate future, more pay for teachers.

I agree that teachers and educators today are grossly underpaid for the great service they are rendering to the parents in this country and to the United States itself. These teachers spend a third of their lives educating and qualifying themselves for a very important and responsible task, and then receive no more remuneration for their labors than a man in a factory who presses buttons to operate an automatic machine.

This is a deplorable condition indeed, but, please, let us remedy this without risking the very freedom in education, religion and everything else which has made this Nation flourish.

I am not an alarmist. But communism is one thing we cannot ignore. If we ignore communism, we will have it. If we fight communism, it cannot possibly succeed because it is fundamentally incongruous with human nature and must sneak past unnoticed before it can seize a nation in its awful grasp.

As I see this bill, it is a step toward communism if nothing else. I do not want my children educated as the children in Russia are educated today. Supporters of this bill will laugh at my concern, and that is all the support communism needs. Simply ignore communism right into this country, and then, what?

Sincerely,

ADJUSTABLE FIXTURE CO.,
NORBERT F. SCHUMAKER, *Treasurer.*

A Message of Hope Regarding Western Waters

EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 11, 1949

Mr. WELCH of California. Mr. Speaker, under leave to extend my re-

marks in the RECORD, I include the following address of Assistant Secretary William E. Warne, Department of the Interior, before the annual meeting of the Riverside County National Farm Loan Association, Riverside, Calif., March 30, 1949:

This is doubly a pleasure for me. It is a pleasure to return home to southern California to be with you tonight and it is a pleasure for me to discuss with you the subject of water—water for irrigation, water for all uses.

Some people may think water a dry subject for a speech, but surely there will not be many of them in a southern California audience.

We have been saying for many years that water is the most precious resource of the West, that water rather than land or minerals or climate or location will be the factor that places the ceiling on the growth of southern California, and indeed on all of the arid and semiarid West which encompasses one-third of the Nation. We have been saying that every single drop of this precious water that falls in the West must be controlled and conserved and used, that not a drop of it should be wasted to the sea.

These statements are so obviously true and have been so often repeated that all of us have accepted them, sometimes without realizing what they, in reality, mean.

We said these things for more than 50 years before we began to develop water plans that encompassed whole river basins. No previous concept of planning for the development of the waters of the West, however, went so far toward meeting the requirements forced upon us by our philosophical acceptance of the importance of water in the scheme of things in the West.

There were instances, of course, in which an entire basin was developed without anyone's having bothered at any stage to lay out a plan, but in every such instance unnecessary problems have been stored up to be solved by us or by our children.

Riverside lies in one of the most beautiful and most fruitful river basins of the West; that of the Santa Ana River. Let us look at the Santa Ana River Basin. It lies in San Bernardino, Riverside, and Orange Counties and drains 2,480 square miles. The river receives 240,000 acre-feet of water as rain and snow in the mountains and 30,000 acre-feet are added as rain that falls in the valley.

In all our broad land, there are few rivers which are so thoroughly used as the Santa Ana and I doubt whether any contributes more in proportion to its flow in the way of wealth and sustenance to people of its basin.

In 1946 there were 534,000 people living in the three counties, largely concentrated in the Santa Ana River Basin. That number was still increasing. By 1966, given water, it is estimated that there will be 850,000 living here.

Presently 82 percent of the water that flows in the Santa Ana River is beneficially used. Allowing for percolation to ground water from valley rains, as much as 90 percent of the total supply may be put to beneficial use. There is an average annual waste of about 21,000 acre-feet to the sea, though it comes in floods that may be spaced several years apart. There is a loss of nine or ten thousand acre-feet that goes to feed useless vegetation in small swampy areas along the river.

In 1946 Redlands, San Bernardino, Riverside, Colton, and Corona were using more than 36,000 acre-feet of water, while only 7 7 years earlier their requirements were less than 20,000. If these cities are to grow, as they can and should, they will use more than 50,000 acre-feet of water in 1956. In 1946, approximately 60,000 acres of land were irrigated in the interior valley of the Santa Ana Basin. With respect to the total water supply, there is an annual overdraft in the Chino Basin area of 21,000 acre-feet, and overdrafts in other areas bring to an estimated 35,700 acre-feet the total annual overuse of water in this river basin. This means that reserves that may have been stored by Nature ages ago are being depleted and exhausted. Wells that were artesian sources of water 30 years ago now have to be pumped. This means that not growth but the opposite impends in parts, at least, of your beautiful river valley unless something constructive is done.

The irresponsible sinking of wells in ground water areas leads to overdrafts and eventually to catastrophe. Creation of false droughts by such thoughtless means cannot be in the public interest. States are now enacting laws to control this, and more should do so.

I do not wish to be represented as a harbinger of doom, because I bring a message not of despair but of hope for this and other areas in the West where similar conditions are faced. I have simply shown that the problem of the Santa Ana River Basin is serious. There is some waste of water here and at the same time an overdraft on the annual supply. You have the climate, the soil, and all needed things except water to continue your growth and development. It is that deficiency in water supply that ought to be faced now forthrightly. Water holds the key to your future.

The rules by which western basins should live in order to flourish and prosper are, in my judgment, quite simple.

The people of western river basins should conserve and use wisely all of the waters that God gives to them. For example, in the Santa Ana River Basin some thought should be given to those 21,000 acre-feet of water that are wasted to the sea in the average year, and to the 9,000 acre-feet of waters lost unnecessarily through keeping useless vegetation alive. Possibly an additional 24,000 acre-feet that disappear annually in evapotranspiration can be reduced without sacrificing on total agricultural production. It is worth considering at least. Also, only those irrigation practices that are the most saving of water should be practiced.

I realize that a reasonable view must be taken of this matter, but, as development proceeds and higher and higher percentages of the total amount of water available are required for beneficial uses, the losses of water in transit from the source to the land must be reduced by lining and covering the canals and by other methods. On certain types of land, evaporation and seepage losses from irrigation ditches may amount to a considerable percentage of the total water supply. Investigations for the Columbia Basin project in the State of Washington disclosed that the prospective losses from farm ditches on class 3 sandy soils might be as high as 12.5 percent of the supply that reached the land. In 1948, almost 200,000 acre-feet of water were lost in the main delivery section of the All-American Canal, across the mountains from you in Imperial County. These instances are cited only because they are well substantiated. They are neither unusual nor excessive amounts when compared with general average experience. Such losses, however, could be lessened by the use of pipe-distribution systems or canal linings if it is found that the added cost involved is justified by the potential savings of water. In addition, waste through overuse in irrigation must be eliminated if we are to have our greatest development. Without having investigated the matter closely in the Santa Ana River Basin, I would guess that your farmers and your water companies give a better account of themselves on this score than in almost any other area of the West. My point is, however, that in our immature irrigation economy in the West we are wasting large amounts of water because, so far, it has not seemed worth while to save and use them. When we face the alternative of putting up such signs as "No admittance" or "Standing room only," the saving of this water will seem more important.

The use of sprinklers often results in marked water savings compared with surface irrigation methods, especially on coarse, sandy soils, lands underlain by gravel beds, or lands on a considerable slope. In a survey of orchards in the State of Washington, where sprinklers are being used, the estimated average saving as compared with former use by surface flooding was 24 percent. Four acres could be irrigated in place of three. On sandy land on the Yuma Mesa in Arizona, project officials think now that, with sprinklers, about double the area can be irrigated as with surface methods, using the same amount of water. This latter example is extreme and may not fairly indicate possible savings on other types of land. But that is Colorado River water, and one need not appear prophetic to indicate the values that are being attached to it in seven great States.

Also, research might be directed profitably toward the production of crops and strains that will reduce the water duty. We have bred special crops and special varieties for almost every other purpose. This might be a promising method of reducing the transpiration requirement of each acre without reducing the yield in terms of the general economy. Thus the water supply might be made to go further.

Having pursued to the limit these lines of more effective use of the local waters, you may ask, Must the Santa Ana Basin and other areas like it that have developed mature economics in the West fold their hands in resignation?

No. I do not believe in the last-waterhole philosophy that encourages such resignation.

Let us step back a minute and take another look. Let me repeat:

"We have been saying for many years that water is the most precious resource of the West, that water rather than land or minerals or climate or location will be the factor that places the ceiling on the growth of southern California, and indeed on all of the arid and semiarid West which encompasses one-third of the Nation. We have been saying that every single drop of this precious water that falls in the West must be controlled and conserved and used, that not a drop of it should be wasted to the sea."

Much less than half of the waters of the West are beneficially used today. Few indeed are the individual basins, small or large, for which the waters, like those of the Santa Ana River Basin, are now 82 percent beneficially used. There are many areas, however, like your own Chino Basin, where pumping has outrun recharge of ground water. There have been several instances of complete disaster from this source. Planning will not be sufficiently flexible to care for such areas of trouble in the future, and cannot be made so. It is like lighting the fuse to a bomb and then trying to plan how to meet the disaster that its explosion will cause, to enlarge pumping irrigation beyond the safe yield of the wells.

While we have been slow in reaching the point at which our planning has been broadened to the limits of river basins, we are just now coming to a period when students of this problem dare speak seriously of planning for the wide use of the waters of the whole arid and semiarid region.

Oh yes, I know there have been interbasin diversions, some of them of great size. I need only mention the Metropolitan Water District Aqueduct which brings Colorado

River water to the southern California coastal basins to provide you with the prime example. But these diversions today are relatively few in number and generally do not involve large amounts of water. Some of the people who have sponsored the construction of such interbasin diversion projects apparently have not felt themselves committed to any principle involving West-wide planning. They have scoffed at the idea of finding out where surplus waters exist so that such surplus waters might be used on a West-wide basis to sustain or to create wealth and opportunity.

You have a right to ask me whether I mean that the Santa Ana River Basin can supplement its limited local water supply by diversion from the Colorado River.

I know that the waters of the Colorado are at the vortex of a controversy that is loud and bitter among the States. I know that California has limited herself as to the amount of water she would take from the Colorado. I know that areas within California and within the other Colorado River Basin States are dependent upon the waters of that stream, and that the Colorado River is the hope and promise of communities from Wyoming to the Gulf of California. I do not mean that the Santa Ana River Basin might tap the Colorado River, except as it might do so through participation in the metropolitan water district and under the allocations of water made to California.

But, for a moment, let us see how the Colorado River is being used. One rule for the use of the western waters was that in any river basin local waters should be conserved and fully utilized. That is not being done in the Colorado River Basin today. Half of the annual flow of the river reaches the Gulf of California unused. Meanwhile, California and Arizona bitterly struggle over approximately a million acre-feet of water, which is involved in various interpretations of compacts and laws. While this contest rages, more than a million acre-feet of water annually are wasted from unlined irrigation canals and ditches and by other irrigation practices to flow into the Salton Sea without producing anything. In 1948, all California allottees in combination diverted only 3,800,000 acre-feet of water from the Colorado River as against the 4,400,000 acre-feet that are mentioned in the California Self-Limitation Act. About 200,000 acre-feet flowed through the Metropolitan aqueduct and 2,900,000 were diverted for California use into the All-American canal.

The boom has not yet been lowered, as these facts show, nor is it about to be lowered on either side of the Colorado River. There is much that remains to be done if it can be approached calmly. The President, Secretary Krug, and all of us in the administration with responsibilities in this field are determined that appropriate solutions must be found.

In the rivers of California that flow westward to the Pacific Ocean, if they are considered together, are several millions of acre-feet of water that are unused and wasted each year. Already an aqueduct 250 miles long is in operation. The complex Central Valley project, now nearing completion by the Bureau of Reclamation, will provide a southward shift of more than 450 miles of surplus waters arising in the Pit, McCloud, and upper Sacramento Rivers. This is done by the borrow-and-exchange method that cuts down on the size and length of individual ditches and uses gravity as well as pumps in a series of stair-step diversions.

When I was a boy, I could scarcely credit my ears when Mr. Mark Rose described a dam that he was advocating to be built in Boulder Canyon for the purpose of controlling the terrible Colorado River, so big and wonderful did it seem. My father had taken me to my first public meeting in the Alamo School in the Imperial Valley. I thought about it for days and I remember the experience still. But such things do come to pass. Twenty years later I was working in the Bureau of Reclamation when the wonderful dam was finished.

We who have experienced the miracles that have been wrought in America surely cannot now believe that we lack the skill to do a simple job such as that involved in saving, transferring, and using the surplus waters of the West.

Provided we of the West work together and provided we plan far enough ahead, I think that we can supply the water needs of any populous area as they arise 20, 30, or even 100 years from now.

The costs of the needed works in the future will be great, but if they are broadly spread, they should not be intolerable, and there will be many more people to help in paying them.

Costs of water are relative, in any event. In Los Angeles, bottled drinking water sells for 17 cents a gallon delivered. Fair enough for water in a drinking cooler, but this amounts to $55,000 per acre-foot. No large water supply could be sold at such a fantastic rate, but, if it were, aqueducts could profitably be built to all corners of the continent to satisfy the need. To be serious, some pumping irrigators pay charges of $40 per acre-foot for water in California today. With known and proved methods, I am told, it might be possible to bring water 1,500 miles to southern California for $115 or $125 an acre-foot, and there is surplus water at this time much nearer at hand. I have had explained to me a plan to haul water from the mouth of the Columbia River in a new type of tanker that, it is estimated, could make the deliveries for $150 or less per acre-foot.

It must always be borne in mind that great works are feasible only to serve great peoples in great need, and they will never be built by a people while in a petty, bickering mood.

I personally visualize a climbing of the ladder to the north. One stream after another might be reached to take a surplus supply of water which would suffice for years. At last, the Columbia might be reached. That great river could then begin to make the contribution that it can make to the whole arid region, a region which is bigger than States or river basins, which is as wide as the West, which is bound forever in a community of interest by the fact that nature withheld from the West the plentiful waters that she gave to the East.

I almost hear shouts of, "Utopia, open your doors. Warne has let his imagination run away with him." But even in the face of such sarcasm, if it were real, I would add one more bit of food for thought, but before I give it to you let me reassure everyone. Only surplus waters should be sought or taken.

To avoid misunderstandings, let me point out that the Columbia discharges 140,000,000 acre-feet into the sea, enough to irrigate more than twice the amount of land presently irrigated in all of the 17 western dryland States, including the Columbia Basin States. All demands that can be foreseen in the Northwest can hardly dent the present surplus. The Columbia River is a great river. Getting much of its waters from ice fields in Canada, it is unlike any other western river in that it has a tremendous volume of flow. Lump all of the other western rivers together and their flow would be far less. Though the time is distant the full use of the Colorado River can be visualized or conceived. After years of study I cannot conceive of local or diversive uses that combined would require all of the flow of the Columbia, except in power generation. The repeated use of all of the Columbia River water for power generation would not be interfered with in such diversions as I have outlined.

There is one other source, as indicated a moment ago, that may be suitable when water requirements grow sufficiently. Possibly this source would become competitive and replace the last rungs of my ladder. The purification of sea water may provide water at costs which would permit its use for domestic water supply or even permit its use for irrigation. Treatment of sea water so far has been tried only on a limited basis. One manufacturer claims that his equipment will produce pure water at a cost of about $180 per acre-foot, which can be reduced if a suitable market for byproducts can be found. Perhaps the application of atomic energy in this field may increase the potentialities for the treatment of sea water. I do not know. Other vistas may be opened in time. We are on the threshold of a new age.

The rather limited research now being carried on through private and public means would be supplemented by a large-scale inquiry under a bill introduced by Congressman McKINNON, of San Diego, and Senator O'MAHONEY, of Wyoming, and now pending before the Congress.

American ingenuity should not be dismayed by the water problems of the West.

The Department of the Interior, through the Bureau of Reclamation and the Geological Survey, historically has carried the responsibility in cooperation with the States and local authorities for the planning for conservation and use of western waters. It is now beginning study of the United Western Project. This work is no farther ahead of the technology and the need of today than was the work of A. P. Davis 30 or 40 years ago on the Colorado River ahead of his time. The work of this early reclamationist became the foundation on which our generation has built the Hoover Dam and all the magnificent things that that dam has made possible. We have a right to hope today that the future may hold the fruition of our plans.

If the future does, then California this year can face with confidence the beginning of her second century. If these hopes materialize, there is in sight no ceiling placed by water on the growth and development of California, or Oregon, or Washington, nor on that of Arizona as well.

Birth of the New State of Israel—Address by Aubrey S. Eban

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, April 12 (legislative day of Monday, April 11), 1949

Mr. WILEY. Mr. President, on March 30 it was my pleasure to be on hand at a very interesting session held by the Washington Chapter of Hadassah, the Women's Zionist Organization of America. At that time, we heard a fascinating after-dinner address by Maj. Aubrey S. Eban, Israeli delegate to the United Nations. Major Eban, speaking without notes, discussed the inspiring story of the birth of the new and free state of Israel—marking the historic reestablishment of the centuries-old dream of a Jewish National Homeland.

All men of good will, of all religious faiths, rejoice in the reestablishment of peace in the Holy Land, and wish for Israel and the entire Near East peace and prosperity.

The rebirth of Israel follows the sad years when 6,000,000 members of the Jewish faith were exterminated in the slaughterhouse of Europe. Already, the new state has made heroic strides toward welcoming and assimilating the shattered remnants of Jewish displaced persons from all over Europe.

The American people have always felt a warm bond of friendship with the aspirations of free peoples for independence, sovereignty, and liberty, and this bond of friendship is certainly extended by all Americans of good will to the new state of Israel. I believe that Major Eban's address will be of interest to all of my colleagues, and for that reason I ask unanimous consent that its text be printed in the Appendix of the CONGRESSIONAL RECORD. I feel that this is particularly appropriate in view of the start this week of the holy days of Passover, celebrating the liberation from bondage of this ancient people when they were in the land of Egypt.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. EBAN. Madam Chairman, distinguished guests, ladies and gentlemen; the organizers of your program, with a fine sense of contrast have provided that my address shall be swiftly succeeded by what is called "entertainment." [Laughter.] They have shown a profound historical insight, for the most typical process in the long and immemorial annals of our people is this sudden transition from acute suffering to unrestrained joy. [Laughter.]

It is such a transition that we celebrate tonight, for we are gathered together at this annual function of the Hadassah chapter at a high moment in the history of the Jewish people and in the annals of international statesmanship.

We look back over a period of 10 months which marks an episode of unparalleled glory in the long and adventurous journey of the Jewish people across the historic scene.

To appreciate the full proportions of that achievement, it is sufficient that we briefly recall the circumstances in which the State of Israel proclaimed its independence on the 15th of May 1948. We were besieged and blockaded. We were entirely alone. We were cut off from international support. We could expect no international recognition for our act. Around our heads the institutions and procedures of government were falling to pieces in disintegration and ruin.

Upon our frontiers ready to swoop down for our destruction stood the armies of five Arab states equipped with the manpower, the weapons, the resources, the finances, and the military experience derived from their long-established sovereign status and their intimate alliance with a greater military power.

Such were the grim and awful circumstances in which the representatives of Palestine Jewry meeting together in the city of Tel Aviv, affirming their faith in divine providence and in the destiny of their people, established the State of Israel as a nation amongst the nations of the world.

Here was an act of supreme historical audacity. It was not the action of practical men. It did not proceed from any cool calculation between advantage and danger.

Practical men have their place in this world, I suppose, but their place is not amongst the liberators of nations, for the liberation of peoples is an act of faith rising up in defiance of logic and drawing its strength from those moral and spiritual impulses which are decisive in all issues of human conflict.

How different, how changed, how miraculously transformed is the situation that confronts us today. To have stood firm against overwhelming invasion, to have carried the war into the territory from which the invasion was launched, to have sustained the crushing burdens of full mobilization, to have met a fierce challenge upon the international scene, to have won through to universal recognition, to have established the organs and institutions of democratic administration amidst the turmoil of war, to have brought 170,000 fugitives and wanderers beneath the shelter of Israel's protective roof, to have done all of this—all of it in 10 short and crowded months—is surely a convincing testimony to the vigor, the resilience, the capacities of self-sacrifice which repose in the people of Israel, sustained by the Jewish communities throughout the world.

Nothing was more remarkable in the whole of this achievement than the moment of history at which it was recorded, for it took place in the sequel to the Second World War, which left 6,000,000 of our kindred buried in the fields of Europe and 1,000,000 Jewish children—1,000,000 children—thrown deliberately and unbelievably into the furnace. It was in the aftermath of that unprecedented disaster at a time when our manpower was depleted by unparalleled slaughter, when the morale and the spirit of our people might have been at its lowest ebb, when our claims for national independence were traduced and misrepresented by powerful interests throughout the world.

It was at this climax of our agony and weakness that the Jewish people somehow summoned up within itself the forces, the faith, the resolution, and the will to survive—with which to bring the third Jewish commonwealth into triumphant existence. No wonder that this performance has bestowed upon every Jew wherever he lives a sense of heightened dignity and deepened pride.

No wonder that the international community stands before this achievement amidst all the manifestations of recognition and respect. No wonder that the greatest of contemporary historians in the western world now on a visit to this country has described this as a millennial event to be measured by the temporal values of thousands of years.

And so we are assembled tonight to review the qualities which have brought this achievement to pass and to survey the challenges which the times now direct towards us in this hour of achievement and opportunity. The whole of this performance was made possible by an action of military victory which has made an irresistible appeal to the sentiment and chivalry of liberal mankind. It was a victory of David against Goliath; a victory achieved against overwhelming odds, for in manpower and equipment and facilities for preparation and in all the mathematical criteria whereby the prospects of military victory may be assessed, we were hopelessly outweighed, and the state of Israel in its infant weeks passed unbeknown to the world through many moments where both its friends and adversaries might have expected its imminent collapse.

We hope that this military episode can now recede into the records of history to take its place side by side with the wars of Maccabeus and Bar Kochba, and be recognized by all posterity as having been the agent, the cause, and the architect of the peaceful life that awaits us upon the horizons of the future.

We never selected war as a method of regulating the relations of Israel with the neighboring states. That grim and fateful choice was made by Arab governments which by that act of choice inherited the full responsibility for all the sorrow and anguish, all the suffering and panic and exile, all the squandering of life and treasure which have been inflicted upon both sides, upon both sides in this futile and unnecessary conflict.

Since war was their choice, we had to adapt ourselves to it as effectively as we could, and when we read the records of Israel's performance, I am tempted to reflect that the process of adaptation was not entirely without success.

Yet our interests and our ideals command us at all times to adhere to our real preference, which is for peace—peace founded upon the political and territorial integrity of Israel as of its neighbors, peace upon the basis of regional cooperation, peace within the shelter of the United Nations and upon the basis of its charter.

This military victory might be regarded as belonging to the past. We therefore attach crucial importance to the current negotiations now proceeding at Rhodes which have already led, under United Nations mediation, to the conclusion of a cause between Israel and Egypt and between Israel and the Lebanon. We hope that the coming few days might crown the recent efforts at Rhodes with a successful agreement between Israel and Trans-Jordan.

We hope that this system of armistice agreements will be swiftly replaced by treaties of peace regulating the relations of Israel with its Arab neighbors upon lasting foundations of mutual respect.

This military victory, spectacular as it has been, should not be allowed to obscure other aspects of Israel's achievement which, beneath the glance of eternity, might appear equally as impressive. I refer to Israel's political and social achievement in establishing the full framework of a functioning parliamentary democracy in the adverse conditions of invasion and amidst the chaos and anarchy bequeathed by the outgoing power, for when the British mandate came to an end in circumstances not worthy of its auspicious beginning, nothing was handed over. Everything had to be taken up, constructed from the very foundations.

There existed a real danger that the institutions of the country would fall apart in disruption and ruin, that no centralized focus of orderly administration could be erected, that forces of social discontent and political dissension would run riot throughout the land, and in this danger of anarchy and chaos there lay a peril as grave to the future of Israel's survival as any implied by the military invasion itself.

This prospect never matured. The provisional government, resting upon a broad coalition, made successful appeal to the allegiance and solidarity of the community as a whole, struck the roots of its authority ever deeper and wider into every aspect of the economic and political life, and has laid the foundations of the democratic constitutional government which now proceeds towards its full consolidation at this time.

This process of administrative consolidation reached a climax last month with the election by popular suffrage of the constituent assembly charged with the task of formulating the purposes of the state in a written constitution, and of defining the prerogatives and responsibilities of the republic's new institutions.

The constituent assembly will not see its task in terms of a slavish imitation of the forms of government prevailing in other states. If we are right in having believed throughout the centuries that the Jewish tradition, the Jewish historic experience represent distinctive elements of human

thought, then the stamp of individuality will be written upon Israeli society as well.

We already see distinctive features in the society of Israel, the existence in harmony side by side of private enterprise together with the most advanced forms of social cooperation. If we can prove that that harmonious coexistence is possible, if we can communicate that dynamic example to the stagnant Middle East, if thereby we can prove that these conflicting doctrines of thought and life can live peacefully together in the world, shall we not within the frontiers of our small State have made some contribution to the wider causes of universal peace?

There is another aspect of Israel's consolidation in which spectacular progress has been recorded in recent weeks. That is in the sphere of diplomatic consolidation, the process whereby Israel has advanced with giant steps toward its own recognition by the civilized world. Upon our bewildered and embarrassed heads there descends an embarrassing deluge of recognition from countries old and new in Asia and in Europe, in every continent of the globe. We are at least, I fear, 3 days behind in the acknowledgment of recognition, and it becomes evermore longer and evermore distinguished. [Laughter.]

It was once suggested that it would be necessary to publish a notice to the effect that Israel was available to be recognized only between the hours of 9 and 12 each morning. [Laughter.] We accept all these manifestations of recognition with appreciation and respect, although we should be less than human if we did not retain a special sentiment for those who, led by President Truman, conferred their recognition and their confidence in the hour of our adversity and danger, at a time when our prospect of bare survival seemed less certain than now. [Applause.]

Nevertheless, any awakening to justice and reality is welcome whether early or late. Nonrecognition has for long been obsolete and unrealistic and evasive policy. It has been nothing but an attempt, ostrichlike, to evade facing evident facts. When an ostrich, even in a great capital of the world, buries its head in the sands to avoid facing unpleasant facts, it not only constitutes an undignified spectacle—it also presents an irresistibly inviting target. [Laughter.]

No wonder that the advocates of nonrecognition have been assailed by a mounting wave of criticism from all directions, until at last the bulwarks of nonrecognition lie before us in ruins. We are now in the happy situation where all the flood of paper communications addressed to us are marked with the correct address. [Laughter.]

Thus the foreign policy of Israel goes forward toward its two crucial objectives, the conclusion of peaceful accords with the neighboring Arab states, and the entry of Israel into full partnership in the international community by its admission to membership in the United Nations. [Applause.]

Decisive progress has recently been made toward each of those objectives, for although the agreements concluded at Rhodes are restricted to discussions on a military level, they have undoubtedly instituted a fruitful precedent for direct Arab-Jewish contact for the resolution of conflicts of interest.

For many weary decades we constantly pleaded that only the establishment of equality between the political status of the Jews and that of their neighbors would create the objective conditions for their partnership. As the Arab Nations emerged one by one out of the regimes of protectorate and tutelage toward full sovereignty, it became an intolerable paradox that the Jewish community alone in the Middle East, in no sense less mature or advanced in its standards than the surrounding Arab communities, should alone be without the capacities and prerogatives of sovereignty, unable to live its life in a sovereign state expressing its distinctive culture and tradition.

The establishment of Jewish statehood abolished that paradox. As long as the Jewish community of Palestine lacked an independent political status, it could not once even contrive to achieve contact with the Arab world for the adjustment of differences and conflicts. No sooner did the state of Israel exist, with all the appearances of permanence and irrevocability, than it found itself for the first time around a table with other governments, treating with them as an equal amongst equals.

Therefore, in recommending Jewish statehood, the United Nations was clearly and consciously creating the objective conditions of eventual partnership, and thus our colleagues at Rhodes may be deemed to be embarked upon the most decisive adventure in Jewish statesmanship, the integration of the Republic of Israel into the environment in which it lives.

Unless Jewish diplomacy can succeed in this, its previous successes may count for very little indeed, for no amount of support in Europe or in America, in East or in West, in the old world or the new, can compensate for the lack of stable and secure relationship with the immediate world in which Israel must live, and whose acquiescence and peaceful outlook is a prior condition for the common pursuit of regional welfare.

We therefore enter in this new period conscious of an objective affinity between the interests and ideals of Israel and those of the neighboring states. The Near East presents a picture of degradation and squalor unparalleled in any other part of the globe in which political independence has been achieved. Grinding poverty, endemic disease, illiteracy, infantile mortality ravage the short and somber life of the common man throughout the Nile Valley and the fertile crescent. The squalor of the present insults the greatness of the past.

The Near East, for the good of its peoples, does not need the flamboyant nationalist crusades which the discredited has imposed upon it in recent years. The Near East needs scientific agriculture, it needs industry based upon human skill; it needs modern techniques of scientific progress; it needs advanced methods of social cooperation; it needs the application of capital resources to new projects of regional health, development, and resettlement.

These things which the Near East most requires in its own interest are the very things most characteristic of Israel's achievement. Therefore we do not tolerate the contention that the examples and exertions of Israel are alien to the genuine interests of the Middle East, and it is our duty to convey and to communicate to our people in Israel and to their sympathizers throughout the world a deep sense of regional responsibility.

The Security Council gave to the resolution in favor of Israel's admission emphatic and impressive support. The Security Council has had unparalleled opportunity to observe from its table the rise of the state of Israel, its successful fight against the invasion, its constant recourse to the principles of the Charter, its demonstration of the true prospectives of aggression and defense, its careful distinction between the legitimate and illegitimate use of force upon which the principles and the purposes of the Charter are based.

After this long process of hard and arduous controversy, that great institution recorded its unmistakable verdict. The nature of the support which Israel's independence and sovereignty secured on that occasion illustrates this great expansion in our internal and external recognition.

The broad foundations of that endorsement encourage us to hope that the Assembly will ratify what the Council has recommended and this banner of Israel which has been carried across so much bloodshed and anguish in the years of martyrdom will soon fly as the fifty-ninth in the free commonwealth of nations. [Applause.]

As we look around that table where the principles of the Charter are enunciated with varying degrees of eloquence, we see 58 states which came into existence by their own unilateral assertion, or by some successful act of secession in the near or distant past. One state alone exists in the world which came to birth at the behest and summons of the international community. That is the Republic of Israel alone. We possess the only international birth certificate in the political world of uneasy virtue.

Within that framework we have secured a certificate of independence. We have found international assistance in the localization and curtailment of conflicts. We have, on two occasions, seen the General Assembly refuse to revise or reverse its original historic decision.

Now the United Nations asks a further contribution in the use of an invaluable and distinguished servant of peace who presides over the processes of mediation at Rhodes. [Applause.]

This is the story of Israel's performance in this, the first year of its independent national life. In addition to this epic of military defense, to this pioneering enterprise in administrative construction, to this romantic advance toward diplomatic consolidation, there has been a fourth enterprise as momentous as any of these. That is this great and welcome flood of immigrants who crowd into Israel's ports from every quarter from displaced persons' camps in Europe, from battered remnants of once ancient communities, from countries in eastern Europe, from north Africa, and the Arab world, from all places where a mounting tide of racial or religious prejudice is undermining the foundations of Jewish security.

Their arrival creates a problem not merely of scale but of urgency. From the displaced persons' camps in Europe they are haunted by the associations of the most monstrous inhumanity ever organized by civilized man. From east Europe they are exercising a right of self-determination in favor of living within Israeli democracy where their capacities and ideals will be fully at home.

In north Africa there is a great wave of messianic fervor. Our people, who for countless centuries have lived in degradation and squalor of poverty and discrimination, have risen up to their feet and have rushed to the ports, for they have heard of the trumpet that was sounded in Zion last month when a free Jewish Republic elected the head of its state and demonstrated a legal and economic capacity to gather in the downtrodden and dispersed from wherever they would come.

There has been messianic movements in history that have ended in disillusion and despair, but this is a messianic fervor which, with your help and ours, shall be satisfied, sustained by the assistance of Jewish communities throughout the world. These new potential citizens of Israel will be integrated into the broad enterprise of our growing Republic.

Envisage the work of your movement in the prospectives of these events and see what a new stature it acquires. In the rehabilitation and the healing of immigrants who come to us wounded in body and spirit, in the salvage of the poignant remnants of the Jewish children of Europe, in the communication to the entire Middle East of modern standards of sanitation and hygiene, in the gathering together of all the races of that region upon the common solidarity of sci-

ence and health, in all of these ventures, your great movement has a noble task to perform.

It was a pioneer in that movement whereby the social and economic standards in Israel were raised above the depressed level of its environment. We believe that the example of its technical and social enterprise will be bound in the long run to overflow all frontiers and to comprehend all the sick and unhappy people of the Middle East in the embrace of this great healing enterprise. Therefore, the Hadassah movement may regard itself as having been a partner in one of the proudest journeys in human political endeavor. The horizons that open before you are immeasurably broader and more glorious than any of those that you have traversed in the past.

Israel cannot escape the vigilant scrutiny of its critics or the solicitudinous inquiries of its friends. It dare not fail to live up to the high expectations which it has raised. Its cultural and social standards must reveal the special purposes and the special spirit of this great liberal cause. Therefore, your movement advances upon a new year of its endeavor with the prospect and opportunity of making the second year of Israel's independence not unworthy of its first.

By your courage and resolution, by your steadfastness of purpose, by your sustained support to Israel's ideals, we shall fulfill our duty to the destiny of our people and the future of mankind. [Applause.]

Economic Conditions in England

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 12 (legislative day of Monday, April 11), 1949

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I received this morning from Charles Murphy, of London, England, dealing with economic conditions in England under the present Socialist Government.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LONDON, ENGLAND, *March 28, 1949.*

DEAR SIR: The attached account of economic conditions in England under the present Socialist government respectfully submitted.

Yours truly,

CHARLES MURPHY.

DEATH OF A NATION—JOBS FOR THE BOYS

Seven hundred thousand civil (?) servants. Ninety percent drinking tea—reading and knitting.

Twenty percent Communist. Building up a "formidable" machine for the coming elections.

All "horselaughing" Uncle Sam. Advertising for more.

Two hundred thousand "superbums" now registered voters installed in the "doss houses'" all.

"Off the Road" drawing $7.50 on the "dole" known as "money for jam."

All under 45 and able-bodied. Only exercise running to the street bookmaker making bets on the dogs and horses.

One hundred and fifty thousand railroad men to get new uniforms free (nationalized railroads). "Boodle" for the "faithful cloth-ing manufacturers."

Nationalized industries $5,000 key jobs to "heels."

Phony street-paving contracts (private contractors "party" members). Swarms of bums loafing on the street everywhere.

Tribunals ("heels," $3,500) calling in the over 60 men and women inquiring why they don't go to work ("Boodle").

Street sweepers holding conclaves in alleys ("Jobs for the boys"). Double time Sunday.

Constructive conservatives known to the Labor Party as "Vermin."

Financial section of London praying for a financial Moses to appear and lead the nation out of this wilderness of inflation.

Basing-Point Capsule Pulled Out of Hat, October 29, 1940—Selective-Service Capsule Pulled Out of Fish Bowl, October 29, 1940—Monopoly Boys Enjoy Feast While Mothers and Fathers Watch the Gathering Clouds of World War II

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1949

Mr. PATMAN. Mr. Speaker, a famous philosopher once wrote, "the ability to discern that what is true is true, and that what is false is false, is the characteristic of intelligence."

Mr. Everette MacIntyre, who is Chief of the Division of Antimonopoly Trials of the Federal Trade Commission, testified before the Select Committee on Small Business of the House of Representatives on November 16, 1948. Mr. MacIntyre, in his testimony on page 1159 of the hearings, presented an abstract of bids opened by the Bureau of Supplies and Accounts of the Navy Department on October 29, 1940, on several lots of rigid steel conduit, saying:

Incidentally, gentlemen, I would like to say I think that is precisely the day on which Secretary of War Stimson pulled the capsule out of the fish bowl to select the number of the first draftee, in the first peacetime draft we ever had.

The bids that were submitted here, the purchasing officer of the Navy Department testified under oath he had to likewise put in a hat and pull out of the hat the name of the successful bidder, because everything was matched.

In other words, it was by lot, just as the first draftee was selected. We had no low bidder. They were all on a matched basis. You will find that that matching on each of those lots with respect to each of a number of those respondents, that is that matching went down through the fourth decimal point in terms of cents per foot for the rigid steel conduit, and it was not such a small order.

Some of these items were for as much as 180,000 feet. Over 200,000 feet were involved on some items, for delivery to such naval supply depots as Sewell Point, Va.; navy yard at Norfolk; and the navy yard at Philadelphia.

The abstracts referred to follow:

No. 1—Abstract of bids—Schedule 3559, lot 400, opening Oct. 29, 1940—Pipe conduit, galvanized, rigid

(Tabulated from Federal Trade Commission's exhibit 719.)

Continuing his testimony, Mr. MacIntyre said:

There is an interesting story about the Navy Yard at Philadelphia and the bid there, particularly with respect to Walker Bros., one of the large units in the industry. Its factory is almost within sight of the Navy Yard at Philadelphia, less than 15 miles out, yet its quotations made here for delivery of its conduit to the navy yard 15 miles away was on the basis of a Pittsburgh price plus

the freight from Pittsburgh, Pa., to the Philadelphia yard, including a phantom freight charge on the lot there involved of more than $25,000, although it was proposed that the conduit be delivered a distance of only 15 miles.

That is the thing that defenders of the basing-point system want legalized, and I ask you gentlemen, is it in the public interest that it be legalized?

This wasn't an isolated instance.

Think of the terrific import of Mr. MacIntyre's statement. The very day on which the Secretary of War selected the first man who was, with 12,000,000 or more others, to do battle in defense of our country in the steaming jungles of the far Pacific, on the rocky terrain of North Africa, on the beaches of Normandy, and in thousands of other places, the basing point and monopoly boys were having a drawing of their own. This drawing did not take place in the atmosphere of impending doom, but rather in an aura of pleasant expectancy.

The truth here is easy to discern. Every person who will pause long enough to read the above tables will instantly know that the identical prices set forth were not arrived at by sheer coincidence. Indeed, devious are the ways and methods but like an open book intelligence pierces the veil of secrecy by which the bidders, using the basing-point system, attempt to veil their actions and subordinate the antitrust laws to their purposes.

Now the basing-point and monopoly boys, hope, by raising the false issue of clarification, to provide an entering wedge by way of the moratorium, to resurrect the basing-point system, and to unsettle antitrust laws generally.

The moratorium bills are a threat to the antitrust laws and pave the way for even more crippling proposals which, judging by past experience, will promptly be brought forward if the bills now under consideration should pass. I have pointed out that the arguments before the Supreme Court in the Rigid Steel Conduit case—Craighton-Marks Co. against Federal Trade Commission, case No. 464, regular docket—were completed the week of March 28, 1949, and within a reasonable length of time the remaining issues will be clarified in an orderly procedure. Let us await this decision before we attempt to tamper with the anitrust laws by way of a moratorium on their enforcement.

Speaking of Speed

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 12 (legislative day of Monday, April 11), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Speaking of Speed," published in the Pittsburgh Press of April 9, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SPEAKING OI SPEED

We have military planes that can beat the speed of sound. We have air liners that enable Americans to travel about 25 times as fast as their ancestors did a century ago.

But for real speed-up, consider the progress of Government spending the last hundred years.

In fiscal 1849–50, according to Northwest National Life Insurance Co. statisticians, the Federal Government spent $1,000,000 every 9 days. The country's population was then a little over 23,000,000.

In fiscal 1949–50, with population about six and a half times as large, the Federal spending rate will be 1,100 times as fast—$1,000,000 every 12 minutes.

Other governmental units aren't so slow, either. Mayor O'Dwyer's record-breaking $1,179,000,000 New York City budget, just announced, is bigger than any Federal budget before World War I, and calls for spending about a million dollars every 7½ hours.

Bradley's Idea Is Right

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1949

Mr. KEATING. Mr. Speaker, in his suggestion that Army Day, Air Force Day, and Navy Day hereafter be assimilated into one National Defense Day, a great soldier and devoted public servant, Gen. Omar N. Bradley, has struck the right note. Efficiency, economy, and security alike require that the various branches of our armed services in modern warfare must increasingly operate as a team.

Under leave to extend my remarks, I include an editorial from the Rochester Democrat and Chronicle and the New York Times strongly endorsing the suggestion of the able Army Chief of Staff.

[From the Rochester (N. Y.) Democrat and Chronicle]

BRADLEY'S IDEA RIGHT

General Bradley, Army Chief of Staff, made a sensible suggestion on the eve of Army Day. He told Jewish War Veterans at the Waldorf-Astoria that he would "happily propose we end it. For if in ridding ourselves of Army, Navy, and Air Force Days we could also rid ourselves of the competition they tend to kindle, then we might better join hands in a single National Security Day."

There still would be opportunity for the different defense service branches to recognize their history and achievements, and to note their part in the Nation's over-all defense team.

But he and Defense Secretary Johnson are right: The Nation's defense now must be a single, well-coordinated team. And the team will be as good as each component part.

We speak of "one Nation indivisible" in our Pledge of Allegiance to the Flag. We must learn also to understand and believe that under modern, vital requirements, the Nation's defense planning and organization is one indivisible team.

We wholeheartedly endorse General Bradley's suggestion that Army Day, Navy Day, and Air Force Day be abandoned as separate observances, and that they be merged in one National Defense Day.

[From the New York Times]

FOR THE WHOLE TEAM

It was the United States Army itself that gracefully paved the way for the statement by Defense Secretary Johnson that the Army Day that we have observed this week would be the last of its kind. When the Army chose its slogan for the celebrations that have been going on this week it fixed on this: "The United States Army—part of the team—for security."

In those words the Army put no little emphasis on the fact that there was a team, and that the Army regarded itself as part, and only part, of it. What the Defense Secretary did was to carry that spirit one step further and indicate that henceforth it would be the team, and not any one part of it, that would be designated for public celebration. The announcement, at the close of the day's gatherings, was dramatically timed, and that timing served to point up the very thing that the Army had already expressed. The prompt response from Admiral Denfeld, Chief of Naval Operations, that he favored "anything to further the team spirit of the Nation's defenders" and the reference of General Vandenberg, Air Force Chief of Staff, to the building of a "strong defensive team" give hope that our service arms will be enthusiastic in their support of this change in emphasis. What has been done by the Secretary is to provide a visible symbol for this team spirit. And that symbol should be as important for the public as it is for the services themselves.

Much of the discussion of unification of the defense services has laid stress upon its technical phases. Unification was presented primarily as an effort to avoid overlapping and waste, to end fruitless rivalries and occasionally dangerous noncooperation. What is needed, also, is stress upon the moral and emotional values of unity. This symbol places that stress. For all of us the very word "team" connotes a closely knit joint effort toward a common goal. We learned that meaning and connotation when we were small children. In times of stress it is a valuable part of our social character. At such times we, the civilians, feel that we, too, are part of the team.

It should be a good thing, then, for our morale as well as for that of the service that we celebrate the team as a whole, and that on Armed Forces Day we put all of the team on display.

Equal Rights

EXTENSION OF REMARKS

OF

HON. CHASE GOING WOODHOUSE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1949

Mrs. WOODHOUSE. Mr. Speaker, under leave to extend my remarks I insert herewith an editorial from the Washington Post, April 1, 1949, entitled "Equal Rights":

EQUAL RIGHTS

The National Woman's Party is assembled in convention in Washington this week end to press its fight for passage of the so-called equal-rights amendment to the Constitution. Its zeal and persistence are worthy of a better cause. For in seeking to eliminate all distinctions in legal treatment of men and women, the proposed amendment

would sweep away a vast body of protective legislation applicable to women. For that reason all major labor organizations are on record as opposed to this amendment, and Secretary of Labor Tobin has likewise voiced opposition to it. Also included among the numerous and numerically strong organizations that regard the amendment as a threat to the welfare of women rather than a benefit are such outstanding women's organizations as the League of Women Voters, the American Association of University Women, the National Women's Trade Union League, the National Board of the YWCA, and the National Councils of Catholic, Jewish, and Negro Women.

The foes of the equal-rights amendment are not unmindful of the fact that women are the victims of discriminations rooted in custom and prejudice which are not justified by differences in sex. But they realize that this kind of discrimination cannot be eradicated by legislation. Moreover, insofar as legislation is concerned, their aim is to revise or abolish only those laws that reflect an irrational sex bias. The women's status bill which was before the Eightieth Congress has been introduced again with that purpose in mind. It has the backing of 38 national organizations, with a membership of more than 28,000,000, composing the National Committee on the Status of Women. This bill declares that it is the policy of the Federal Government to abolish distinctions based on sex in Federal Government and its administration, "except such as are reasonably justified by differences in physical structure or by maternal function." It also recommends that the States declare a similar policy and review their own laws and practices with the intention of bringing them into line with this new policy. An especially important provision of the bill calls for establishment of a presidential commission to study and report on all phases of the legal, economic, and social status of women and make recommendations for such legislative action as may be required.

The women's status bill outlines a practicable and rational method of dealing with problems of sex discrimination. That is shown by the fact that it is being actively supported by representative groups that have achieved notable victories over the years in battles to elevate the legal status and living conditions of women in industry and in the home.

In addition, I should like to include a list of organizations which have expressed their opposition to the equal-rights amendment:

American Association of Social Workers.
American Civil Liberties Union.
Americans for Democratic Action.
Amalgamated Clothing Workers of America.
American Federation of Hosiery Workers.
American Federation of Labor.
American Federation of Teachers.
American Federation of Women's Auxiliaries of Labor.
Brotherhood of Boilermakers, Iron Ship Builders and Helpers Union.
Brotherhood of Locomotive Firemen and Enginemen.
Brotherhood of Railroad Trainmen.
Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.
Congress of Women's Auxiliaries of the CIO.
Congress of Industrial Organizations.
Communications Workers of America.
Glass Bottle Blowers Association of the United States and Canada.
International Ladies Garment Workers Union.
International Women's Auxiliary of United Automobile Workers.
Machinists Union.
National Consumers League.
National Council of Catholic Women.
National Council of Jewish Women.
National Council of Negro Women.
National Farmers Union.
National Federation of Post Office Clerks.
National Federation of Settlements, Inc.
National League of Women Voters.
National Women's Trade-Union League.
Textile Workers Union of America.
Oil Workers Union of America.
United Automobile, Aircraft, Agricultural Implement Workers of America.
United Hatters, Cap, and Millinery Workers.
United Packinghouse Workers of America.
United Steel Workers of America.
Women's National Homeopathic Medical Fraternity.
Women's Society for Christian Service of the Methodist Episcopal Church (eastern division).
Young Women's Christian Associations of the United States of America (national board.)

The Federal Government Should Repay the Tax Loss to the States Where Extensive Federal Landholdings Have Depleted the Tax Base of the States and Subdivisions Thereof

EXTENSION OF REMARKS
OF
HON. JAMES S. GOLDEN
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1949

Mr. GOLDEN. Mr. Speaker, I desire to call to the attention of the Members of the House, a condition which is causing great hardship in many of the counties and other political subdivisions of Kentucky, and I am sure many other States.

Over a period of years, and during the last few years, at a greatly accelerated speed, the United States Government has acquired millions of acres of land in various sections of the United States for a multitude of purposes, thereby making such lands and improvements tax-free, so far as the States, counties, municipalties, school districts and other political subdivisions are concerned, wherein such lands and improvements are located. You can readily see what it means to these States and other political subdivisions to lose the taxes which they would ordinarily receive if such properties were privately owned.

The United States Government now owns more than 1,000,000 acres of land in the State of Kentucky which has been withdrawn from the tax rolls of the counties and other political subdivisions wherein such lands are situated, and as a result these counties and political subdivisions are now precluded from receiving any tax revenues whatever from said properties. This is working an undue hardship on the counties, municipalities, and other subdivisions, including school districts, and causing a great loss to essential local government and to the school systems in these counties.

There are 17 counties in my congressional district, several of them are considered as rural counties.

Some of them are very sparsely populated. For many years, in view of their relatively small populations and practically no industries other than farming, it has been very difficult indeed for these counties and their political subdivisions to render the type and character of service to their citizens which they are justly entitled to receive, due to the lack of revenue derived from taxes on the land and improvements situated within these counties. These counties, for a good many years, have been considered very poor counties. It so happens that most of the property taken over by the United States Government in my district is located in some of these poor counties, thereby adding to the distressing condition already existing in these counties with respect to furnishing adequate municipal government and school facilities.

For flood control and power development of Agriculture has taken more than 250,000 acres of land in four counties alone in my congressional district.

For flood control and power development, the Army engineers of the Department of the Army has taken over approximately 100,000 acres in 7 counties in my congressional district in connection with the flood-control and power-development projects known as the Wolf Creek and Dale Hollow Reservoirs. Most of the lands taken over by the Army engineers are the best farming lands situated in that section of my district. When the Wolf Creek Reservoir is filled these fertile farm lands will be lost and thousands of our best farms in that area will be lost and the farmers forced to leave their homes and find new places to live.

I am advised that the Wolf Creek project alone is considerably larger than the Norris Dam project in Tennessee, and this Wolf Creek Reservoir is all located in my congressional district. It furnishes no flood protection for the people in my district; whatever flood protection is afforded by the Wolf Creek Dam and Reservoir will be for citizens residing below the dam and outside of my congressional district. You can readily see what it will mean to these poor counties to have their best farms covered with water, with hundreds of their farmers moving to other locations and out of these counties, thereby losing the tax revenues from these lands owned by the Federal Government.

I am confident that this situation prevails in many other counties in Kentucky and in other States where the Federal Government has acquired millions of acres of lands in those States and counties. No one could have any idea just how disastrous this loss of tax revenues is to local counties, municipalities, and school districts until they go on the ground and see for themselves what a hardship it is working on these agencies.

I have discussed this situation with other Members of the Kentucky delegation in Congress and they feel as I do, that some relief must be granted to these counties and their political subdivisions that have lost large sums of taxes through the withdrawal of thousands of

acres of their lands acquired by the United States Government.

This important matter was recently considered by the Legislature of Kentucky in extraordinary session. The legislature passed a concurrent resolution memorializing the President and the Congress of the United States to make some provision for the payment of taxes to Kentucky and her political subdivisions on the same basis as if these lands and the improvements thereon, acquired by the Federal Government, were individually owned.

Mr. Speaker, I now ask unanimous consent to have this concurrent resolution passed by the Legislature of Kentucky incorporated in my remarks and printed in full in the CONGRESSIONAL RECORD.

Working in conjunction with other members of the Kentucky delegation, I have prepared a bill proposing to grant relief to these States and their local political subdivisions wherein the Federal Government has acquired vast acreages of lands and improvements thereon, and has taken such properties out of taxation, and I now ask unanimous consent to have this bill incorporated in full in my remarks in the CONGRESSIONAL RECORD.

In the bill we do not purpose that the Federal Government should pay taxes or an amount equivalent to the taxes on courthouses, post offices, customhouses, mints, penitentiaries, reformatories, or national cemeteries. However, I do feel that it is not right or just for the Federal Government to acquire millions of acres of land, and in many instances the best lands in the counties and other political subdivisions, and take such lands and the improvements thereon out of local and State taxation and cause a severe curtailment in the county and other local governments and a great hardship on the school districts involved, and not making any provision for the payment of taxes to these States, counties, and other political subdivisions the same as if such properties were privately owned.

We are called upon to appropriate billions of dollars to help put many countries in Europe and other sections of the world on their feet, economically and politically, so as to enable them to be self-sustaining, and at the same time, through the acquisition of all these millions of acres of land in the United States by the Federal Government taking such property off of the local and State tax rolls, we are curtailing services which these States, countries, and other political subdivisions are able to render to their citizens, and if continued will eventually bankrupt these counties and political subdivisions.

Senate Resolution 17

Concurrent resolution of the Legislature of the State of Kentucky, memorializing the Congress of the United States to make provision for payment of the exact equivalent of taxes to the State of Kentucky, its counties, and other political subdivisions thereof whenever the tax base of such taxing units is depleted by withdrawals of lands for the use of Federal agencies

Whereas the Federal Government and agencies thereof from time to time have withdrawn from the State and its political subdivisions areas such as the Cumberland National Forest project, the Wolf Creek Reservoir project, the Kentucky Woodland National Wildlife Refuge project, the Tennessee Valley Authority projects, the Mammoth Cave National Park project, the Dale Hollow project, the Kentucky Forestland Utilization projects, the Blue Grass Ordnance Depot, Camp Breckinridge, Camp Campbell, Fort Knox, Campbell Air Force Base, Lexington Signal Corps Depot, Goodman Air Force Base, Ohio River Ordnance Works, the Dewey Reservoir project, and many other lesser withdrawals which now total 1,000,000 acres; and

Whereas it will likely in the development of other projects in Kentucky in the future be necessary for the Federal Government to acquire extensive areas for Federal purposes and for administrative facilities; and

Whereas the State of Kentucky, its counties and municipalities have already lost and will continue to lose vast sums of tax revenues by reason of these withdrawals: Now, therefore, be it

Resolved, That the Senate and House of Representatives of the State of Kentucky, in special session, do hereby memorialize the Congress of the United States to take steps to provide for the payment of the exact equivalent of taxes which would otherwise be levied on lands in the State and its political subdivisions were such lands not acquired by the Federal Government, and its agencies, with the exception of Federal buildings such as post offices, courthouses, and hospitals; and be it further

Resolved, That a copy of this concurrent resolution be forwarded to His Excellency, the President of the United States, Harry S. Truman; the Vice President of the United States and President of the Senate, Alben W. Barkley; the Speaker of the House, Hon. Sam Rayburn; to each of our Kentucky Senators, and to each Member of Congress serving in the United States Congress from Kentucky.

Copy attest:

J. ERVIN SANDERS,
Chief Clerk of the Senate.

MARCH 30, 1949.

A bill to provide for local taxation of real estate and improvements thereon owned by the United States, and for other purposes

Be it enacted, etc., That, except as hereinafter provided in section 3 of this act, all real estate and improvements thereon owned by the United States or by any corporation, the majority of the common stock of which is owned by the United States, shall, commencing on the 1st day of January after the passage and approval of this act, and thereafter, be subject to taxation by the respective States, counties, municipalities, school districts, and other political subdivisions, and taxing units in which said real estate may be situated, and shall remain subject to taxation by such States, counties, municipalities, school districts and other political subdivisions in which such property is located, to the same extent, on the same basis, and at the same rates and at the same times as such real estate would be subject to taxation if privately owned: *Provided,* That the United States shall, with respect to such real estate and improvements thereon, have all the rights as to assessments, reassessments, appeal, and otherwise as a private owner thereof would have if such real estate was privately owned.

SEC. 2. Nothing in this act shall eliminate or in any way affect existing or subsequent provisions for contributions by the United States to local units of the proceeds realized from the sale of timber in national forests.

SEC. 3. The provisions of this act shall not apply to real estate owned by the United States or by any corporation defined in section 1 of this act, primarily and substantially for the following uses or any combination thereof: Courthouses, hospitals, post offices, customhouses, mints, penitentiaries, reformatories, or national cemeteries.

SEC. 4. The provisions of this act shall not apply to any property with respect to which such power of taxation is waived in accordance with State law by the State or political subdivision in which such property is located.

SEC. 5. Within 6 months next following the date of the enactment of this act in the case of lands and improvements thereon held by the United States on the date of enactment of this act, and within 60 days next following the acquisition of any lands in any of the States by the United States after the date of enactment of this act, the head of the department, agency, or independent establishment in the executive branch of the Government having jurisdiction over such lands and improvements thereon for which payment is required under this act, shall certify to the Secretary of the Treasury of the United States the acreage and improvements thereon, the fair value of such property, together with such other information as he may deem necessary, to aid in the apportionment of such tax payments among the various States and political subdivisions thereof, and as may be required by the rules and regulations promulgated by the Secretary of the Treasury.

SEC. 6. The Secretary of the Treasury is authorized and directed to make all payments herein annually after the close of the fiscal year to the treasurer or other equivalent official of the State for distribution to the counties, municipalities, school districts, and other political subdivisions and taxing units in said State wherein are situated lands of the United States, not specifically excluded in section 3 of this act, an amount equal to and in lieu of the taxes that would be levied against said property if privately owned.

SEC. 7. The Secretary of the Treasury is authorized and directed to prescribe such rules and regulations as may be necessary to carry out the purposes of this act.

SEC. 8. All determinations made by the Secretary of the Treasury and the heads of departments, agencies, and independent establishments in the executive branch of the Government for the purposes of this act shall be conclusive upon all accounting and other officers of the Government.

SEC. 9. There is hereby authorized to be appropriated from time to time such sums as may be necessary to carry out the provisions of this act and to administer the same.

Walter Apfelbaum and Jordan Bittel, Winners of Georgetown University International Debating Tournament

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 12 (legislative day of Monday, April 11), 1949

Mr. PEPPER. Mr. President, Florida is very proud that two of her fine young men, students of the University of Florida, have just won the Georgetown University invitational debating tournament, in which teams from 15 colleges and universities participated. These young men are Walter Apfelbaum, 18, and Jordan Bittel, 20.

I ask unanimous consent to include in the Appendix of the RECORD an article entitled "Florida Pair Wins Debate Tour-

nament," published in the Washington Post of yesterday, telling about the victory of these two young Florida students.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AT GEORGETOWN UNIVERSITY—FLORIDA PAIR WINS DEBATE TOURNAMENT

Two University of Florida students last night won the Georgetown University invitational debating tournament in which teams from 15 colleges and universities tangled with pros and cons for the last 3 days.

Taking the negative, Walter Apfelbaum, 18, and Jordan Bittel, 20, wrested a close victory from W. Jerry Roberts, 31, and Charles Harvey, 28, a University of Richmond team that upheld the affirmative in a much-explored subject:

"Resolved, That the Federal Government should adopt a policy of equalizing educational opportunity in tax-supported schools by means of annual grants."

When the Richmond and Florida teams took up the subject last night it was the one hundred and thirteenth hour of actual debate on the subject at Georgetown.

An estimated 5,424,000 words were expended by the orators in exploring the subject, tournament officials estimated.

But of the old-fashioned, wild waving of arms there was none last night. "Audiences are more sophisticated than they used to be," one debater said afterward.

Words flowed rapidly and evenly, however, and at least one veteran listener, the Reverend Eugene B. Gallagher, S. J., director of the Philodemic and Edmund Campion Debating Societies' activities at Georgetown, confessed after the first 1,000,000 words or so that he was "dazed."

To Apfelbaum from Miami and a junior at the University of Florida, and his teammate, Bittel, of Miami Beach, a senior, the John J. Toohey, S. J., challenge trophy was presented. The university will have to defend the trophy a year from now in the second annual Georgetown debating tournament.

To Roberts, Harvey, Apfelbaum, and Bittel were presented sterling silver gavel pins.

Roberts, Harvey, and Bittel together with Richard Gordon, 21, of Georgetown's Philodemic Society team, on the basis of a point system, were named the four individual champion debaters. Gordon, a junior at Georgetown, lives at 1383 Bryant Street NE.

The tournament trophy is named in honor of the Reverend Father Toohey, 76, veteran Georgetown debate coach who coached Philodemic teams through 17 undefeated seasons, 1921 to 1939.

Judges for the final debate were Philip J. Perlman, Solicitor General of the United States; Bolitha J. Laws, chief justice of the United States District Court for the District; and Joseph R. Jackson, associate judge of the United States Court of Customs and Patent Appeals.

Closing of the Veterans' Administration Branch Office No. 2, New York City

EXTENSION OF REMARKS

OF

HON. L. GARY CLEMENTE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1949

Mr. CLEMENTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter dated April 9, 1949, addressed to me by the American Legion, Department of New York, with respect to the closing of Branch Office No. 2 in New York City.

THE AMERICAN LEGION,
DEPARTMENT OF NEW YORK,
New York, N. Y., April 9, 1949.

Hon. L. GARY CLEMENTE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: It was with regret that we received the decision of the Administrator of Veterans' Affairs, Carl R. Gray, Jr., which brought about the closing of branch office No. 2, here in New York City. While we knew that the elimination of such offices was being considered, we felt we had reason to believe, that because of the fact that here in New York State where we have 2,047,000 veterans residing which is approximately 12 percent of the veteran population of the Nation and further, that we have approximately 10 percent of the VA hospital bed capacity, which incidentally is more than the combined bed capacity of New England and New Jersey, that the branch offices in Boston, New York, and Philadelphia might be merged into one with its headquarters here in New York City. However, the Administrator decided otherwise and all branch offices were abolished and the various divisions with the exception of insurance and death claims were transferred to central office. The insurance and death claims divisions remained in the same office which is now called a district office and comes under the supervision of a district office manager.

We keenly feel the loss of this branch office because it means that we will have to resort to letter writing with officials in central office and judging from past experience, we are in for much delay.

While the closing of the branch office so abruptly was quite a shock to us, the real jolt came almost immediately thereafter when we learned that the Administrator contemplated setting up five or six area medical offices throughout the country and that New York would be placed under the jurisdiction of one to be located in Boston. This area as we still understand it includes the New England States, New York, New Jersey, Pennsylvania, and Delaware.

While in Washington attending our National Rehabilitation Conference the first week in March, the undersigned called upon the Administrator and asked that that office be located in New York City. We gave as our reasons that New York City was not only centrally located but that it was the greatest traveling center in the country and the medical center of the Nation. The Administrator disagreed with us on the medical center and advised us that Dr. Magnuson wanted it in Boston because that city was the medical center. He did, however, place the responsibility for the location upon the Medical Director, Dr. Magnuson, and suggested that we contact him. Dr. Magnuson was confined in a hospital at that time, so upon our return to New York we wrote the doctor and presented our case to him. A reply was received from the doctor under date of March 14 wherein he gave his reason for setting up the office in Boston as in the interest of economy and travel. (Copy of letter attached.)

We disagreed with both the Administrator and the Medical Director when they gave as their reasons that Boston was the medical center of the Nation and that economy would result in travel by having the office located there.

In support of our claims we submit herewith a table showing the mileage between New York City and the VA hospitals and Boston and the same points. Further, we submit a list showing the medical schools and hospitals located in and around Boston and New York City. We feel sure that after a perusal of these facts, no one will question the merits of our claim. There is just no comparison. There must be some other reason for placing this headquarters in Boston.

As stated previously, we feel and the facts will substantiate our claim that New York City is the medical center of the Nation at present. Further, vast sums of money have been appropriated by the city for enlargement of its present hospital and medical facilities. Plans are under way for the construction of several private hospitals and additions to hospitals now in operation. New York University has plans for a combined NYU-Bellevue medical center, to be located on First Avenue between Thirtieth and Thirty-fourth Streets, adjoining Bellevue Hospital, which is situated on the same avenue between Twenty-fifth and Thirtieth Streets. The site of the new VA 1,250-bed hospital runs along the avenue between Twenty-third and Twenty-fifth Streets. Directly across the street from Bellevue Hospital is located the New York Pharmaceutical School and around the corner, on Twenty-third Street, is the NYU Dental School. This picture presents but a part of the vast medical set-up located here in New York City. In addition to that, New York City is the greatest center for recruitment of medical personnel, an important point to keep in mind when it becomes necessary to staff these various installations.

So much for the medical side of the picture. In connection with the travel side, we would like to cite an example. Recently the chief medical officer, whose headquarters is now located in Boston, made a visit to the VA hospital located at Northport, Long Island. To get there he had to travel 229 miles from Boston to New York, then approximately 50 miles to Northport. Seventy-five percent of the other visitations to VA hospitals would entail similar excess travel from the office where it is now located.

These facts and figures are presented to you in the hope that you will join with us, in an effort to have the area medical office of the Veterans' Administration moved from its present location in Boston to New York City, where ample accommodations and office space are available in the VA district office, located at 299 Broadway.

Your cooperation will be appreciated by the membership of the American Legion in the State of New York and particularly by those who directly serve the veterans.

Respectfully yours,

JOSEPH P. PICCIRILLO,
Chairman, Department Rehabilitation.
GEORGE A. MEAD,
Director, Department Rehabilitation.

VETERANS' ADMINISTRATION,
Washington, D. C., March 14, 1949.

Mr. JOSEPH PICCIRILLO,
Chairman, Department Rehabilitation Committee, the American Legion,
New York, N. Y.

DEAR MR. PICCIRILLO: This is to acknowledge receipt of your letter of March 10, 1949, in which you outline the advantages of the location of the so-called district office in New York City.

May I state that it is not contemplated that any operative functions will be carried on in any installations other than our field stations and central office. However, in the interest of economy and travel we will have representatives with official stations at certain localities in the field. These in no sense will be a district office, but simply, as previously stated, official headquarters. The personnel on duty will be traveling the greater part of the time and these supervisory activities will bring the supervision of central office closer to the hospital and other medical activities in the field thereby assuring the finest medical service to veterans.

It has been decided that for those representatives visiting Veterans' Administration

installations in the New England and New York States areas, Boston, Mass., will be their official headquarters. Of course, a large percentage of their time will be spent in the New York area where there are a number of medical Veterans' Administration installations.

Sincerely yours,

PAUL B. MAGNUSON,
Chief Medical Director.

A Henry Wallace Hang-Over

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1949

Mr. KEATING. Mr. Speaker, although secretaries come and go, their staffs continue on. This was never more forcefully illustrated than in connection with the fantastic program recently presented by the Secretary of Agriculture for the serious consideration of the House Committee on Agriculture. It reflects the thinking of a former Secretary of Agriculture, Henry A. Wallace, an outspoken advocate of a completely controlled economy, always unduly and usually unfortunately influenced by those surrounding him.

It is my hope that this proposal to write every farmer in the country a check, presumably around electiontime, for the difference between what he received for his products and the amount which a government agency fixed as their price, will receive relegation to oblivion, which it so richly deserves. Certainly this should be its fate, unless it is intended to pay every working man and woman in the country the difference between the wages he or she draws and the amount which a government agency decides he or she should earn, and unless it be further intended to pay every businessman, large and small, the difference between his losses or his profits, if any, on the one hand, and the amount which the Government thinks, if any, should be his profits on the other hand.

Such nonsense is not the stuff of which this country was made or through which it has prospered. It represents ideas borrowed from those who control the economies of other countries which, without a single exception, do not enjoy a standard of living remotely comparable with our own.

Several days ago I inserted an editorial from the New York Times condemning in most vigorous and clear language the completely political and thoroughly unsound suggestion of the Secretary of Agriculture. Editorial comment continues to be almost universally unfavorable. Today, under leave to extend my remarks, I include an editorial from the Rochester Times-Union and an article by Mr. Gould Lincoln appearing in the Washington Evening Star.

[From the Rochester (N. Y.) Times-Union of April 8, 1949]

AS WE SEE IT—LOWER FOOD PRICES, HIGHER FARM INCOME, IS NEAT TRICK

The corn States Thursday got their gold star for good conduct in November. The Secretary of Agriculture unwrapped a new farm program and politically it's a daisy. It will raise farm income but lower food prices, it says here, which is the neatest trick of the Washington week.

How can either a dirt-farm Congressman or a sidewalk Congressman oppose a deal like that?

The only way we can imagine is by seeing the catch in it. This shouldn't be hard to do.

The bill would let the free market set prices on meat, milk, butterfat, eggs, poultry, fruits, and vegetables. These are the foods people prefer and should eat more of.

But if the unsupported market lets people buy them too cheaply, Uncle Sam would sit down and write a check for the farmer who produced them, covering the difference between what the Government thinks the farmer should have received and what the people were willing to pay.

There is no better recipe than a fat check to turn people into satisfied voters.

But don't go away, there's more to it than this. Where do meat, milk, butterfat, eggs, and poultry come from? They come from feeding animals and fowls corn, wheat, and other grains.

And this same bill jacks up support prices on these, along with cotton, tobacco, peanuts, soybeans, flaxseed, dry beans, peas, and wool. All the apparatus of loans, surplus purchases, and Government-built storage space would be continued and strengthened to raise prices on these.

Then how is the price of meat, milk butterfat, eggs, and poultry to come down, if the price of grains that produce them is propped higher?

There is more than a little flim-flammery here.

Besides this bill's hokum, it contains some ideas that surely need far more exploration than they have had.

There is the question of the Government's guaranteeing the income of one portion of our people regardless of other portions' price judgment on the value of their output.

And if that is desirable, is it good policy to attempt to freeze one portion's income at distorted wartime high levels—which is the effect of the new base period for computing parity, a price index of what farmers buy?

But the most reprehensible thing about the plan is that Secretary Brannan presented it to Congress without a single estimate on what the program would cost.

Without solid cost estimates, adequately documented, Congress really has nothing to work on. We have surely not come to the point that we buy every bauble that looks pretty politically without asking the price. Or have we?

[From the Washington (D. C.) Evening Star]

THE POLITICAL MILL—NEW FARM PLAN LEAVES SOME DEMOCRATS PUZZLED—PRODUCTION PAYMENTS MIGHT RUN INTO BILLIONS OF DOLLARS

(By Gould Lincoln)

The administration's new farm-aid plan, presented by Secretary of Agriculture Brannan with the blessing of President Truman, is about as understandable to Democratic Members of the Senate as the operation of a pyramid club, and if the administration hopes to get major support for the plan, it will have to let a lot of light in.

Coined in the plan is a new phrase, "production payments." To the run-of-the-mine citizen, it will mean a Government subsidy to farmers, designed to maintain high prices for them and at the same time permit consumers to buy foodstuffs at prices fixed by the old-fashioned law of supply and demand. In other words, it is enticement to farmers to produce plenty so that the supply will always equal or run ahead of the consumer demand, thereby assuring reasonable or low prices to the public.

Nobody has suggested yet how far down in his jeans Uncle Sam will have to dig to pay the farmers these production payments. It is well understood, however, that whatever Uncle Sam pays—and it may run into billions if prices of foodstuffs should go very low on the market—will come out of the pockets of the American taxpayers.

QUICK ENDORSEMENT BY M'GRATH

The Democratic National Committee immediately put out a statement by Senator J. HOWARD MCGRATH, of Rhode Island, chairman, giving the new farm plan superlative endorsement. In conclusion, Senator MCGRATH made this wholly understandable remark: "Without going into the technical explanation and the working details of Secretary Brannan's testimony (about the new plan), I want to emphasize again that this program tackles the farm problem in relation to the whole country." It is just those working details which need explaining.

Secretary Brannan, in his appearance before a joint meeting of the House and Senate Committees on Agriculture, stated the objective of the plan—the welfare of the American farmer. He made the trite assertion that if the farmer goes bust, the whole Nation does, too. No one will quarrel with his demand that the farmer be given a fair break. But he apparently is undertaking to set up a kind of endless chain whereby the farmer will produce all he can, or at least all that the Government thinks he should, and the consumer will buy all he can, or certainly as much as the farmer produces. This is supposed to keep everybody else working and making money and spending it.

WEAK LINK IN CHAIN

The weak link in the chain seems to be the requirement that the Government be ready at all times to step in and pay the farmer the difference between his cost of production, plus a fair income, and the price the farmer is compelled to receive in an open market. It is possible that any government budget might be knocked galley-west under the operation of such a plan.

The details of the plan are numerous and intricate. On of them is designed to help the family size farm and not to encourage the development of large industrialized farming.

Nobody knows, but it is surmised that operation of the proposed law will require the services of an army of Government agents, a tremendous amount of bookkeeping by both the farmers and the Government and finally, the strictest kind of control of the farmers by the Government.

ANDERSON NOT CONSULTED

The production payments appear to be limited to the more perishable crops, like fruits, vegetables, meats, poultry, eggs, and milk; and the old or present price-support method of commodity loans and purchase agreements will be used for commodities which do not appreciably deteriorate in storage, for example, grains and cotton.

Senator ANDERSON of New Mexico, who before he came to the Senate was Democratic Secretary of Agriculture and is now a member of the Senate Agriculture Committee, was not consulted by the drafters of the new administration farm plan before it was revealed by Secretary Brannan. Mr. ANDERSON is saying nothing publicly about the plan—until the legislation to put it into effect has been presented and Secretary Brannan has explained its provisions. Other Democratic Senators admit they are mystified, and some of them just don't like the plan.

Extension of European Recovery Program

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1949

Mr. ZABLOCKI. Mr. Speaker, as a member of the House Foreign Affairs Committee, I have followed the extensive hearings on this legislation, and looking back on the testimony presented and considering the magnitude of the program, I find it very difficult to understand the criticism by some Members of the House toward the work and recommendations of this committee. May I add my humble observations? I believe and have full confidence in the chairman of our committee, the gentleman from West Virginia, Judge KEE, and the deliberations and fine cooperative and successful, conscientious work of the members of this committee. The measure unanimously reported out for favorable passage puts or should place the consideration of this measure favorably by the House beyond the doubt of the most dubious. The moneys thus far expended in the Marshall plan were judiciously allocated and have borne fruit.

Two years ago the American Government and the American people decided to help rehabilitate and reconstruct the economy of Europe. The effort has been thus far extremely worth while. But we should not stop now. The danger of disaster is not past. It would be utter stupidity to discontinue a working plan in the middle of its success.

I would like to call to the attention of this body, particularly to the gentleman from New York [Mr. KEATING], the noticeable improvement in east-west trade.

EAST-WEST TRADE

A steady upswing in Europe's east-west trade during the past year has served as a healthy stimulant to the ultimate recovery of Marshall-plan nations.

In 1945, east-west trade was virtually at a standstill. Last year, it rose to about 50 percent of 1938 and by 1952 the Economic Cooperation Administration hopes that trade between eastern and western Europe will be within reach of its normal prewar volume.

The increased flow of goods across the east-west borders is regarded by ECA as a life line to the economic goal of ERP nations. Polish coal is being burned to help meet their production targets. Eastern timber is going into their housing and construction programs, and eastern grain is boosting their food consumption.

The Marshall plan is supplying some of the money with which western Europe obtains part of its immediate requirements, but on the whole, east-west trade is being accomplished on a give-and-take basis with very little stimulus from ECA dollars. For example, ECA dollar authorizations for the purchases of Polish coal, Yugoslav nonferrous metals, and eastern German potash have totaled $12,751,000 thus far compared with the over-all figure of $1,163,000,000 which ERP countries spent for imports from eastern Europe in 1948. ECA prefers that these imports be obtained through direct trading, and authorizes dollars only when the need is urgent.

A major importance of east-west trade is that the barter method is saving ERP countries dollars through an alternative means of payment, such as exchange of goods, credit, or payment in some foreign currency. In order to be viable by 1952, western Europe must reduce her dollar deficit and restore her balance of trade. This can be achieved partly by the import of goods from sources other than dollar areas. ECA estimates that failure to maintain east-west trade would impose an additional aggregate cost of $5,000,000,000 in ERP aid, since western Europe would have to find means for importing commodities from other than nondollar areas. Besides, ERP countries need eastern Europe for an essential market outlet.

According to ECA figures, ERP countries are importing more than they are exporting. During 1948, it is estimated that exports totaled $788,000,000, as compared with $1,163,000,000 in imports from eastern Europe. In exchange for foodstuffs, coal, timber, and nonferrous metals, western Europe supplies the east with industrial products and machinery equipment.

On the whole, ECA views the expansion of east-west trade as one of the most important means for reducing the dependence of European countries on products from the Western Hemisphere and thus for diminishing the dangerous excess of imports over exports which has thrown the European economy out of balance. Of course, east-west trade is carried on by the participating countries only within the limits of security considerations and under strict export controls necessary for the national security of the participating countries and the United States.

ADDITIONAL DETAILS

Before the war, east-west trade comprised about 10 percent of the total trade of the ERP countries. The prewar figure for exports from eastern to ERP countries was approximately $1,300,000,000 a year. If computed at postwar prices, the figure would be considerably higher. ECA estimates that if present east-west trade developments continue—particularly if the recovery plans for the bizone are successful—1952 imports from the east may exceed the prewar volume.

Of all the commodities imported from the east before the war, coal, timber, grain, and potash made up over 50 percent of the trade. The end of dependence on American coal by 1952 depends on increasing production in participating countries and on the availability of coal from Poland. It is expected that by 1952 Poland may be a source of about 25,000,000 tons of coal for ERP countries, as compared with 13,000,000 last year.

Timber, which is needed for coal mines, pulp and cellulose, railroads and the building industry, is currently in very short supply since iron-curtain countries are exporting only slightly more than half of their prewar shipments. A World Bank loan, now under consideration, to provide additional timber equipment for some eastern countries would increase their export availabilities to about $60,000,000 of additional timber per year.

Before the war, eastern Europe supplied 25 percent of the net imports of grain for western Europe. ECA estimates, however, that grain imports from the east in 1948–49 will constitute only about one-third of the prewar supplies from that area.

Potash from eastern Europe, and chiefly the Soviet zone of Germany, is expected to play an important role in meeting increased requirements in western Europe. Imports from eastern Europe may account for as much as three-fourths of the net imports of the ERP countries throughout the ECA program period.

Monopoly Versus Democracy

EXTENSION OF REMARKS
OF
HON. CHASE GOING WOODHOUSE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1949

Mrs. WOODHOUSE. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert herewith a speech by the

Honorable WRIGHT PATMAN, of Texas, made Sunday, April 10, at a dinner meeting of the Cooperative League of America, Jerry Voorhis, managing director, and John Carson, Washington representative:

Monopoly and democracy are incompatible. One is, in the words of Holy Writ, a "child of a bond woman," and that child is called monopoly and the path he builds leads into slavery. The other child is "a child of a free woman," and that child is called Democracy. That child builds paths toward freedom and in support of the dignity of men and women and children.

These two, monopoly and democracy, are utterly irreconciliable. They cannot live under one roof. If monopoly is permitted to thrive it will consume and destroy democracy and freedom. That is the problem we have before us in our country. It is the problem of this day and this hour. It is the challenge presented to United States Congress and to all Government officials as the Federal Trade Commission reported only a short time ago. Incidentally, in that report the Commission warned that the days are very few in which we can save our country and our people from the inevitable end of the monopoly road, and that end is economic totalitarianism.

We need not believe in any theory of economic determinism to accept what is a fact. The fact is that our political freedom is dependent upon our economic freedom. Our economic freedom is dependent upon the maintenance of a free market. We cannot hope to retain our political freedom if we permit our market place to become owned and dominated by monopoly interests.

The reports made some years ago by the Temporary National Economic Commission, of which the Senator from Wyoming, Senator O'MAHONEY, was chairman, proved that monopoly then dominated most of our industries. The statements made many times since by Senator O'MAHONEY and by others and the continuing stream of antitrust cases which pour into our courts, prove that monopoly condition has grown worse since the days of TNEC. In fact, the stories told before the Joint Economic Committee of the Congress prove conclusively that the warning given to us only a short time ago by the Federal Trade Commission was a warning couched in very moderate language.

Our problem is, then, the problem of attacking this disease to society, this disease we know by the word monopoly. Turn to the hospital wards. When a man is sick, the first thing a good doctor does is to get control of the disease. He does that through medication. Our first effort in attacking this disease, monopoly, then should be to give adequate assistance to the Antitrust Division of the Department of Justice, and to the Federal Trade Commission. That is the medication we need. We must insist on adequate appropriations for these Departments.

Then the able physician in the hospital wards seeks to induce and encourage the sick person to begin to help himself. His full recovery always must depend upon his will and his ability to help himself.

One of the subjects we are discussing in this conference, I assume, is that of inducing people to help themselves through cooperatives. The analogy of the hospital ward runs true throughout.

As many of you know, there is one subject which has interested me and concerned me from the day I first came to the United States Congress. That subject is monopoly. Throughout my career I have labored to protect and encourage independent business organizations, and particularly what we know as small business organizations. I was much pleased recently to learn that cooperative representatives and the representatives of small business were conferring in one industry (oil distribution) and seeking for methods through which they could work together. I hope that these joint efforts will continue. I have heard repeatedly from your cooperative representatives in Washington that they would cooperate in every way to assist small business.

Tomorrow afternoon, I understand from your program, this conference will turn to a study of the electric power industry. That is well for me, because I was asked to talk with you a few minutes about the REA answer to monopoly.

Not so many years ago, one of our great Senators, one whom we shall not forget, George W. Norris, of Nebraska, determined to give to our farm people the advantages of electric power. I would like to tell you that story as it was told to me by one of Senator Norris' closest friends. He told how Senator Norris had been riding through Nebraska and had stopped to visit with a farmer friend. The farmer's wife was washing clothes with an old-style washing machine. She was laboring under a hot Nebraska sun.

"I made up my mind right there," said Senator Norris, "that I'd try to find some way to help these poor people, and particularly those good women, to get electric power into their homes."

Senator Norris began his famous fight to save Muscle Shoals, and the Wilson Dam power development. That was the fight which finally resulted in the development of what we know as TVA. Then Senator Norris, encouraged by President Franklin D. Roosevelt, turned to the development of what we know as REA.

It is an interesting fact that when Senator Norris completed the rural electrification bill, he admitted to a belief and a fear that he was merely helping the Power Trust.

"Of course, I know what will happen," he said. "The big power companies are going to borrow this cheap money from the Government and get control of rural electric lines. That is inevitable. But if I have to see that happen in order to get electric power into our farm homes, I'll submit to even helping the Power Trust."

My friend reminded the Senator that his REA bill provided for loans to political subdivisions, counties, or townships. The Senator said that was true, but he had little hope that counties or townships would develop that field. Then Senator Norris' attention was called to the provision of his bill which permitted loans to be made to cooperatives. The Senator shook his head, sadly, as he talked about cooperatives.

"Yes, I put that in the bill, but it just will not happen. That would be the finest development," he added, "but cooperatives have never developed in this country, as they should have."

Senator Norris predicted that night that 95 percent of the rural electric lines would be built by the Power Trust. Strangely, that was also the opinion of Morris L. Cooke, the first Administrator of REA. I only mention these facts to impress on you what can be done by people once they are encouraged to help themselves. And I should add that three of your cooperative representatives, Mr. Hull, of Indiana, Mr. Lincoln, of Ohio, and Mr. Bowen, of Chicago, came to Washington and induced Mr. Cooke to give a little bit of encouragement to cooperatives through putting, as they said, at least one little desk in the REA office.

The one little desk was placed in the REA office, and a few little people were appointed by Mr. Cooke to man the Cooperative Division of the first Rural Electrification Administration. Mr. Cooke was just as friendly to cooperatives as was Senator Norris, but the fact is that neither believed that cooperatives would develop.

We know what the result was. The rural electric cooperatives developed just about 95 percent of the rural electric lines and the power trust was proved to be utterly incompetent. There was one field in which monopoly had to surrender. We know how Norris' dream came true, how States soon boasted that majority of their farm homes were completely electrified. We know now that in some States more than 90 percent—as I recall—of the farm homes have electric power.

The REA principle, as I have tried to present it, is merely that of using our Government's power to provide credit to our people so that they can help themselves.

What can be wrong about any such proposal? These credit resources are the resources of our people. They belong to all of our people. They would be of no value if they were not supported by confidence in all of our people. And all that we now propose through the REA principle is that the Government—the trustee for all the people—shall take these resources and turn them back into the rural areas and the towns and cities of our country to help people to help themselves.

What can be wrong about a proposal that we shall use this Government credit, this resource, to develop an independent steel industry, or to develop independent cement industries throughout our country? We have proved, through REA, that the people are very capable, so capable in fact that in REA they developed many improvements on the work of the power companies.

I have complete confidence in the ability of people to help themselves. I have complete faith that the so-called little people of our country, the people who just go about doing their job every day, will prove themselves to be just about as capable of handling these so-called big jobs as have any of our industrial managers.

Recently, I offered in the House a housing bill, H. R. 2811. It has been described by some people as the REA-housing bill. I wish this conference could be continued through a week, or on into several weeks, so that you people might study such proposals as are in this housing bill.

What do we propose in this housing bill? We propose to create a Government agency which will do the work in housing that the Rural Electrification Administration has done in the rural electric field. We propose that this division of Government shall have authority and responsibility to develop new plans and new methods for housing. We propose that this division shall have authority to develop credit resources for those who need housing, either through getting cooperation from private mortgage lenders, or through getting credit from Government lending corporations.

I am interested in this bill for many reasons, but particularly for the reason that through this bill I think we will help people to obtain good housing accommodations which they can buy and own. I am interested in home ownership. It is time we should become interested in home ownership because home ownership is our greatest protection against the spread of political doctrines which might destroy our country. Just as the Rural Electrification Administration helped people to own their electric power lines.

Through this REA principle, I would hope, and in fact I would demand, that any independent business would have every encouragement comparable with that given to cooperatives. And again, I must repeat that there has never been an occasion when cooperative representatives did not propose to me that every method should be devised to encourage and help the small-business man. Incidentally, I have been told that in Sweden the small-business men prospered as cooperatives prospered. It is not difficult to understand why, because the Swedish cooperatives curbed and destroyed monopoly and

provided for a free market. Then the Swedish cooperatives, in many instances, became partners of or with other small business. That is the kind of a development I would like to see in our country, because I know, as you know, that this evil thing we know as monopoly is not going to be conquered unless we can arm every enemy of monopoly.

I would like to propose to this conference that a committee representative of the farmers and of organized labor and of cooperatives and of bona fide independent businessmen should be appointed to confer with Government officials for the purpose of exploring every possibility of making use of the REA principle. We have offered a way in the housing field. Some of my good friends in the House and Senate have offered proposals with reference to rural telephone services. Perhaps we can find a pattern which we can apply to the steel industry, to the oil industry, to the fertilizer industry, and, in fact, to every industry where monopoloy has thrived,

One picture has always remained with me as I have labored in this field. It is the picture of the small-business man and his great asset, which was the greatest asset of our country. That asset was good will and confidence. The consumers bought shoes in those days, because the shoes were made by their friend and neighbor. And the manufacturer of shoes had far more interest in gaining the good will and permanent friendship of the consumer of shoes than he had in making a profit.

We must struggle to return to that wonderful state for all of our people, even though the great mass industries and the monopoly interests make the return difficult. We must find methods through which people, the men and the women of our country, will have that supreme satisfaction of producing something which expresses their spirit. Unless we keep that goal in mind, we cannot serve the cause of freedom and democracy. Democracy is a thing of the spirit. It depends upon self-restraint. It depends upon the healthfulness of the soul, or the spirit. We must feed that soul and spirit if we would have it survive.

That is why I have been interested in this never-ending struggle against monopoly. That is why I have done what I could to help the bona fide small-business men of all kinds, both cooperative, small business and other kinds of small business. That is why I have become interested in the possibility of developing and expanding this REA principle. Perhaps we have discovered in the REA principle the finest weapon for an attack on monopoly. And this conference, if it could succeed in developing interest in that field would be remembered throughout the years to come.

Last Call for Mr. Bevin

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1949

Mr. KLEIN. Mr. Speaker, not since the destruction of Nazi Germany had any nation dared make anti-Semitism a major policy until Ernie Bevin became Foreign Minister of England. What motivates him, by what fantastic stretch of moral and intellectual gymnastics he arrives at such a position, I cannot say. I do not know how, in a Labor government, he can hold or pursue such policies. I know only that the foreign policy of Great Britain is keyed to a snide and almost obscene anti-Semitic attitude.

Under leave, I am inserting in the RECORD an editorial from the New York Post Home News which reviews the most recent convolutions of the British delegation in the United Nations Assembly. I hope, Mr. Speaker, that Members will pay due attention to this brilliant piece of writing.

LAST CALL FOR MR. BEVIN

The British Government, which didn't give de facto recognition to Israel until after every other major nation had done so, seems determined to keep Israel out of the United Nations as long as possible.

There is no other sensible interpretation of British behavior at Lake Success last week. Britain's representative supported the unsuccessful Moslem attempt to delay advancement of Israel's candidacy for membership.

Foreign Secretary Ernest Bevin is very slow learning the facts of life. Beyond all doubt, Israel will enter the United Nations, but Mr. Bevin has so far refused to see either the fundamental justice or even the basis political common sense of making honorable amends for his injustices of the past.

This week begins with him still clinging to obstruction, and although we know that the cause of Israel can't be advanced by calling a statesman a dolt, we still wonder why anyone ever considered this dolt a statesman.

Yet, in the hope that Mr. Bevin can even now be instructed, let us list again three steps which the British Government should take—and take quickly—to render justice to Israel, to strengthen the cause of lasting peace in the Near East, and, by no means incidentally, to do Britain some direct good, too.

First. Britain should expedite, and not hamper, Israel's admission into the UN. No other single action will go nearly so far to show that at least once in a while the British Government not only talks about world democracy but is actually capable of doing something to advance it.

Second. Britain should enter into sensible trade agreements with this young and virile state. Israel has, among other things, potash for British industry and citrus fruits for the untanned residents of the cloudy British homeland. Israel, moreover, is a bigger potential market for British exports than the whole of the Arab Near East.

To implement trade agreements, Britain should drop immediately its cruel and senseless demand that Israel pay the costs of the ghastly Cyprus internment camps.

Britain should also, in common decency, turn over to the Israeli Government a just share of the cash which was raised by the sale of Palestine Government bonds and was shipped off to London nearly a year ago.

Further, Britain should release at once the sterling funds owned by Israeli citizens and now blocked in British banks.

The third step: Let Israel flourish unhampered by the ring of Arab and British arms which now surrounds it. The driving energies of Israel, progressively redeeming the desert for the good of mankind, should be free to work unchecked and unthreatened by armed prowlers who build and have built nothing whatever in this world.

In this connection, we are reminded that British opposition to an independent Israel stemmed in part from the notion that the Arab states had to be coddled because Britain might need them in a clash with the U. S. S. R. (At least, so it was said; quite likely, the pro-Arab basis actually had more to do with oil than ideology.)

But granting the British Government was once sincere in believing it could rely on Arab armies, how can it possibly think so any longer? The ineffectiveness, if not the worthlessness, of Arab military force has been shown to all the world.

If Britain ever needs an ally in the Near East, Israel with its sturdy farms, its modern approach to trade and industry, and its great body of men and women trained in all fields of modern science, could be the best possible. But, in probable fact, the building up of a strong Israel would of itself so improve the position of democracy in the Near East as to discourage effectively any military adventurers.

Meanwhile, let those who are really fearful of Russian threats in that quarter of the world ponder the fact that the Israeli Government is stanchly anti-Communist—so much so that it is being denounced by the Communist press everywhere, particularly here in New York City.

And so it seems obvious that self-interest alone—even if the British Government can find no higher motive—should justify Mr. Bevin in doing a quick about-face. What is really shocking, however, is that it is necessary for anyone to point out a course of action which any genuine lover of justice, any friend of freedom, should be able to see clearly for himself.

When Israel's admission to the UN comes up before the General Assembly, Mr. Bevin will be on trial before the bar of world justice. The representatives of the United Kingdom will have an opportunity to register their Foreign Secretary's present point of view.

Let us hope he has learned a little from the past. If love of liberty has not led him to right decisions, perhaps self-interest may.

Here's What Is Wrong With the Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. SADOWSKI. Mr. Speaker, today I offer another installment in my answer to the question now being presented to those of us who favor enactment of H. R. 2032, the Thomas-Lesinski bill repealing the Taft-Hartley Act and reenactment of the Wagner Act with certain amendments. The question put to us is "What Is Wrong with the Taft-Hartley Act?"

Of course, a great many things are wrong with it. It was wrong in its motives, which were revenge and punishment, not justice; wrong in its draftsmanship which was perpetrated in secret by a lawyer who was paid $7,500 for the job by the Republican National Committee, according to his own statement in the recent hearings before the House Labor and Education Committee. It was wrong in its provisions which, as I have shown in previous remarks, were loaded against labor and in favor of employers, and it has been wrong in its administration, which in the person of NLRB General Counsel Robert Denham, has been brazenly anti-labor in dozens of instances.

One of those instances was the Perry Norvell Shoe case, wherein the employer used the willing NLRB general counsel to break a strike. Let us see how NLRB General Counsel Denham, acting with all

the speed of a short-order cook, gave the employer what he wanted in the way of a basis for an injunction that was used to break a strike, despite the fact that the employer's charges were later found to be without merit.

Although the NLRB is years behind in its work and steadily falling further behind, the employer in this case, with the cooperation of NLRB General Counsel Denham, completed his blitz against the union between August 27, 1947, when he filed charges against the union, and December 12, 1947, when the NLRB trial examiner found no cause and dismissed the employer's complaint—after the strike had been broken.

To show how the NLRB moves with winged feet to serve employers and drags its feet when a union has filed a complaint against an employer, I invite the Members to examine the chronologies of the Perry Norvell Shoe case and the Dorsey Trailers case, as placed side by side in the record of the House Education and Labor Committee during its hearings on H. R. 2032:

PERRY NORVELL SHOE

August 27, 1947: Employer files charge alleging jurisdictional, strike and breach of contract.

October 6, 1947: Employer consults general counsel, files amended charge alleging coercion and restraint.

October 8, 1947: General counsel issues complaint against union.

October 20, 1947: Company fires all union leaders; notifies strikers that "United States Government has intervened" and orders them to return to work October 23 or be fired.

October 21, 1947: Hearing on complaint.

November 19, 1947: Employer obtains injunction against picketing.

December 12, 1947: Trial examiner finds no violation of contract, no violence, dismisses complaint, but its purpose was accomplished—the strike was broken.

DORSEY TRAILERS

November 15, 1946: Strike voted by Local 773, UAW-CIO, after employer refused to arbitrate grievance.

November 22, 1946: Employer refuses to bargain with union.

November 26, 1946: Union offers to end strike. Employer closes plant.

December 17, 1946: Three thugs, hired by plant superintendent and local chief of police for $50, beat up union's representative.

December 24, 1946: Union files charges of unfair labor practices.

January 6, 1947: Plant reopens. Three union organizers laid off. Employer still refuses to bargain.

April 23, 1947: Union files amended charges.

April 25, 1947: Complaint issues against employer.

June 2, 1947: Hearings on complaint.

September 19, 1947: Trial examiner files intermediate report with NLRB, finding violations.

April 30, 1948: Case not yet assigned by NLRB Washington office.

May 14, 1948: NLRB Chairman hopeful of action in near future. Case now assigned.

November 23, 1948: NLRB finds employer guilty of unfair labor practice in discriminatory lay-off of employees active in union; refusal to bargain on December 31, 1946, and thereafter; participation in assault on union representative. (A more flagrant violation of the act would be difficult to find); and NLRB orders employer to bargain, to reinstate discharged workers, and to pay backwages.

February 10, 1949: Company still refuses to bargain and to reinstate employees with back pay as ordered. Regional NLRB attorney transfers case back to Washington for enforcement.

March 11, 1949: General counsel's office still drafting brief, expecting to file petition in court in 2 or 3 weeks, but court action prior to fall term is now unlikely.

LOCAL 773, DORSEY TRAILERS, INC., ELBA, ALA.

The union was certified as the exclusive bargaining agent in this company on May 16, 1945, and signed a contract September 17, 1945. In the early fall of 1946 the contract was renewed with provision for union shop and check-off.

Shortly after renewal of the contract the company transferred certain employees to new job classifications but refused to pay the wage rates provided for such classifications under the contract. The grievance procedure was employed without satisfactory adjustment. The company refused to arbitrate the grievances.

A strike ensued, on November 19, 1946, but 1 week later the company rejected the offer of the union for the unconditional return of the strikers and shut down the plant until January 6, 1947. During this lockout the employees affected drew their unemployment compensation.

On December 17, 1946, a membership meeting was convened by the president of the local who called the meeting for the purpose of having a vote to determine whether the men in the plant still desired to be represented by the union. Shortly before the meeting convened at 2 p. m., three men accosted on the street and beat up severely with the jaws of a heavy pocket knife the international representative of the union, Jim Harden. These three men, W. L. Dewberry, Joe Collins, and David Burk, had been procured by Fred Harper, police chief of Elba, and Kimmie Dorsey, assistant superintendent of the company, for the sum of $50 to beat up Harden and to tell him to get out of town.

Later in the same afternoon the financial secretary of the union, Ben Logan, was told by the same three men that he would be shot unless he left town before sundown. The financial secretary, the union attorney, and the assistant regional director of the international union reported this threat to the sheriff in Elba, who made no move to make any arrest, but on the contrary stated to the financial secretary: "It has been reported to me that you are carrying a gun around here."

The three who had been procured by the Elba police and the company for this assault later testified in the Labor Board hearings concerning their employment for this purpose, and one of them testified also that he had been asked, but refused, to place a gun in Jim Harden's car, and that they had been offered money by the chief of police to run over Jim Harden with their automobile "even though they had to run up on the sidewalk to get him," and to burn the car of Ben Logan, financial secretary of the union.

Appeals by the union to the attorney general, the State bureau of investigation, the Governor's office, and the FBI produced no action. One of the three thugs appeared in local court, pleaded guilty for himself and one other, and was told that a fine of $104.50 against each of them "had been paid."

Excerpts from the testimony of the three men named above are attached hereto as an exhibit.

Upon the reopening of the plant on January 6, 1947, Jim Nevels, Ben Logan, and Leavy Boutwell, all officers of the local union, were not recalled to work. They have not been rehired, although they have applied for reinstatement.

Complaint issued by the NLRB April 25, 1947, against Dorsey Trailers, Inc., alleging unfair labor practices. Hearings were held in June 1947 at Elba, Ala. The trial examiner's report finds the company guilty of unfair labor practice in the assault upon Jim Harden and in discriminating against Jim Nevels, Ben Logan, and Leavy Boutwell. The case was sent to the National Board in Washington in September 1947, but was not assigned for Board consideration until some time subsequent to April 30, 1948, and prior to May 14, 1948.

In a letter dated May 14, 1948, Paul M. Herzog, Chairman, advised the union, "I can advise you that we have commenced analyzing the transcript of the hearing and the exceptions to the intermediate report in this matter."

Chairman Herzog also stated: "We are hopeful that formal action may be taken in the near future." This was on May 14, 1948. Six months later, on November 22, 1948, 2 years to the day from the employer's first refusal to bargain with the union, the Board issued its decision and order.

The Board found that this respondent locked out its employees illegally for 4 days in May 1946; that it illegally refused to reinstate three union officers on January 6, 1947 because of their leadership in the strike; that the employer illegally refused to bargain with the union on December 31, 1946, and at all times thereafter; and that it illegally participated in the assault on Jim Harden.

The Board ordered the respondent company to cease and desist from discouraging membership in the union, from refusing to bargain with the union, and to reinstate the three union officers with back pay to January 6, 1947, and to reimburse the employees locked out in May 1946.

As of February 10, 1949, the company still refused to comply with the act or the Board's orders. On that date the case was sent into Washington for enforcement by the Office of the General Counsel.

As of March 11, drafting of the brief by the general counsel was reported to be still 2 or 3 weeks from completion, and that court action against the company would not begin sooner than 3 weeks from date. It was held unlikely that the case would be heard before the fall term of court.

It therefore appears probable that the case of Dorsey Trailers, Inc., will be in court or awaiting its turn on the third anniversary of the refusal to bargain and of the slugging of Jim Harden by the company's hired thugs.

During all this time, and up to the present, the company refuses to bargain with the union, refuses even to accept mail from the union, continues to lay off employees without regard to seniority and in violation of the contract, and refuses to process grievances. While seniority employees remain laid off, new employees are hired.

Italy's Former Colonies

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1949

Mr. RODINO. Mr. Speaker, the people of Italy have through the past few years made manifest their loyalty and devotion to the cause of democracy. As a cobelligerent during the last phases of World War II, I witnessed personally the heroic contributions to the war effort by her troops and her citizenry. And, I can personally attest to the fact that despite the hardships the people were undergoing, they rallied with an inspired courage and a renewed moral strength to overthrow the threat of Communist domination.

Italy and her people have a profound respect and admiration for America and a deep-rooted love for the people of America. They know that America is the core of world democracy and the hope of the world in the struggle for peace.

Now two great questions arise—one the trusteeship of Italy's former colonies and the other whether Italy should be admitted to representation in the United Nations. And again Italy looks to America with hopeful appealing eyes, for she believes her requests have great merit.

A group of fine outstanding citizens of America, known as the Columbian Civic Club make the following appeal by resolution:

Whereas the UN Assembly, at its next session, will take under consideration the trusteeship of the former Italian colonies; and

Whereas Italy, by geographical position, tradition, culture, and ideology, and now as a party to the North Atlantic Pact, is a definite part of the alliance of western nations; and

Whereas by her victory at recent national elections, achieved in the face of tremendous communistic opposition. Italy established herself, not only as a democracy but as an impregnable barrier against the forces of communism; and

Whereas Italy's high rate of unemployment, due, in a great measure, to overpopulation, is being used as a basis for communistic propaganda, intended to strain her relations with the other western powers; and

Whereas the development of the African Continent will be a great contributing factor toward the social progress and economic rehabilitation of western Europe; and

Whereas Italy, prompted, not by selffish gain, but to relieve the sad state of her overpopulation, made great contributions in the development of her colonies, by the construction of railroads, airports, and seaports, by converting arid lands into rich farms, by transforming unknown places into industrial centers and, through the application of scientific knowledge, methods, and skills, raising the standard of living far above that which had been enjoyed by the natives and hundreds of thousands of Italians who settled there; and

Whereas by virtue of her enormous efforts and sacrifices in their development, and her proximity to her former colonies, and her technique, and her excessive population and manpower, Italy is deserving and qualified to undertake their further development; and

Whereas the awarding to Italy of the trusteeship of her former colonies will be a great step in her own economic rehabilitation and will further solidify the western nations against the common enemy; and

Whereas Italy is now the only friendly democracy which has not been given membership to the UN; and

Whereas by every action since she threw off the yoke of fascism, and joined forces with America and the other free nations of the world—first against nazism and then against communism—Italy has earned the moral right to be a member of and participate in the UN: Therefore be it

Resolved by the Columbian Civic Club in special meeting assembled, on this 4th day of April 1949, at its headquarters, 12 Hill Street, Newark, N. J., That—

1. Italy has every moral right to the trusteeship of her former colonies.

2. The UN would perform an act of supreme justice by awarding to Italy the trusteeship of her former colonies.

3. Italy's friendship to America and her many contributions toward the culture and way of life now enjoyed by our country has earned for her the sincere support of our delegates to the UN for the trusteeship of her former colonies.

4. Justice also requires that Italy be admitted as a member of the UN, so that her hopes and aspirations for her own future and for the peace of the world may be advocated by her own delegates.

5. That every means consistent with loyalty and propriety be employed to bring to the attention of the elected representatives and other leaders of our country, the moral considerations supporting Italy's claims and qualifications for the trusteeship of her former colonies, and her right to representation in the UN.

6. That a copy of this resolution be sent to His Excellency, Harry S. Truman, President of the United States, in the hope that he will consider it a respectful appeal for his powerful aid by way of accomplishing these purposes and objectives.

Franklin D. Roosevelt

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1949

Mr. KLEIN. Mr. Speaker, 4 years ago today the hush of mourning descended on our land.

President Roosevelt was dead.

Mr. Speaker, I can still hear that funereal silence.

I can hear the weeping of his people, the prayers that arose from high and from low for the repose of his great and gallant soul, the hush of expectancy while his people pondered and mourned.

In my memory I can hear his organ-like voice, I can recall his irresistible charm, his swift mind and swifter emotions.

It is time for us to pause again, not to mourn for the great man who has departed, but to take stock of ourselves. Have we lived up to the great expectations which Franklin D. Roosevelt had of his country and of his party?

Mr. Speaker, we have not.

Our commander in chief died in battle as surely as any soldier; and he left to us who remained behind the completion of his victories.

We have failed.

True, we carried his physical war of armed might to victory. We destroyed Nazi Germany and we destroyed fascist Japan.

But we are surrendering that victory to fear and bigotry. Our ideals of democratic processes are trailing in the dust of unworthy trepidation.

The political, social, and economic progress made possible from 1933 to 1945 by the leadership of Franklin Delano Roosevelt stands as an enduring monument to the memory of one of our greatest Presidents.

But we could build another monument, we should build another monument—a monument of accomplished legislation dear to his heart. We should repeal the Taft-Hartley Act, restore the Wagner Act, pass the anti-lynching and anti-poll-tax bills, enact housing legislation, throw the silly antics being committed in the name of loyalty investigation out the window, pass FEPC, pass the federal aid to education and national health and science bills, and above all rise above the current fears of the future.

Who among us can ever forget the electrifying message of his first inaugural address:

So first of all let me assert my firm belief that the only thing we have to fear is fear itself—nameless, unreasoning, unjustified terror which paralyzes needed efforts to convert retreat into advance.

By those simple and clarion words Franklin D. Roosevelt brought this country out of economic and social and political retreat into a great era of advancement.

Now, we are once more facing backward when we should face forward. The people spoke, last fall; they spoke with a thunderous voice. They spoke for Roosevelt and progress and for peace.

It is time for us, the elected Representatives of the people, Mr. Speaker, to turn our faces to the front and pursue without further delay or wrangling the high ideals of the New Deal; to cease our childish terror of entrenched privilege, and to renew our allegiance to our country.

Let me quote, in conclusion, two short paragraphs from President Roosevelt's election-eve address at Hyde Park, November 4, 1940:

The service of democracy must be something much more than mere lip service.

It is a living thing—a human thing—compounded of brains and muscles and heart and soul. The service of democracy is the birthright of every citizen, the white and the colored; the Protestant, the Catholic, the Jew; the sons and daughters of every country in the world, who make up the people of this land. Democracy is every man and woman who loves freedom and serves the cause of freedom.

Let's Repeal the Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1949

Mr. YOUNG. Mr. Speaker, the gentleman from Michigan [Mr. HOFFMAN] recently issued a challenge on the floor of the House that those who are asking for the repeal of the Taft-Hartley Act, point specifically to those provisions of the Taft-Hartley Act which they think are wrong. I take up his challenge.

The Taft-Hartley law represents the first shameful ugly step toward fascism in this country. Attacks upon labor unions and upon farmers' and consumers' cooperatives were the first step toward fascism in Germany and Italy the same as in America.

If I were a laboring man, instead of a professional man, I would belong to the union of my craft and sit in the front row. For a half century organized labor has battled for and won many of the proudest treasures of our American tradition and heritage. For example, the

40-hour week, workmen's compensation laws, the highest standard of living in the world, to cite but a few.

Labor unions and members of labor unions have helped to maintain the American way of life and those who would, by restrictive legislative enactment, destroy unions would destroy one of the most dynamic and vital forces of our democracy.

The Taft-Hartley law effectively curtails the constitutional rights of workers to be free from employer domination. It restricts the rights of workers to bargain effectively as a group for improved wages and working conditions.

The claim has been made that the Taft-Hartley Act emancipates workingmen and women from the domination of unions and union bosses.

It is somewhat curious that the National Association of Manufacturers has been so interested in protecting the welfare of workers claimed to be oppressed.

Collective bargaining, as we have known it under the Wagner Act, furnished labor and management a wide range of freedom of voice in reaching agreements. Now the Taft-Hartley law has established an entirely new pattern. The freedom of voice is eliminated and the ruling of a third party, the Government, becomes a decided factor. Under such circumstances, it is difficult to build agreements on a foundation of trust and mutual understanding. Labor relations are more likely to become embroiled in a maze of regulations and legal restrictions.

Most employers should now realize, and undoubtedly do realize, that the best way to achieve and maintain industrial peace in this free Nation is through collective bargaining. If our American way of life and free-enterprise system is to be preserved, employers and employees must solve their own problems themselves around the bargaining table.

Advocates of the Taft-Hartley law had much to say regarding high union initiation fees. Many unions provide their members with unemployment benefits, retirement funds, burial benefits and it would seem proper to compel new members, who become immediately eligible to such benefits, to pay an initiation fee to represent their share of what other members have paid. This is not extortion. No one claims our Government should be given the power to determine initiation or entrance fees into a church or a lodge or a fraternity? Why is it necessary to give it such power over union labor affairs?

The Taft-Hartley law requires unions to file very complete data with the Secretary of Labor. It is claimed that corporations are required to give such detailed reports to the Securities and Exchange Commission. I maintain that unions should not be run like corporations. Corporations are operated for private profit. Unions are not. Furthermore, corporations operated for private profit are almost invariably run by a compact, tightly run management group with limited liability. Except at the outset when security issues are floated, stockholders in corporations find it nearly impossible to learn how their corporations are run.

Another objection I voice to this law is the ban against direct contributions to political parties; and the provision of the Taft-Hartley law that unions may make no contributions nor expenditures in connection with any national election. It is well to know that corporations, through their officers, make huge contributions to their political favorites. The Eightieth Congress passed this law sponsored by the senior Member from Ohio of the other body that labor organized and unorganized is bound to oppose. Those who sponsored it seek to prohibit labor unions from publishing the congressional records of candidates in papers, circulars, or pamphlets supported in whole or in part by union dues, prohibit unions from using their funds to rent halls and hold meetings to discuss political candidates and their congressional records and to buy radio time to speak in support or opposition to any candidates. Is this not a threat to our political freedom? Is that not an infringement upon the right of free speech? Is this not a violation of the very first amendment of our Constitution, which provides:

> Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people to assemble, and to petition the Government for redress of grievances.

Under the Taft-Hartley law it is illegal for a union to set up funds for vacations with pay. Yet corporations may provide such vacations for their executives. Do the executives need vacations which those who work are denied?

One of the outstanding examples of the unfairness of the Taft-Hartley law is the method of voting for a union shop. The requirement of the law is that a majority of all eligible employees must vote "yes" in order for the union to win the election. In other words, every worker who fails to vote has his vote counted as a "no" vote. No candidate for office in the United States, no other issue on the ballot, must face such a test.

The Norris-LaGuardia Act, which was a fine forward-looking law, prohibited arbitrary injunctions by judges. This salutary provision was, in effect, repealed by the Taft-Hartley Act. When a judge arbitrarily issues an injunction in a labor controversy he becomes prosecutor, jury, judge, and executioner combined in one person.

In many respects the Taft-Hartley law sets labor and management apart and prevents teamwork and cooperation in the field of collective bargaining. There are more than 30 separate procedural items imposed before the union is entitled to ask an employer to grant a union shop. Many of these items present virtual obstacles to collective bargaining. There are about 20,000,000 American employees working under various kinds of union security contracts. It is obvious what a widespread handicap this restrictive legislation presents. If this law is construed to require elections every year, as appears to be the case, the National Labor Relations Board would require not less than 20,000,000 man-hours each year to conduct the elections with respect to union-shop authorization. Under the Wagner Act, with only 7,000 elections a year, even the simplest kind of representation elections were delayed for periods of 6 months or longer.

President William Green, of the American Federation of Labor, asserted that labor's antagonism to the law at the outset has been intensified by recent developments in the field of labor-management relations which would bear out every charge made against this restrictive and oppressive law. President Green stated that the National Labor Relations Board, a Government agency created to protect the rights of labor, has been perverted by the Taft-Hartley law into a prosecutor of labor unions.

The Taft-Hartley law, according to United States Senator WAYNE MORSE, Republican, of Oregon, a leading liberal, is a "device for making unions so weak they cannot bargain collectively."

We must realize that labor, business, and agriculture are all interdependent and that our whole Nation cannot enjoy stable prosperity unless all groups receive their fair share of the national income. We must establish a decent standard of living as a minimum for every American, and constantly improve the distribution of our production so that all Americans benefit. A great abuse of the past was the fact that judges very frequently and very arbitrarily issued injunctions against workers and without the production of evidence to justify such high-handed proceedings. We should not, in this country, set up one set of standards for unions and another for employers. We should not promote Government interference in labor relations.

To require employees or union officials to furnish anti-Communist affidavits and to fail to make the same requirement of employers is discriminatory legislation which is unfair and should not be tolerated.

Under the Taft-Hartley law the United States Department of Labor has been weakened. The weakening in this Department of the executive branch of the Government has proved a severe blow to the workers. The separation of the Conciliation Service from this department and a change in its basic conception has alienated the confidence of union members. Furthermore, the Wage and Hour Division has been weakened to a point where it cannot make adequate inspections of the violations of the provisions of that law. We should not stand idly by and permit the lowering of the prestige of a once great department of our Government, devoted to the welfare of the laboring men and women the country over.

An example of the chaos caused by the Taft-Hartley law is the situation of the International Typographical Union, one of the greatest and oldest unions. For 75 years this union and its members had little, if any, trouble with employers, had very few strikes, customarily arbitrated differences, negotiated wage scales, and became known as one of the great democratic trade-unions of the world. Yet this situation was entirely disrupted by the Taft-Hartley Act. The union was forbidden to negotiate wage scales, working conditions, and rules in the shop by reason of the Taft-Hartley Act, and

strikes resulted in various parts of the Nation. Union printers previously steadily employed walked the streets jobless. Millions of dollars were lost to both employers and employees as a result of this reactionary law.

The Taft-Hartley Act is an anti-labor law. This is the judgment of Maurice J. Tobin, Secretary of Labor. The Secretary calls attention in particular to one unfair labor practice written into the law, that management can go into court and get an injunction in 24 hours, whereas in the case of an unfair labor practice by management it would take at least 12 to 18 months to get an injunction under the law. The Taft-Hartley Act is slanted against labor and it makes it extremely difficult to organize those twelve to fifteen million unorganized workers in the country who today work for sweatshop wages, and it makes it most difficult for labor unions to preserve the gains they have made and for the unorganized to organize.

Finally, I denounce the Taft-Hartley law for the added reason that Gerald D. Morgan, a Washington lawyer, testified he received $7,500 for his work in drafting the Taft-Hartley law. Of course, the National Association of Manufacturers paid this money.

This must be shocking news to fair-minded citizens who have been defending the Taft-Hartley law. The Republican Eightieth Congress, according to the testimony of this lawyer who received $7,500, abdicated its duties and powers to this lawyer and his employers.

The Republican National Committee paid him his fee and you may depend upon it, the money so paid was paid into the Republican National Committee by interests who secured special privileges in the legislation he drafted. We propose to repeal this act and replace it with a statute fair to workers, employers and the general public.

What Is Wrong With the Taft-Hartley Act?

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. SADOWSKI. Mr. Speaker, in further answer to the question, "What is wrong with the Taft-Hartley Act?" I offer the experience of the Murray Corp., of Detroit, Mich., and the UAW-CIO.

In 1947, immediately upon enactment of the Taft-Hartley Act, that act caused 10 years of peaceful union-management relations to be broken by a strike in the Murray body plant in Detroit over the issue of union liability which had been created by the provisions of the Taft-Hartley Act.

The so-called watchdog committee, created by the Taft-Hartley Act and chaired by former Senator Ball, made a study of the effect of the Taft-Hartley Act upon labor-management relations in the Murray body plant. Reporting in March 1948, the watchdog committee made a report and probably an inadvertent admission regarding the effect of the act, not only in that plant but upon labor-management relations generally.

I quote from page 177 of that report:

> With passage of the Taft-Hartley Act, the company and the union each feels that its relations with the other are on the threshold of a new era.
>
> Efforts of the company to regain exclusive control of what it conceives are the rights of management and to restore a balance and equality to the bargaining relation will be vigorously resisted by the union as a challenge to its power and authority, a threat to its very existence.
>
> There is unquestionably to be a readjustment of the relation between the parties during the next few years, a new concept of the functions of union and management in the industrial economy.
>
> Achievement of this evolutionary cycle without open strife will be a severe test of collective bargaining.

It is not hard to translate this guarded language, and translate it fairly, into an admission that the Taft-Hartley Act is an incitement to industrial warfare. The words I have just quoted are an admission that the Taft-Hartley Act is an attempt to turn the clock back to pre-Wagner Act days, to cancel out the advances of peaceful labor-management relations they did achieve in 10 years of experience under the Wagner Act. Never mind the words "the threshold of a new era." The "new era" is simply a return to the old era of employer intimidation of employees and industrial espionage, terror, violence, and systematic campaigns to weaken and destroy unions so that labor can again be hired on any terms set by the employer.

Fortunately, the American people have refused to permit the Taft-Hartley Act to run its full course, to wreck its full evil effects during a period when, with a more plentiful labor market, antiunion employers would take the opportunities presented by the act to fight unions for the purpose of first weakening and then destroying them. I am confident that this House will shortly adopt the Thomas-Lesinski bill, H. R. 2032, in substantially its present form, without the emasculating amendments which will be offered by those who still believe in Taft-Hartley.

Pacific Coast Shipbuilding

EXTENSION OF REMARKS
OF
HON. JOHN J. ALLEN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1949

Mr. ALLEN of California. Mr. Speaker, I have this day introduced H. R. 4190, a bill to provide for the allocation of shipconstruction contracts in such a manner as to keep alive at strategic points on each of our coasts the skills which are needed in the building of ships, the skills so essential to the national defense in times of emergency.

Almost everyone is familiar with the record of the shipbuilding industry on the Pacific coast during World War II. At one time, approximately one-half of our tonnage was being produced there. Few people, however, realize that it took 4 years, from 1939 to 1943, to train a nucleus of men to revive a dead industry and expand it to a full and efficient production. It was time we could ill afford to take.

Mr. Speaker, at the present time not a single ship is being built on the Pacific coast. There is no immediate prospect for the building of any such ship. The skills which we developed are rapidly being lost. The organizations which built our ships are rapidly disintegrating.

H. R. 4190 sets forth that it is desirable that 150,000 men should be engaged in the shipbuilding industry at all times and that of these at least 60,000 should be occupied on the Atlantic coast, at least 10,000 on the Gulf coast, and at least 30,000 on the Pacific coast. The Maritime Commission would be charged with the responsibility of keeping account of the numbers actually employed from time to time and of allocating additional construction contracts in such a manner as would cure any deficiencies in the number of men employed in each area.

Mr. Speaker, the Merchant Marine Act of 1936 recognizes the necessity to our national defense of having shipbuilding facilities and skills at strategic locations on all coasts. The provisions of that act to accomplish this objective failed to be effective. H. R. 4190 endeavors to amend the Merchant Marine Act of 1936 so that this objective will be reached and the shipbuilding skills, facilities, and organizations will be kept alive and active on all of our coasts and in all of our strategic locations.

Our Glorious Army

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1949

Mr. McCORMACK. Mr. Speaker, I herewith include in my extension of remarks, a splendid article written by Harry H. Schlacht appearing in the Boston Daily Record of April 6, 1949, entitled "Our Glorious Army":

OUR GLORIOUS ARMY
(By Harry H. Schlacht)

Today we salute the armies of America—the heroes of humanity, the soldiers of democracy. They are the guardians of our present. They are the defenders of our future.

Army Day will be marked with celebrations throughout the Nation. Col. Charles F. H. Johnson, a great American, is national chairman. This is an occasion for the rededication of our spirit to national patriotism. This is an occasion for the reconsecration of our might to the principles for which our fighters for freedom have so gallantly fought. They have been great in war. They have been great in peace.

Strong in our faith, stubborn in our resolve, invincible in our liberty, we liberty-loving Americans promise earnestly that the great traditions of our Army will live as long as the breath of life resides within us.

You have never drawn your sword except in honor. You have never sheathed your sword except in victory. You are the sons of those who braved the wilderness at Plymouth Rock, who carried the torch of freedom across the western prairies, whose blood flowed down the slopes of Bunker Hill and whose blood stained the snow at Valley Forge. You are the sons of heroes who crimsoned the sod at Gettysburg, consecrated the apple blossoms at Appomattox and liberated the downtrodden at Santiago. You are the sons of freedom whose blood flooded Flanders fields, and a thousand blazing battlefields in World War I.

Today your glorious story is written in white crosses and unmarked graves, in the sands of Africa and in the fields of France, in the valleys of Holland and in the mountains of Italy, in the hillsides of Germany, in the islands of the Pacific, and in the silent depths of the seven seas.

Our Army has sprung from the loins of a free people, ennobled and inspired by the cause of liberty. We are a peace-loving people. We are a peace-living people. American history records the part played by our valiant soldiers during peacetime—in opening the West for settlement, in mapping unexplored areas, in improving waterways for domestic commerce, in furthering science and industry, in providing assistance to those suffering from disasters.

We are not a nation of warriors. We are not a nation seeking territorial conquest. We have never sought through cowardly and treacherous infiltration to pollute and contaminate the ideological conception of any people. We have never sought to sap the vitality or to undermine the institutions of any government.

The spirit of America is the spirit of peace. It breathes the most diffusive benevolence. It inculcates the sincere good will. It presents for imitation the exercise of the most kind and friendly offices among men.

Let us all today cheer our fighters for freedom. Let us all today crown them with our applause. Let us say to every man in the service today, from private to general, from seaman to admiral, "God bless you all."

ECA Appropriation

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1949

Mr. TABER. Mr. Speaker, last June the House Appropriations Committee presented the appropriation for the ECA. We had spent two full months in the most intensive study of the needs of these foreign countries and knew what we were doing. In other words, the cut that was made was based upon scientific and intense study. At that time, people who knew nothing about it and who had not spent any time at all in studying it, made repeated statements that we had taken the meat ax to the appropriations. And they were able to deceive the Senate and ultimately force through conference a provision to the effect that all of the funds that were provided might be obligated by April 2, 1949. That date has arrived.

In 11 months to March 1, out of $5,050,000,000 of available funds they have actually shipped and paid for $2,900,000,000, leaving $1,300,000,000 yet to ship and a large amount of loan funds. Unquestionably enough to carry the operation along until the 1st of July and probably until August 15 or September 1. Thus it turns out that the Appropriations Committee was right and that they knew what they were doing and that those in the House, the Senate, the State Department, and the ECA who were proceeding without any idea of what they were doing, were wrong.

Instead of the Appropriations Committee taking the meat ax to the ECA appropriations, those who approached their responsibility from a dishonest and an ignorant standpoint were taking the meat ax to the American people. The result has been to encourage extravagance, to promote the complete socialization of industry in western Europe and in England and to keep them busy on projects which are utterly ridiculous and foolish, like building stations on French railroads and electrifying French railroads when there was no need for it, like digging up the streets in Belgian cities, like paying the deficit of operating the socialistic developments in western Europe and in England. If these people would go to work, with all the money that has been given them and all the food that has been given them, they could have already developed an arms-production program which would supply Britain and France and Italy with everything they need to protect themselves from their Communist neighbors.

The real meat of this situation is that those reactionaries who wish to destroy the United States by reckless spending and by promoting inefficiency in the countries across the sea are actually creating a situation where we will have complete socialism in those countries and that can result in nothing but a dictatorship. A dictatorship will result in communism and there will be no free countries left in Europe able to join us when World War III is thrust upon us. The way out of this situation is for us to reduce the amounts that we contribute to these foreign countries down to a point that we can afford to carry, and to a point where we are providing just what is needed rather than enough to promote socialism and communism in these western countries.

No forward looking approach to this problem can be made without the proper consideration of this situation. Those people are isolationists of the worst kind, who have voted for improper and ill-considered expenditures that are absolutely unneeded and that we cannot afford to make. Not only have they no grasp of the foreign situation but not an open-minded approach to it. It is time for America to wake up, to realize its responsibilities to itself and to the world and not to be led astray by idle dreamers and smart alecks.

We should adopt amendments here reducing the amount of these authorizations to something approaching the need. They need no money for the rest of this fiscal year. They do not need $4,000,000,000 for the next fiscal year. We were told a year ago that the Appropriations Committee would go into the question of how much was needed and when the committee did and reported honestly and fairly, we were met with the statement, on the part of those who desire to raid the Treasury, that we had taken the meat ax to it.

In other words, in order to get their authorizations through they stated that it would be reviewed by the Appropriations Committee and when it was reviewed they went back on their pledge to the Congress.

For that reason, I feel that this authorization should be cut at this time while the bill is under consideration for that purpose.

I would support reasonable foreign aid. I cannot support a proposition that is based upon a racket and a raid upon the American people and designed to increase taxes and destroy the economy of our people.

Disposal of Certain Oil and Water-Color Paintings by War Assets Administration

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1949

Mr. HOLIFIELD. Mr. Speaker, on the 6th of April and again on the 13th of April 1948 the Department of State declared surplus to War Assets Administration a total of 117 oil and water-color paintings which had been acquired by the United States Government at a cost of $56,599.87.

Having received such declaration War Assets proceeded to dispose of these paintings in accordance with the provisions of the Surplus Property Act of 1944, as amended.

The individual paintings were offered by the New York regional office and a total of 144 bids were received. These bids were opened at a public meeting and the successful bidders were selected in keeping with priority requirements. Since there were many bids or priority fair value claimants for each picture it was necessary to conduct a drawing among all priority claimants who had indicated a willingness to pay the fair value established by War Assets Administration or who had set a dollar limit at or above the established fair value.

As a result of this public drawing 11 educational institutions, 2 museums, and 1 public library were awarded a total of 112 of the 117 paintings at a discount of 95 percent of the established fair value of each painting on which they had bid.

Since neither bids nor priority claims at fair value were submitted on the remaining five paintings by educational and nonprofit institutions these paintings were awarded to the three highest veteran bidders. The acquisition cost of these five paintings to the United States Government amounted to $1,287.50 and their sale by War Assets Administration brought a return of $1,625.

After allowing the 95-percent discount to the afore-mentioned educational and

nonprofit institutions as provided for under WAA Regulation 14 the cash return received by War Assets Administration for the 117 paintings was $5,526.68. It should be pointed out, however, that if these paintings could have been sold to the highest bidder and not awarded to educational and nonprofit institutions at 95-percent discount of fair value the cash return to the United States Government would have been far greater than the $5,526.68.

Tears and Taxes

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1949

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wall Street Journal of April 8, 1949:

TEARS AND TAXES

The House of Commons was glum. The Chancellor of the Exchequer, a hard man and an honest man, had just presented the bill for the wonderful benefits His Majesty's Government were providing free to the people. The gentlemen gulped.

Said a Liberal member: "Taxation and tears." Said a Laborite: "Appalling." Said a Conservative: "Sobering."

The Labor Government, for whom Chancellor Cripps spoke, has promised the British people many gifts. Several basic industries, such as coal, have been nationalized so that their profits would belong to everybody. Food has been subsidized by the Government so it wouldn't cost so much in the grocery stores. Prices have been regulated. Medical care and other social services have been proffered to all. The full-blown welfare state where nobody has economic worries was just around the corner.

Now they were asked to look at the price of these gifts. It comes high. The profits from the nationalized industries proved largely illusionary. The social services cost more than anybody imagined. The food subsidies are eating the treasury out of house and home. The taxes on the rich, which run up to 97 cents on the dollar, proved not rich enough.

So there can be no reduction in anybody's income taxes. The Government will continue to take 45 percent and upward when taxable income of the worker passes the equivalent of $500. The retail sales taxes, which run up to 100 percent, will not be lowered. The Government will continue to limit wages.

Many taxes are to be raised. The Chancellor gave a list of excise levies, from telephone calls to match boxes, that will be boosted 50 to 100 percent.

British housewives are to have all this and price increases too. Food subsidies are becoming too costly even for a government that levies austerity taxes. Cheese and meat will go up 8 cents a pound; butter another 4 cents; many other items accordingly. It was either that or a still further $2,000,000,000 in taxes.

There was only one note of cheer. Sir Stafford could report that the Government managed to pay off $428,000,000 of its short-term debt. But that had to be done with United States dollars, from the cornucopia of ECA.

We aren't surprised that Sir Stafford's severest critics are his colleagues in the Labor Party. They would prefer not to tot up the cost. They wanted all promises and no pain.

Mayhap the British people will still want their socialized state, but it ought to be clear now that they cannot bring it forth without tears. Or in Sir Stafford's homely aphorism to the House: "We cannot have our cake and eat it."

An Illogical Deletion

EXTENSION OF REMARKS
OF
HON. MARY T. NORTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1949

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star:

AN ILLOGICAL DELETION

Beyond understanding is the action of the House Appropriations Committee in denying the request of the District Sesquicentennial Commission for $1,500,000 with which to carry out its mandate from Congress and the President. That mandate was implicit in the legislation creating the Commission. It was explicit in President Truman's statement to the Commission at its first meeting more than a year ago.

The President, speaking as a member of the Commission, set the pattern for the observance when he declared that the one hundred and fiftieth birthday anniversary of the National Capital is a matter of importance to all the citizens of the United States and a symbol to freedom-loving people everywhere. He called for a celebration next year in keeping with the high importance of the occasion. Under this authority, Commission officials have been making plans for what they hoped would be an adequate, but not extravagant, centennial program. In accordance with Mr. Truman's expressed wishes, all the States have been invited to participate. A national exposition, a pageant and similar events have been planned, with suitable temporary buildings to be erected in West Potomac Park. Only last week New York State appropriated $150,000 to finance its participation and created a 15-member commission to make preparations. Many other States have advised the District group of their desire to take part in the exposition and other phases of the program.

All of these preparations will be futile if Congress should fail to grant funds with which to plan and stage the Washington celebration. The Commission so far has been struggling along on a preliminary grant of $15,000. The Commission had asked for $3,000,000 additional as a minimum appropriation, but the budget provided for only half this amount. And now the House committee, without explanation, has knocked even this sum from the pending deficiency bill. Against the background of legislative and Presidential authorizations for the sesquicentennial, the deletion of the item does not make sense. The Star hopes that the Senate Appropriations Committee will restore the appropriation and that both Houses of Congress will go even further and grant the full amount sought by the Commission. Without adequate funds there can be no adequate observance—and an inadequate one would be a discredit to Washington and the Nation.

Slide Problems of the Panama Canal

EXTENSION OF REMARKS
OF
HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1949

Mr. BLAND. Mr. Speaker, the CONGRESSIONAL RECORD of March 30, 1949, on page A1888, my remarks were extended to include a well-considered discussion, by Capt. H. H. Little, on the Panama Canal sea-level project, published in the March 1949 issue of the proceedings of the American Society of Civil Engineers. That contribution presented a number of the most important features involved, which, I believe, had not been adequately covered in previous discussions, but dealt chiefly with operational and defense matters.

Recently another vital statement has been added to the symposium of views on the indicated subject. It was submitted by Prof. A. Casagrande, and relates to the engineering basis for the sea-level proposal, and is in the form of an elaboration of the "question of safe excavation slopes in the Cucaracha formation"—the geological feature, of sinister fame, and so well known in the building and operation of the Panama Canal. The same issue of the proceedings just named also carries Professor Casagrande's contribution.

This distinguished authority on geological subjects was first officially associated with the Panama Canal problem in 1940—the year after the third locks project was authorized; and again during the course of the studies made under Public law 280, Seventy-ninth Congress—acting as expert consultant in soil mechanics. He therefore speaks from the basis of his scientific background and experience. Currently, therefore, though stating that his previous opinions as to the stability of the Cucaracha slopes, upon which the sea-level plan was largely based, were the best that could be reached on the available evidence and knowledge then obtaining, Professor Casagrande now admits that some of the tacit assumptions upon which those opinions were grounded, are not tenable.

This recent discussion of the slide problem is of peculiar and important significance, as it represents—upon a further study—a vital change of viewpoint on the part of its author, from that held by him at the time of the formulation of the official report under Public Law 280. This present contribution by Professor Casagrande, and that of Captain Little, constitute valuable additions to the store of cumulative knowledge on this general subject, and merit careful study by all concerned.

All of which, I may suggest, further emphasizes the absolute importance of the most thorough, all-embracing, up-to-date, and objective studies before there are made final decisions touching the matter of increased or improved facilities at Panama.

Under leave granted, I am extending, as a part of these remarks, the indicated article by Professor Casagrande.

(By A. Casagrande, M. ASCE, professor of soil mechanics and foundation engineering Graduate School of Engineering, Harvard University, Cambridge, Mass.)

The prompt publication of the results of these comprehensive investigations is an invaluable service to the profession. Much of this work will also prove of great value to other engineering projects. In this discussion the writer wishes to elaborate on the question of safe excavation slopes in the Cucaracha formation, which is one of the topics in the seventh symposium paper, by Messrs. Binger and Thompson. The writer became acquainted with this problem officially in 1940; and, during the subsequent studies under Public Law No. 280 (79th Cong.), he concurred in the conclusions as to the slopes in the Cucaracha formation, believing at the time, and believing still that they are the best that could be reached on the available evidence and knowledge of the behavior of this material. It has been questioned during these investigations whether long-time effects may reduce the shear strength of the Cucaracha as a result of very slow swelling caused by reduction in load. This possibility received recognition in certain proposals by the special engineering division which were briefly as follows:

(a) Install telltale devices to observe movements of the Cucaracha and from these evaluate the action taking place and adopt corrective measures where called for.

(b) Undertake long-range field and laboratory studies of the long-time effects in the Cucaracha formation when project authorization is given by Congress. Until the sea-level canal would be opened to traffic, there would be a period of 10 years or more for such studies.

In the analysis of this problem it seemed agreed by all concerned, including the consultants, that with the proposed slopes forewarning of such slides as might occur would be given by observable evidences which would permit remedial action (unloading), and that it was unlikely that such slides would involve great quantities of material moving with rapidity into the Canal. Even if it is assumed that rapid movement would develop, the wide cross section of the Canal prism would admit a large volume of material without causing closure of the Canal to traffic.

Since the termination of the active studies by the Special Engineering Division in mid-1947, the writer has become increasingly concerned over the lack of knowledge of the long-time effects as they bear ultimately on the stability of the Cucaracha slopes.

Long-time effects influencing stability of slopes in Cucaracha: The Cucaracha clay shale is so difficult to test in the laboratory that the results of strength tests on this material have so far been of limited value. One was obliged, therefore, to rely on empirical rules derived from the behavior of the slopes and on the results of analytical studies of such slopes. Of special importance in these studies was the analysis of a model slope which has not failed, and of another slope which failed in 1907.

In figure 118[1] the cross sections through the Culebra slide areas are shown for three different dates, January 1912, July 1915, and March 1947. When comparing these profiles (together with numerous photographs and a detailed description of the slides contained in the report by the National Academy of Sciences[2] and in unpublished reports of the Panama Canal), one is struck by the extraordinary reduction in effective shear strength (that is, the average shearing resistance along the probable failure surface) which has gradually developed over many years. For example, in January 1912 the east Culebra slope, at the station shown in figure 118, had an effective shear strength of 42.8 pounds per square inch and the west slope, one of 29.9 pounds per square inch. Still higher values can be computed for earlier construction stages, since substantial sliding had already been taking place in 1911. By July 1915 the effective shear strength had dropped to 33.9 pounds per square inch and 18.6 pounds per square inch for the east and west sides, respectively. During the period since 1916 there has been no major slide. In 1940 the writer witnessed very slow movement toward the Canal along the banks of the west side which would indicate that the computed effective strength of 5.77 pounds per square inch would correspond to a factor of safety barely above 1.0. [Diagram omitted.]

Even if it is assumed that the early slides had already affected the clay shale as far as 1,000 feet inside the face of the slopes, it would be remarkable that the effective shear strength of such disturbed material would continue to drop in the course of 35 years quite gradually to about one-fifth or one-sixth of the value that governed the stability of the slopes in January 1912. However, the writer believes that in 1912 at least one-half of the mass bounded by the underlying Culebra and on the east and the west by faults, was not yet disturbed by the slides and that intermittently additional parts of the mass became involved in the movement. If the assumption is made that the strength characteristics of the undisturbed material have not considerably changed with time and that they are equal only to those governing the slopes in January 1912, then it can be shown that the mass should have come to rest with much steeper slopes than those existing today.

Based on the foregoing considerations the writer is forced to conclude that the strength not only of the disturbed material, but also of the undisturbed material, has been gradually and very substantially decreasing in the course of many years as a result of the reduction in normal stresses and the increase in shear stresses.

Many examples could be cited to show that in clay shales and still clays and substantial reduction in load due to excavation is followed by a long period of swelling. Whereas on this project the engineer's concern is the reduction in strength, the volume increase due to swelling is of importance in connection with several large earth-dam projects along the Missouri River where extensive deposits of clay shales form the foundations for the structures. For example, the Bearpaw shale at the Fort Peck spillway has been causing a continuous heaving of the spillway chute pavement with a maximum of about 2 feet since 1936, and the heaving is still progressing.

Whether the slow reduction in strength of the Cucaracha is caused by an ordinary swelling process which follows the theory of consolidation, or whether this reduction is the result of molecular adjustments to the reduced normal and increased shear stresses which gradually weaken the cohesive bonds without significant swelling of the entire mass, is a question that will require much research along the lines already contemplated before it can be answered. Such research should also answer the question whether measurable plastic deformations precede, for a considerable time, any major movement, a likely reaction for such a highly colloidal material. It may well be that by such observations the possibility of additional movements could be determined so far in advance that necessary flattening of a slope could be undertaken in time to prevent a slide. It is conceivable that slopes could be designed to be safe for a period of say, about 20 years, with the intention of flattening when the need is indicated by analysis of the observed deformations. Such a proposal is unorthodox, but it is what (for all practical purposes) has been done since about 1914 on the slopes, apparently without any special difficulty. If such an approach were followed in the design and construction of a new or improved canal, it would result in an earlier completion of the canal and would also have the advantage that additional flattening of slopes would be carried out only if, when, and where needed. The latter advantage is important because the stability characteristics of the Cucaracha seem to vary widely.

Comments on model slope and old slide used as criteria for undisturbed sheer strength: The presence of a layer of relatively strong and previous ash flow in the model slope indicates the possibility that the sequence of various layers is not identical with that in the Culebra slopes. Furthermore, even though the borings indicate layers of the soapy phase of the Cucaracha, it is not the mere presence of this material but its relative position to the stronger phases of the Cucaracha which determines the overall resistance to sliding. It is not difficult to conceive a distribution of strong and weak layers, or of faults and other irregularities, such as to interrupt a continuous shear surface through the soapy phase so effectively that the total resistance of this slope may be much greater than that of the Culebra slopes. If this slope had a real factor of safety very much greater than unity (which is a possibility), there would apparently be no rational basis for using this slope for derivation of those strength characteristics which govern much weaker slopes. However, for the purpose of the recent studies this procedure appeared to be the best that could be followed at that time.

In regard to the 100-foot cut that failed in 1907 with a slope believed to have been three vertical on two horizontal, the writer understands that the stability analysis of the slide checked the design criteria for a factor of safety of unity. If one takes into consideration the probable time effect, one is forced to the conclusion that, to begin with, this slope must have been very much weaker than the model slope which is still standing. In the writer's opinion the tacit assumption that for the purpose of analysis these slopes have similar strength characteristic is not tenable.

The Cucaracha clay-shale is so thoroughly slickensided that the usual differentiation between undisturbed and disturbed material can scarcely apply. Considering the extreme weakness of the finest-grained phases of the Cucaracha, and having in mind the rather rough topography of the Canal Zone, the writer is inclined to believe that some of the Cucaracha which has been affected by slides as a result of the construction of the Canal had been exposed to excessive shear deformations at some previous period and, therefore, must be considered as disturbed material. Whatever the causes of the slickensides, they represent disturbance of the material.

Many of the observed slides have moved slowly, showing only a small reduction in the effective shear strength before and after each movement. This condition is particularly significant when compared to the large difference between the maximum and residual (after failure) strength values obtained in all laboratory tests on Cucaracha because it makes it appear probable that the resistance of the banks to sliding had already the character of residual strength when the cuts were made. (This large difference was found both for the tests in the Canal Zone and for those made in the laboratory at Harvard University in Cambridge, Mass. The latter showed that the residual compressive

[1] Report of the Governor of the Panama Canal Under Public Law No. 280, 79th Cong., 1st sess., annex 4, fig. 6.

[2] Report of the Committee of the National Academy of Sciences on Panama Canal Slides, Memoirs of the National Academy of Sciences, vol. XVII, Washington, D. C., 1924.

strength in all tests on Cucaracha was about one-half of the compressive strength, regardless of the time of loading.) [3] Adding to these observations the important time effects, the writer cannot escape the conclusion that the strength characteristics of the Cucaracha clay-shale are not similar to those that can be expressed by the Coulomb equation with constant c-values and ϕ-values. In addition, the basis on which these values were determined is open to objections.

Conclusion: Having thus critically reviewed the method of arriving at the slopes in the Cucaracha, the writer reiterates that the proposed design curve represents the best that could be accomplished with the tools and the knowledge available. The writer believes that the Special Engineering Division would not have been justified in spending more money on these investigations even if the necessary additional time had been available. However, as soon as construction of a new or improved canal is authorized by Congress, the additional investigations on the stability of slopes in Cucaracha should be carried out with special attention to the time effects. As recommended by the Special Engineering Division, it would then be necessary to explore and study thoroughly the materials in each slope, by additional exploratory borings as excavation of the slope progresses, with the purpose in mind that additional flattening of the slope will be undertaken if it is found that in any place the strength falls below expectations.

In addition, the writer recommends extensive observations on the pore-water pressures in the Cucaracha formation, and on the possibility of reducing these pressures by drainage measures (wells and tunnels) for the purpose of increasing the stability of slopes. The effect of time on the shear strength should be investigated also by long-time laboratory tests. Although this is a very difficult task, every effort should be made to bridge the large gap that now exists between the results of laboratory strength tests and the strength characteristics that govern the stability of slopes in the Cucaracha.

The Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1949

Mr. SADOWSKI. Mr. Speaker, what is wrong with the Taft-Hartley Act?

Let us take the history of labor-management relations between local 61 of the UAW-CIO and the Autopulse Corp., Ludington, Mich. The Autopulse Corp., after 7 years of fairly good labor relations with local 174, UAW-CIO, in Detroit, completely reversed its policy when it moved to Ludington, Mich., and began production in June 1947, the month the Taft-Hartley Act became law.

After firing workers who attended a union meeting November 26, the company vainly attempted to stop payment of unemployment compensation, and mailed vicious letters to each worker's home intended to induce him to vote no union in the representation election, March 30, 1948.

For 10 days prior to the election, plant meetings on company time and property were held, during which time workers were forced to shut off machines, stop work, and listen.

Workers were told that if they voted "no" it would be easy to get paid vacations, they would have steady work, and that if they voted "yes" immediate large lay-offs would follow, employees would be bossed by union big shots, and so forth.

A letter to employees March 19, 1948, from the corporation management contained this threat:

> If you are planning on a home, or have other reasons for wishing a steady income, why vote a mistake you may later regret?

Despite this campaign of attempted intimidation, the UAW-CIO Local 61 won the election and, after a costly strike, negotiated a contract now in effect.

But, to date, 14 months after the 28 employees were fired following attendance at a union meeting by 27 of them, the NLRB has not even set a hearing on the unfair-labor-practice charge.

Contrast this inaction with the short-order service rendered to employers by the Taft-Hartley NLRB general counsel and the Board itself.

By its failure to act in this and other instances of mass firings for union activity, the Taft-Hartley NLRB and the general counsel condone this method of smashing organizing efforts, particularly in the smaller plants.

Private Enterprise and the Western Printing and Lithographing Co.

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, in my own city of Racine, Wis. is located one of this country's leading printing and lithographic establishments. It is the perfect example of private initiative; the will of a few men in the beginning to develop and enlarge an idea by diligence and hard work until today this firm employes 2,116 employees and with branch plants at Poughkeepsie, N. Y., and St. Louis, Mo.

Mr. Speaker, as a kid of 15 I well remember the time and the circumstances when this business came into being back in 1906. I did not then know its founder Mr. E. H. Wadewitz but as a "printers devil," I did know Mr. Roy A. Spencer who joined Mr. Wadewitz in 1907 and these two men were the spark plugs that have generated this great industry. I do not have the space to relate to full and complete story of the success of this business which rose from a very small beginning, after some discouraging setbacks, to a concern of outstanding national reputation. In 1948 this firm had its biggest year with a gain of 30 percent in sales over the previous year.

Mr. Speaker, the Western Printing & Lithographing Co. has maintained the loyalty of its employees down through the years and this year at least 50 new members will become eligible for the 20-year club out of 2,116 employees.

At this point, Mr. Speaker, I will include a part of Mr. Wadewitz' annual report to the stockholders:

I hope that as the years go by and succeeding generations take hold of Western, that the principle of sharing profits with employees and giving generously to worthy charities will always rank of equal importance with the principle of paying dividends to stockholders.

It is interesting to all Westerners to take a look at the distribution of the Western sales dollars for the year 1948. This shows what actually happened to every dollar that the company collected during the year as a result of sales of its products and services to its customers.

The biggest portion of the dollar, or 69.9 percent went for wages and material. In other words, the company paid out almost 70 percent of the moneys it received for wages to the people who produced its work and for paper, ink, supplies, and material with which to produce that work. Expenses of doing business was the next biggest item, taking 7.2 percent of the sales dollar. This item was down from last year, in spite of the rising cost of doing business, due to the wider distribution of expenses over increasing sales. Next in line was taxes, which were higher than ever before in history in actual dollars and cents and took 6.7 percent of the sales dollar. Next in line was employee security and welfare (which included profit-sharing for production employees only, retirement, life insurance, hospitalization, and surgical insurance and other benefits) and this amounted to 4.9 percent of the sales dollar. Preferred- and common-stock dividends to stockholders during the year amounted to 1.8 percent of the dollar. Another 4.8 percent of the dollar, in the form of undivided surplus, was plowed back into the business as a necessity to finance our record 1948 sales. Revenue stamps for playing cards, which are purchased from the United States Government, represented 1.9 percent of the sales dollar. A reserve for contingencies, which is part of every intelligent business operation, required 1.6 percent of the sales dollar. And, finally, depreciation, which must always be charged off on aging equipment and facilities, took another 1.2 percent of every sales dollars.

Add all of these things together and you get 100 percent, or a full accounting of where and how every sales dollar received by the company was distributed in 1948. It indicates a fair return from the investment of the stockholders and a liberal share in profits, benefits and security for every Westerner.

Naturally, it takes a lot more sales in this day and age to produce the same dollar profits that were gained in former years. Material, labor, taxes, and expenses—the four biggest factors in the sales dollar—have all increased to a considerable degree and we must therefore promote and finance greater sales and produce more efficient work in order to assure even a modest profit in which all can share.

With special reference to the fact that employee benefits and security absorbed 4.9 percent of the sales dollar, as compared to only 1.8 percent paid out in the form of all dividends to stockholders, President Wadewitz had this to say:

"The question has often been asked me, 'Why doesn't the company pay larger cash dividends to stockholders, which are much less than the voluntary payments it makes to or for the benefit of employees, and the relatively large donations that are made each year by the company to charities and community welfare?'

"In 1948, we paid out 1.8 percent of our sales dollar in dividends. Voluntary payments to or for the benefit of employees amounted to considerably more than this figure. Donations were also a sizable item. I might go further than the voluntary payments referred to in the above question and include paid vacations and paid holidays, social security and unemployment insurance, which total a still higher sum. All told, in these categories, we spend almost three times as much as the amount we distribute in cash dividends to stockholders.

"I could even make the question stronger, by calling attention to the fact that last year we plowed back into the business earnings of 4.8 percent of our sales dollar, over and above dividends. I am sure, however, that we can all agree that profits left in the business make for job security and better jobs and more jobs, just as much as they add security and value to the stockholders' investment."

Here, then, is reiterated one of the effective long-term policies of the company, to plow back into the business a reasonable portion of the earnings each year, to help finance new sales and to assure production of more and better goods, in order to still return a fair profit. Here, too, is the advantage of the Western stockholder plan, whereby all stock in the company is held only by the employees or their nominees, with no individual owning more than 6 percent of the total stock. At the present time, there are 546 Western stockholders and they are all people with a direct interest in the company and the individual success of its employee personnel. They endorse the policy of putting earnings back into the business, to make all jobs better and more secure and to help spread the share of profits among the greatest possible number.

In commenting further on these policies, E. H. Wadewitz remarked: "Others may not agree with what we do here at Western but I feel that 41 years of steady growth is sufficient proof of the soundness of our policy. I feel that everything we do for our employees and for the cities in which we are located is all a part of our great American free-enterprise system as practiced at Western. I can only say to you stockholders, that the more of our profits we share with employees, the less Washington will impose on us. A sure return from bureaucracy to democracy would be provided by more companies doing the same thing as we do here. When the workman ceases to look to the politician for security, then we will be on our way back to the principles on which this country was built."

If we may be permitted a commentary at this point, we would say that in these remarks, the president of our company expresses abiding faith in the integrity of the type of American people who bear the name of Westerners. He places complete confidence in their ability to understand and appreciate the fact that in order to earn more, we must produce more and that there can be no sharing of profits unless profits are produced through conscientious work and efficient production. In this connection, Mr. Wadewitz added a note of caution:

"All of our ability and all our energies will be needed this year to meet the impact of an eager, jealous competition. As we grow bigger, more and more eyes look enviously at our markets and our products. So, to maintain our sales, job security for our employees, to protect our capital, and to assure the payments of dividends to stockholders, we must devote our unceasing energies to keeping Western on top."

This same thought was expressed by Messrs. Elmer G. Voigt, of Racine; Harold D. Spencer, of Poughkeepsie; and John M. Wolff, of St. Louis, each of whom addressed the stockholders' meeting at Racine. They emphasized the point that a real challenge was now presented to company employees in attempting to better the fine record of 1948 and each predicted a return to a strongly competitive condition in the industry which will call for the greatest ingenuity, hard work, and efficient production results in the future. They were confident, however, that proper teamwork, coupled with new equipment and facilities to produce a greater sales volume, would help the company to maintain its position of prominence and success.

E. H. Wadewitz, the man who started the Western organization on its way in a little basement print shop 41 years ago and whose social thinking throughout those 41 years has had so much to do with the establishment of present-day policies of the company, concluded his report on this optimistic note:

"I am happy to have been a part of this fine organization for so many years, to have played a part in its growth and to feel that its prosperity is being shared not only by a great body of employee stockholders but by every last employee of the company who has been with us for 6 months or more. I believe in Western—in Western policies—and in Western employees and stockholders. I believe we will set new records in 1949."

Mr. Speaker, here we have the American success story. Men with vision are directing this great industry; men who have been willing to share their success with their employees; men who have planned to provide security for their workers within the Western organization; men who are plowing back into the business a lot of money in order to maintain the leadership of this firm in its particular field; men above all who believe in the United States of America and the private enterprise system, the best on the face of this earth. Our hats are off to Western.

Remember Jefferson?

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1949

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to submit a quotation from Thomas Jefferson, as follows:

I place economy among the first and most important virtues, and public debt as the greatest of dangers. To preserve our independence, we must not let our rulers load us with perpetual debt. We must make our choice between economy and liberty, or profusion and servitude. If we can prevent the Government from wasting the labors of the people under the pretense of caring for them, they will be happy. The same prudence which in private life would forbid our paying our money for unexplained projects, forbids it in the disposition of public money.

Queensview Housing Project

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1949

Mr. JAVITS. Mr. Speaker, I append hereto from the New York Post Home News of Monday, March 7, 1949, an analysis of the Queensview housing project describing the new plan used in this enterprise. There is a vast need in the middle-income brackets for housing. Those of us who have been working for federally assisted public housing know that a balanced program must be carried out. The Queensview plan is an outstanding example of non-profit-cooperative housing to be built by private enterprise and a great service to families of moderate income who are too often neglected in today's building plans. It will be recalled that in the housing bill which I am sponsoring together with nine other Members of the House, H. R. 1973, an important title provides for direct loans of $3,000,000,000 to just such projects as this making even more of them possible.

NEW QUEENS CO-OP PROJECT WILL HOUSE 728 FAMILIES

(By Charles Abrams)

Here is an important announcement for those who need housing.

Fourteen eminent citizens have undertaken to build a cooperative housing project for 728 families. It is known as Queensview and I consider it one of the best housing opportunities in the New York City area. The tax exemption benefit should be more than enough to offset current high building costs and make the investment sound.

About 673 of the units are available. Applications will be closed after all the apartments have been sold, so I advise early investigation.

The sponsoring citizens are Henry Morgenthau, Jr., Howard C. Sheperd, president of the National City Bank, David Sarnoff of RCA, Bernard F. Gimbel, Gerard Swope, Mrs. Yorke Allen, Howard S. Cullman, Albert D. Lasker, the Very Reverend E. Roberts Moore, Louis H. Pink, Beardsley Ruml, G. Howland Shaw, Mrs. Mary K. Simkhovitch, and Thomas J. Watson, Jr., of International Business Machines. All are people experienced in housing or business. Alfred Rheinstein, former chairman of the city housing authority, may build the project.

The location is across the East River from about Seventy-ninth Street, 1 mile north of the Queensborough Bridge. The site is on 10¼ acres bounded by Thirty-third Road, Crescent Street, Thirty-fourth Avenue, and Twenty-first Street. Nearby will be one of the new self-supporting public housing projects, so that a whole new neighborhood of 16 square blocks will have been created when improvements are completed. The project will be 5 minutes from the IRT and BMT stations and 15 minutes in travel time from Manhattan.

The apartments will consist of 3½, 4½, and 5½ room units, each with 5 to 6 closets. The living room will be about 14 by 12½; the master bedroom about 11.1 by 15.9, another bedroom about 12 by 12, and the kitchen about 7 by 11. There will be two self-service elevators in each of the 14 buildings, community rooms, playgrounds, parking space, gardens and landscaping. The buildings

will be 14 stories each, built on only 13 percent of the site.

The average carrying charges and cash investment for the apartments are:

	3½ rooms (average)	4½ rooms (average)	5½ rooms (average)
Monthly carrying charges (rent)	$66	$76	$86
Development cost per apartment	9,550	12,100	14,550
Less mortgage allocation per apartment	7,450	9,550	11,650
Cash investment per apartment	2,100	2,550	2,900

The monthly carrying charges include gas and electricity, heat and hot water, all repairs, reserves, insurance, interest and amortization of the mortgage, and other contingencies, except redecoration and the replacement of ranges and refrigerators.

If you cannot afford to make the whole down payment at once, the National City Bank will make a 50-percent personal loan of the cash required, at 3.8 percent interest.

You get your money back if you change your mind before construction begins. Five hundred dollars must accompany each application together with $2.50 for credit investigation.

Occupancy will be ready about spring 1950.

Preference will be given first to veterans and persons with average annual incomes of $5,500 and under, but if you earn up to $6,950 you are eligible. In all other respects there is no discrimination of any kind.

The low charges are possible because:

1. New York City is giving a 25-year tax exemption on the improvements.

2. The Mutual Life Insurance Co. loan of $6,406,000 on the property is at 4 percent interest.

3. The sponsors are giving their services free.

4. The project will be conducted on a nonprofit basis.

5. The site will be acquired from the city at cost.

Applications are now being accepted at the offices of the Joint Queensview Housing Enterprise, 362 Fifth Avenue, Wisconsin 7-0500.

Is the Administration Fighting Communism?

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, after saving Russia during the war and then putting Stalin on his feet, the Nation was told that he and communism were planning to enslave the world; hence, for our own national security, we must "contain" communism and its influence, as personified by Stalin, within Russia and those countries now dominated by it.

In the effort to rehabilitate the war-torn countries and enable them to oppose communism, we gave or loaned them $23,783,000,000.

The ERP countries cover 23,162,999 square miles. In our country and its possessions there are 3,619,623 square miles—a ratio of 6⅓ to 1.

We and our possessions have a population of 142,098,454. The ERP countries have a population of 937,930,450, or 6½ to our 1.

If you are interested in comparing the per capita debt burden, as of 1946, of the individual in the countries to which we have extended aid, with our own, just note that the average debt burden upon each foreigner is $695, while your and my share of our debt is $1,830.

But that is not the whole story. To fight communism abroad and for additional Marshall plan money, the Congress is now appropriating another $5,550,000,000; will be asked for another one and one-half or two billion dollars to arm western Europe in support of the Atlantic Pact, which, from a practical standpoint, binds us to take part in any war in which any 1 of the 12 signatory nations becomes involved; and, for our own national defense, we are about to appropriate $15,000,000,000 for this year.

On top of the foregoing, veterans are asking for pensions; the present existing veterans' program may cost as much as $7,000,000,000 a year. Federal employees are insisting upon, and many of them getting, an increase in pay.

The national debt today exceeds $252,000,000,000, with an interest charge in excess of $5,000,000,000 a year.

And just remember that the national income is bound to be smaller unless the tax rate is increased, new taxes imposed. And who wants that?

IS THERE A BOTTOM TO THE BARREL?

A limit to what can be raised by taxation? Are we to continue to overspend until we wreck ourselves, create unemployment and bread lines?

One of the President's economic advisers is warning, as does Capt. Eddie Rickenbacker, that we may spread ourselves so thin that we may in the end be unable to defend ourselves.

I vote to end this ruinous spending program, but am in the minority, as the record will show.

THE DOCTOR JEKYLL SIDE OF THE PICTURE

But the foregoing is the less unpleasant side of the picture.

During the past week, a Washington paper, quoting Representative STEFAN, of Nebraska, as authority, stated that 88 undesirable employees of the State Department were released as the result of investigations carried on by a Congressional Committee of the Eightieth Congress, but that some have been rehired.

Last week, the same paper revealed that numerous former employees of the State Department, fired for loyalty reasons, are now on the United Nations Educational, Scientific, and Cultural Organization pay roll, which, it charged, and I quote, "has become a haven for Communists and their sympathizers booted out of United States Government jobs." That agency gets $3,000,000 annually of your tax money. Two of these former employees now receive a salary of $10,000 each.

The same publication further charged that 108 employees of the State Department had been ousted after being exposed as bad security risks. Twelve are now on the UNESCO pay roll.

But even worse, if that is possible, is the situation disclosed by the investigation of Robert E. Lee, former FBI official, who was in charge of investigations for a committee of the Eightieth Congress. As the result of his investigations, the State Department was forced to fire 64 homosexuals during the past year as bad security risks.

The Democratic Congress fired Lee's staff. The Republican minority has retained him, but, being in the minority, will have difficulty in giving him adequate assistance.

Why, when we spend billions abroad to "contain" communism; when we spend other billions because we fear Communists will overcome us; why, with a third world war by Communists threatening, did the last, and why does the present, administration furnish a harbor of refuge for Communists and homosexuals? If there is an answer, I do not know it.

Why court financial disaster; strip ourselves of national resources, send our youth to form a battle line on the eastern boundary of western Germany, committing ourselves to every war in Europe, while Communists and perverts find shelter and opportunity for treasonable action in the Federal Government?

God help us to prevent official political Washington becoming, if it is not already, another Sodom and Gomorrah.

Can Our Taxpayers Afford Such Waste?

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend, I am inserting an article published in the Sun, Baltimore, on Tuesday, April 12, 1949, as follows:

HOOVER SAYS SERVICES PAD COST FIGURES—NOTES STARTLING WASTE, ASSERTS FUND REQUESTS ARE MILLIONS TOO HIGH

WASHINGTON, April 11.—Herbert Hoover testified today that the Army, Navy and Air Force were padding their money requests to Congress by millions of dollars. He also accused them of startling waste and extravagance.

The former President, appearing before the Senate Armed Services Committee, cited an Air Force request for funds to build 910 family homes in Alaska costing $58,350 each.

He noted the Army wanted $100,000 each to modernize 102 M-26 tanks it doesn't even have.

Then, he said, there was a $30,000,000 clerical error in requesting $39,000,000 for 69 National Guard 155-millimeter howitzers which would actually cost only $9,000,000.

GOOD BOOKKEEPING URGED

And he submitted a report which declared:

"Applications (in the military budget) for hundreds of millions of dollars to retool industry should be examined with the greatest skepticism."

Hoover told the committee that what the Department of National Defense needed was a good bookkeeping system.

"At the present time," he said, "nobody can tell the cost of any particular function in the armed services."

Robert Patterson, former Secretary of War, following Hoover in the witness chair, told the Senators:

"It is no exaggeration to say that in World War II the cost in duplication, competition and disjointed effort directly traceable to the two-headed (Army-Navy) system ran to billions and billions."

BYRD CHARGES WASTE

Much of the public debt, Patterson said, is due to that division of authority and responsibility between the War Department and the Navy Department.

Hoover's testimony prompted Senator Byrd (Democrat, Virginia) to comment:

"The entire Military Establishment is permeated with waste and inefficiency."

But Hoover replied:

"Well, no one man is to blame, Senator. It's just that the system has grown up through the years until it's completely antiquated."

BYRD and Senator KNOWLAND (Republican, California) served notice they would demand a thorough overhauling of military budget practices after Hoover told the committee:

"It is difficult to escape the conclusion that some padding has been a fairly general practice."

UNITED STATES MIGHT LIVE ON "FAT"

The Senate group is studying changes in the law which combined the Army, Navy, and Air Force under a single department. Hoover was called to testify in the light of his knowledge as Chairman of the Hoover Commission on Government Reorganization.

In submitting a report by one of his task forces, Hoover said the Federal Government now had about $27,000,000,000 in personal property, and he observed:

"We might be able to live on our fat for a while if we had it cataloged and knew where it was."

Among other things, the task force report said:

LACK ACCURATE KNOWLEDGE

"Our military budget system has broken down.

"Congress allocates billions without accurate knowledge as to why they are necessary and what they are being used for.

"The Army's original budgetary requests for 1950 included an item of $108,280,859 for 'tropical worsted uniforms,' which would purchase 838,000 uniforms at $129 apiece—enough for all the enlisted men in the Army, and then some.

"There was also an item of $213,519,000 for stock-piling of clothing and personal equipage, which would seem in part unnecessary unless vast amounts of surplus Army clothing accumulated during the war have been lost or dissipated."

The Hoover Commission urged appointment of three Assistant Secretaries of Defense to wipe out waste and inefficiency.

Voting Citizens' Business

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1949

Mr. BARRETT of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the March 28, 1949, issue of the Philadelphia Inquirer.

CITIZENS' BUSINESS

When asked a few days ago whether he planned to return to politics, Jim Farley said:

"I've been interested in politics most of my life, and will be interested in it all of my life."

A great many good citizens worry a lot about the kind of men that are in politics. Maybe they should worry about those who aren't.

When nearly half the eligibles fail to vote and the President elected is short of 50 percent of those who do vote, the mandate he receives is less positive less impressive and less significant of the will of the people than a republic under universal suffrage is entitled to demand.

It is not necessary to agree with Jim Farley in political views to say that he is playing the part of a good citizen by taking an abiding and a permanent interest in politics.

The citizen who is indifferent to issues, and lets election day slide by without going to the polls, isn't entitled to much sympathy if the election result doesn't suit him, or is even positively injurious to him. He left unheeded the call to speak out now or forever after hold his peace when the result of any particular election in which he played slacker is being discussed.

Voting is citizens' business.

Extension of European Recovery Program

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1949

Mr. POWELL. Mr. Speaker, when the Economic Cooperation Act came before us during the last session of Congress I voted against it. It was a tough decision to make because my natural Christian instincts applaud any effort to alleviate misery and suffering. As some of you may know, the church of which I am the minister in New York City spends a large percentage of its budget annually for just that purpose—to alleviate misery and suffering. Back in the dismal thirties when people of this Nation were forced to walk through the valley of the shadow of a depression, it was my happy privilege to serve as the first director of relief for the community of Harlem, serving under Seward Prosser. I look back on the aftermath of World War I and for me the great thing that came out of that was the titanic job performed by Herbert Hoover in heading the Commission which rebuilt and fed Europe back to its feet. The American Friends Service Committee has quietly, in its Quaker way through the years, performed a monumental task in feeding the peoples of devastated areas. Nevertheless, I was against the Marshall plan in the Eightieth Congress and I must be against it now under the name of the Economic Cooperation Act.

As long as there is a Marshall plan there can be no successful United Nations Organization. For me, the crying need of our generation is a successful United Nations Organization. The Marshall plan is not a peace effort. The Marshall plan is a plan to build up the favored peoples of Europe, not for peace but to get them on their feet economically as quickly as possible so that they will be ready for another war and, we hope, as our allies. It also is a plan aimed at bolstering up our slipping domestic economy and again we hope by waving the flag of internationalism to cover up our serious sins of omission and commission on the home front.

There is absolutely no reason why the same ostensible objective of the ECA could not be accomplished through the United Nations Organization or if not, then through some organization such as the old Hoover Commission completely devoid of any of the overtones of warmongering.

As regards the problem of reconstructing in addition to feeding, may I ask what's happened to the World Bank? The World Bank was set up specifically for the exact purpose of nations to borrow money to reconstruct their economy. Mr. John J. McCloy sits in his office twiddling his thumbs with nothing to do while at his fingertips there are millions of dollars to lend. Just why then has this formula been forced upon us, and I use the word "forced" advisedly. Because of the pressure of hysteria built up by the instruments to control public opinion the Marshall plan has been forced upon not only the American people, but upon this Congress. I repeat, why? If the reconstruction of Europe had taken place through the processes of the World Bank, the money could not be controlled. That is, we could not be forcing upon Europe the surplus commodities of the United States, whether they wanted them or not; and we would not be putting our American capitalists in a position where they could bargain with European capitalists and enter into world monopoly and cartel arrangements.

I admit that the present bill before us, H. R. 3748, to amend the Economic Cooperation Act of 1948, is not as bad a package as was presented to us a year ago on March 31, and then again for conference report on April 2. The iniquitous titles 2, 3, and 4 are not in this. There is no longer any question of aid to Greece, Turkey, and China, those repudiated and undemocratic countries. The question of military is not stated in the final act as it was when titles 3 and 4 were a part of it. Nevertheless, military aid is very specifically mentioned in the committee report of this Congress on page 19 as part of our general budget on international affairs and finance.

Now I am a pacifist and I must be against grouping the feeding and the reconstruction of Europe with military aid. So I am offering an amendment to make sure that there is no military aid in our European recovery program. I will go so far as to say that if this amendment is adopted, and it should be, even though I am not fully satisfied with the ECA, I will, nevertheless, vote for it. A year ago the war mongerers needed the one-package bill which included military aid. Today there is no need for that. We have thrown the Constitution out of the

window, we have signed the North Atlantic Pact and now we are not only entering into military alliance with Europe, we are not only going to take our already bankrupt Government and arm Europe but we have also taken away from the hands of the regularly designated body, the United States Senate, the power to declare war. The hour has arrived therefore for the good of America and European recovery to separate specifically the Marshall plan from military aid. If this is done, the atmosphere will be cleared up. The public will know that we really intend with this act to reconstruct Europe not reequip it for our battlefield.

In passing may I say that when the military-services budget comes before us it is my purpose to introduce an amendment which will state that none of the money for our military service shall go toward arming other nations.

Finally, I would like to say that somewhere along the line, since March 24, 1948, ECA has been cleaned up. I introduced an amendment then to strike out part of ECA which put America into the business of colonialism. It was defeated in the House, but in the final bill now that phrase is deleted (p. 89, sec. 115, subpar. 9) which would have put America into the business of colonialism.

It is also my purpose today to introduce an amendment which will prevent the Administrator of ECA from sending to Europe second-class goods—an amendment which will say that he can buy goods only where no discrimination is practiced. One such amendment was introduced a few weeks ago in connection with our Air Force bill and was defeated. Mark you, ladies and gentlemen, the very next day an order went down the line from the Pentagon instructing all purchasers not to buy any goods for the United States armed forces which came from individuals, firms, corporations, or partnerships that discriminated in employment. Now if we can do that for our armed forces, why should we not, above all, do that for goods which we are sending to Europe? Why send contaminated, damaged, second-class goods to Europe especially when we are striving to set up in Europe the maximum respect for our way of life. Any goods produced in a Jim-Crow factory are second class. If we are going to have a bipartisan foreign policy, we must stop our bipartisan Jim-Crow policy. They cannot succeed together.

Economic Chumps Act, American Variety

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1949

Mr. GROSS. Mr. Speaker, I opposed and voted against the so-called Economic Cooperation Act for several reasons, the most important being the refusal of proponents to effect a substantial reduction in this form of lavishing money on foreign countries.

This program constitutes one of the heaviest spending items in our budget and is therefore one of the heavy burdens on already over-burdened American taxpayers. There can be no question in the mind of any Member of Congress that economic conditions in this country do not justify a continuation of spending to the extent that we have indulged ourselves in recent years.

The admitted progress toward economic recovery, on the part of most of the nations now covered by the ECA tenet, made it a sane and reasonable undertaking to reduce the dollar aid to foreign lands and thus reduce the strain on the taxpayers of this Nation, whose ability to pay the bills, both at home and abroad, is steadily slipping. Amendments that would have pared even a comparatively meager $500,000,000 were beaten down—the American taxpayer must continue to pay through the nose.

Among other fair and reasonable amendments was one which would have provided that 20 percent of the moneys expended under this program must, in time, be returned to this country. But the passion for making multibillion dollar gifts blocked even this effort to introduce some semblance of business reason into this program.

Also rejected was an amendment that had for its purpose the withholding of aid to the Netherlands Government unless it halted the continuing rape and destruction of the Indonesian Republic. One member of the Foreign Affairs Committee, opposing this amendment, advanced the specious argument that fewer Indonesians had been slaughtered by the Dutch than American Indians had been killed in taking over the territory now comprising the United States. In other words, it is perfectly justifiable for the pot to call the kettle black if it suits the purpose of giving away money in Congress in the year 1949.

Mr. Speaker, it would be interesting to know how many American dollars, handed to foreign countries, are being used to finance the teas, assorted social brawls, and propaganda mills that are being operated in and around the various foreign embassies in Washington, particularly those which are the beneficiaries of the multibillion dollar handouts.

There is another little item in the so-called Economic Cooperation Act, 1949 style, which deserves at least passing attention. This provides for a guaranty to American investors in foreign countries that they will suffer no monetary loss on investments, earnings, or profits. It appears that an American dollar invested abroad and the owner of that dollar is destined to enjoy financial privileges not accorded to citizens who have money for investment purposes in this country.

Mr. Speaker, we have yet to appropriate billions of dollars for the military defense of this country and for other operations of this Government. I intend to support every reasonable request of the armed forces in providing the weapons and supplies for the defense of this country. Therein lies our strength and the fulfillment of our first duty to the American people insofar as our foreign policy is concerned.

In terms of dollars, we should have authorized a substantially reduced ECA program that would have provided true, humanitarian relief and not a foreign WPA which will never have an end as long as tax dollars can be gouged from the American people.

Yes, Mr. Speaker, Winston Churchill, the great deviser of booby traps, has been eminently successful in his recent venture to these shores. Despite the much publicized austerity program, Churchill showed no signs of anemia. He looked well and he has done very well indeed, not only in behalf of his socialistic government—the handmaiden of communism—but in behalf of the other countries of Europe, whose markets the British will now proceed to capture.

And the gift of nearly another billion dollars to the British should enable that Government to make additional loans in the millions of dollars to Russia as well as expand the sale of locomotives, steel, and jet engines to the rulers of the Kremlin.

The Economic Cooperation Act, as approved by the House of Representatives, is misnamed. It should be labeled "Economic Chumps Act, American Variety."

United States Treasury and United States Markets Wide Open to Britain

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1949

Mr. REED of New York. Mr. Speaker, now that our internationalists, interventionists, and one worlders have opened the Treasury to foreign nations, the next step is to open our markets to Britain. Under leave to extend heretofore granted I am inserting an article which appeared in the Sun, Baltimore, Tuesday morning, April 12, 1949, the title of the article is "United States Markets Lure Britain."

UNITED STATES MARKETS LURE BRITAIN—LONDON PLANS ALL-OUT SALES CAMPAIGN TO BOOST EXPORTS

(By Gerald Griffin)

LONDON, April 11.—Britain hopes to export $720,000,000 worth of goods to the United States and Canada in 1950, an increase of 30 percent over last year's total.

It proposes to tackle the job in an all-out sales drive, dividing the United States into four regions under trade consuls and business advisers and making use of marketing research and publicity campaigns.

TURNS FROM LUXURY MARKET

Instead of relying primarily on high-priced goods for the luxury market, as is the tendency now in many instances, Britain wants to reach wider sections of the American population who will buy lower-

priced products which still are of good quality.

These plans were outlined today to the House of Commons by Harold Wilson, president of the Board of Trade, who said the problem of exports to North America dominated all others this year.

Although the dollar gap has been narrowed, and is being met now by Marshall aid, he emphasized that in the next 2 or 3 years Britain must greatly increase exports to Canada and the United States if it is to become independent of European recovery program assistance without lowering its standard of living.

Wilson estimated that when the Marshall plan ends Britain should be exporting to Canada and the United States at a rate of £185,000,000 a year, based on mid-1948 prices. This is over 30 percent more than last year's total and more than double the 1947 figure, he noted.

NEEDED TO PAY FOR IMPORTS

Such a total is necessary if Britain is to be able to pay for American and Canadian products, such as wheat, cotton, and tobacco, which it needs to maintain its economy.

"The task of expanding our exports to North America," Wilson said, "is one of the greatest challenges in all our history to the merchant adventuring spirit of our traders."

"In detailing what the Government proposes to do," Wilson said, "regional offices for superintending trade consuls are being set up in New York, New Orleans, Chicago, and San Francisco."

"An experienced businessman," he said, "will be appointed as trade adviser to the trade consul in each region, and facilities will be provided for these officials to travel freely."

NECESSARY TO SPEND DOLLARS

Wilson said, "The Government recognized that it will be necessary to spend dollars in America to launch the vigorous selling methods and promised that dollar exchange will be allowed for such activities as market research, advertising, establishment of agencies, and the establishment of selling and servicing organizations.

"Financial help will be given to British exporters through the Government export credits guaranty department," he continued.

"We recognize," he remarked, "genuine risks and obstacles of the North American market have hitherto been too great for many exporters to pursue what would otherwise seem to them worth while new ventures.

"Therefore we encourage all exporters out to promote sales to North America, who are faced with special difficulties of this nature, to approach the export credits guaranty department for appropriate facilities."

COMPETITION RECOGNIZED

Largely because of competition offered by American goods it is recognized here that American markets are tough to penetrate, but it is emphasized on the other hand that no licensing restrictions are imposed on imports, that factors which count are price, quality, and service, and that British exports could be substantially increased and still would amount to only a small percentage of the total American consumption.

Wilson also announced to the House of Commons that British exports in March totaled £159,900,000, a new high mark which he placed at 162 percent of the 1938 level.

Imports also set a record in March, reflecting in part greater imports of industrial goods and materials, and the gap in visible trade accounts for the month was greater than in January and February.

Thomas Jefferson's Doctrine of Individual Freedom and Private Enterprise Honored

EXTENSION OF REMARKS
OF
HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1949

Mr. H. CARL. ANDERSEN. Mr. Speaker, today our country will celebrate the birthday of Thomas Jefferson. "Tom" Jefferson was not only one of the greatest Americans of his time but his name enjoys an imperishable world renown, and it will always be spoken with reverence by those who exalt the majesty and freedom of the individual above the power of the state.

His individualism did not require the enhancement of adjectives, such as "rugged." It was his belief that a country is best governed which is least governed. He was first and foremost among the founders of the Republic who unreservedly embraced the principles of individual freedom and private enterprise, under which the young Nation of his time has since become one of the most powerful in the world.

That philosophy of life and government is still with us. The opening sentence of the Agricultural Marketing Act of 1946—being title II of the Research and Marketing Act—pays homage to Jefferson and the principles he espoused in the following language:

> The Congress hereby declares that a sound, efficient, and privately operated system for distributing and marketing agricultural products is essential to a prosperous agriculture.

This act authorizes "an integrated administration of all laws enacted by Congress to aid the distribution of agricultural products through market aids and services." One of the marketing aids for which Congress makes appropriations is that for the determination and certification of the condition—shrinkage or clean content—of wool for the benefit of wool growers having raw wool for marketing.

On January 14, 1948, the Secretary of Agriculture announced by publication in the Federal Register his intention to establish the service described—the analysis of wool samples—to be done in a Government-owned, Government-operated laboratory. Mr. Speaker, I was at that time, as I am now, a member of the subcommittee having in charge the appropriation bill for the Department of Agriculture. One of the privately owned laboratories, which has done a great deal of work in the analysis of wool samples, protested to me that they were being unjustifiably subjected to Government competition—that their laboratory was fully equipped and amply staffed to perform this work for the wool growers at a cost no greater, and possibly less, than it could be done by the Government.

At my instance, the subcommittee chairman was authorized to send a letter of protest to the Secretary of Agriculture, which halted, temporarily, the Department's proceedings. Ultimately, the Department was authorized to process the samples of the then current wool crop, but by the unanimous action of the House and Senate conferees, the Secretary was directed to explore thoroughly the possibilities of having the analysis work done for the Government under contract agreement by one or more of the privately owned laboratories.

The exploration indicated was carried on by the Department, and, while there were times when it seemed that an unwilling horse was being led to water, bids were sought and received and one of the bidding laboratories, namely, the United States Testing Co., of Hoboken, N. J., submitted a bid which was lower than the Department's estimate of the cost of having the work done by the Government.

I have been informed that today the Department will confer with the low bidder with a view to negotiating a contract for laboratory analysis of wool samples taken by the Government in connection with its wool-marketing work. It is, indeed, fitting, Mr. Speaker, that the negotiation of this contract, which will have the effect of getting the Government out of a business which can as well be carried on by private enterprise, should begin on the birthday of the great advocate of individual freedom and private enterprise—Thomas Jefferson.

It is also refreshing to note, Mr. Speaker, that our subcommittee, in reporting out the Department of Agriculture bill for 1950, indicated its desire that the Department should, in expending the funds for carrying out the provisions of the Research and Marketing Act, use its contract authority to the fullest possible extent in preference to having the work done by Government personnel. This is but another declaration of the doctrine of free enterprise and, in my humble judgment, marks the path to continued prosperity and greatness as a nation.

Federal Housing Legislation and Cities

EXTENSION OF REMARKS
OF
HON. THEODORE FRANCIS GREEN
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, April 13 (legislative day of Monday, April 11), 1949

Mr. GREEN. Mr. President, when the United States Conference of Mayors met in Washington on March 22, the Honorable Dennis J. Roberts, mayor of the city of Providence, R. I., delivered an address entitled "Federal Housing Legislation and Cities." With the housing bill presently under consideration, I believe the mayor's address will be of interest to the Members of the Senate, and I desire to present it at this time and ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Most of you will agree with me, I think, that housing, traffic, and money are the

biggest post-war problems. At least, this is the case in Providence.

We have an old city. That means old dwellings and narrow streets—and big headaches.

We also have a conservative city, particularly in matters of money. Our general property tax rate has been held down to $25 a thousand, although last week I recommended to the people that it be increased about 15 percent as the best means of making ends meet these days.

In Providence we believe that careful planning is the first step toward making every tax dollar buy the most value for the city. We have done a lot of this since the war, and I believe that it will pay off handsomely in years to come.

That planning, of course, has covered our traffic problems. We are trying to get the State to build a modern express freeway across the city to drain off half the vehicles that now clog our downtown business district. As a first step in this direction, we ourselves are building, in the western end of the city an expressway which will be a key component of the over-all system. We are going to the legislature at this session with a bill to give the city full powers to develop an off-street parking program downtown.

We also have done a lot of planning as regards housing. That work now promises to pay off in the near future, when, as and if proposed Federal housing legislation is passed by Congress.

The Federal legislation I refer to is the bill known as Senate 1070, which is the 1949 version of the Taft-Ellender-Wagner bill for public housing and redevelopment.

I do not propose to discuss that bill with you. You already are familiar with its provisions.

What I want to do is to outline the basic ways in which the cities can avail themselves of the Federal money to be provided under that bill. Specifically, of course, I want to discuss with you what we have done in Providence to this end.

First. We have definite and detailed plans for housing developments.

Second. We have permissive legislation to enable them to undertake projects covered by S. 1070.

Third. We have money available.

These are the three basic steps a city must take in order to qualify for Federal money under the proposed Federal legislation.

These steps are absolutely essential. The Federal Government does not propose to plan programs for the cities, nor does it propose to carry out any programs. The Government will provide financial aid. But the cities must do the job.

Let's run over the actions we have taken in Providence to qualify under S. 1070.

First. Planning: Right after the war we did a comprehensive survey of housing requirements in Providence, particularly as regards veterans and their families, who were clearly entitled to first consideration in planning a housing program.

From this we derived much basic information about the size of the need and the rentals people could afford. Acting on this information, we went ahead with a city-financed middle-rental housing development for veterans. This is now nearing completion, and I shall have a word to say about it later.

Our full-fledged redevelopment agency also was set up after the war. This organization, working closely with our city plan commission, has dug deep into the housing problem and has come up with some excellent answers.

We have in Providence about 900 acres of vacant land which is considered suitable for housing development.

Another 300 acres of blighted area should be cleared and converted to good, modern housing. Some 150 acres of blight we plan to clear and convert to industrial use.

That is the broad picture. Now, here is what we have done so far in drawing specific plans for housing developments:

Of the 900 acres of vacant land, we already have earmarked 350 for development along carefully planned lines. These 350 acres comprise a total of 19 sites on which we expect to build housing for some 4,000 families.

Eight of these sites have been recommended for private development to produce 1,800 single-family garden-apartment and in-town apartment units. By July 1, we will have necessary information about two of these sites in final shape to enter definite negotiations with private capital to build the planned types of dwellings.

Four of the 19 sites are programed for middle-rental public housing, to take care of some 1,500 families. The first of these is Valley View, the fine veterans' development I mentioned earlier. In the near future 256 families will move into Valley View, and their monthly rentals will prove the soundness of our planning.

Our postwar housing survey showed that the average amount veterans could pay was $45 a month. The Providence Housing Authority, which is building and will operate Valley View for the city, drew its plans and set its sights on that target of $45 a month.

The development, as I said, is nearing completion and we are now able to figure where we are coming out financially. Ten days ago, the Housing Authority informed me that the average monthly rental for Valley View would be, not $45, but $45.85.

Thus, we overshot the target by 85 cents.

But I think you will agree that is not bad planning on a development involving nearly $2,850,000.

All of that money is city funds, as I told you, which we secured through bond issues, without waiting for the Federal Government or anybody else to come along to help us.

The plan is to mortgage Valley View to the local banks for some $1,600,000. This mortgage money will be used to make a start on a second development similar to Valley View. That second one will then be mortgaged, we expect, to provide the springboard for a third development of this type.

Finally, we have programed 7 of the 19 vacant-land sites for low-rent public housing to take care of some 1,500 families.

Two of these seven sites were purchased and cleared by the Providence Housing Authority before the war, following completion of two other developments which are being successfully operated today. Plans and specifications to house 398 families actually were drawn. Bids, however, exceeded the Federal funds available under the law at that time. Both developments thus were shelved in 1941.

But we still have those plans and they can be put out to bid again in a matter of a few days. This gives us two projects qualified for Federal money in the low-rental field as soon as S. 1070 becomes law.

We come now to the second main qualification for Federal housing aid—the matter of legislation. I do not want to go into details on this, since the specific provisions of the law should probably be tailored to the special needs and situations of each State and city.

There are, however, three fundamental provisions we have incorporated into our redevelopment act, which I suggest to you are essential if legislation is to give proper powers to your city.

The first is provision for setting up a full-fledged redevelopment agency, adequately staffed and charged with the duty of planning and executing redevelopment programs. Unless you do this, you are inviting inertia. The New York law, for example, merely provides that a corporation may be formed for redevelopment purposes—and that leaves the cities in the position of having to find somebody willing to form such a corporation.

Some legislation designates the local housing authority as the agency for redevelopment. This is all right as far as housing goes. But there are obvious shortcomings involved when you start thinking in terms of having a housing authority handle redevelopment of industrial areas.

If, on the other hand, you have a full-fledged redevelopment agency, you have somebody who is not only empowered but is directed to carry the ball and get things done.

Let me suggest, also, that enabling legislation should be broad enough to cover redevelopment not only of blighted areas but also of arrested subdivisions. We have this provision in our law and feel it will have important results as we go along. This type of provision, incidentally, was not in the old TEW bill, but is included in S. 1070.

Finally, I would suggest that every redevelopment act should contain a provision that is, I believe, contained only in the law under which we operate in Providence. This provision enables us not only to take property by eminent domain and write down the land costs; it also permits us to grant tax freezes that make it attractive for private capital to enter the middle-rental housing field in much the same manner that limited-dividend housing has been handled in New York City.

Third of the fundamental ways in which cities must qualify for aid under S. 1070 is the matter of money.

The money is essential because the Federal Government is willing to go two-thirds of the way in financing redevelopment, but not all the way. The cities must have the other third of the cost available before the Government will put up a penny.

By cost I mean the loss to be expected from transactions in which the city buys land at market prices and resells it at a lower figure to attract private capital, which is the typical pattern of a redevelopment operation.

Federal loans to finance redevelopment programs would be available under S. 1070, providing, of course, that a city qualifies properly in planning and legislation groundwork. But the Government expects to be paid back most of the face of these loans from the proceeds of land sales to private capital.

What it does not get back is the loss, and the Federal Government will foot two-thirds of this. However, before any Federal loans are made the city must have on hand enough money to pay the other one-third of the loss.

In Providence we have a revolving fund of $2,000,000 available for this phase of redevelopment. Issue of bonds in this amount was authorized by the voters at the last election for this specific purpose.

Here is the way in which the financing will work: Suppose we undertake a project which involves purchase of land for $1,000,000 and resale to private interests at a price of $700,000.

The city suffers a loss of $300,000. Of this, the Federal Government pays $200,000 and the city $100,000, taking from the redevelopment fund.

Obviously, on a 2-to-1 basis, we can make that $2,000,000 do the work of $6,000,000 with Federal help. Before we have lost that $6,000,000, we should have done perhaps fifty or even one hundred million dollars' worth of redevelopment in Providence—depending on the extent to which we have to write down land values to attract private capital.

There, in broad outline, is the redevelopment picture as we see it in Providence. We look forward eagerly to the enactment of S. 1070, which will enable us to really get our housing and redevelopment plans rolling toward physical reality.

We are in a good position to take immediate advantage of the new law for just one reason—we have worked hard and planned hard to get Providence ready.

One reason we have taken these steps of planning, legislation, and financing is that

it looked for a while as if Federal aid might not be forthcoming. We were resolved to go ahead with housing as fast as we could and as far as we could with our own money, limited as it is.

But even with the best will in the world, no city today can fully finance a proper housing program of its own. At least, I do not know of any major city that can afford such an outlay in these times of tight budgets.

Therefore, passage of S. 1070 with its Federal aid is essential if the cities are to give their people the kind of dwellings to which every American is entitled.

But, as I have outlined to you this afternoon, mere passage of the bill by Congress is not enough. You and I in the cities must organize to qualify for Federal aid.

The cities must develop sound and detailed plans, secure adequate enabling legislation, and must make available sufficient funds before Uncle Sam will put up a dime.

Naturally, those requirements are set up for the sole purpose of insuring the success of redevelopment projects. In Providence we welcome the challenge of meeting high standards like that.

We know that when we have laid the foundations right and have the Federal money to build on those solid foundations redevelopment will succeed and will be an incalculable benefit to the city.

On the public housing side also we are well prepared. Our housing authority is experienced in nearly 10 years of operating the two developments we built before the war.

It is acquiring postwar building experience at Valley View, our fine new middle-rental development for veterans.

It has plans ready to put out for bids under the public housing provisions of S. 1070.

In closing let me emphasize to you that we are making an across-the-board attack on the housing problem in Providence. We are doing this through close and active teamwork between the Housing Authority, the Redevelopment Agency, and the city-plan commission.

The Providence housing program is aimed at meeting the needs of all income groups, and I hope that within a comparatively few years we will have achieved this all-important goal.

Thank you.

Economic Consequences of British Socialism

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, April 13 (legislative day of Monday, April 11), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excerpt from an address entitled "The Economic Consequences of British Socialism," delivered by Geoffrey Crowther, editor of the Economist of London, before the Economic Club of New York at New York City on Wednesday, January 26, 1949.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

THE ECONOMIC CONSEQUENCES OF BRITISH SOCIALISM

We are witnessing, in our times and within our own democracies, a great struggle of ideas. Western industrial civilization, as we know it, grew up under the domination of a system of ideas that we now call those of the right. It was a system of ideas that exalted material progress and production, and under it more wealth has been created than was ever before imagined. But it was also a system that took little notice of the miseries and the injustices that were the price of its progress. We have therefore in the last generation seen the rise of the opposite doctrines of the left, which exalt the security and social welfare of the individual, even at the cost of economic efficiency and the maximum creation of wealth. This is one of the great antitheses of our time, which reappears in innumerable guises. It is the antithesis between progress and security, between the efficiency of the economic system and its equity. It is the contrast between the gospel of work and the endowment of leisure, between the premium that our fathers put upon thrift and the stimulus that the present age gives to consumption. It is the conflict between Samuel Smiles and Karl Marx.

I do not believe that any of us can afford to be fundamentalists in this conflict. Life would be easier if one could say that one order of ideals is wholly right and the other wholly wrong. But I do not think it is so. We cannot simply go back to the nineteenth century. There is far too much of the logic of the twentieth century in the ideas of the left for it to be possible to sweep them aside. I am one of those who think that the movement to the left of the last 20 years has gone too far and that, if we are to hold to the course that history has set us, the time is due for a tack to the right. But there must be both elements in our twentieth-century society, and we shall spend the rest of our lives learning how they can be trained to double harness.

Of this great antithesis, the issue of the public ownership of industry, which I have been discussing with you, is only one of the manifestations. Indeed, it is not even one of the more important, for what are fundamental are the ideas and the aspirations of the left, not the particular piece of social mechanism through which they show themselves. I dislike the discount at which the present Government of my country values such things as enterprise, efficiency, and thrift. But the move to socialize industry is not the cause of this discount, it is one of its effects. If, therefore, you look upon socialism as an exotic disease, like typhus or beri-beri, the symptoms of which it may be interesting to have described by a visiting traveler, but which can be kept out of your own country by quarantine regulations at the ports, I submit you are making a great mistake. For one thing, it is not a disease, but a perfectly legitimate and responsible movement of human thought. And for another, though the manifestations of it may be different in different countries, it is a tendency that is present, in this twentieth century, everywhere where men are free to think. Or do you perhaps believe that enterprise and efficiency and hard work and thrift are not under attack in your own country?

I said "under attack," but that is the wrong word, for it suggests a battle. And this issue of right and left is not a battle that can be won by either one killing the other. It is rather a problem that has to be resolved by the mating of the one with the other and the birth of offspring that takes something from each but has its own life.

But there is a battle in the world today, a real battle to the death. It often appears in the disguise of a battle between different systems of economics. But that is a trap set by the enemy and designed to foster unnecessary quarrels in the ranks of those who oppose him. If the main difference between the Soviet system and our own were simply that they believed in the public ownership of industry and we did not, we could agree to differ and each mind his own business. But we know that is not what is at issue. It is human liberty that we cannot agree to differ about. It is not the public ownership of industry that we fear, but tyranny and the military aggression that follows in its wake. What divides us from the Soviets is not their views on the matters I have been discussing, but their views on my right to discuss them.

I have sometimes heard the argument in this country that, since communism means a complete loss of liberty, every Socialist experiment must mean some loss of liberty. That seems to me to be poor logic—unless you are prepared to admit that the American public-school system, the United States Post Office, the State banking commissions, and the Maritime Commission are all of them limbs of tyranny. Certainly nobody in England thinks the basic liberties are endangered by the Socialist experiments we have had. All of them will be submitted, within 18 months at most from now, to an election that will be as free—and, I would add, as unpredictable, as anywhere in the world.

Democracy, after all, is a system of trial and error. Perhaps all systems of government are that, but only democracy provides deliberate opportunities for the correction of error. If there be error in the Socialist experiments it will be corrected.

The lawyers have a doctrine of uberrima fides. I am no lawyer and perhaps I misconstrue it. But as I understand it the doctrine is that, within a jurisdiction, every court must accord the utmost faith to the acts of every other court. However queer and misguided the other court's decisions may seem to be, they must be accorded the utmost faith that all will turn out for the best. I suggest that we might do worse than evolve a doctrine of uberrima fides between free democracies. If you believe in democracy, you believe that it puts its errors right in the end. This experiment has not yet appeared before the court of first instance. Let us suppose that the American people were to elect to office an administration pledged to experiments of a novel and, as many people thought, dangerous kind, and suppose that that administration were reelected—I am only supposing—to a second, a third, a fourth and even a fifth term of office. Would you then despair of the Republic?

We think we know about as much about the practice of democracy as you do. Indeed, some people think you got the idea from us in the first place. I ask you to believe that what is proved to be error in the present Socialist experiments will be washed away, and that what is good will add one more stone to that great edifice of human achievement that we call the society of freemen.

Israel and American Citizens of Jewish Faith

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include the following letter to the Attorney General from Norman Buckner, of Pontiac, Mich., which raises an interesting question relative to a possible political link between the Government of the State of Israel and American citizens

of Jewish faith who are members of the World Zionist Organization:

FEBRUARY 9, 1949.

The HONORABLE THOMAS CLARK,
Attorney General of the United States,
Department of Justice,
Washington, D. C.

I

DEAR MR. ATTORNEY GENERAL: In the course of some correspondence with the Honorable Robert A. Lovett, former Under Secretary of State, I had occasion to refer to a possible, direct, political link between the Government of the State of Israel and the World Zionist Organization. Inasmuch as the various branches of the Zionist movement in the United States are all constituent members of the World Zionist Organization, the possibility exists that these several American Zionist parties are also linked, politically and directly, to the Government of the State of Isreal.

If upon proper examination these possibilities should develop to be realities, many American nationals of Jewish faith would, innocently, find themselves in the embarrassing and undesirable status of being agents of a foreign government. For, as you know, these Zionist parties carry on political activity and propaganda campaigns designed to affect the official position and actions of the Government of the United States in our relations with the State of Israel.

Although I did not write Mr. Lovettt on this matter in any detail, having made only a casual reference to it, Mr. Lovett suggested that properly, this was a subject to be presented to you and your Department.

Because of the potentially serious consequences to 5,000,000 of my fellow Americans of Jewish faith and, indeed, to the United States itself, I take the liberty of putting before you, in some detail, certain facts pertinent to the possibility of this political linkage.

If the evidence herewith set out, in even this superficial manner, seems to warrant your further investigation, I sincerely hope that you will explore the relationship between the World Zionist Organization, the State of Israel, the Jewish Agency for Palestine and the several American Zionist parties. If such a further exploration does seem warranted, I would be very glad to be of any further service that you might think it possible for me to provide.

II

These are the facts in the situation, with such documentation as I have at hand.

The September 1, 1948, issue of the official publication of the Zionist Organization of America, Spot News indicates that the question of political separation of the Zionist movement from the Government of Israel involved Zionists in a protracted discussion.

It is clear, to begin with, that there was formidable support for political linkage. Among those who supported such an organic political relationship was Napai, the party of Mr. Ben-Gurion and the strongest party in the government of Israel, as a result of the elections of January 25, 1949.

This official publication reports the proceedings of the meetings of the World Zionist Organization's Actions Committee (highest policy-making body of the World Zionist movement) held in Israel last summer.

The most important item on the agenda of those meetings was the discussion as to whether the Zionist movement should or should not be separated from the (then) provisional government of the State of Israel.

Mr. Ben-Gurion's viewpoint in favor of political linkage is corroborated in a dispatch credited to Palcor.

Similarly, Mr. Gruenbaum, a member of the Government of Israel, expresses his support of the policy of political attachment.

The importance of these reports is self-evident. Whether political separation is a legal fact, or not (and evidence will be adduced following to make an answer to that question, problematical, at least) the fact is that there were and are—in the Israel Government, powerful forces which believed in and fought for an organic, political alliance between the Zionist movement and the government of Israel.

The debate over this highly important policy seems to have been resolved in a compromise, the implications of which are extremely ambiguous. The specific nature of this compromise is reported in the September 8 issue of Spot News.

The precise nature of Mr. Kaplan's liaison rights and responsibilities are not here detailed. But that, in some measure, the important principle of political separation was not observed may be gathered from public statements, credited to or quoted directly from people in authority in either the Government of Israel or one or another party of the American Zionist movement.

1. Mr. Ben-Gurion is quoted in the Jewish Morning Journal of September 26, 1948, as follows:

"Our conversation then turned to the last meeting of the Zionist Actions Committee, at which the question of the relationship between the State of Israel and the people of Israel was so passionately discussed.

" 'It is a gratifying fact,' said Ben-Gurion, 'that the opinions of some of the American Zionist leaders concerning the separation of the Jewish State from the Jewish people was not adopted by the majority. Neither was the plan to transfer the center of Zionism adopted. Jerusalem remains the center of the Zionist movement, and the Jewish State will give its powerful support to it everywhere.' "

2. On September 10, 1948, Mr. Baruch Zuckerman, president of the American Labor Zionist Organization, is reported by the New York Times, as follows:

"ZIONIST SEPARATION LOST; ZUCKERMAN SAYS PRINCIPLE WAS DEFEATED IN TEL AVIV

"Baruch Zuckerman, president of the American Labor Zionist Organization and member of the World Zionist Executive, said last night that the American General Zionist delegates at the recent meeting of the World Zionist Actions Committee in Tel Aviv, Palestine, were not able to establish the principle of separation between the World Zionist Movement and the State of Israel.

"Speaking at a meeting of the Labor Zionist Movement in the Pennsylvania Hotel, Mr. Zuckerman declared that the American General Zionists had attempted to separate the World Zionist Movement from Israel by suggesting that Israeli citizens should not be members of the World Zionist Organization. He asserted that the Labor Zionists fought this proposal on the ground that Jews in any land share equal rights and privileges and said that this position triumphed because Finance Minister Eliezer Kaplan remains a member of the World Zionist Executive."

3. On January 17, 1949, Mr. Moshe Shertok is reported by Anne O'Hare McCormick, in the New York Times, to have said:

"We are a state and also a world people, and that gives us special international obligations."

4. Dr. Emanuel Neumann, president of the Zionist Organization of America declared to the last annual convention of that body, in his presidential message:

"For an unspecified period we shall still have to be concerned with political affairs, though in a different and more limited sense than in the past. To be sure, the immediate struggle is by no means over; but assuming that a full and satisfactory settlement will now be reached, the position of the young Republic of Israel will be such, that it will need friends and the favor of public opinion. It will continue to be surrounded by Arab states and will have a substantial Arab minority within its own borders. Difficult problems may arise in its internal and external relations.

"It will then be necessary for appropriate agreements to be worked out between the World Zionist Organization and the Government of Israel regulating the manner and procedures by which we will assist and cooperate in clearly defined areas and under such rules and regulations as the Government of Israel may properly prescribe."

5. On November 14, 1948, Dr. Abba Hillel Silver, chairman of the American section of the Jewish agency declared in Boston:

"The anti-Zionist, if he persists in his agitation, will no longer be fighting an idea or a movement, but an established state. He will be endangering the security of a legally constituted state which is recognized by his own country."

6. Zionist adherence to this basic principle of political discipline from the Government of Israel was admitted in an article in the New Palestine (official publication of the Zionist Organization of America), as early as June 11, 1948, in an article, a portion of which reads as follows:

"From the minute a Jewish state was proclaimed, we are constrained from undertaking any political action in regard to Israel without the approval of the Jewish state."

7. On January 31, Mr. Ben-Gurion, according to a New York Times dispatch on February 1, 1949, said:

"We must save the remnants of Israel in the Diaspora (the dispersion of the Jews outside Palestine). We must also save their possessions. Without these two things we shall not build up this country."

If all of these statements are not legal proof of political attachment of the Zionist movement and the Government of Israel, there is then either a careless or a deliberate plan, in which members of that Government and American Zionists together use language and claim authority involving all Jews, which is highly misleading and dangerous.

III

Finally, more than language is involved in the actual practice of the several American Zionist organizations. Even a casual reading of the September 1, 1948, issue of Spot News indicates that the Zionist movement is operating as an agent serving the national functions and interests of a foreign state.

Some of those national functions of the State of Israel, being performed by Zionists, as agents of that state are:

1. Participation in determining the immigration policy of Israel.

(a) This includes active campaigns to enlist and train American boys and girls of Jewish faith for citizenship in Israel.

2. Participation in the national economy of Israel by promoting the investment of capital in that state (both public and private capital) and by promoting sales of Israeli products.

3. Active participation in "the development of Jerusalem" and in "questions concerning Jerusalem."

4. Mobilization and control of funds for banks in Israel.

5. Cooperation with the educational system of Israel in the promotion of education and cultural activities (Israeli?) "the world over."

IV

Considerably more evidence can be adduced. But I have already burdened you with too long a memorandum.

I sincerely hope, however, that this assembling of a few of the available facts may lead you to have the Department of Justice thoroughly and objectively investigate this situation.

Many Americans of Jewish faith—and of other faiths, resent this intervention in our

national life of this Zionist-Israeli-nationalism.

Many Americans of Jewish faith could be saved from innocently contributing to or participating in these programs of a foreign nationalism, if, upon investigation, it were learned that the Zionist parties in America were, in fact, agents of a foreign principal and were compelled to comply to the requirements set forth for such agents by the laws of the United States.

Renewing my assurances of a desire to be of any further assistance possible, I am

Respectfully yours,

NORMAN BUCKNER.

PONTIAC, MICH.

Improvement of Humboldt Bay

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1949

Mr. SCUDDER. Mr. Speaker, under leave to extend my remarks, I insert an editorial appearing March 4, 1949, in the Humboldt Times of Eureka, Calif., regarding the necessity for the improvement of Humboldt Bay:

INERTIA IN PORT PROJECT

During the last 3 years there has been a vast amount of study and talk devoted to the matter of improvement to Humboldt Bay, particularly with respect to the bar and the principal channels of the harbor. But as the months go by with nothing happening other than the initiation of new studies and continuation of the talk, we must wonder if the situation is not held in the grip of inertia which may indefinitely postpone the needed work.

In analyzing the situation, it is to be borne in mind that there has been no extensive improvement work conducted in the local harbor since before the start of World War II. The postponement of such work during the war period was understandable, since the war effort demanded concentration on other projects and since ocean-borne shipping more or less at a standstill from all but the major ports during the span of hostilities. It is not so easy to dismiss the delay that characterized the postwar period, when facilities are again free for the purpose and as the smaller ports attempt to regain at least a portion of their prewar shipping.

Apropos of the situation, the Eureka Chamber of Commerce recently forwarded a letter to Congressman HUBERT B. SCUDDER outlining the problem in its general aspects and commenting on the apparent lethargy that has held up the project to date.

Among other things, it was pointed out that not long ago a Federal representative was sent to Eureka to make a study of the latest developments in the situation, in connection with the final report now being prepared for submission to Washington. The letter points out that "after spending 3 days here I am afraid that he was of the same opinion as before coming—namely that there still was not enough shipping to justify the expense."

To that response, the chamber directs attention to a pithy observation by Supervisor George Cole, who points out that deepening of the channels and improvement of the harbor must come first before we can expect any substantial increase in the volume of commerce from the port.
